7. The Renaissance. As the classical world was rediscovered in the Renaissance, language study was broadened to include contemporary national tongues as well as the Latin, Greek, and Hebrew which became the mark of the educated person. This brought the grammatical model that had endured from Greco–Roman times through the medieval period into contact with the fresh data of contemporary languages. The renewed study of Hebrew also brought about contact with the vastly different structure of a Semitic language and with the works of medieval Jewish grammarians. Yet the overall tendency was to study the European venaculars and even Hebrew and other non-Indo-European languages through the inherited model, which was not fundamentally modified.

8. The Enlightenment. During the 17th and 18th centuries, the study of languages reflected philosophical movements. The impact of empiricism can be observed in England in the study of spelling and its relation to pronunciation (under the terms “orthography” and “orthoepy”) and in efforts to rework English grammar. By the 18th century, as a result of the effort to construct a universal grammatical theory, writers on language turned their attention to establishing correct norms in pronunciation and usage. As a result, grammars became largely prescriptive. At the same time, rationalism encouraged the production of philosophic grammars. The French Port-Royal school attempted to demonstrate a common logical and rational system behind the varieties of natural languages.

B. Modern General Linguistics

1. Historical/Comparative Linguistics. Linguistics, in its primary sense as the study of language itself, may be said to have been established in the 19th century. The field of historical and comparative linguistics emerged and became dominant during this time. It was pioneered for the African languages in 1783 by William Marsden, for the European languages in 1786 by Sir William Jones, and for the Finno-Ugric group in 1799 by S. Gyarmathi. Each of these scholars posited a genetic relationship among the languages within their respective language group, while Jones also spoke of a common ancestor language which no longer existed. This language, which was the parent of Sanskrit, Greek, Latin, and later European languages, came to be called Indo-European. A methodology was developed for reconstructing this common parent language; language change (especially in phonology) was studied; languages were classified by type; and major language families were delineated.

The actual founder of systematic comparative linguistics was Franz Bopp (1791–1867) with his treatise of 1816 on the inflectional endings of verbs in several Indo-European languages. He was followed by Jacob Grimm (1785–1863), generally regarded as the founder of Germanic linguistics, who studied the relationships between consonants in Germanic and other Indo-European languages and set these forth in what has come to be called *Grimm’s law.* (In fact, his findings were anticipated by others and later extended by Karl Verner [1846–1896].)

In the last half of the 19th century, the views of mechanistic physics and especially of biological evolution were influential in linguistic theory. August Schleicher (1821–1868), first trained as a botanist, set out to treat language as a living organism under the analogy of evolution and to trace its development according to similar laws. From his work has come the concept of the descent of languages in a “genealogical tree” (the *Stammbaum* theory). A competing view, the wave theory, was that of Johannes

Schmidt, who argued that linguistic innovations spread from a center (like waves on the surface of water) among speech communities.

In some ways the high point of the historical/comparative linguistics of the 19th century was achieved by the Neogrammarians. Originating in Leipzig, this group brought rigor to linguistic method and thereby put all succeeding linguists in their debt. On the other hand, they developed a position which could not be maintained in its extreme form. August Leskien (1840–1916) and especially Karl Brugmann (1849–1919) affirmed the thoroughgoing consistency of sound laws, and H. Paul called for an exclusively historical approach as the avenue to linguistic knowledge.

2. Structural Linguistics. The next major phase in the history of linguistics (and for many the beginning of modern linguistics) commenced with the work of Ferdinand de Saussure (1857–1913). His lectures on general linguistics at the University of Geneva (1907–13) were published after his death by colleagues and students (1959). These lectures laid the basis for much of the linguistic work that has followed.

Saussure pointed in a new direction (though he was anticipated in this by Humboldt in the 19th century) by distinguishing synchronic from diachronic analysis. Synchronic study investigates a language as it appears at a point in time; a diachronic approach analyzes the developments a language undergoes over a period of time. Whereas he recognized the need for both approaches, and spent a great deal of his life in diachronic study, his successors, especially in the United States, went on to emphasize the synchronic to the virtual exclusion of the diachronic. Saussure also distinguished language as a system (*langue*) from actual speech (*parole*), the syntagmatic (linguistic elements that can be combined) from the associative (later called the paradigmatic, linguistic elements that can be interchanged), and the signified from the signifier. Perhaps most important, and in contrast to the piecemeal work of the 19th century, Saussure saw that a language is a system whose parts must be understood in relation to the whole; and for him this systematic character was present only in a language as it exists at a point in time, i.e., only in a language viewed synchronically.

3. American Descriptive Linguistics. The direction of American descriptive linguistics for roughly the first half of the 20th century was set by Franz Boas (1858–1942), Edward Sapir (1884–1939), and Leonard Bloomfield (1887–1949). Boas (1911) concentrated on American Indian languages and developed an inductive methodology for analyzing a language from its own structure, apart from any other language. He assumed that differences among languages were unlimited by any generally shared structures. Sapir (1921) gave classical expression to the concept of the phoneme, further emphasized the structural differences among languages, and examined the relationship of language to culture. In this last interest he was followed by Benjamin Lee Whorf (1897–1941), who drew a fundamental connection between language and world view. The dependence of a people on their language for their range of ideas about the world necessarily relates the two, Whorf argued. While a connection between language and culture has been generally acknowledged, the degree of dominance of the former over the latter argued by Whorf has not. In his book *Language* (1933), Bloomfield laid the foundation for the next quarter of a century by systematically articulating the principles of descriptive linguistics, though many of his ideas were already present in Boas.

Following Bloomfield, the subsequent influential American descriptivists, known as "Post-Bloomfieldians" (e.g., Bloch, Trager, Hockett, Hill, and Harris), in some cases took their heritage too far by pressing for mechanical operations ("discovery procedures" in this sense) and attempting to describe language without reference to meaning. A more productive direction within American descriptivism was set by Kenneth L. Pike with the theory of Tagmemics (1967, 1982). For Pike, language is to be understood in terms of discrete units, continuity and change, and relatedness (in his words: "particle, wave, and field"). He has insisted that any component of a language can only be analyzed in its relationship to the rest of the language and that form and meaning must not be separated in linguistic inquiry.

Not only was the impact of linguistics on language teaching in the United States essentially nil prior to World War II, the very teaching of foreign languages was at an extreme low. The war abruptly shattered

such isolationism. In the postwar period, the armed forces led the way in instituting programs for efficient foreign language teaching, and they called on linguists for leadership. The traditional grammar and translation approach was put aside in a search for methods which would produce conversational fluency by the most direct route. However, as the biblical languages are no longer spoken and the goal of their teaching was translation and not fluency in speech, these fields were essentially bypassed by such developments.

4. Linguistics Outside the United States. Outside the United States, major developments in linguistics in this century have been diverse. Louis Hjelmslev (b. 1899) of Copenhagen pioneered the highly formal theory of glossematics (1961). Incorporating Saussure's emphasis on form over substance, glossematics sought to discover a system of categories from which could be derived the elements of a language. His work remained at the purely theoretical level, however, and was never applied to any actual language.

The Prague school is represented especially by Nikolay Trubetzkoy (1890–1938) and Roman Jakobson (b. 1896). Their linguistic theory is known as functionalism. Prague school theorists study language in terms of its distinctive function (out of which came Distinctive Feature Phonology), its demarcative function, and its expressive function. A productive result of the Prague school emphasis has been the recognition within languages of ranges of alternate "registers" or "styles" employed by speakers according to both their own background and the immediate social situation.

J. R. Firth (1957, 1968) was the first to hold a teaching position in general linguistics in England. He developed a contextual theory of language which called for analysis at the phonetic, lexical, grammatical, and situational levels in order to understand language in actual use. His attention went primarily to phonology and semantics. His view that phonetics has meaning led to an approach at the phonological level known as Prosodic Analysis. An explicit theory of language based on Firth's ideas and known as Neo-Firthian Linguistics, or, more recently, Systemics, has been developed by Halliday (1985).

5. Generative-Transformational Grammar. The most radical departure from earlier descriptive linguistics in the United States began in 1957 with the appearance of Noam Chomsky's *Syntactic Structures.* Numerous publications by Chomsky have followed. His thought has gone through several significant stages, and many other linguistic theories have developed under the influence of, or in reaction to, his views. His position has come to be known generally as Generative-Transformational (G-T) Grammar. American linguistics in particular has been fundamentally reshaped by his views. At issue is the very purpose of linguistic theory and the nature of the evidence upon which it rests.

Chomsky has grounded his views in philosophic rationalism. In breaking with structural, or descriptive, linguistics, he has resolutely turned from the empiricism that undergirded the work of his predecessors. He set out to achieve the sort of grammar that would explain a native speaker's internalized knowledge of his or her language, which is called competence, in contrast to the use to which this knowledge is put in actual speech, which is called performance. (Chomsky has not conceived of such a grammar as a replica of the human mind, but rather as a model that is comparable.) An acceptable grammar of a language, then, should produce the grammatical, or well-formed, strings (sentences) of that language (of which the potential number is infinite) and only those that are grammatical, and should capture the significant generalizations about them. The capacity to acquire this competence comes with being human and is akin to the notion of innate ideas associated with Descartes and the rationalist philosophical tradition. Another closely related goal is Chomsky's quest for universals in the explanation of linguistic phenomena.

From the beginning, Chomsky's central concern has been with syntax. In the second major phase of his theorizing, elaborated in his 1965 publication, *Aspects of the Theory of Syntax,* he set forth a model with a generative syntactic component and interpretive semantic and phonological components. Strings generated in the syntactic component are seen to be interpreted at the level of deep structure by the semantic component and transformed (by the application of rules) to the level of surface structure where they are interpreted by the phonological component.

Because of disagreement over the place of the semantic component, a division occurred after 1965 between adherents of Chomsky's view and others who espoused the theory of Generative Semantics (Katz and Fodor 1963). Chomsky modified his Aspects model (the Standard Theory) to produce the Extended

Standard Theory (1970). He has since made further revisions resulting in the Revised Extended Standard Theory (Chomsky and Lasnik 1972) and still more recently in his position known as Government and Binding (1980, 1982). While the essential features of the Standard Theory have remained in Chomsky's later views, his emphases have changed; and he has attempted to constrain the power of the transformational component (which was almost unlimited in the Aspects model). Some of the competing theories which have emerged out of this process are Case Grammar (Fillmore 1968, 1977), Montague Grammar (Montague 1974), Relational Grammar (Perlmutter and Postal 1974, Johnson and Postal 1980), Daughter-dependency Grammar (Hudson 1976, Schachter 1980), and Context-free Grammar (Gadzar, Pullum and Sag 1980).

The influence of G-T Grammar is obvious. Models such as Chomsky's, Montague Grammar, and Relational Grammar have done the most to shape the current linguistic scene. Many linguists judge that the goals of linguistic theory have been established and that the domain of syntax has finally been conquered. At the same time, the future of these models is less than clear. Some linguists involved in fieldwork with languages never before analyzed are not content with any linguistic theory that has discarded the discovery procedures they require, although Chomsky's rejection of discovery procedures in the context of the search for mechanical procedures among Post-Bloomfieldians (later somewhat modified by him) is understandable. Again, the orientation of field linguists to the hard data of actual languages often steers them away from the extreme formalism of G-T Grammar. Many linguists question the existence of a deep structure or other aspects of the typically Chomskyan approach. It must be acknowledged, in any case, that prolific research has been spawned within this orientation, in particular by the work of Chomsky.

A sort of model-free linguistics is also developing in which those trained in the G-T paradigm rarely make explicit use of it as a frame of reference, e.g., Comrie (1981), Givon (1979, 1984), and S. Thompson. Such linguists are insisting on the freedom to make use of whatever model best explicates the issue at hand.

6. Stratificational Grammar. Another theory and a major development within general linguistics must be mentioned because of their promise for the present topic. Stratificational Grammar has been pioneered by Lamb (1966) and elaborated by Lockwood (1972) and others. It developed out of the glossematic theory of Hjelmslev. The work of Fleming (1979, 1988) is making the stratificational model more accessible to philologians and others interested in cross-disciplinary research. In stratificational theory, language is viewed as an integrated whole consisting of several strata (originally in Lamb the phonetic, phonemic, morphemic, lexemic, sememic, and semantic). Analysis is carried out both horizontally (in terms of the tactics of each stratum) and vertically (in terms of realization relationships among the strata). A primary appeal of Stratificational Grammar is its ability to trace the function of language in both directions, i.e., from speaker to hearer and conversely.

7. Discourse Analysis/Text Linguistics. While not a theory per se, Discourse Analysis is perhaps most important among recent methodological developments within general linguistics for the concerns of this article. Discourse Analysis extends the borders of linguistic investigation beyond the sentence to encompass entire sections of material viewed as communicable wholes. Although his teacher Zellig Harris had already pointed in this direction, Chomsky launched his endeavors with the sentence as the limit of analysis.

Impatience with this limitation led to the development of Text Linguistics in Europe during the late sixties and seventies, with leadership from de Beaugrande (1981), van Dijk (1972, 1977), Dressler (1972, 1981), and Petöfi (1983). In the United States, somewhat independently of Europe and known more often as Discourse Analysis, initial interest was stimulated by missionary translators who had learned the futility of sentence-by-sentence translation. Also prominent were such scholars as Chafe (1980), Hopper (1980), and Tannen (1984). The relevance of the entire context of a discourse to even the phonological level of analysis has been demonstrated by Mayers. Text Linguistics, or Discourse Analysis, has become a well-defined and important trend in world linguistics. It now provides one of the most fruitful avenues of rapprochement between linguists and biblical scholars. Among those leading the way in OT studies are

Longacre (1979, 1983), Rabin (1982), Schneider (1974), Winther-Nielsen (1978), and (in the NT) Callow (1974), Funk (1975), Grimes (1975), and Louw (1973, 1981).

C. Biblical Studies vis-à-vis Linguistics

1. Hebrew Grammars. The biblical Hebrew grammars of Gesenius (edited by Kautzsch and translated by Cowley [GKC]); Bergsträsser; Bauer and Leander; and Joüon were written during the 19th century or early in the 20th, and generally reflect the philological approach which developed out of the Renaissance. This approach was based primarily on classical models (with attention to the work of the medieval Hebrew grammarians) and (in the grammar by Bauer and Leander especially) the historical/comparative approach of the 19th century. The classical models had been developed entirely on the basis of Greek and Latin, apart from the study of other languages. The historical/comparative approach had been formulated primarily by Indo-Europeanists at work on the data of the languages of their field, while Hebraists and other Semitists (as well as students of other language families) contributed little to this development. Thus, it was inevitable that these models would often not be suitable for the analysis of Semitic (or other non-Indo-European) languages.

While other Hebrew grammars have been produced, including those of Blau, Lambdin, Meyer, Richter, Sawyer, and Schneider, none has yet appeared on a scale comparable to GKC or Bauer and Leander. Sawyer (1976) has incorporated some insights from descriptive linguistics, and Andersen (1970, 1974) has utilized a tagmemic approach to study the Hebrew verbless clause and sentence. Richter (1978, 1979, 1980) is engaged in a serious effort to analyze biblical Hebrew linguistically, although he has largely bypassed the essential step of phonological analysis. Joseph Malone has studied many specific issues in Hebrew (and Semitic) from a G-T perspective. On the philological side, a considerably increased understanding of biblical Hebrew has been achieved through comparative data from other Semitic languages, especially of the NW Semitic group; but most of these results have yet to find their way into published grammars.

2. NT Greek Grammars. In the early 19th century Georg Benedikt Winer (1789–1858) brought a Port-Royal rationalist perspective to the study of NT Greek and also called for an internal analysis of the language. This latter impetus was profoundly vindicated when Gustav Adolf Deissmann (1866–1937) showed the close relation between the Greek of the NT and that of the Hellenistic papyri. The major grammars of Blass and Debrunner; Moulton, Howard, and Turner; and Robertson were, as in the case of Hebrew grammars, written in the late 19th and early 20th century (with the exception of Turner, who has written more recently). The German work of Friedrich Blass (1843–1907) emphasized a comparison with classical Greek, and Albert Debrunner (b. 1884) incorporated contemporary comparative material in his revision, as did Radermacher and Mayser in their grammars. The English contribution began with Moulton's strong insistence, following Deissmann, on the character of NT Greek as Hellenistic and as a reflection of spoken language. While Howard essentially published the work of Moulton in the second volume, he did indicate more openness to Semitic influence. This emphasis then came to the fore in the third and fourth volumes with Turner's conviction that biblical Greek is unique and that the influence of the Septuagint was determinative in its development. In America Robertson employed the historical/comparative approach. The descriptive linguistic paradigm of the first half of the 20th century is reflected in the Hellenistic grammar of Robert Funk and the introductory NT grammar of Goetchius. Probes in the application of G-T Grammar to the NT text have been made by Mueller (1978) and Schmidt (1981).

3. Synchronic and Diachronic Study. It may be that an unbalanced focus on synchronic analysis among linguists has been one of the significant impediments to interaction with students of biblical Hebrew. Aside from questions of the prehistory of the text and viable differences in the dating of various books and sections, the Hebrew Bible represents over a millennium of language development. The only synchronic reading which is possible (apart from multifaceted comparative reconstruction) is that of the Hebrew of the Masoretes, and their vocalization system was added about another millennium after the consonantal text finally reached its present shape and thus can scarcely represent precisely the Hebrew of any phase of the biblical period. In other words, a realistic linguistic analysis of biblical Hebrew cannot

proceed on a purely synchronic basis. In NT studies this issue is not nearly so pressing because of the relatively short period of time during which all of the material was written.

4. Internal Analysis. In the study of biblical Hebrew, the insistence of Boas and Sapir that each language must be analyzed from within on its own terms instead of through categories derived from other languages cannot be overemphasized. This kind of analysis is still needed. An example of such a need is the frequent discussion of the biblical Hebrew noun in terms of cases, whereas case inflection had almost certainly been lost in Hebrew by the biblical period (though it was present in earlier NW Semitic). Another example is the ongoing effort to discover the categories which will best explicate the Hebrew verb, which categories need to be intrinsically derived from Hebrew itself (as well as from closely controlled cognate Semitic data).

In NT studies, Winer saw the need for internal analysis. The issue has focused thus far particularly on whether the language is simply the Hellenistic Greek of the time (Deissmann, Moulton), or a unique sort of Greek shaped by the influence of Semitic, especially through the Septuagint (Turner). Perhaps what is needed is a fresh approach, working from the vantage point of some model within general linguistics and grounding the study more broadly than only in the question of Hellenistic versus Hebraic (or Semitic) Greek.

5. Interdisciplinary Dialogue. Some of the barriers which have hindered students of the biblical languages in benefiting from general linguistics continue to constitute a challenge. One of these is the simple lack of contact between the fields. Another is the highly technical nature of so much of linguistic literature and the lack of effort on the part of many linguists to communicate to a wider audience, even to scholars in other disciplines. Perhaps even more important, the lack of theoretical consensus among linguists still leaves outsiders hard put to know where to begin in finding a point of entry.

Another serious concern arises from the assumption, continued among most linguists since the late 19th century, that only speech provides primary linguistic data. Some linguists do argue, on the other hand, that writing also affords primary data for linguistic analysis, though of a different sort. Whether or not they are able to make their case, since all data from the ancient world are only written, it is essential for biblical studies that the discipline of graphemics (as the linguistic study of writing is often called) be developed so as to indicate how linguistic research may be applied to written data.

More encouraging signs may be found in the recently renewed attention among linguists to diachronic analysis and in the interest that is being expressed and demonstrated among scholars of biblical and other ancient languages in incorporating an understanding of linguistics into their work. In light of the good which will surely come as this happens, such interest must be encouraged. In light of the barriers which remain, the sights of biblical scholars must be set on a higher goal than merely that of finding another ready-made tool which can be added to their already overcrowded stock of methods for analysis. They must, rather, pursue a deeper insight into the nature of language and, thereby, into the meaning of texts, as they enter into dialogue with linguists. Linguistic theories and consequent methods of analysis can aid biblical scholars immensely. Conversely, as people who work with hard language data, biblical scholars can hope to contribute to the continuing effort of linguists to understand the phenomenon of language.

Those who wish to do further reading may find it helpful to begin with the introductions to general linguistics by Gleason (1961), Lyons (1968), and Robins (1980) and the histories of linguistics by Dineen (1967), Robins (1979), and Sampson (1980).

WALTER R. BODINE

LINUS (PERSON) [Gk *Linos* (Λινος)]. A Christian mentioned after Pudens and before Claudia, who sent greetings along with them to Timothy (2 Tim 4:21). It has been speculated that Linus was the son of Pudens and Claudia, although it then becomes difficult to understand why he is mentioned between and not after them.

Because 2 Timothy is assumed to reflect an imprisonment of Paul in Rome (cf. 1:17)—although Caesarea has also been suggested—Linus is sometimes taken to be the Linus whom tradition identifies as the first bishop of Rome after the apostles. This linking goes back to Irenaeus (*haer.* 3.3.3) who stated that "the blessed Apostles having founded and built up the Church, committed into the hands of Linus the office of the episcopate. Of this Linus Paul makes mention in the Epistles to Timothy." This is then quoted by Eusebius (*Hist. Eccl.* 5.6) who also writes that "after the martyrdom of Paul and Peter, Linus was the first appointed to the bishopric of the church of Rome" (*Hist. Eccl.* 3.2). Eusebius notes that the episcopate of Linus lasted twelve years, after which he handed on his office to Anencletus (*Hist. Eccl.* 3.13). The *Apos. Con.* 7.46 likewise identify a person named Linus as the first bishop of Rome after the apostles and as ordained by Paul. The same text relates him to Claudia as Gk *linos ho klaudias*, i.e., as either her husband or brother. The question of historicity arises beginning with the earliest of these sources, the text from Irenaeus, which no doubt influenced the later sources. Hanson (*The Pastoral Epistles* NCBC, 164) has judged that Irenaeus' notation about Linus is unhistorical: "It assumes that the church in Rome had monepiscopacy in the 1st century, which it certainly had not." In addition, he points out that "it is also probably quite unhistorical to envisage either Paul or Peter or both as entrusting to anyone the leadership of a church which neither of them had founded." Nevertheless, Hanson (*The Pastoral Epistles* NCBC, 164) finds "a faint echo of history in the name [Linus]" for, as he remarks, "Are we to imagine the author of the Pastorals as freely inventing all these names [i.e., Eubulus, Pudens, Linus, Claudia]? It does not seem likely. They are probably part of his oral tradition."

LITERACY. This entry consists of two articles, one covering literacy in the ANE (mainly Mesopotamia and Egypt), and one treating literacy in ancient Israel.

ANCIENT NEAR EAST

Although the ANE has been studied principally from written sources, discussion of the status of writing in its civilizations is only beginning. Many issues are involved. These range from the potentially factual, such as rates of literacy, through levels of literacy to the extent to which writing represents language, and the relation of writing to contemporaneous spoken language. More abstractly, effects of writing on social structure or on cognition are explored. This last problem has received particular attention, because it has been held, despite the counterexamples of Chinese and Japanese, that alphabetic writing which encodes vowels was a necessary precondition for such a phenomenon as the "cognitive revolution" of archaic and classical Greece (e.g., Havelock 1982), and may have similar consequences wherever it is introduced (Goody and Watt 1963; later modified, e.g., Goody 1987). Although few espouse a strong form of this hypothesis, it has stimulated discussion, serves as a point of reference, and is relevant for the world of the Hebrew Bible, with its alphabetical (though unvocalized) form of writing. Most studies that seek to test or

replace the hypothesis examine the way in which writing is used and embedded in social structures, and place more explanatory weight on those structures.

    2. Egypt
B. Discussion

———

A. Forms, Distribution and Use of Writing

1. Mesopotamia and Surrounding Regions. From the 4th millennium B.C. Mesopotamia was linguistically and politically diverse. It strongly influenced areas as remote as Anatolia and Urartu in the 2d and 1st millennia B.C., and Iran in the days of the Persian Empire, while the cuneiform script and some of its languages survived into the Parthian period. All these regions wrote in cuneiform. In view of this enormous spread of time, space, and language, it is not meaningful to speak of one style of "Mesopotamian" literacy. There was a long initial development which created a script that could fully encode a language, with subsequent phases in which writing came to be both more and less widespread and important in social life. This complex picture has an analogy in successive political orders in the region (e.g., Yoffee 1988).

Writing was invented in S Mesopotamia, perhaps at Uruk (Nissen 1985), before the end of the 4th millennium B.C. (Michalowski 1990; Powell 1981). The separate system of Iranian writing, centered either on the Iranian plateau or in Susiana (Khuzestan), is as ancient, but it did not survive. The early tablets from Uruk, which are administrative and "lexical" (Green 1986: 465), have a repertory of about 1200 signs; they cannot be read in any particular language (Green 1981).

Only very gradually was the system modified to encode phonetic elements, perhaps starting from proper names. When a language becomes apparent, it is Sumerian, which has no known cognate. From earliest times, names of Semitic form are found, and there were probably always Semitic speakers in Mesopotamia. To this picture should be added the likely presence of the Elamite language in adjacent Susiana. This multilingualism is important both for the position of writing as a communicative system and for the later adaption of cuneiform for additional languages, a potential that was exploited many times.

The earliest Semitic texts, as against Semitic names, known in the Mesopotamian script are in Fara period tablets from Abu Salabikh (Biggs 1974: 42, 91); different Semitic dialects are attested slightly later from Ebla in Syria. There is controversy as to whether the principal dialect there was the language of Ebla itself ("Eblaite") or a Semitic language of N Mesopotamia—poorly known for this period—adopted with the script at Ebla (Michalowski 1987). From the succeeding Agade dynasty on, Akkadian became the dominant Semitic language written in cuneiform, and is known in many dialects from different areas. It traveled with the script to regions where cuneiform was adopted for different languages; those regions therefore also had multilingual written cultures. The two principal strands of Akkadian are Babylonian and Assyrian, which separated after 2000 B.C. By the time of the Agade dynasty, the isolated language Hurrian began to be written in cuneiform (Wilhelm 1982: 4–5, 11, 106–08). Although this survived for more than a millennium, it never became widespread, except perhaps around the capital of the Hurrian state of Mitanni (Waššukanni; site not identified).

From the mid-2d millennium B.C., the Indo-European Hittite language, together with its local forerunner Hattic (Kammenhuber 1969b) and the Indo-European Palaic and Luwian, were written in cuneiform (Kammenhuber 1969a). In Anatolia, the influence of cuneiform spread beyond the writing system itself with the invention of the hieroglyphic Luwian script, whose pictorial signs may have looked to Egyptian or Levantine models, but whose structure was patterned after cuneiform (Morpurgo Davies and Hawkins 1978). Cuneiform preserves traces of yet further languages, notably Amorite, the traditional language of an ethnic element in the Mesopotamian population of the late 3d and early 2d millennia B.C. (Gelb 1980). Comparable later phenomena are Kassite, which remains almost unknown, and Aramaic, used alongside Akkadian cuneiform in the 1st millennium B.C. and ultimately supplanting it.

Vast numbers of cuneiform tablets are preserved (cf. Veenhof 1986: 2–3), although their distribution is irregular; gaps were illustrated by the discovery of Ebla in the 1970s (Cagni 1987), of Tell Leilan (Eidem 1987), and of the Late Babylonian temple library at Sippar (Black and Ball 1987: 248–49) in the 1980s. Despite this abundance of material, the picture of the use of writing is limited. Most preserved tablets are bureaucratic or administrative.

Continuous language was not recorded until the ED period, and literary texts, narrowly defined, are not known before the Fara period (Biggs 1974: 28–42). The earliest of these are perhaps more sets of cues for oral performance than full texts (Michalowski 1990). Except on cylinder seals, writing was rare in public places and on works of art until the later 3d millennium B.C., and letters were uncommon. The most intense early administrative use of writing was during the Agade dynasty in Akkadian and the succeeding Ur III dynasty in Sumerian, by then probably a dead language (cf. Larsen 1988a: 188).

From the Isin-Larsa period on, Akkadian began to predominate over Sumerian in writing, but Sumerian was transmitted as long as Mesopotamian culture survived and spread to all areas where cuneiform was adopted. Whatever language was used in everyday writing, all known schooling was based on Sumerian, which was fundamental to many features of the cuneiform script and underlay sign lists and lexical lists. The main corpus of Sumerian literature is preserved only in Old Babylonian (OB) and later copies, and thus was in a dead language (e.g., Hallo 1975). The principal early Akkadian literary texts belong to the same period.

The only period during which there was widespread use of writing outside scribal classes was the OB/Old Assyrian (OA), from which large amounts of private correspondence are preserved, notably from the Assyrian trading colony of Kültepe/Kanish in Anatolia (e.g., Larsen 1976). This material uses a reduced range of signs that would have been relatively easy to learn (Larsen 1988b: 132–34; but see Morpurgo Davies 1986: 60–63). OB and OA are markedly different from the Old Akkadian (OAkk) of the Agade dynasty and may not derive directly from it (Reiner 1966: 21), so that they could at times have been relatively close to the current language of the Akkadian-speaking part of the population. The same can be said only of isolated other strands of the tradition, perhaps of Neo-Assyrian (NA) of the 8th–7th centuries B.C. and of subsequent Late Babylonian (LB). The Standard Babylonian (SB) of Akkadian literary texts was an artificial "dialect."

From the 1st millennium B.C. come major collections of literary material, especially the Library of Assurbanipal from Nineveh (Reade 1986; Parpola 1986); traditions of belles lettres, mathematics, and astronomy continued in Babylonia to the end of Mesopotamian culture. From the aftermath of the OB period on, the writing system became more complicated, in that it used an increasing number of signs, with more homophony. The same is true of the relatively short history of Hittite cuneiform, in the later stages of which more words were written in Sumerian and Akkadian (Morpurgo Davies 1986: 60–61). In some cases, these more complex practices could lead to greater "efficiency," because fewer signs were needed to write the same amount of text, but the general tendency is not popularizing. Rather, writing was kept within a scribal class, and there were sanctions, recorded in formal colophons on tablets and in one more explicit text (Beaulieu fc.), against transmitting knowledge of writing outside that class. The scribal group was exclusive also in that it did not include the leaders of states; but those people were as committed as the scribes to maintaining the cultural, as well as the administrative, tradition of writing.

In none of Mesopotamian history is there suitable evidence for assessing rates of literacy. Although in small social groups, such as the OA merchants, the rate may have been relatively high, the general impression is of very restricted literacy.

2. Egypt. Writing was invented in Egypt after the cultural and political unification of the country in late-predynastic times (ca. 3100 B.C.). The Egyptian script belongs to a unilingual culture and was hardly used to write other languages; even dialect forms are rare. There are two principal variants of the script, hieroglyphs, which have a pictorial form and are integrated with the system of pictorial representation, and cursive, the later hieratic, which was used for most writing on the artificial medium of papyrus. From about 650 B.C. a second cursive form, demotic, evolved. This was thenceforth the business script; from the 4th century B.C. or earlier, literary, and later religious, texts were also written in it.

The hieroglyphic script has a broader significance because of its integration with art; together these formed both the main medium of display and, in times before continuous language was written down, the central definition of the meaning of the Egyptian state and cosmos (Baines 1989). Most pictorial representation includes some writing. The presentation of the social order and cosmos on the monuments is strongly hierarchical, and positive values became attached to forms of writing that did not employ continuous language. Perhaps for this reason, it was some centuries before continuous language was written down, perhaps in the late 2d dynasty, even though the requisite sign repertory existed earlier.

Most preserved early writing is in ink or incised, on pottery, stone vases, or ivory tags, but papyrus was perfected by the middle of the 1st dynasty. Papyrus and wooden writing boards were the main writing media for administration. Because papyrus can be preserved only in dry conditions, the cursive written record is much less abundant than that on clay from the Near East (Veenhof 1986: 2–3); only for the New Kingdom village of Deir el-Medina (Valbelle 1985) and for the Roman period is the volume comparable, and most of the latter material is in Greek (Montevecchi 1973; Youtie 1981). Egypt has, however, preserved altogether more monumental writing than the Near East.

The earliest written materials are broadly administrative (Dreyer 1989), but it is uncertain whether writing was invented for administration and then adopted for display, invented for display, or devised for both at once. It is also an open question whether its invention was independent or was due to stimulus diffusion from Mesopotamia, whose influence was strong in the Delta (Von der Way and Schmidt 1987). Writing was used as the instrument of the unified nation state. In most periods, developments were introduced from the center.

The first major advance dates to the 2d–4th dynasties. Brief speeches of gods were recorded, and by the end of the 4th dynasty administrative documents including whole sentences were composed (Posener Kriéger 1979). The language of this period is termed Old Egyptian; it is not unitary. Most continuous Egyptian texts are in a simple form of meter (*LÄ* 4: 1127–54). The earliest form of "literary text" seems to have been the list, as in Mesopotamia; these are known from the 2d dynasty on (*AEL* 1: 3–5). In the 5th–6th dynasties, public and private uses of writing proliferated (Roccati 1982), and the Pyramid Texts in later pyramids provide indirect evidence for large corpora of religious texts, while medical and mathematical texts may also have been written. The design of documents became very elaborate (Helck 1974). Conventionalized representations in nonroyal tombs show scribes in almost every context of production and administration. The inner elite and kings were literate.

The central Old Kingdom is the period best suited for estimating the extent of literacy. If the size of the inner elite (a few hundred) and their supporting scribes (perhaps ten times that number) is related to the total population (perhaps a million), a rate of literacy of 0.3–1.0 percent emerges (Baines and Eyre 1983: 65–74). All these people will have been males in the service of the state or officials; there is no place for nonprofessional literate people and little evidence for female literacy.

During the 1st intermediate period, writing may have spread a little, while the succeeding Middle Kingdom saw a pervasive bureaucratization and the composition of much literature. The language of these periods is termed Middle Egyptian. Its orthography was regularized in the early 12th dynasty; it was probably an artificial idiom, for it is little different grammatically from Old Egyptian.

Middle Kingdom literature (*AEL* 1) focuses on the Instruction (or Wisdom) text, but includes other genres, notably narratives such as that of Sinuhe. Finds of groups of papyri from the 13th dynasty (Gardiner 1955) to the Roman period (Tait 1977) show that "literature" was the sum of transmitted old texts and could extend to copies of inscriptions. The chief context in which belles lettres were certainly used was in schools. Middle Kingdom literature is complex, serious, and focused on elite concerns; it was "classical" for later periods, and allusions to its phraseology show that it pervaded later written culture.

There was little essential change in the position of writing in the New Kingdom, but the culture of the period was more diverse, particularly in the 19th–20th dynasties, when Late Egyptian joined Middle Egyptian as a written form rather nearer to the spoken language. Monumental inscriptions of those dynasties stand linguistically between Middle and Late Egyptian. Later inscriptions reverted to Middle Egyptian, while documentary Late Egyptian continued to develop, being transformed ultimately into

demotic (from the 7th century B.C.), which designates a form both of the script and of the language (Johnson 1986). From the later New Kingdom on, the chief repositories of traditional culture were the temples. The linguistic diversity of texts grew steadily, while in later times the spread of literacy may have declined. Here, the development of demotic is crucial, because the connection between hieroglyphs and the cursive was broken, and hieroglyphs developed from a repertory of a few hundred signs to one of several thousand, used in the most elaborate fashion in temple inscriptions of the Greco–Roman period (Kurth 1983). Literacy was probably less widespread in demotic than it had been in hieratic, while late hieroglyphic was the preserve of a small priestly group.

Ptolemaic and Roman rule did not bring an end to Egyptian writing, but the primary administrative language of the country was now Greek, and the rate of literacy in Greek was much higher than in Egyptian. Although there was considerable mixing of people over this long period, little Greek influence can be seen in Egyptian texts. Native written traditions survived and developed into the 3d century A.D., before disappearing in the face of changes in the Roman Empire and the spread of Christianity.

B. Discussion

The patterns of development and use of writing in the two principal cultural areas of the ANE are different in detail but share important features. Writing is part of the definition of these societies or civilizations and of their cultural awareness. This point is clearer for Egypt than for Mesopotamia, but is significant there too (Machinist 1986), despite the fact that writing was not used for high-cultural purposes for several centuries after its invention. Literacy was restricted in both cultures, being integral to administration and high culture in Egypt and subservient to those forces in Mesopotamia. In both, development toward encoding continuous language was slow. Even when written language arrived, it was restricted to particular dialects or standardized forms and subject to many conventions. In Mesopotamia and peripheral regions, the written language was a foreign one for many of its users. These restrictions of writing go together with limited access to written and artistic display. For Egypt this was chiefly in palaces, temples, and tombs; in Mesopotamia too, palaces (e.g. Winter 1981) and temples were central.

Thus, the position of writing in these societies could hardly have led to mass literacy; in Mesopotamia there were also formal barriers to learning to read and write. In neither region would acquiring literacy have brought obvious benefits for those outside the administration. If the question needs to be rehearsed, this position of writing might be sufficient explanation for the absence of some of the developments of Greece. But in Greece, the principal stimuli to development may have come from social forces other than writing (e.g., Murray 1980: 90–99), so that the argument would then be irrelevant, even if, as is likely, writing is necessary to sustain the complex and continued development of abstract modes of thought and argument.

If more appropriate criteria are used, the position and effects of writing in these civilizations remain crucial. The whole administrative apparatus was predicated on writing (cf. Gibson and Biggs 1987). Writing allowed historical transmission of cultural materials over vast spans of time with quite accurate knowledge of the periods from which it derived (more so in Egypt than in Mesopotamia; cf. Baines 1988; Michalowski 1983; see in general Assmann 1988). In Mesopotamia there were developments of mathematics and astronomy that would hardly have occurred in oral form (Machinist 1985). In Egypt, the religious controversy and development of the Amarna period belong in a high-cultural and written tradition (Assmann 1983: 96–143). These examples could be multiplied.

From an opposite perspective, it is important to see the effects of writing in the context of limited literacy. In societies where few are literate and writing is normally read aloud during composition and retrieval, the oral context dominates and envelops the written. That context is virtually lost, but it was all that most people experienced; no one was embarrassed not to be literate (Morpurgo Davies 1986: 55). Yet elite projects and elite display, which utilized and were organized through writing, consumed such a high proportion of resources that the written record gives a truer picture than it would of less unequal semi-oral communities. As well as recording that inequality, writing was a powerful aid to its existence.

JOHN BAINES

ANCIENT ISRAEL

The Bible itself is a witness to Hebrew and Hellenistic literacy, the products of people who wrote in the expectation that others would read their works. Who could write and who could read in ancient Israel are questions which can be discussed from two independent sources of evidence: the information contained in the OT and the information from Hebrew and other ancient inscriptions.

A. The Biblical Evidence
B. The Epigraphic Evidence
C. Conclusions

A. The Biblical Evidence

From the book of Exodus onward, writing, books, and reading are mentioned frequently and without comment. Moses is portrayed writing the terms of God's covenant with Israel (Exod 24:4), the stages of Israel's journey from Egypt to Canaan (Num 33:2), his song (Deut 31:25), and the law (Deut 31:9), the last two being written to be taught and to be read in public respectively. The laws given in writing by God (Exod 32:16; 34:1, 4) were called "the book of the law" (Deut 28:58). Other leaders, secular and religious, read and wrote: Joshua from the book of the law (Josh 1:8; 24:26), Samuel the duties of the king (1 Sam 10:25), David letters to Joab (2 Sam 11:14), Jezebel letters in Ahab's name (1 Kgs 21:8f.), the king of Damascus to the king of Israel (2 Kings 5), Jehu to men of Samaria (2 Kings 10), Hezekiah read letters from Sennacherib and Merodach-Baladan (2 Kgs 19:14; 20:12). In all these cases the rulers may have read or written themselves but, equally, secretaries ("scribes") may have acted on their behalf, for there would be no need to mention the latter's role unless it was significant for the narrative, as when Jehudi read Jeremiah's oracles to Jehoiakim and the king cut up the scroll after a few columns had been read (Jer 36:20–26). However, Deut 17:18–19 does envisage Israelite kings copying and reading the law book for themselves. Kings had their official secretaries from David's reign (2 Sam 8:17; cf. 1 Kgs 4:3; 2 Ki 12:10), and their control presumably extended over the clerks who operated Solomon's revenue-collecting system (1 Kings 4) and whatever administrative arrangements took its place in Israel and Judah. Local centers responsible to the capital would generate a certain amount of reading and writing in normal circumstances, enabling such levies as Menahem's to be raised (2 Kgs 15:19–20). Hezekiah's Passover proclamation assumed it could be read throughout the land (2 Chr 30:6).

While tax-collecting may have brought the ordinary farmer or citizen into contact with writing on occasion, as would any regular attempt to ensure all men paid the half-shekel tax to the sanctuary (Exod 30:13; 38:25ff.; cf. Matt 17:24–27), biblical laws expected a greater familiarity with those skills. A man

divorcing his wife was to write a document of divorce for her (Deut 24:1–3; cf. Isa 50:1; Jer 3:8), and God's laws were to be written on the doors and doorframes of the houses (Deut 6:9; 11:20). Evidently, reading and writing were assumed to affect life at most levels; their existence was common knowledge, even if their practice was largely in the hands of specialists, the scribes. Isaiah could meet people able to read and people unable to read (Isa 29:11–12). The public reading of the Law, even if not carried out so regularly as prescribed by Deut 31:10–13, would emphasize the role of the book (cf. 2 Kings 22). Inscribed monuments visible to travelers, would also advertise the use of writing (cf. Josh 8:30–35).

If a man had a Scriptural text on his doorpost, did that bring an awareness of books and literature? The question is almost unanswerable from the biblical text. The ubiquity of references to writing and writing materials of several kinds, using terms which are seldom foreign to the Hebrew language (Heb *qeset* 'palette' came from Eg *gst,* since the art of writing in ink originated in Egypt), does seem to imply that books were not great rarities confined to temple or palace libraries. And although many of the references occur in texts from the latter part of the Monarchy, some are to be found in parts of the Pentateuch which standard literary analysis sets in the earlier part (e.g., Exod 17:14; 24:7 in E; Exod 32:32–33 in J).

B. The Epigraphic Evidence

Writing and reading were skills 2000 years old in Babylonia and Egypt by the time Israel became a kingdom. Although the scripts of both cultures had been current in Canaan, they gave place to the locally invented alphabet at the end of the 2d millennium B.C., and it was that script which the Israelites adopted.

Examples of ancient Hebrew writing are most plentiful from the 7th century B.C. and the early 6th, that is, from the last century of Judah's existence. Most are short notes or messages written in ink on potsherds, the scrap-paper of ancient times (see WRITING AND WRITING MATERIALS). They have been found in major towns such as Jerusalem and Lachish, in military settlements like Arad and Aroer, and in smaller places like Khirbet Qumran and Vered Yericho. Labels describing contents or naming the owner were scratched or pecked on wine jars at Gibeon and many other sites.

The most common inscribed objects are stone seals bearing the owner's name, often followed by the father's name, occasionally by a title. Hundreds are known either in the original stones or from their imprints on tiny lumps of clay. These clay bullae sealed papyrus documents. This is proved both by the impressions of papyrus fibers left on the backs of the bullae and by the recovery of similar bullae still attached to papyri in Egypt (e.g., at Elephantine; see *ArchEleph,* pl. 14a). Papyrus documents will not survive in the damp soil of most Palestinian sites, but in the dehydrated conditions of the caves near the Dead Sea one fragment has lasted from this period. Originally it carried a letter, then the ink had been partially washed away and an accountancy list written over it; papyrus was costly or hard to obtain. Bullae have been found in excavations at Jerusalem and Lachish, and by chance at other sites. A hoard of 255 obtained from antiquities dealers represents an archive of scores of papyrus documents (see Avigad 1986). Seal-stones are found in burials and in settlements, one coming from a remote farmstead in the Buqei'ah valley W of Qumran. Some seals were impressed into the fabric of jars, to indicate the place of origin or the capacity or for other purposes. Another class of inscribed stone from this period is weights. Fractions of the shekel had their value incised on them in words, obviously intended to be recognized, for some of the weights differ only a little in size. Besides these regular products of scribes and engravers, there are graffiti in tombs and other places, the spur-of-the-moment scribbles of mourners or visitors (e.g., Khirbet el-Qom, Khirbet Beit Lei, the caravanserai at Kuntillet Ajrud). Formal inscriptions are rare, a fact to be attributed to the constant occupation and rebuilding of major towns rather than to a disinclination to make such things. Small pieces of inscribed monuments have been found in Jerusalem and Samaria, and tombs of the very wealthy in Silwan had carefully cut notices declaring ownership and cursing plunderers. The outstanding piece of ancient Hebrew writing is the Siloam Tunnel Inscription (*ANET,* 321), engraved on the rock wall by lamplight in a position where few people would ever see it. Its flowing script preserves the handwriting of a proficient scribe. See SILOAM INSCRIPTION.

All of these inscriptions date from the last 150 years of Judah's history. The Samaria Ostraca, consisting of over a hundred pieces, represent the work of clerks in the Israelite capital about 775 to 750 B.C. Apart from them, there are few ancient Hebrew texts which can be dated much before 700 B.C. This does not

mean there was little writing in Israel earlier in the Monarchy. The Gezer Calendar is one piece of evidence from the 10th century B.C. for a knowledge of writing in Palestine, although the text is not certainly Hebrew. The monumental possibilities of the 9th century are demonstrated by the Moabite Stone, product of a culture so close to Judah's in nature that it would be hard to suppose Hebrew scribes incapable of preparing a similar memorial.

Epigraphic evidence fails to supply any Hebrew book earlier than the Dead Sea Scrolls. One discovery does illustrate the appearance of a book in the time of Isaiah (ca. 700 B.C.). Although not a Hebrew text, the inscribed plaster fragments from Tell Deir ʿAlla cannot preserve a very different form. Written in black ink framed at the top and left side with red rulings and with initial and certain other words in red, the text, in Aramaic script, describes visions of Balaam son of Beor. No doubt this is an enlarged version of a column of a scroll, a book about Balaam. (See also DEIR ʿALLA (TEXTS)). The form is seen more extensively in the oldest surviving W Semitic book scrolls, the Aramaic papyri containing the Wisdom of Ahiqar, and a translation of Darius the Great's Behistun inscription copied in the 5th century B.C. and found at Elephantine (see Millard 1982: 150).

C. Conclusions

Measuring literacy is a subjective exercise, dependent upon definition of the term and breadth of information on hand. For a dead culture the inquiry is almost wholly confined to assessing the products of the literate members of the culture. Israel provides the rare opportunity to set the evidence of a traditional literary text, the Bible, beside epigraphic remains. At once, some speculations arising from study of the former are extinguished by the testimony of the latter. Assertions that writing was confined to palace and temple to centers of administration and cult (e.g., Phillips 1968: 194) are now disproved. The wide distribution of ostraca and graffiti beyond major towns to military outposts and farms (see Millard 1985a: 302, 310–12) attests the presence of readers and writers in such places. Even if their presence was temporary, it disseminated awareness of the skills of literacy. Discovery of Hebrew ostraca in hoards has led to the supposition that potsherds were the Hebrew scribes' normal writing material, and that all their works were short (Warner 1980: 89). This is a misunderstanding of the situation. Ostraca survive because they are all but indestructible, while papyri perish. The nature of many Hebrew ostraca implies the production of more extensive documents collating and ordering their data. Where both ostraca and papyrus records survive side by side, as they do in Egypt, notably in the Aramean–Jewish colony at Elephantine, the ostraca carry ephemeral notes, messages and lists; the papyri contain legal deeds, longer or more important letters, memoranda and other documents that were to be kept for future consultation, and ledgers incorporating the details recorded on individual ostraca. In Egypt books were written on papyrus scrolls, and it is reasonable to suppose this was also true in Israel.

Protagonists of a major role for oral tradition in ancient Israel have developed the idea that an oral community's literature was only put into writing at moments of crisis (Nielsen 1954). In the face of an enemy threat, memories were tapped and the accumulated knowledge of the population written down. Apart from the inherent unlikelihood of this scenario, the epigraphic evidence tells against it. Documents from the closing stage of an occupation have a greater likelihood of surviving. Moreover, in Babylonia and Assyria where manuscripts of literary works may bear dates, the copying was clearly done over several years before the phases ended.

The distribution of Hebrew epigraphic material is one sign of a widespread awareness of writing; another is the large number of seals, the majority bearing the owners' names without any distinctive design, so that one could be distinguished from another only by the shapes of the letters. There are too many of these seals for them to have been only the insignia of government officers in the small state of Judah over the last hundred years of its life. Clearly they belonged to a wider group of landowners, merchants, and religious personnel. Either these owners or their secretaries had to read the tiny letters to identify the seals. Some expectation that seal legends might be read is also implicit in the impressions on jars. The fact that two common types carried the words "royal property" (*lmlk*) and the name of a place (Hebron, Soco, Ziph, or Mamshit) above and below a special emblem (Lemaire 1982) suggests some

value was attached to the presence of the letters. Similarly, names scratched on pots imply ability to distinguish one from another on the part of the owners, at least.

The simplicity of the alphabet may be seen as an aid to literacy because it needed far less time and effort to memorize than the hundreds of Babylonian or Egyptian signs. Conservatism in scribal circles and the integration of writing systems in the national cultures helped Babylonian and Egyptian to continue into the Christian era. The invention of a cuneiform alphabet in Ugarit during the LB Age in imitation of the Canaanite alphabet is testimony to the scribes' realization of the advantages the new script brought. The effect is shown by the greater proportion of inscribed to uninscribed seals in Israel and Judah by comparison with Assyrian and Babylonian seals, and by the occurrence of casual graffiti in alphabetic scripts.

Whether in knowledge of the skills themselves or from observation of others using them, it is arguable that many Israelite and Judean citizens were aware of writing and its powers. Nevertheless, in normal daily business it was the professional scribes who did most of the reading and writing. Scribes were active in Canaan before Israel ruled there, already known by the term *sōpēr.* (This word appears as a W Semitic loanword in an Egyptian composition of the 13th century B.C., Papyrus Anastasi I [*ANET,* 476]; it is accompanied with the determinative indicating a scribe's palette, making its meaning clear, *contra* McKane [1965: 23ff.]). Some held high positions in court (e.g., Shaphan [2 Kings 22]), others worked as secretaries to individuals (as Baruch did for Jeremiah [Jeremiah 36, 45]), or presumably hired their services to anyone who had need of them. Some people who were literate did other work. The writer of one of the Lachish Ostraca protested indignantly, "My lord has as good as said, 'You don't know how to read a letter.' As the Lord lives, no one has ever had to read a letter to me! In fact, when I've read any letter that has come to me, I've been able to repeat its contents in detail!" (Lachish Letter 3; see Lemaire 1977: 100–1). The writer was commander of a military outpost. How such a man or any scribe learned to read and write is uncertain; there may have been schools with classes of pupils, or practicing scribes may have taken apprentices. Part of the training was probably the copying of works of Hebrew literature as a means to inculcate accuracy, grammar and style, and as a mental stimulus, as it was in Egypt and Babylonia. See EDUCATION (ANCIENT ISRAEL). The range of Hebrew literature in the Bible is comparable with surviving texts from those cultures, although not identical with them, and it would be strange if such works were preserved in writing in neighboring regions yet not in Israel and Judah. It is also noteworthy that many texts were written down at the time of composition in adjacent states, including such various genres as treaties or covenants (Aramaic from Sefire, *ANET,* 531–41), narratives of victory (like the Moabite Stone, *ANET,* 320), and prophetic oracles (*ANET,* 605–7; 623–26; 629–32; cf. Millard 1985b). Israel is unlikely to have had totally different literary habits.

The biblical evidence actually complements the epigraphic. The creation of a second copy of Jeremiah's oracles is not set out as an extraordinary event (Jer 36:28–32), nor is the writing of a deed of sale (Jeremiah 32). While the number of ancient Israelites who regularly read and wrote may have been very small and mostly professional scribes, the number who possessed marginal literacy was larger, and still more would likely have been able to recognize and write their names. (At Elephantine several legal documents bear signatures in the writing of people who were not used to using a pen; see Naveh 1970: 29–30). The majority of the people would have encountered writing on some occasion and would be aware of the power and possibilities it possessed, even in quasi-magical form (cf. Num 5:11–31 and the silver amulet plaques engraved with a form of Num 6:24–27 found in a late 7th century B.C. tomb in the valley of Hinnom).

In the light of the evidence from all sources it appears that literacy reached beyond the palaces and temples of Israel and Judah to quite small settlements. This means prophetic oracles, hymns, laws could have circulated in written form from an early time to offer an authority and a control on oral tradition. In discussion of the history of the books of the OT the role of Israelite literacy deserves to be given greater prominence.

A. Canonical and Uncanonical

In this article "literature" is used in a comprehensive sense: it is not restricted to works which were consciously composed for literary effect, but includes occasional compositions like personal letters. Moreover, no distinction is made between canonical and uncanonical literature. Such a distinction is important theologically and ecclesiastically, but not for the study of literary history. The earliest Christian literature is indeed found in the NT; that is to say, it comprises works which the Church eventually acknowledged as canonical. But canonical and uncanonical writings overlap chronologically: thus the letter of Clement of Rome to the Corinthians certainly, and the letters of Ignatius probably, antedate the latest NT documents (2 Peter, for example).

All the literary genres found in the NT are represented in uncanonical Christian literature of the earliest centuries A.D. Alongside the letters of Paul may be set the letters of Ignatius, half a century later. Alongside the four NT Gospels stand the "apocryphal" gospels, whether orthodox or heterodox—of a later date, it is true, but following the same literary pattern. Alongside the Acts of the Apostles stand the volumes of apocryphal Acts; alongside the Revelation of John stands the *Revelation of Peter*.

Of these genres only the first (letters or epistles) was familiar in the Greco–Roman world; the other three were distinctively Christian—or, so far as apocalypses are concerned, Jewish and Christian.

1. Gospels. All four of the canonical Gospels tell the story of Jesus' ministry, from his baptism to his death and resurrection. The first three (the Synoptic Gospels) share a considerable body of primitive Christian tradition, relating to both deeds and sayings of Jesus. The inclusion of so much common material, and the combination with this of material special to each evangelist, present us with what is commonly called the SYNOPTIC PROBLEM. The gospel of John has a core of narrative material, covering the same period but representing another line of tradition; this is set in the context of a body of teaching material, mainly in the form of discourse, showing a distinctive theology and style which are characteristically Johannine.

One of the earliest of the uncanonical gospels, the *Gospel of Thomas,* is a collection of 114 sayings ascribed to Jesus. About half of these have affinities with sayings recorded in the canonical Gospels. The *Gospel of Thomas* first became known from Greek papyrus fragments unearthed at Oxyrhynchus, Egypt, at the end of the 19th and beginning of the 20th century. Its complete text, in a Coptic version, was included in one of the thirteen papyrus codices discovered at Nag Hammadi, Upper Egypt, about 1945.

The later gospels were designed in part to supply information about Jesus beyond what is found in the NT Gospels. Most of them are attached to the name of an apostle or some other prominent figure in the primitive Christian story. While the NT gospels of Matthew and Luke give some account of Jesus' birth and infancy, others—the "infancy gospels"—undertake to give details of his parentage and early days which pious readers were anxious to know. The *Protevangelium of James,* for example, begins by relating the conception, birth, and upbringing of Mary, the mother of Jesus, and goes on to describe the birth of Jesus and its immediate sequel. The *Infancy Gospel of Thomas* contains stories of Jesus' boyhood, presenting him as an infant prodigy both at school and at play.

The *Gospel of Peter,* or all that is left of it, is a "passion narrative"; it was popular in some quarters of the early Church until a bishop of Antioch, at the end of the 2d century, exposed its docetic tendency: it represented Jesus' suffering on the cross as being apparent, not real.

The *Gospel according to the Hebrews* and the *Gospel according to the Egyptians* seem to have circulated in Alexandria among Jewish and gentile Christians respectively. The former bore some kind of relationship to the canonical gospel of Matthew, but includes some material not found there, such as the account of Jesus' appearance after his resurrection to Matthew's brother James (cf. 1 Cor 15:7). The *Gospel according to the Egyptians* has more of a gnostic tinge, as in Jesus' declaration to Salome, "I have come to destroy the works of the female." This implies an end to the cycle of conception, birth,

parenthood, and death, with the reunion of male and female (or the reabsorption of the female in the male) in one person, as in the time before the formation of Eve.

The motif of Jesus' imparting further teaching to his disciples after his resurrection (cf. Acts 1:3) is found in a number of early Christian writings. About the middle of the 3d century, for example, an Egyptian gnostic wrote a Greek work known as *Pistis Sophia. Pistis Sophia* ("Faith Wisdom") probably represents the human soul, endeavoring to attain salvation. The work survives in a Coptic version. In it Jesus continues to live with his disciples for eleven or twelve years after his resurrection and tells them many things about salvation, especially in reply to questions, asked preeminently by Mary Magdalene (see PISTIS SOPHIA).

2. Acts. In the second half of the 2d century, there began to appear a body of "Acts" literature, of the same general character as the NT Acts of the Apostles, ascribed to Paul, Peter, Andrew, John, and Thomas.

The *Acts of Paul,* composed about 160 by a presbyter of one of the churches of Asia ("from love of Paul," as he said), is an early example of Christian fiction. It records various adventures of Paul; the most popular part of the work describes the activities of his female disciple Thecla. Unlike the Paul of the Pastoral Epistles, the Paul of this work deprecates marriage but promotes freedom of ministry for Christian women. The author's good intentions were not appreciated by his church leaders; he was deposed from the presbyterate (Tert. *De Bapt.* 17).

The *Acts of Peter* deal with Peter's residence in Rome, culminating with his crucifixion under Nero. The work includes an account of his encounter in Rome with Simon Magus. The *Acts of Andrew* (early 3d century) tell of Andrew's apostolic activity and his martyrdom at Patras. The *Acts of Thomas* and *Acts of John* are gnosticizing works. The former relates Thomas' evangelizing of India; it includes a beautiful poem called the *Hymn of the Soul,* about a prince who goes down to Egypt to recover a pearl of great price. The latter is said to have been composed by one Leucius, after whom all five of these *Acts* compositions are sometimes, but misleadingly, called the Leucian *Acts.* The *Acts of John* contains a poem, the *Hymn of Christ,* which has been set to music (as the *Hymn of Jesus*) by Gustav Holst; like the rest of the work, the hymn portrays a docetic Christ.

The works called the *Clementines,* claiming the authority of Clement of Rome, share some of the characteristics of the apocryphal Acts. Two treatises deserve special notice: the *Clementine Homilies* and the *Clementine Recognitions.* These are to be dated in the 3d or early 4th century, but are based in part on earlier documents no longer extant, such as the *Acts of James* and the *Travels of Peter.*

The *Clementine Homilies,* which are introduced by an *Epistle of Peter to James,* comprise twenty discourses sent by Clement in Rome to James of Jerusalem; they give an account of Clement's travels in the East, where he met Peter and witnessed his contest with Simon Magus. The *Clementine Recognitions* record the adventures of Clement's parents and brothers, who lose touch with one another until they are "recognized" by Peter and reunited with one another and with Clement. Their theological tendency is Judaistic and Gnostic, but this probably belongs more to their sources than to their final authors.

3. Apocalypses. Apocalyptic literature originated in a Jewish milieu, although the work from which it is so called is the NT Revelation of John (the Apocalypse or "unveiling" par excellence). Apocalypses usually take the form of visions in which the seer, often a figure from earlier times (like Enoch), is shown things inaccessible to ordinary knowledge, such as the unexplored recesses of outer space or the mysteries of the divine purpose regarding future events.

The Revelation of John, firmly based in the contemporary situation in which the Church's prospects seemed hopeless, with the might of the Roman Empire deployed against it, looks forward to the triumph and universal sovereignty of Christ and his persecuted followers.

The *Revelation* (or *Apocalypse*) *of Peter,* which was read in some churches as an apostolic work from the late 2d to the 5th century, paints lurid word-pictures of the fate of the damned in the afterlife, and for long exercised an influence on Christian art, as in Dante's *Inferno* and Gustav Doré's illustrations of it.

A number of less important apocalyptic writings were current in the early Christian centuries. There was, for example, the *Apocalypse of Paul,* which undertook to divulge the "things that cannot be told"

which the apostle heard on the occasion when he was "caught up to the third heaven" (2 Cor 12:2–4); it was evidently composed in the 4th century and had only a limited circulation.

B. Apostolic Fathers.

The Apostolic Fathers, so called since the 17th century, are a group of Christian writers of the first few generations after the apostolic age, from the end of the 1st century to about the middle of the 2d.

1. Clement of Rome. Clement, foreign secretary of the church in Rome, is credited with the authorship of a letter sent by that church to the church in Corinth, expostulating with it for its unruly behavior (commonly dated ca. A.D. 96). The so-called *Second Letter of Clement* is an anonymous homily of rather later date.

2. Ignatius and Polycarp. Of great importance are the seven letters which Ignatius, bishop of Antioch, sent to six churches and one individual when he was being taken through Asia Minor on his way to martyrdom in the Roman Colosseum (ca. A.D. 115). The one individual to whom he sent a letter was Polycarp, bishop of Smyrna. A letter of Polycarp has survived (possibly a combination of two letters) in which he replies to a request from the Christians of Philippi for copies of the letters of Ignatius which they thought he might be able to procure for them. Polycarp was a true "apostolic father" in the sense that he was believed to be a disciple of the apostles; he lived on to suffer martyrdom at the age of eighty-six (A.D. 155/6). An account of the *Martyrdom of Polycarp* has been preserved among the Apostolic Fathers.

3. Hermas. The *Shepherd of Hermas* is a work, partly allegorical and partly apocalyptic, composed by a Roman Christian early in the 2d century. It deals with moral problems which ordinary Christians were likely to encounter in daily life and attained great popularity in the West; at one time it almost made its way into the NT canon.

4. Didache, Barnabas and Others. The DIDACHE, or *Teaching of the Lord to the Gentiles through the Apostles* (a title based on Matt 28:18–20), is a primitive manual of church order, originating perhaps in Syria towards the end of the 1st century. (Later manuals of church order, such as the 3d-century *Didascalia* and the 4th-century *Apostolic Constitutions*, were modeled on the *Didache*.) Among the traditional material which the *Didache* contains is a body of ethical teaching, possibly of Jewish origin, called "The Two Ways"—the way of life and the way of death. This body of teaching appears also in the *Letter of Barnabas*, a document of approximately the same date, apparently of Alexandrian origin. The *Letter of Barnabas* is concerned to show that the Jews have misinterpreted the levitical ordinances of the OT by taking them literally; when they are understood allegorically, they are seen to impart moral lessons of permanent and universal validity.

5. Other Epistles. The anonymous *Letter to Diognatus* was sent by a Christian writer in the second half of the 2d century to an inquirer. It reveals a deep appreciation of the love of God displayed in the gospel and compares Christians' relation to the world with that of the soul to the body.

The *Epistle of the Apostles*, having come to light only in 1895, has not been conventionally included among the Apostolic Fathers. It purports to be a letter addressed to the churches by the apostles (including Nathanael, with Peter and Cephas named as two separate persons) and summarizes the main articles of Christian faith and hope. It was written in Greek, apparently in the province of Asia about the middle of the 2d century, but is known only from Latin, Coptic, and Ethiopic versions.

C. Apologists

One variety of Christian literature which flourished during the 2d century was apologetic. Christian apologists wrote to defend their faith against popular slander and official repression, and also against rival forms of belief and worship such as Judaism and Greek and Roman paganism.

1. Quadratus and Aristides. Some of the earliest works in this category, mentioned in ancient writings, are almost entirely lost, like the *Apology* of Quadratus, who about A.D. 124 addressed a defense of Christianity to the emperor Hadrian. Eusebius (*Hist. Eccl.* 4.3.2) preserves one sentence from it, in which Quadratus claims to have seen in his youth some people who had been healed, and even raised from the dead, by Jesus.

The *Apology* of Aristides, surviving complete in a Syriac version and partially in some other forms, was addressed to Antoninus Pius (138–161); it reviews other religions and concludes that Christians have a worthier appreciation of God than Greeks, barbarians, or Jews.

2. Justin Martyr. One of the greatest Greek apologists was the philosophically trained Justin, who addressed a lengthy defense of Christianity to Antoninus Pius and his two designated successors, and a shorter one, some time later, to the Roman senate. He argues that Christian faith is entirely harmonious with reason and defends Christians against current calumnies. These defenses brought Justin no advantage: he was executed, with a number of his fellow-Christians, about 165, by sentence of the Roman urban prefect (their trial is reported in the almost contemporary *Acts of Justin*). His Apology provides incidental information about Christian life and church practice in his day. Another of his works, his *Dialogue with Trypho the Jew* (ca. 140), undertakes to prove that the Church is the true Israel, in which the law and the prophets find their proper fulfillment.

3. Tatian and Athenagoras. Justin's pupil Tatian, an Assyrian by birth, wrote an *Address to the Greeks,* which defends the antiquity and purity of Christianity over against Greek paganism. Whereas Justin ascribed all that was good and true in Greek culture to the divine "word" (*logos*) which in due course became incarnate in Jesus, Tatian dismissed Greek culture and religion alike as wholly evil. Tatian is best known as compiler of the *Diatessaron,* a rearrangement of the four canonical gospels in which their component parts were unstitched and reassembled so as to form one continuous narrative (ca. 170).

Tatian's contemporary Athenagoras addressed a *Supplication* to Marcus Aurelius and his son Commodus (ca. 177), refuting defamatory reports about Christian morality. He also wrote a work on the resurrection of the dead.

4. Latin Apologists. Chief among the Latin apologists are Minucius Felix (early 3d century), whose *Octavius* reports a debate between a Christian and his pagan friend, which results in the pagan's conversion, and (most outstanding of all) Tertullian of Carthage, whose *Apology* (ca. 197), addressed to the governors of Roman provinces, exposes the absurdity of the accusations popularly leveled against Christians, and argues that those accusations can more properly be leveled against pagan deities.

It is not clear that the emperors and magistrates to whom these works were addressed ever saw them; there is certainly nothing to suggest that they had any effect on public policy toward Christians.

D. Heretics

The word "heretics" is used here in no pejorative sense: it denotes those Christian teachers who deviated from the line maintained by the leaders of churches which claimed to have been founded by apostles.

1. Marcion. Marcion, from Sinope on the Black Sea, produced (ca. 144) the first edition of the Greek NT of which anything is known. His edition, published at Rome, presented a text which reflected his dogmatic presuppositions. He was a wholehearted devotee of Paul, dedicated (like him) to the gospel of free grace; but he made a sharp cleavage between the Creator God of the OT, the God of Israel, and the previously unknown God whom Jesus revealed as the Father. The OT, he held, had nothing to do with the Christian revelation, and NT passages which seemed to recognize the authority of the OT were removed from the text, as being self-evidently corruptions introduced by judaizers.

Along with his edition of the NT Marcion issued a series of *Antitheses,* setting out the incompatibility of the two Gods and of the dispensations of law and gospel proceeding respectively from the one God and from the other. The *Antitheses* have not survived, apart from the lyrical celebration of divine grace which introduced them: "O wealth of riches! Ecstasy, power and amazement! Nothing can be said about it, nor even imagined about it, neither can it be compared with anything!"

2. Gnostic Literature. Gnosticism was a phenomenon of great diversity: it may be regarded as a general term for an alternative interpretation of Christianity to that handed down in the "apostolic tradition"—although it made its own claim to reproduce the apostles' teaching. The knowledge (*gnōsis*) which it cultivated was the knowledge of salvation. This in itself did not distinguish it from the apostolic tradition: much depended on the definitions of "knowledge" and "salvation." For the gnostics the essence of the primordial fall was the soul's loss of the true knowledge through contamination contracted from the material order; salvation lay in the recovery of the true knowledge. To aid human beings in its recovery

was the function of the Savior. The descent of the Savior, his rescuing of those who, through loss of the true knowledge, found themselves astray in an unfriendly universe, and his raising them with him to the realm of light to which he and they originally belonged, was the story set forth in a variety of mythological forms.

Until 1945 knowledge of the tenets of Gnosticism was derived largely from the critiques of its opponents: since then the situation has been changed by the discovery of a gnostic library near Nag Hammadi in Upper Egypt—about fifty treatises in thirteen leather-bound codices. The treatises (copied in the 4th century A.D.) are preserved in Coptic; behind most of them lies a Greek original. Various gnostic schools are represented in the library: some of the most important emanated from the school of Valentinus (ca. A.D. 140), e.g., the *Gospel of Truth* (a meditation on the saving work of Jesus), the *Gospel of Philip,* and a treatise on the resurrection called the *Letter to Rheginus.*

Ptolemy, probably Valentinus' successor as head of his school, states his theological position in his *Letter to Flora* (preserved by the 4th-century writer Epiphanius); he undertakes to show (against Marcion) that the OT, properly understood—i.e., allegorically understood in accordance with Valentinian principles—retains its value for Christians.

An earlier gnostic writer, Basilides, wrote an exegetical work in twenty-four volumes, but only the merest fragments survive. He is credited with the composition of a *Gospel of Basilides,* but nothing certain is known of it.

3. Manicheans. One interesting gnostic development was Manicheism, originating with Mani (ca. 215–277), self-styled "Apostle of Jesus Christ," who resided for a good part of his life in Persia, and on March 20, 242, announced himself as a new prophet. Although Manicheism may have started as a Christian heresy, it developed into a new missionary religion, drawing in part on Zoroastrianism and Buddhism, which for a time rivaled Christianity. Its main feature was its thoroughgoing dualism, in which Light and Darkness were two equal and opposite principles. It was totally world-renouncing. Augustine was a Manichean for nine years (373–382) before his conversion to Christianity.

Manicheism gave rise to a rich literature, most of it surviving now in fragments in Central Asian languages, which, however, can scarcely be subsumed under Christian literature.

E. Christian Writers in the West

The teaching of the gnostics and others called forth replies and refutations from defenders of the apostolic tradition. Justin Martyr, for example, wrote a treatise *Against Marcion* which, unfortunately, has not survived.

1. Irenaeus. The greatest of the antiheretical writers of the late 2d century was Irenaeus (ca. 130–200), a native of the province of Asia who about A.D. 177 became bishop of Lyon in Gaul. He was able to view the contemporary state of Christian belief and life from a broad perspective. His work *Against Heresies,* in five volumes (surviving mainly in a Latin translation from the original Greek and partly in an Armenian translation), includes a critique of several gnostic schools. While his account of them is consistently hostile, it is shown to be reasonably accurate by the evidence of the gnostic library from Nag Hammadi. The positive element in his work is his establishment of the apostolic tradition: the rule of faith, handed down without change through a succession of bishops in those churches which were founded by apostles, provides a test by which everything that claims to be authentic Christianity can be assessed.

Another work of Irenaeus, *The Demonstration of the Apostolic Preaching,* presents an outline of the plan of salvation; it is extant only in an Armenian translation.

2. Hippolytus. In the following generation Hippolytus (died 235), a great scholar, bishop for a time of a schismatic Christian community in Rome, was the last significant Roman Christian to write in Greek. He wrote a number of exegetical works: His commentary on Daniel (ca. 204) seems to be the earliest orthodox commentary on any biblical book. His main work, in ten volumes, is entitled *The Refutation of All Heresies.*

3. Novatian. If Hippolytus was the last Roman Christian of significance to write in Greek, the first to write in Latin was Novatian (like Hippolytus, the leader of a dissident body, the Novatianists). A few

treatises by him are extant; among them by far the most important is a well-constructed work *On the Trinity* (ca. 250).

4. Tertullian. Across the Mediterranean, in North Africa, Christian writings in Latin appeared in the last quarter of the 2d century. Tertullian of Carthage, whose *Apology* has been mentioned above, wrote voluminously on Christian doctrine and practice. In matters of Christian practice he took a uniformly puritan line, especially after his conversion (ca. 206) to Montanism, a charismatic movement which arose in Phrygia about the middle of the 2d century. He was a scathing controversialist, and wrote several antiheretical works: *Against Marcion, Against the Valentinians,* and others. Although his language in these works is hostile and abusive, his representation of the views which he attacks is generally reliable. It is to him, for example, that we owe much of what is known about Marcion's New Testament. Tertullian contributed weightily to the vocabulary of Latin Christianity. It is in his writings, for instance, that we first meet the word *trinitas* ("trinity").

5. Cyprian. Cyprian, bishop of Carthage (martyred 258), wrote a number of letters and treatises which, while they showed nothing of the intellectual power of Tertullian, expressed a pastoral concern which won them great popularity. His treatise *On the Unity of the Catholic Church* was specially influential in the early Church; even today its influence remains.

F. The Alexandrian Fathers

From 180 onward the church of Alexandria in Egypt was enriched by a succession of great teachers who were also prolific writers; many of their works have survived, though many more have been lost.

1. Clement of Alexandria. Clement, probably an Athenian by birth, lived in Alexandria between 180 and 202 and taught in the catechetical school which had been set up in that city by Pantaenus. Clement's surviving writings include the *Protrepticus* (an introduction to Christian ethics), a treatise on the gospel incident of the rich ruler (Mark 10:17–31), a collection of extracts from the OT prophets and another of extracts from the works of Theodotus (a disciple of Valentinus), and eight volumes of *Stromateis* or "miscellanies"—a wide-ranging and discursive work maintaining that Christian knowledge (*gnōsis*) is preferable to any other kind. Clement was a man of classical culture, and saw no reason why it should not be enlisted in the service of Christian truth: to his mind "the truth-loving Plato" speaks at times "as if divinely inspired" (*Strom.* 1.8).

2. Origen. Origen (185–254), a native of Alexandria, became head of the catechetical school soon after Clement's departure from the city, when he was barely out of his teens. In 231 he left Alexandria and lived from then on at Caesarea in Palestine. Most of his surviving works have unfortunately been preserved only in a Latin translation which does not always do justice to his thought: for one thing his translator, Rufinus of Aquileia (ca. 345–410), tries to make him conform to the orthodoxy of a later age. Origen has left a work *On First Principles,* in four volumes, containing a systematic exposition of the Christian faith, and an important defense of Christianity, in eight volumes, *Against Celsus* (a Platonic philosopher who about 178 had published an attack on Christianity in his *True Word*). Origen's *Hexapla* was an edition of the biblical text in six parallel columns (the OT comprised the Hebrew text and a transliteration into Greek characters, together with four different Greek versions). In its entirety it probably existed only in the original copy. Origen was an indefatigable commentator on the biblical writings, but most of his commentaries are lost. By the standards of later Christian generations he was judged to be in some respects heretical, but he was the eastern church's greatest scholar, and its greatest theologian before Athanasius (295–373).

3. Dionysius. Origen's pupil Dionysius, who became bishop of Alexandria in 247, was an able theologian with a rare sense of literary style. This appears, for example, in the course of his treatise *On the Promises,* in which he criticizes the literal millenarianism of Nepos, another Egyptian bishop. He points out that the Apocalypse, on which Nepos had based his arguments, has no apostolic authority, since stylistic criteria prove that the John who wrote it was not the author of the Fourth Gospel. This treatise, like the rest of his many works, has been preserved only in extracts quoted by later authors.

G. Eusebius

Our survey is designed to terminate at the end of the 3d century. One exception must be made—Eusebius (ca. 260–339), a native of Palestinian Caesarea, who became bishop of the church there in 314. The reason for including him is that he preserves quotations from so many earlier writings that are otherwise lost. It is he, for instance, who preserves the comment of Dionysius of Alexandria on the authorship of the Apocalypse. An older writer from whom he quotes is Papias, bishop of Hierapolis about A.D. 125, who in his five volumes of *Exegesis of the Lord's Oracles* recorded much primitive Christian oral tradition which he had assiduously collected. This compilation has been lost for centuries, apart from passages quoted by Eusebius and one or two other writers.

Eusebius' writings include his *Preparation for the Gospel,* his *Demonstration of the Gospels,* his *Martyrs of Palestine,* and—most important of all—his *Church History.* This work traces the advance of Christianity, especially in the E Mediterranean world, from NT times to his own day, to the eve of the Council of Nicaea (325). In spite of infelicities of construction and style, this is a work of inestimable value both in its own right and especially for its inclusion of extracts from many earlier Christian works which are no longer extant. Those works were accessible to him in the library of Caesarea accumulated by his mentor Pamphilus (martyred 309). Eusebius reproduced his extracts with remarkable accuracy: "in no instance where we can test does Eusebius give a doubtful testimony" (Lightfoot 1889: 49). He was highly esteemed by the emperor Constantine, and composed his panegyric at his death in 337. Despite its lavish flattery, this panegyric contains valuable historical material.

LO-AMMI (PERSON) [Heb *lō› ʿammî* (לֹא עַמִּי)]. See NOT MY PEOPLE (PERSON).

LO-DEBAR (PLACE) [Heb *lô dĕbār* (לוֹ דְבָר)*; lō› dĕbār* (לֹא דְבָר)]. A non-Israelite city-state located in the Transjordan N of the Yarmuk River, near the watercourse. The name is variously spelled:

Heb *lô dĕbār* in 2 Sam 9:4–5, and Heb *lō› dĕbār* in 2 Sam 17:27; Amos 6:13. In Amos 6:13, the name plays on its two Hebrew elements (*lō›* "no"; *dābār* "thing") meaning "nothing," which highlights the predicted punishment in v 14. Similar in spelling is Heb *līdĕbīr,* translated in RSV "to Debir," but possibly a variant spelling of the name "Lidebir." Though the etymology of the name is unclear, and quadraliteral roots are not characteristically Semitic, the single form *ldbr* is more likely to be a place name than the ambiguous word combination *lw/›dbr*; thus Lidebir is to be preferred.

In the days of Saul, either Ammiel or his son Machir ruled the city which appears to have become an ally of the new Israelite state. In view of the secret political asylum granted to Jonathan's infant son Meribaal after the death of Saul and his three eldest sons at Gilboa, some sort of preexisting political ties presumably existed between the two states. In the wake of the discovery that Machir was harboring Meribaal, it is likely that he was forced to become David's vassal. Machir performed vassal obligations to David along with Shobi ben Nahash of Ammon, and Barzillai of Rogelim in Gilead, by supplying troops and provisions to David during his conflict with Absalom.

In the Iron Age II period, Lidebir apparently became a satellite of Aram-Damascus. Jeroboam II, king of Israel (785–745 B.C.) is credited with restoring Israel's borders to their former limits under David, and with gaining control over Damascus and Hamath again (2 Kgs 14:23, 28). If the report is reliable, the states and their dependents probably were made vassals rather than being incorporated into Israel's boundaries as administrative districts (cf. David's policy to this effect mentioned above). Amos 6:13 seems to reflect the beginning of Jeroboam II's expansion into traditional Syrian territory in its allusion to the capture of Lidebir and its reference to the capture of Karnaim, often identified with mod. Tell Ashtarah (M.R. 243244), in the SE Golan heights.

The general site location can be determined from the boundary of Gad described in Josh 13:24–28. The phrase, "from Mahanaim to the border of Lidebir" (v 26b) is likely a secondary addition to the original Gadite description. The traditional homeland of Gad lay S of the River Jabbok, and Mahanaim was probably situated on the N bank of the river, and thus represented the southernmost boundary point for the territory of half-Manasseh. In light of the report in 1 Chr 5:16–17 that during the reign of Jotham, king of Judah, the Gadites dwelt "in Gilead, in Bashan and in its towns, and in all the pasture lands of Sharon to its limits," one can conclude that in the years preceding Jotham's reign the tribe of Gad expanded into the traditional territory of half-Manasseh. Verse 26b can be understood to reflect this expansion, and to represent the S and N boundary points, respectively, of the former territory of half-Manasseh.

Because the Gadites' expanded holdings in Gilead abutted, but did not encompass Lidebir, and the Yarmuk River represents the traditional N boundary of Gilead, it is logical to seek a site on the N bank of the Yarmuk for the city. Past suggestions of Tell Mghanne (Noth 1959: 45; Ottosson 1969: 128); Tell el Hamme (Metzger 1960: 101); Umm ed-Dabar (*GP,* 70; M.R. 207219); Khirbet Hamid (Mittmann 1970: 244); or Ibdar (*EncBib* 4: 2810), all of which lie S of the Yarmuk, are inconsistent with the biblical evidence. A possible candidate would be Tell Dober (M.R. 209232), strategically situated below the southwesternmost tip of the Golan, N of the Yarmuk, facing the Jordan Valley plain lying S and SE of the Sea of Galilee. The site has evidence of occupation in both Iron Age I and II (Kochavi 1972: 292), and lies along one of the proposed ancient routes by which one would have gained access to the international trade center of Damascus from Trans- and Cis-jordan (Mazar, Biran, and Dunayevsky 1964: 2). Saul's probable establishment of ties with Lidebir should be viewed in light of the city's proposed role as controller of access to the Golan from his state's territory.

LOD (PLACE) [Heb *lōd* (לֹד)]. Var. LYDDA. A town in the N Shephelah whose founding was attributed to (one of) the sons of Elpaal, a Benjaminite (1 Chr 8:12). Its traditional location is modern Lod/el-Ludd (M.R. 140151), on the S bank of the wadi el-Kabir near the intersection of the main E–W road from Jerusalem to Joppa and the main N–S road from Damascus and Mesopotamia to Egypt. Although the Chronicler, perhaps influenced by the postexilic resettlement of Lod by Benjaminites (Ezra 2:23 = Neh 7:37; Neh 11:35), attributes the founding of Lod to a Benjaminite, the town's earliest tribal associations may have first been with Dan and then with Ephraim.

A. Historical Sources

While Aharoni and Avi-Yonah suggest that Lod may appear as #44 in the second group of Egyptian Execration texts (*MBA*, 26), its first definite mention is in the conquest list of Thutmose III (*ANET*, 263, #64). Lod is not mentioned again in ancient sources until the Persian period, so it may have been unoccupied during the latter part of the LB Age and the Iron Age. After its resettlement by Benjaminites in the early Persian period, Lod seems to have formed the westernmost extension of the territory of Judah, although several scholars have questioned whether the region of Lod actually formed part of the Jewish province (*GTTOT*, 392). Neh 11:35 suggests that Jews may have continued to live in Lod even during the Exile.

By the Hellenistic period the name of Lod had evolved into Lydda. During the reign of the Seleucid king Demetrius II (145 B.C.) Lydda, along with Apherima and Ramathea, was transferred from the control of Samaria to that of Judea (1 Macc 11:34; *Ant* 13.4.9 §127). Lydda subsequently became the capital of one of the eleven districts of Judea (*JW* 3.3.5 §54–55). During the time of the Roman civil war following the death of Julius Caesar, Cassius sold the people of Lydda into slavery for failure to pay the taxes needed to support his army (*Ant* 14.11.4 §275). After his victory over Cassius at Philippi in 42 B.C., Mark Antony restored the inhabitants of Lydda (*Ant* 14.12.2 §304–5).

The apostle Paul visited Lydda, where he healed Aneas, who had been bedridden for eight years (Acts 9:32–38). News of this miracle is said to have converted many people in Lydda and the Sharon, and to have prompted Peter's call to Joppa to raise Tabitha from the dead. Lydda was burned by Cestius and the 12th Legion early in the First Jewish Revolt, when all but fifty of its citizens were on a pilgrimage to Jerusalem for the Feast of Tabernacles (*JW* 2.19.1 §515). After Cestius' defeat, the Lydda region was placed under the command of John the Essene (*JW* 2.20.4 §567). When Vespasian marched against Jerusalem, his army resettled the ruins of Lydia with a population which included Jews loyal to Rome (*JW* 4.8.1 §445).

Around the time of Septimius Severus (A.D. 193–211), the city received the status of a Roman colony and was renamed Diospolis. Its Christian community was strong during the Byzantine period; Diospolis sent a bishop to the Council of Nicaea, and a Synod was convened there in 415. The town regained its traditional name after the Arab conquest. Lydda was believed to be the site of the martyrdom of St. George, and for a time the Crusaders referred to the town as St. George.

MELVIN HUNT

B. Archaeological Excavations

Today the ruins of ancient Lod are completely covered by modern buildings, thus preventing efforts to excavate the ruins of the historic town. However, on the N side there are a few houses and the edge of the mound was cut away, thus forming a section 2.5 m deep. In December 1951–January 1952 excavations were briefly conducted in three small areas at the site: (1) the N edge of the mound (area A); (2) the two sides of a small ravine (area B); and (3) a level area N of the cut mentioned above (area C). Neolithic and Chalcolithic remains were unearthed.

In area A, a trench was dug running from the base of the mound toward the summit, exposing part of a circular structure built of rubble. Beneath this structure was a mud-brick wall built on the sandy soil. Altogether, four phases of occupation could be distinguished in this section of the mound, all dating to EB I.

A dump of grey earth was discovered in area B, containing pottery resembling the Chalcolithic cultures of Wadi Rabah (stratum II), Jericho stratum VIII, and Ghassul. See RABAH, WADI; GHASSUL, TULEILAT EL-). The pottery of the first two types included sherds of jars with bow rims, splay-ended loop handles, and "black-burnished ware." Among the Ghassulian sherds were lug handles with triangular sections, cornets, and churns.

Shallow pits dug into the sand and containing Neolithic pottery were found in area C. Most of the pottery was characteristic of Jericho IX ware both in decoration and in form (see Kaplan 1969), providing a rare opportunity to examine such an assemblage this far from the Jordan rift.

JACOB KAPLAN

LOG [Heb *lōg* (לֹג)]. See WEIGHTS AND MEASURES.

LOGIA. Logia is a loan word from Greek (pl. of *logion,* a diminutive of *logos,* or "word") meaning "oracles" or "sayings." Among ancient Christian writers the term is employed in a variety of ways, referring to sayings of Jesus (e.g., Pol. *Phil.* 7:1; Eus., *Hist. Eccl.* 9.7.15), but also to accounts of things Jesus did (Eus., *Hist. Eccl.,* 3.39.15), to OT passages (Eus., *Hist. Eccl.,* 9.9.7; 10.1.4; etc.), or even to the OT as a whole (*1 Clem.* 19:1; 53:1; 62:3; Eus., *Hist. Eccl.,* 5.17.5; 6.23.2; 10.4.43). In the technical parlance of NT scholarship, however, it has come to refer specifically to *sayings* attributed to Jesus. This technical usage probably derives from R. Bultmann, who used its German equivalent as a formal category within which to consider the wisdom sayings attributed to Jesus in the synoptic tradition (73ff.). Taking the Greek term *logoi* ("words") as its virtual synonym, J. M. Robinson used Bultmann's formal category as a point of departure, and traced the use of *logia/logoi* by early Christian authors to designate collections of Jesus' sayings, such as the *Gospel of Thomas,* whose incipit reads: "These are the secret words (Coptic: *nshaje* = Greek: *logoi* or *logia*) which the Living Jesus spoke …" Other such early Christian sayings collections would have included the synoptic sayings source (Q) used by Matthew and Luke, the collection of sayings and parables in Mark 4:1–34, and the chain of sayings that occurs in *1 Clem.* 13:2. Robinson coined the term *logoi sophon* ("sayings of the wise") to serve as an appropriate name for this genre of early Christian writing, and duly noted the very close relationship of these collections to similar collections to be found in Jewish wisdom literature, as well as the wisdom literature of other Near Eastern cultures.

It is curious that, apart from the *Gospel of Thomas,* these early collections of Jesus' logia managed to survive antiquity only when they were incorporated into some other genre, such as the narrative gospel, from which they must now be reconstructed if they are to be studied at all. This may perhaps be taken as an indication that relatively early in its historical development, the Church lost interest in Jesus' sayings, or logia, as the focus of its theological reflection, preferring instead forms and genres that allowed for a wider range of christological imagining, going beyond the simple notion of Jesus as Wisdom's sage. It may also be that as the early Church moved gradually away from the socially radical lifestyle that Theissen and others have associated with the synoptic sayings tradition, it soon found the older collections of logia less appealing than narrative gospels, in which the radicalism of the itinerant sage could be softened, and stories depicting Jesus disputing with local figures such as the "Pharisees" could be introduced to better reflect and comment upon the conflicts these settled Christians were now having with their neighbors. Consequently, many of the logia the early Church attributed to Jesus are to be found

today where the tradition has imbedded them artificially in an apophthegmatic context, in which the saying could be harnessed to address a particular *Sitz im Leben* of the early Church.

LOGOS. The ancient Greek word *"logos,"* usually translated "word," has a wide variety of meanings and is common to all periods of Greek literature, both prose and verse, with the exception of Epic literature where it is rarely used.

Logos is a verbal noun from the Greek verb *legō.* The two basic meanings of the verb are: (1) to count or recount, and (2) to say or speak. The various senses of *logos* cluster around the two meanings of that verb. Connected with the first meaning of *legō, logos* means "computation" or "reckoning." Depending on the context, the word can then mean "accounts," or "measure," or "esteem," that is, the value put on a person or thing. In mathematics, it means "ratio" or "proportion." Depending on the second meaning of *legō, logos* also has a wide variety of meanings: explanation, argument, theory, law or rule of conduct, hypothesis, formula or definition, narrative, oration, conversation, dialogue, oracle, proverb or saying. The specific meaning can be derived only from the context in which the word appears. Connected with both meanings of the verb, *logos* can mean the process by which both computations and explanations are produced. In this context, *logos* refers to the process of human reasoning, human rationality, and more broadly the rationality or the rational principle of the universe. These latter meanings are especially important in Greek philosophical literature. The word is rarely used in Greek to refer to a single word and never in grammar to refer to a vocable. In referring to a single word or a vocable, ancient Greek uses terms such as *lexis, epos, onoma,* or *rhēma* (LSJM, 1057–59; BAGD, 477–79).

A. *Logos* in Greek Philosophy

Logos had a long, distinguished, and very complex career in Greek philosophy. That career began with the pre-Socratic philosopher Heraclitus (ca. 500 B.C.E.). Most of the time Heraclitus employed the term *logos* in its more common meanings (proportion, account, explanation). Some scholars think that he always used the term in this way (Robinson 1987: 74–76, 114–15). But he may also have used it in the sense of an underlying cosmic principle of order, a principle that escaped the view of most people but which was grasped by the few who were wise (Diels and Kranz 1952: Fragments 1, 2, 50). This principle of order was related to the general meaning of measure, reckoning, or proportion (Kirk and Raven 1957: 188). It was the proportional arrangement of things that provided the ultimate order of all phenomena which on the surface appeared to be disparate in nature. This *logos* seems to have been material for Heraclitus and coextensive with the primary cosmic element of fire (Diels and Kranz 1952: Fragment 30).

Plato's (429–347 B.C.E.) use of *logos* in his dialogues was a very complex one. In its more philosophical sense, *logos* was associated with discourse or rational explanation rather than with the Heraclitean

concept of an ordering principle of the material world. In contrast to myth (*mythos*), *logos* was a rational, true account (*Phd.* 61b; *Ti.* 26e). For Plato there was no greater misfortune than to become a hater of rational discourse (*logoi*) (*Phd.* 89d, 90d–e). Plato generally identified thinking (*dianoia*) and rational discourse (*logos*); *logos* was the inward dialogue of the mind as it flowed from the mind through the lips (*Soph.* 263e). Yet Plato also claimed that rational discourse (*logos*), even when it was in support of true belief, could not lead to real knowledge in the area of the sense perceptible (*Tht.* 201c–210d). Rational discourse or explanation, however, did play an important role at what Plato considered the higher levels of being, that is, at the level of the essence (*ousia*) or idea of things, and could lead to real knowledge (*Resp.* 534b–c).

Aristotle (384–322 B.C.E.) also used *logos* in several different ways. He often used the term *logos* in the sense of "definition." He also used it to mean "proportion" or "ratio" (*Metaph.* 991b). Aristotle, like Plato, often used the term *logos* to refer to rational speech and rationality. According to him, what distinguished human beings from lower animals was speech (*logos*) (*Pol.* 1253a). Later in *Pol.* 1332b, Aristotle used the same words but obviously meant that what distinguished human beings from lower animals was reason (*logos*). He also often introduced the concept of reason into ethical contexts. To live ethically, one must live according to reason or right reason (*orthos logos*) (*Eth. Nic.* 1144b); in this context right reason was identified with practical wisdom (*phronēsis*). Indeed, the specifically human function of human beings was an activity of soul which was in accord with reason (*kata logon*) (*Eth. Nic.* 1098a). This living in accordance with reason also involved overcoming the irrational elements of the soul and body (*Eth. Nic.* 1102a–1103b).

The concept of *logos* was central to Stoicism. In Stoicism, *logos* once again played a cosmological role. In this sense, Stoicism drew on Heraclitus (perhaps mistakenly) in a way that neither Plato nor Aristotle had (Long 1986: 145–47). For the Stoics, *logos*, God, and nature were in reality one (Diog. Laert. 7.135; Plutarch, *De Stoic. repugn.* 34, 1050A). *Logos* was the rational element that pervades the controls all of the universe (*SVF* 1.87). *Logos* was the active element (*to poioun*) of reality while matter without quality was the passive element (*to paschon*) (Diog. Laert. 7.134). For the Stoics, however, both of these elements were ultimately material. *Logos* was identified by Zeno of Citium (335–263 B.C.E.), the founder of Stoicism, with fire and by Stoics from Chrysippus (ca. 280–207 B.C.E.) with a blend of fire and air, which they referred to as breath or spirit (*pneuma*) (Long 1986: 155). The passive element was identified with earth and water. The *logos* which permeated the universe was present in nature through seminal reasons (*logoi spermatikoi*) which served as the powers of order and growth in individual entities (*SVF* 2.1027).

While *logos* permeated and ordered all of nature, it was present in different parts of nature in different ways (Diog. Laert. 7.139). Only in human beings was *logos* present as part of their very nature. In other words, only human beings were rational (Cicero, *Nat. D.* 2.6.16). For the Stoics, human rationality (*logos*) was intimately connected with and reflected the rationality of the universe as a whole. While this view of human rationality at first looks very much like the views of Plato and Aristotle, human rationality for the Stoics, like the rationality of the universe as a whole, was material in character, while for both Plato and Aristotle human rationality was beyond the realm of the material. For the Stoics, the *logos* in human beings was part of the governing principle (*to hēgemonikon*) of the soul and for most of them was located in the heart (Long 1986: 171).

The concept of *logos* also played a crucial role in Stoic ethics. Human rationality was in tension with the passions (*ta pathē*) (Diog. Laert. 7.110). The goal of human life was to live a life in accord with *logos* or nature, that is, a life which was lived rationally and in which all of the other faculties of the soul were dominated by right reason (*orthos logos*) (Diog. Laert. 7.85–87). Such rationality united human beings with the rationality of the universe as a whole.

Given the fact that the *logos* of the universe always controlled the universe, the Stoics found it difficult to reconcile that control with an ethical theory, in the sense that, without some human capacity to choose one way or another, living in accordance with the *logos* of the universe was inevitable and so not a matter of virtue or vice. Yet the Stoics did maintain that there were good and bad human actions and that,

through a long process of education and practice, human beings could reach the level of living in accord with the universal *logos* or nature (Diog. Laert. 7.86–87; Inwood 1985: 101–217). In the final analysis, however, the *logos* of the universe reconciled even human beings' evil actions into an ultimately perfect universe (Cleanthes, *Hymn to Zeus,* 11–21 in *SVF* 1.537).

As in the Greek philosophical tradition generally, *logos* was used in Middle Platonism (the Platonic tradition from ca. 80 B.C.E. to ca. 220 C.E.) in the sense of rational discourse and human rationality. At the level of cosmology, however, *logos* did not play quite the central role that it did in Stoicism. Nevertheless, it did play an important role in relation to other concepts in the Middle Platonic tradition.

Middle Platonism, in contrast to Stoicism and in keeping with its Platonic roots, emphasized the primary reality of the immaterial, intelligible realm. In keeping with this emphasis, one of the characteristics of Middle Platonism was its distinction between two aspects of the divinity. The first aspect of the divinity was essentially transcendent and basically inner-directed. The second aspect was an active, demiurgic power which was responsible for the ordering of everything else in the universe. The distinction was not simply metaphorical, but was meant as a metaphysical explanation which both preserved the transcendence of God and accounted for the relatively orderly character of the universe. Middle Platonists sometimes adopted the Stoic *logos* into their systems as the term for this active force of God in the world (Dillon 1977: 46). More often, however, they gave this demiurgic aspect of divinity a name other than *logos* (e.g., idea, mind). In contrast to Stoicism, both of these divine realities in Middle Platonism transcended the material level of reality and were part of the intelligible world. For example, one of the early Middle Platonists, Eudorus of Alexandria (fl. 25 B.C.E.), may have referred to the demiurgic combination of the Monad, which represented form, and the Dyad, which represented matter, as the thought (*logos*) of the essentially transcendent God, the First or Supreme One (Dillon 1977: 128; Tobin 1983: 14–15). A similar *logos* figure appears in Plutarch (ca. 50–120 C.E.) (*De Is. et Os.* 53–54, 372E–373C). The *logos,* which was identified with the Egyptian God Osiris, was the one who ordered and made manifest the material world and at the same time served as the intelligible paradigm for that world (Tobin 1983: 73–75). The same seems to have been the case for the 2d century C.E. Middle Platonist, Atticus (Dillon 1977: 252). This early Middle Platonic outlook influenced Hellenistic Judaism and particularly Philo of Alexandria.

B. *Logos* in the Septuagint

Logos was used frequently in the Septuagint. It was used to translate a number of Hebrew words (*ʾēmer* [word], 13 times; *millāh* [word], 30 times). Over 90 percent of the time, however, *logos* was a translation of the Hebrew word *dābār* (word). Both *logos* and another Greek word (*rhēma,* word) were used to translate *dābār. Rhēma* predominates in the Pentateuch (*logos,* 56; *rhēma,* 147); in Joshua, Judges, and Ruth they occur about equally (*logos,* 26; *rhēma,* 30). In the other biblical books, *logos* predominates (*logos,* 1065; *rhēma,* 352). This is especially true for the prophetic books (*logos,* 320; *rhēma,* 40) and wisdom literature (*logos,* 221; *rhēma,* 40) (*TDNT* 4:92). One reason for the shift was due to differences in literary genre. In secular Greek *rhēma* carried less the meanings of "oracle" or "proverb" than did *logos,* meanings which were central to prophetic and wisdom literature respectively. Yet *rhēma* was sometimes used in the Septuagint with the meanings of "oracle" (Isa 16:13; 59:21; 66:5; Jer 1:1; 6:10; 16:10) and "proverb" (Prov 3:1; 7:24; 8:8; Eccl 1:1; 7:30; Sir 39:7). This suggests that there may also have been another reason for the shift from *rhēma* to *logos.* Because the prophetic and wisdom literatures were translated into Greek later than the Pentateuch, this shift from *rhēma* to *logos* and the preponderance of *logos* in prophetic and wisdom literature may reflect to some extent the growing influence on Hellenistic Judaism of Hellenistic culture and philosophy with their emphasis on *logos.*

Logos in the Septuagint, like the Hebrew *dābār,* had a wide range of meanings. It meant narrative, speech, dialogue, oracle, or proverb. Because the Hebrew *dābār* and the Greek *logos,* however, did not have the identical range of meanings, the use of *logos* as a translation of the Hebrew *dābār* inevitably influenced the way in which *logos* was understood. In the Septuagint *logos* often took on a more dynamic meaning than it originally had in Greek (Isa 2:3: "And the word [*logos*] of the Lord [will go forth] from Jerusalem"; Isa 45:23: "My words [*logoi*] will not be frustrated; Ps 119:74: "For I have hoped in your

words [*logous*]; Ps 147:15: "His word [*logos*] will run swiftly."). There is a sense of power and dynamism in this use of *logos* that was not part of its semantic range in secular Greek. In addition, *logos* and particularly the plural *logoi* were used to refer to the Mosaic Law (Exod 19:1; Deut 1:1).

In several Psalms (33:6) and in the Sirach (39:17, 31; 43:10, 26), *logos* was associated with God's act of creation and his maintenance of cosmic order.

"By the *word* of the Lord the heavens were made, and all their host by the breath of his mouth." (Ps 33:6

"At his *word* the waters stood in a heap, and the reservoirs of water at the *word* of his mouth. At his command whatever pleases him is done, and none can limit his saving power." (Sir 39:17–18)

"Because of him his messenger finds the way, and by his *word* all things hold together." (Sir 43:26)

While *logos* in each of these passages refers to God's command (see Gen 1:3, 6, 9, 11, 14, 20, 24, 26: "And God *said* …) and not directly to some cosmic principle of order, the association of God's *logos* with creation and cosmic order was an important influence on the use of *logos* in Hellenistic Jewish literature and speculation. In this way, *logos* also played a role similar to that played by wisdom in other biblical texts (Prov 8:22–31; Sir 24) although in a much less developed fashion.

C. *Logos* in Hellenistic Jewish Speculation

Logos became a much more important concept in Hellenistic Judaism and reached its climax in the writings of the Hellenistic Jewish exegete Philo of Alexandria (ca. 20 B.C.E.–50 C.E.). Although the beginnings of this process are lost to us, fragments from the Hellenistic Jewish writer Aristobulus (fl. 150 B.C.E.) indicate that this process had begun, although tentatively, by the middle of the second century B.C.E.

Aristobulus, who is mentioned in 2 Macc 1:10, was an Alexandrian Jewish exegete who sought to interpret the LXX in a way consistent with Greek philosophy, primarily Stoic philosophy but also including Platonic and Pythagorean elements (Walter 1964: 124–49). In one fragment (Eusebius, *Praep. Evang.* 13.12.3–4) in which he offered an interpretation of Gen 1:3, 6, 9 ("And God said …), Aristobulus claimed that Moses called the whole genesis of the world the words (*logoi*) of God. In another fragment (Eusebius, *Praep. Evang.* 13.12.10–11), Aristobulus connected wisdom (*sophia*) with a metaphorical interpretation of the seventh day of creation because, according to his interpretation, all things are contemplated in the light of wisdom just as all things are contemplated in the light of the seventh day mentioned in Gen 2:2. He then went on to connect the seventh day with the sevenfold *logos* which is the principle of order in the world (Eusebius, *Praep. Evang.* 13.12.13). For Aristobulus, then, both wisdom and *logos* served similar cosmological ordering functions (*OTP* 2: 834–35).

The connection between wisdom and *logos* was also made explicitly, although again in an inchoate way, in the Wisdom of Solomon, a Hellenistic Jewish text from perhaps first-century B.C.E. Egypt or Syria. God's word and God's wisdom were used in this text as two parallel ways of describing God's creation of the world and his creation of human beings (Wis 9:1–2).

It was, however, in the works of Philo of Alexandria that *logos* found its full flowering in Hellenistic Jewish literature. Philo of Alexandria came from a prominent Jewish family in Alexandria and, on the basis of his writings, obviously had a very good education in Greek philosophical literature. In his writings, which are primarily interpretations of the LXX of the Pentateuch (since he probably knew no Hebrew), he sought to interpret the Mosaic Law in the light of Greek, primarily Middle Platonic, philosophy. The concept of *logos* played a central role in these interpretations. Philo's use of *logos* must be seen within the tradition of Hellenistic Jewish wisdom speculation since Philo, in continuity with his predecessors, identified wisdom (*sophia*) with *logos* (*Leg All* 1.65; *Heres* 191; *Somn* 2.242–45) and gave both some of the same attributes (e.g., image of God [*Conf* 146]).

For Philo the *logos* was the intermediate reality between God, who was essentially transcendent, and the universe. While Philo could use the Stoic concept of the *logos* as the principle of rationality that pervades the universe (*Heres* 188; *Fuga* 110), Philo's *logos* primarily fits into the pattern of the intermediate figure found in most Middle Platonic systems. Philo depicted the *logos* in a variety of ways, and the figure had a number of different functions.

The first general function was cosmological. The *logos* was the image of God, the highest of all beings who were intellectually perceived, the one closest to God, the only truly existent (*Fuga* 101). This image, the *logos,* also served as the paradigm or model for the ordering of the rest of the universe (*Somn* 2.45). The *logos* was an image in a twofold way, a reflection of the truly existent God above and a model on the basis of which the rest of the universe below was ordered. The *logos* was the archetypal idea in which all of the other ideas were contained (*Op* 23–25). But the *logos* was not simply the image or paradigm according to which the universe was ordered, it was also the instrument (*organon*) through which the universe was ordered (*Cher* 127; *Spec Leg* 1:81). The *logos* was both the power through which the universe was originally ordered and the power by which the universe continued to be ordered. Philo called these two aspects of the *logos* the Creative Power and the Ruling Power, and he connected the first with the name Elohim (God) and the second with Lord (*kyrios*), the Greek word used to translate Yahweh in the LXX (*Vita Mos* 2.99–199). Other terms used by Philo to refer to the *logos* are the First-Begotten Son of the Uncreated Father (*Conf* 146; *Somn* 1.215), the Chief of the Angels (*Heres* 205), the High Priest of the Cosmos (*Fuga* 108), and the Man of God (*Conf* 41, 63, 146). What was common to all of these designations of the *logos* was the intermediate role that the *logos* played between the transcendent God and the rest of the universe.

The second function of the philonic *logos* was anthropological. The *logos* was the paradigm according to which human beings were made, not the human being as a whole but only the human mind. In interpreting Gen 1:27, Philo noted that man was not created *as* the image of God but *according to* the image of God. He interpreted this to mean that man was created according to the *paradigm* which was the image of God (*Op* 24–25). For Philo this paradigm was the *logos,* and man was an expression at third hand (God-*logos*-human mind) of the Maker (*Heres* 231). In addition, a correspondence existed between the microcosm (human being) and the macrocosm (the universe). The human mind was to the rest of the human being (the irrational parts of the soul and the body) as the *logos* was to the cosmos as a whole (*Op* 69). The human mind not only had its paradigm in the *logos,* it was also in some fashion a fragment or an effulgence of the divine *logos* (*Op* 146, *Spec Leg* 4.123).

The third function of the philonic *logos* was anagogical, that is, the *logos* was meant to guide the human soul to the realm of the divine. For Philo the goal of the human soul was the knowledge and vision of God (*Quod Deus* 143), to become like God or to be assimilated to God (*homoiōsis tō͗ theō͗*) (*Fuga* 63). The possibility of the human soul attaining the knowledge and vision of God was rooted in the soul's fundamental relationship to and participation in the divine *logos.* But the human soul must begin by recognizing its own nothingness in relationship to the divine and must realize that the divine is ultimately the author of everything that the human soul is capable of (*Somn* 1.60; *Leg All* 1.82). Once the human soul has realized this and turns to God (*Praem* 163), it can then detach itself from the body and the realm of sense perception (*Fuga* 91–92; *Heres* 69–74) and mystically rise above the material world and be free to contemplate the divine *logos* (*Somn* 1.71; 2.249) and in some very limited sense even God himself (*Migr* 170–75). In this process, the divine *logos* is the means and the guide of this mystical ascent (*Somn* 1.68–69, 86; *Leg All* 3.169–178) (Winston 1985: 43–55).

Because the *logos* functions in such a complex way in Philo's biblical interpretations, it is often difficult to understand precisely what he meant in those interpretations. Is the *logos* only a metaphor for God's power, a hypostatization of some aspect of God, or a reality distinct from if not independent of God? Is the *logos* personal or impersonal? The answers to these questions can never be altogether clear. One reason for this is that Philo was rooted in a larger tradition of interpretation, and some of his interpretations were derived from that tradition and were not completely integrated in his own thought (Tobin 1983: 1–35). But a basic sense of what Philo meant can be gained by paying attention to the kind of language he used and why he used it. Like other Middle Platonists, Philo thought that God in his essence could not be implicated in the material universe. At the same time, the relative order of the material universe had to derive at least indirectly from God. For Philo the *logos* served as the intermediate metaphysical reality through which the universe was originally ordered and by which it continued to be sustained in an orderly state. On the one hand, then, the *logos* was not simply a metaphor. It was meant to

serve as a real explanation, one which safeguarded both the transcendence of God and the relative order of the universe. On the other hand, it was not a straightforward description of a being other than God. It was a real aspect of the divine reality through which God was related, although indirectly, to the universe (Runia 1986: 446–51). In much the same way, the *logos* cannot aptly be characterized as either personal or impersonal. It was rather the source of the intelligibility of the universe and so was itself intelligent in a way that transcended the universe and, in that sense, also went beyond the categories of either personal or impersonal. In this respect, Philo was very much like other Middle Platonists who also maintained both the transcendence of God and God's indirect relationship to the universe through the use of an intermediate metaphysical reality.

D. *Logos* in the New Testament in General

Logos is used 331 times in the NT and in most of the same ways in which it is used in the LXX and in Greek literature in general (BAGD, 477–79). It can mean a statement (Luke 20:20), an assertion (Matt 15:12), a command (Luke 4:36), a report or story (Matt 28:15), a proverb or saying (John 4:37), an oracle or prophecy (John 2:22), a speech (Matt 15:12), or the matter under discussion (Mark 9:10). In the plural *logoi* can refer to speeches of various sorts (Matt 7:24; 13:37; 26:1; Mark 10:24; 13:31; Luke 1:20; John 14:24). It can be used of *written* words and speeches, as well as of the separate books of a larger work (Acts 1:1; Heb 5:11). It can also be used, although not often, to mean "ground" (Acts 10:29) or "reason" (Acts 18:14) for something. With the exception of Johannine literature, however, *logos* is not used in the NT in the more philosophical senses of rationality or of the rational principle of the universe.

What characterizes the use of *logos* in the NT is not some new meaning for the word beyond what is found in the Septuagint but its reference to the divine revelation of God, specifically the divine revelation of God through Jesus Christ and his messengers. In many cases the "word of God" is simply the Christian message, the gospel. The apostles and preachers are said to "speak the word of God" (Acts 4:31), to "proclaim the word of God" (Acts 13:5), or to "teach the word of God" (Acts 18:11). Because it is the word of *God*, it is also efficacious (Heb 4:12; 1 Thess 2:13), to be received (1 Thess 1:6; Acts 8:14; 11:1) and to be acted on (Jas 1:21). Since this word of revelation is brought by Christ, the "word of the Lord," the "word of Christ," or the "words" of Jesus can be used in the same sense as the "word of God" (John 5:24; 12:48; 18:32; Acts 8:25; 12:24; 13:44, 48–49; Col 3:16). *Logos* is often qualified by other genitive phrases ("the word of the kingdom" [Matt 13:19]; "the word of salvation" [Acts 13:26]; "the word of reconciliation" [2 Cor 5:19]; "the word of the cross" [1 Cor 1:18]; "the word of righteousness" [Heb 5:13]). But *logos* is also often used with no qualifying genitive to refer simply to the Christian message as such (Matt 13:20–23; Mark 2:2; Luke 8:12–13; Acts 6:4; Gal 6:6; Jas 1:21).

E. *Logos* in Johannine Literature

The most striking use of the term *logos* in the NT is found in the Johannine literature, in John 1:1–18 and in 1 John 1:1–4. Both the interpretation of these texts and the religious and intellectual background against which they should be set are a matter of debate.

1. *Logos* in the Prologue of the Gospel of John. While some scholars think that the Prologue of John (John 1:1–18) is a unified whole and the work of the author of the Gospel of John (Barrett 1978; Borgen 1970), most think that there are literary stages in the Prologue (Becker 1979; Brown *John* AB; Bultmann *John* MeyerK; Haenchen *John* Hermeneia; Rochais 1985a; Schnackenburg *John* HTKNT; Schmithals 1979). Behind the present form of the Prologue lies a hymn which has been commented on and added to in order to be used as the beginning of the Gospel of John. There is a general consensus that vv 6–8 and v 15 (all of which are about John the Baptist) are later additions that serve to integrate the hymn into the present form of the Gospel of John, which originally began with the figure of John the Baptist. In addition, many scholars think that vv 12c–13 and vv 17–18 are explanatory comments which did not belong to the original hymn (Rochais 1985a: 7–9).

While the structure of the original hymn is a matter of debate, one can plausibly argue that it fell into three strophes (Rochais 1985b: 161–62). In the first strophe (1:1–5), the *logos* was with God at the beginning and was God and was the means through which the universe and life came to be. In the second strophe (1:10–12b) the *logos* came to its own, was not received by its own, but to those who received the

logos gave the power of becoming children of God. In the third and final strophe (1:14, 16), the *logos* became flesh in Jesus of Nazareth and the glory of the *logos* was experienced by those who believed. John 1:10–12b originally referred to the presence of the *logos* prior to the incarnation, and only in John 1:14, 16 was the incarnate *logos* referred to. When the hymn, however, was later connected to the Gospel of John and John 1:6–9 (about John the Baptist) was inserted before John 1:10, everything after John 1:5 now came to be understood as referring to the incarnate *logos,* perhaps because the redactor of the gospel wanted to see everything from the point of view of the incarnate *logos* (Schnackenburg *John* HTKNT 1: 227–28).

How one understands the meaning of *logos* in the hymn depends to a great extent on what religious and intellectual background one thinks the Prologue should be set against. There are a variety of proposals in this area.

a. The *logos,* Targum, and Midrash. Some scholars understand the *logos* in the Prologue of John against the background of the targums (the Aramaic translations of the OT) and midrashim (certain kinds of Jewish interpretations of the OT). Renewed interest in this approach to the *logos* in the Prologue of the Gospel has been due especially to the discovery in 1955 of the Targum Neofiti I to the Pentateuch. The principal editor of Targum Neofiti I, A. Diez Macho (1968: 57–95) maintains that this targum is Palestinian in origin and should be dated in the late 1st century or the 2d century C.E. Some of the traditions found in it go back even farther.

M. McNamara (1968) has argued that the Prologue of John has been influenced by the liturgical traditions found in Palestinian Targums such as Neofiti I. As an example of this he offers the midrash of the Four Nights found in Targum Neofiti I to Exod 12:42. In this interpretation sacred history is summed up in four nights. The first of these nights is that of creation:

> "The first night: when the Lord was revealed over the world to create it. The world was without form and void and darkness was spread over the face of the abyss and the Word (*memrā*) of the Lord was the light, and it shone; and he called it the First Night."

In this passage the Word (Aram *memrā*) of the Lord seems to be identified with the primordial light which shone at creation. These same elements (the Word identified with light and the association of both with the creation of the world) are also found in John 1:1–18. McNamara maintains that the author of the Prologue would have heard a passage such as this read in the synagogue and would have been influenced by its viewpoint.

Another suggestion has been made by P. Borgen (1970) that the *structure* of the Prologue reflects a basic exposition (a. Word–God, 1:1–2; b. all things were made through him, 1:3; c. light, 1:4–5) and an elaboration in reverse order of the elements in 1:1–5 (c´. light, 1:6–9; b´. the world was made through him, 1:10–13; a´. Word–God, 1:14–18). He finds this same kind of structure involving basic exposition (a, b, c) followed by an elaboration in reverse order (c´,b´,a´) in the Targum Pseudo-Jonathan to Gen 3:24. Borgen (1972) has also tried to establish that *logos* and light were connected in learned Jewish exegesis. As an example he cites *Gen. Rab.* 3.3 which contains an interpretation of Prov 15:23: "A man has joy in the answer of His mouth; a word in season, how good it is." In the interpretation found in *Gen. Rab.* 3.3, the phrase in Prov 15:23, "the answer of His mouth," is understood as God's creative word and is connected with the phrase, "and God said, 'Let there be light' " in Gen 1:3. In Jewish exegesis, then, God's creative *word* is associated with the light, which was created in Gen 1:3, an association also found in John 1:1–5.

Attractive as this approach appears at first, there are significant problems with it. First, *memrā* (word) as used in the targums is basically a buffer term to preserve the transcendence of God; it has no reality of its own (Hamp 1938; Muñoz León 1974: 106–15). This means that *memrā* offers only a verbal parallel with the *logos* of the Prologue and not a conceptual parallel. Second, neither the targums nor Midrashic literature offer a *consistent* set of verbal or conceptual parallels which could plausibly serve as the background for the use of the term *logos* in the Prologue. Third, the dating of the targums, including the recently discovered Targum Neofiti I, is very much in dispute. While Diez Macho places Targum Neofiti I in the late 1st or 2d century C.E., other scholars (Fitzmyer 1979: 70–74) place it in the 3d century C.E. or

later. Finally, one should not confuse the fixed literary form of targums such as Neofiti I with earlier, less formal and oral Aramaic translations (Golomb 1985: 2–8). One should use the targums, including Targum Neofiti I, for interpreting 1st century C.E. literature such as the Prologue only with great caution and only when the parallels are clear and consistent. Because of this one must look elsewhere for the basic background for the Prologue of John.

b. The *logos* and Gnosticism. R. Bultmann (*John* MeyerK) sought to locate the background for the *logos* of the Prologue in Gnosticism. According to him, the Prologue in its original form was a gnostic hymn to John the Baptist. The hymn was then Christianized and became a hymn to Jesus as the incarnate *logos.* At the same time it was interpreted as a Johannine polemic against followers of John the Baptist. According to Bultmann, behind this hymn stood a pre-Christian gnostic myth of a heavenly redeemer figure. On the basis of the analysis of later gnostic documents, Bultmann maintained that this redeemer myth presupposed an *Urmensch* (Original Man) who dwelt in the realm of light. This Original Man for various reasons became scattered about in the lower world of darkness in the form of human souls. God then sent a heavenly redeemer figure to awaken the human souls below and reveal to them their true identity and so bring them once more to the world of light above. In this form, Bultmann's view finds few supporters today. The main reason is that it is far from clear that the different elements that eventually went into forming the myth of the Original Man in later gnostic documents were already joined together in pre-Christian times (Brown *John* AB 1:1v).

The discovery of the gnostic documents at Nag Hammadi, however, has provided renewed interest in the relationship of the Gospel of John in general and the hymn from the Prologue in particular to Gnosticism. While the gnostic documents from Nag Hammadi are, in their present form, from the 2d and 3d centuries, some of the documents probably contain earlier material. This is particularly true for those documents which seem to have been only secondarily Christianized. Such documents point to at least an earlier non-Christian, if not a pre-Christian, Gnosticism. In their earlier non-Christian forms, many of these documents involve various sorts of interpretations of the early chapters of Genesis.

The document that has been most interesting for trying to understand the *logos* in the hymn from the Prologue of John is the *Trimorphic Protennoia* (NHC XIII.*1*) (*JAC* 17:110–25; Evans 1980; Janssens 1983; Schenke 1974). The *Trim. Prot.* probably has a very complex compositional history and reached its present form in the early 3d century C.E. (Turner 1988: 511). It seems to have undergone only secondary and, for the most part, superficial Christianization. The tractate proclaims three descents of a gnostic heavenly redeemer, Protennoia (the First Thought of the Father). The third of these descents is in the form of the Son or *logos* (*Trim. Prot.* 46.5–50.20). It is in this third section of the tractate that one finds the closest parallels to the *logos* in the hymn of the Prologue. In addition to the contrast of light and darkness found in both documents, terms such as *logos,* beginning, life, illumine, and glory appear both in the hymn and in the third part of the *Trim. Prot.* (Evans 1980: 397; Janssens 1983: 241–42).

The most striking parallel to the hymn from the Prologue is *Trim. Prot.* 47.14–18:

> "I revealed myself to them in their tents (*skēnē*) as Word and I revealed myself in the likeness of their shape. And I wore everyone's garment and hid myself within them."

As in John 1:14, the Protennoia has been revealed in human "likeness." In addition, there is the verbal connection of *skēnē* in the *Trim. Prot.* and *skēnoun* (to pitch one's tent, to dwell) in John 1:14. Yet the parallelism should not be pressed too far. Prior to its secondary Christianization, it is clear that this passage refers not to an "incarnation" in a specific individual but to the presence of the heavenly revealer figure among those who belong to the light (49.25–26). The reference to putting on Jesus (50.12) at the end of the tractate is clearly part of the secondary Christianization of the document.

While there are very important parallels between the hymn from the Prologue and this section of the *Trim. Prot.,* the *Trim. Prot.,* even without its secondary Christianization, is more developed in its viewpoint than is the hymn. This makes it improbable that the hymn in John's Prologue is dependent even on an earlier non-Christian form of the *Trim. Prot.* What is more likely is that both the *Trim. Prot.* and the hymn were distinct, dualistic developments of the traditions of Jewish wisdom speculation (Evans 1980:

399; Janssens 1983: 243; Turner 1988). Each of the texts, however, has developed those traditions and speculations in rather different directions.

c. The *logos* of the Prologue and Jewish Wisdom Speculation. The closest conceptual parallels to the use of *logos* in the hymn from the Prologue of John are to be found in Jewish wisdom literature (Proverbs, Sirach, Baruch, and the Wisdom of Solomon). The various attributes and activities ascribed to wisdom in Jewish wisdom literature are ascribed to the *logos* in the hymn in the Prologue. The following table lists the more important of those parallels (Rochais 1985b: 175–80):

In the beginning was the word *(logos)* (1:1)	The lord created me *(sophia)* at the beginning of his work, the first of his acts of old. Ages ago I was set up, at the first, before the beginnings of the earth. (Prov 8:22–23)
	From eternity, in the beginning he created me (wisdom), and for eternity I shall not cease to exist. (Sir 24:9)
And the Word was with God (1:1)	When he established the Heavens, I (wisdom) was there, (Prov 8:27)
	When he marked out the foundations of the earth, then I (wisdom) was beside him. (Prov 8:29–30)
	With thee (God) is wisdom, who knows thy works and was present when thou didst make the world. (Wis 9:9)
All things were made through him (1:3)	For wisdom, the fashioner of all things, taught me (Solomon). (Wis 7:22)
	With thee (God) is wisdom, who knows thy works and was present when thou didst make the world. (Wis 9:9)
That which came to be in him was life (1:3–4)	For he who finds me (wisdom) finds life. (Prov 8:35)
	Because of her (wisdom) I shall have immortality. (Wis 8:13)
And the life was the light of men (1:4)	Wisdom is radiant and unfading. (Wis 6:12)
	For she (wisdom) is a revelation of eternal light, a spotless mirror of the working of God, and an image of his goodness. (Wis 8:26)
The light shines in the darkness, and the darkness has not overcome it (1:5)	Compared with the light she (wisdom) is found to be superior, for it (light) is succeeded by the night, but against wisdom evil does not prevail. (Wis 7:29–30)
He was in the world (1:10)	And I (wisdom) was his delight, rejoicing in his inhabited world and delighting in the sons of men. (Prov 8:30–31)
	She (wisdom) made among men an eternal foundation, and among their descendants she will be trusted. (Sir 1:15)
	She (wisdom) reaches mightily from one end of the earth to the other, and she orders all things well. (Wis 8:1)
Yet the world knew him not (1:10)	No one knows the way to her (wisdom), or is concerned about the path to her. (Bar 3:31)
He came to his own (1:11)	Then the Creator of all things gave me (wisdom) a commandment, and the one who created me assigned a place for my tent. And he said, "Make your dwelling in Jacob, and in Israel your inheritance." (Sir 24:10)
	Afterward she (wisdom) appeared upon earth and lived among men. She is the book of the commandment of God and the law that endures forever. (Bar 3:37–4:1)

And his own received him not (1:11)	You (Israel) have forsaken the fountain of wisdom. (Bar 3:12; see also Prov 1:20–30)
But too all who receive him, … He gave power to become the children of God (1:12)	Though she (wisdom) is but one, she can do all things, and while remaining in herself, she renews all things; in every generation she passes into holy souls and makes them friends of God, and prophets. (Wis 7:27)
And the Word became flesh and dwelt among us (1:14)	Then the creator of all things gave me (wisdom) a commandment, and the one who created me assigned a place for my tent. (Sir 24:8)
	Afterward she (wisdom) appeared upon earth and lived among men. (Bar 3:38)

Both the *logos* of the hymn in the Prologue and wisdom in Jewish wisdom literature are with God in the beginning; both are involved in the creation of the world; both seek to find a place among humankind; both are within a Jewish tradition of speculation about the deeper meanings of the early chapters of Genesis. In addition, many of the parallels between the *logos* in the hymn and the figure of wisdom are found in passages which like the hymn are poetic in character (Prov 8:22–31; Sir 24). The parallels are not simply conceptual but also stylistic.

In Jewish wisdom literature, however, the figure of wisdom was never displaced by the *logos* as it was in the hymn in the Prologue. This striking difference indicates that the type of speculation found in the hymn has moved beyond the viewpoints found in Proverbs, Sirach, Baruch, and the Wisdom of Solomon. Such a displacement of wisdom by *logos,* however, is found in the works of the Alexandrian Jewish exegete Philo of Alexandria. As indicated above, Philo's conception of the *logos* is rooted in Middle Platonic philosophy. This conception of the *logos* has some striking parallels with the *logos* in the hymn in the Prologue (Argyle 1952: 385–86; Dodd 1953: 276–77).

Both Philo and the hymn use *logos* as the equivalent of *wisdom* in Jewish wisdom literature. In both cases, *logos* overshadows the figure of wisdom in importance. Both Philo (*Op.* 17, 24) and the hymn (John 1:1–2) understand the *logos* as a reality which existed with God before creation. Both Philo (*Somn* 1.228–30) and the hymn (John 1:1) use the anarthrous *theos* (God) to refer to the *logos.* Both Philo (*Conf.* 146) and the hymn (John 1:1–2) connect the *logos* with the "beginning" (*archē*) of Gen 1:1. Both Philo (*Cher.* 127) and the hymn (John 1:3) think of the *logos* as the instrument through which (*di' hou*) the universe was created. Like the hymn in the Prologue, Philo (*Somn* 1.75; *Op.* 33; *Conf.* 60–63) associates the *logos* with light. Finally, both Philo (*Conf.* 145–46) and the hymn (John 1:12) connect the *logos* with becoming sons or children of God.

While the parallels between Philo and the hymn of the Prologue are important, it is also clear that the concept of the *logos* in Philo is developed far more philosophically than it is in the hymn. Philo's concept of the *logos* is rooted in the metaphysics of Middle Platonism in a way that the concept of the *logos* in the hymn is not. Nor is the parallelism close enough verbally to assert that the author of the hymn was acquainted with the works of Philo. Nevertheless, the parallels between Philo and the hymn in the Prologue strongly suggest that the hymn cannot be seen simply against the background of Jewish wisdom literature. Rather, it must also be seen against the background of Jewish speculation about wisdom/*logos* which extended beyond Jewish wisdom literature and which included the kinds of speculative traditions about the *logos* which are reflected in the interpretations of a writer such as Philo (Rochais 1985b: 184–85). Both are part of the larger movement of Hellenistic Jewish wisdom/*logos* speculation.

The background of Jewish Hellenistic speculation on wisdom/*logos* also allows us to account for the similarities between the hymn in the Prologue and sections from the *Trim. Prot.* Both are rooted in similar Hellenistic Jewish speculative traditions about wisdom and the *logos.* The Christian circles from which the Prologue came were probably influenced by Hellenistic Jewish converts familiar with speculation about wisdom/*logos* found in Hellenistic Judaism (Schnackenburg *John* HTKNT 1:231).

The use of *logos,* however, in the hymn in the Prologue of John moves behind Hellenistic Jewish speculations about *logos*/wisdom in that it identifies this *logos* with Jesus of Nazareth. Neither Jewish

wisdom literature nor the kind of Hellenistic Jewish speculation represented by Philo ever sought to identify either wisdom or *logos* with a specific human being. The hymn in the Prologue is the clearest example in first-century Christian literature of both an incarnational and a preexistence christology (Dunn 1980: 213–50). It affirms both that the *logos* has become flesh in the person of Jesus of Nazareth and that Jesus of Nazareth existed before the incarnation, indeed before the creation of the world, as God's divine *logos.* The development of this belief as it appears in the hymn and in the Gospel of John as a whole is the most characteristic development of the Johannine tradition.

The development of this belief, however, was not without a certain amount of ambiguity. This ambiguity is reflected in John 1:14 which affirms both that "the Word (*logos*) became flesh" and that "we have beheld his glory, glory as of the only Son from the Father." The first statement emphasizes the identification of the Word with the *human being* Jesus; the second the identification of Jesus with the *divine word.* There was an ambiguity between an incarnational christology and arguably a somewhat more docetic christology, at least a christology that did not value theologically the earthly life of Jesus including his crucifixion and death. Given the religious and intellectual background of the hymn in Hellenistic Jewish speculation, one can hardly be surprised at such an ambiguity.

2. *Logos* in the First Epistle of John. This ambiguity seems to have surfaced in the Johannine community shortly after the initial completion of the Gospel of John (ca. 90 C.E.) (Brown *The Epistles of John* AB, 73–79). Some members of the Johannine community wanted to emphasize the incarnational intent of the Prologue and the Gospel while others wanted to emphasize less the incarnational and more the divine aspect of Jesus as the *logos* (1 John 4:1–3; 2 John 7).

The ambiguity of the Prologue and the Gospel probably led to tensions between these two groups and finally to a schism. Specifically, disputes about the interpretation of *logos* emerge in the opening verses of the First Epistle of John (1 John 1:1–4). 1 John represented the views of that segment of the Johannine tradition which emphasized the incarnational side of the tradition, that is, the reality of the *logos*'earthly identification with Jesus of Nazareth.

In 1 John 1:1–4, the author emphasized that the Word of life (the *logos* of the Prologue of the Gospel) was the same one which was from the beginning and which the correct interpreters of the Johannine tradition had heard, seen with their own eyes, looked upon, and touched with their own hands, Jesus of Nazareth. Presumably this seeing, hearing, and touching was ultimately derived by this segment of the Johannine tradition from its relationship to the Beloved Disciple (John 13:23–26; 19:25–27; 20:2–10; 21:7; 21:20–23; 21:24) who was understood as the source of their tradition (Brown *John* AB 1: lxxxvii–cii; 1979: 33–34; Schnackenburg *John* HTKNT 3:375–88). In any case, over against his opponents, the author of 1 John wanted to emphasize that the correct interpretation of the Prologue and the rest of the Gospel of John involved affirming the theological significance of the earthly life of Jesus, the Word of life (Brown *The Epistles of John* AB, 151–88).

In the end, as Brown suggests (*The Epistles of John* AB, 103–130), the Johannine tradition represented by the author of 1 John was probably absorbed into the churches represented by the Pastoral Epistles, Acts, Matthew, and 1 Peter. The other more docetic Johannine group may have been absorbed into various 2d-century Christian gnostic groups. This would account for the fact that the first known commentary on the Gospel of John was by the Valentinian gnostic, Heracleon (ca. 160 C.E.).

F. *Logos* in Second-Century Christian Literature

The use of *logos* was widespread and played a diverse role in 2d-century Christian literature. It played only a minor role in the writings of Ignatius of Antioch who wrote of Jesus Christ as "the word which proceeded from silence" (*Magn.* 8.2). Given the context, *logos* was probably used in this passage metaphorically and with little or no mythological or metaphysical implications (Schoedel 1985: 120–22). The concept of *logos* was important, however, for the thought of the *Odes of Solomon.* In the *Odes* the *logos* was the mediation of creation (*Odes Sol.* 16), of God's self-revelation (*Odes Sol.* 7.7, 12; 8.8; 12.10; 46.13–14), and of salvation (*Odes Sol.* 46.11, 15; 31.14) (Pollard 1970: 34). The *logos* also became incarnate, although it is not altogether clear whether the author was asserting the full humanity of Jesus

(*Odes Sol.* 7.4, 6). The author of the *Odes of Solomon* may have been acquainted with the Gospel of John (Barrett 1978: 65).

The concept of *logos* was also important in various gnostic writings such as the *Gospel of Truth,* the *Tripartite Tractate* and in "orthodox" writers such as Justin Martyr, Theophilus of Antioch, and Irenaeus. There is, however, no clear reference to the *logos* from the Gospel of John in "orthodox" Christian writers until Theophilus of Antioch and Irenaeus of Lyons in the late 2d century. Justin Martyr, for whom the concept of the *logos* was of great importance, did not clearly refer to the Gospel of John. Justin's concept of the *logos* and its use in the interpretation of Jesus finds its religious and intellectual background in the continuation of Hellenistic Jewish speculation (*Dial.* 61–62) and in Middle Platonism and Stoicism rather than in any direct dependence on the Gospel of John. The widespread use of *logos* in 2d-century Christian literature of various sorts and the fact that a good deal of this literature did not directly depend on the Gospel of John points to the continued influence of Hellenistic Jewish speculation on early Christian literature of various sorts.

THOMAS H. TOBIN

LOIS (PERSON) [Gk *Lois* (Λοις)]. Lois, the mother of Eunice and grandmother of Timothy, was a Christian convert apparently at the hands of Paul and Barnabas in Lystra of Lycaonia (2 Tim 1:5; cf. Acts

16:1). 2 Timothy 1:5 indicates that she and her daughter Eunice were believers before Timothy. It is possible that the reference in 2 Tim 3:15 to Timothy's instruction from childhood in the sacred writings is an allusion to teaching he received from Lois and Eunice. Like her daughter, who is specifically identified as a Jewess (Acts 16:1), Lois was probably also Jewish. See the fuller discussion under EUNICE. See also TIMOTHY.

FLORENCE MORGAN GILLMAN

LOOPS [Heb *lulā·ôt* (לֻלָאוֹת)]. Rings attached to the edges of the tabernacle's curtains so that they could be attached to each other (Exod 26:4, 5, 10, 11; 36:11, 12, 17). The loops were apparently made of wool, since the text states that they were "blue," which was one of the colors of the wool used to make many of the tabernacle's finest fabrics. Two sets of five curtains made of linen and colored wools were coupled to each other, with fifty golden clasps that attached together the fifty loops on the edge of each set. In this way the inner covering of the tabernacle's frame was formed. A similar procedure, using loops of unspecified material and bronze clasps, was used for the outer covering of goat's hair. See also TABERNACLE for a reconstruction of how the loop and clasp assembly coupled the tabernacle curtains.

A. Issues in Interpretation

Because of the complexity of the problems raised by the Lord's Prayer (LP), it is worth listing some of the chief "probes" which may be attempted. Not all the resulting perspectives are mutually consistent.

1. Original Version. Assuming the Gospels to be reporting and adapting a prayer spoken by Jesus, or a liturgical composition predating the writing of the Gospels, what was the form of that prayer, presumably in Aramaic, and how does it relate to the forms preserved in Matthew and Luke? This line of enquiry remains at the level of hypothesis insofar as it posits an original form of the LP which is independent of the Gospels themselves.

2. Relationship between the Versions. This immediately raises the question of the relationship between the gospels of Matthew and Luke, the question of John's use of one or both in his own distinctive manner, and of the *Didache*'s use of Matthew. This enquiry may still envisage the LP as an independent prayer in use in the early Church, but it may suggest a different perspective altogether.

3. Various Documentary Attestations. This redaction-critical or even "narrative" approach leaves aside the issue of putative original forms and concentrates instead on the subtle connections of the various versions of the LP with the Gospels and the *Didache* as writings with their own coherent identity. This perspective may in part be used alongside the two previous ones, but if taken in a thoroughgoing way it

raises the possibility of a quite different kind of illumination. Questions of detail, such as the meaning of individual words, play their part within the major enquiries and are in turn affected by the various perspectives they suggest.

B. Text

The texts of the versions of the LP are given synoptically in Table 1. The versions of the LP in the gospels of Matthew and Luke, though distinct, are recognizably related, while that in the *Didache* is very close to the LP in Matthew. (This similarity of text is one of a number of close similarities between the *Didache* and Matthew, betokening the use of comparable traditions or the dependence of the former on the latter.) The Johannine material is less clearly involved in a study of the LP. What is at stake is a correct discernment of possible Johannine methods of using and elaborating material derived from or similar to that found in earlier Gospels. It is not implausible to see many elements and themes in the prayer of Jesus in John 17 as related to parts of the LP but developed in a Johannine manner.

Table 1: The Text of the Lord's Prayer

Line	Matt 6:9–13	Luke 11:2–4	*Didache 8:2*	John
1	Our Father who art in the heavens.	Father	Our Father who art in heaven,	17:1, 5; 17:11, 21, 24–25
2	may thy name be hallowed.	may the name be hallowed.	may thy name be hallowed.	17:11–12; 17:26
3	May thy Kingdom come.	may thy kingdom come.	may thy kingdom come.	17:1–2
4	May thy will come to pass as in heaven also on earth.		May thy will come to pass as in heaven also on earth.	17:4
5	Our bread for the morrow (?) give us today	Our bread for the morrow (?) give us each day	Our bread for the morrow (?) give us today	6:32–35
6	and forgive us our debts as we also have forgiven our debtors;	and forgive us our sins for we also forgive everyone indebted to us;	and forgive us our debt as we also forgive our debtors;	17:17
7	and do not lead us into rest,	and do not lead us into test,	and do not lead us into test,	17:11–15
8	but rescue us from the evil one (?).		but rescue us from the evil one (?).	17:15

From the 4th or 5th century on, some mss of Matthew add a stereotyped doxology in scriptural style (see RSV marg.; cf. 1 Chr 29.11–13): "for thine is the kingdom and the power and the glory, for ever. Amen." There are minor variations, and the *Didache* omits "the kingdom."

Variations in the form of the LP did not cease with the writing of the Gospels and the *Didache.* Such variations are in no way surprising in the transmission of a text which was soon, and perhaps from the start, central in Christian liturgy and instruction. The operation of both liturgical and instructional use can be discerned. Thus, over a long period various mss have alterations, whether the addition of the liturgical doxology to Matthew or the harmonizing expansion of Luke's shorter version with Matthew's fuller and soon more widely used version. Both the gospel settings and that of the *Didache* reflect instructional needs, the provision of a guide for Christian prayer. Soon, this use widened and the LP became a basis for teaching. In Tertullian's *On the Prayer* (early 3d century), the version expounded is that of Matthew, but "our" is omitted before "Father," and lines 3 and 4 are reversed, perhaps so that in a catechetical context teaching on Christian life (doing God's will) might precede attention to the final End (the kingdom). Already in the 2d century, some Christians knew Luke's version with "may thy Holy Spirit come upon us and cleanse us" substituted for "may thy kingdom come," a wording still being copied in medieval times but probably originating in the LP's links with prebaptismal teaching, reflected as early as the *Didache.* The fluidity persists into more recent times. The doxology, long in abeyance in western Christian use, reappeared in 17th-century Anglican services and is included in recent Roman Catholic liturgical revisions. More recently some feminists have adapted the LP to begin "Our Mother" or "Our Parent."

Whatever the strength of liturgical and instructional pressures from early days to the present, these factors may not be the whole of the story. Other matters must come into play as we try to assess the origins and early development of the LP.

C. Origins

The oldest extant forms of the LP are those found in the gospels of Matthew and Luke. Any earlier history must remain obscure, but a number of hypotheses may be considered, each reflecting wider

matters of NT studies and, as already indicated, sometimes compelling choices between methods of interpretation.

The most widely accepted view is that the LP goes back to the Aramaic teaching of Jesus. In due course, it was incorporated into a collection of his sayings (Q) and thence included in the gospels of Matthew and Luke, each of whom altered it in accordance with preferences of style, structure, or doctrine. Luke's version is considered to be closer to Q. Thus, Matthew added lines 2, 4, 8 (see Table 1), using typical language, and filling out the balance of the LP; while Luke altered the original "debts" to "sins" (line 6) and "today" to "each day" (line 5), a favorite phrase (9:23), and changed the tense of the verbs "give" (line 5) and "forgive" (line 6) to the present continuous, in order to turn the LP's application more usefully to everyday Christian living. This view is summed up in Jeremias' words: "in *length* the shorter text of Luke is to be regarded as original, and in general *wording* the text of Matthew is to be preferred" (Jeremias 1971: 196). On the basis of such a view, there have been various attempts to reconstruct an Aramaic text, which might then even be the very words (*ipsissima verba*) of Jesus.

Evidence for the existence of the LP before the writing of the Gospels is found in its intrusive appearance in Matthew 6, where the otherwise balanced treatment of the three aspects of piety (almsgiving, prayer, and fasting) is spoiled by its presence. The same point can be made about the *Didache*. The LP is less intrusive in Luke, though here too it may be read as a familiar formula which is given as *the* Christian prayer. On this view, though the two evangelists have each played a part in the wording of the LP, early Christian liturgical practice is the most likely milieu for the preservation of this piece of Jesus' teaching, even if it was included in a written collection of dominical sayings such as Q. Moreover, it may be that a reference to the LP is to be found in Rom 8:15 and Gal 4:6, and "Abba, Father" may even have been the name by which the LP was known (cf. *Paternoster* or "the Our Father" of later times).

The element of hypothesis may be reduced by taking a different approach. As they stand, the two early versions are part of the gospels of Matthew and Luke, and each version may be viewed in the context of its own gospel's structure and the flow of its narrative. Both versions respond interestingly to such treatment. Thus, Matthew's teaching on prayer centers on the avoidance of verbosity and prattling and on the necessity for single-minded attentiveness to God. By comparison with Jewish formulas (like the Eighteen Benedictions or the Shema), the LP, despite its strongly Jewish character as far as phraseology goes, is an admirable example of these qualities. It is resolutely theocentric, even though its structure involves an orderly shift from "thou" to "we" after line 4; it is simple in its wording; and it avoids concern with Jewish national restoration. Its petitions are, mostly, noticeably consistent with Matthean concerns and language. Its themes and style are at home in Matthew's Jewish Christian setting. The two verses that follow the LP further stress the matter of conditional forgiveness, a prominent concern of Matthew consistent with his general sense of strict rewards and punishments (16:27; 18:35; 25; and, also showing his feeling for reciprocity, 7:12). Luke's version also displays the characteristics of the particular evangelist, from the one-word address "Father" onwards (22:42; 23:34, 46). His brevity, by comparison with Matthew, finds a parallel in the Beatitudes (6:20; cf. Matt 5:3–12). Luke's everyday piety appears in his concern for God's constant provision of bread and for deliverance from sin and temptation. Most obviously, his placing of the LP in relation to Jesus' own praying accords wholy with his constant stress on Jesus' prayerfulness, noted by Luke alone at every major turn of his ministry (3:21; 5:16; 6:12; 9:18, 28; 22:32, 41), as does the gospel's shift from the LP to a major treatment of the various aspects of prayer, but with a continuing and realistic interest in "bread" (11:5–13).

The approach just outlined, which is compatible with a number of different opinions about the source from which the LP derives and the relationship among the Gospels, can receive a more definite outline. Such a definition is illustrated by M. D. Goulder's proposal (1963; 1974) that the phenomena of the Synoptic Gospels can be most economically explained by supposing that Matthew built up his gospel not only from direct assimilation of Mark but also from the midrashic development of "hints" in Mark. On this view, Matthew drew together the elements of the LP from the teaching and deeds of Jesus in Mark, seen in the light of his own interests and needs, in particular the desire to provide teaching for practical

Christian living. The teaching in Mark 11:25–26 (which Matthew omits in its Marcan context) is then the basis for the LP, and its message is, as we have seen, emphasized not only in Matthew 6, where vv 14–15 use Mark's actual word "trespasses," moving away from Matthew's earlier "debts," but also elsewhere. It is possible that the Marcan passage also contributes the LP's opening in terms which became great favorites with Matthew (5:16, 45; 7:11, 21; 10:32–33; 12:50; 16:17; 18:10, 14, 19). Lines 4 and 8 both derive from the Gethsemane episode (Mark 14:32–42), with the former included also at 26:42. The petition for the coming of the kingdom is amply based in Jesus' preaching in Mark 1:14–15 and the parables of Mark 4. The Sinai model for the Sermon on the Mount as a whole brings manna to mind, as did Mark's feeding stories (6:35–44; 8:1–9), forming the basis for line 5 (cf. Mark 8:16–17). Other features confirm the Matthean nature of the LP. "Our Father" parallels Matthew's alteration of Mark's "Abba, Father" in 14:36 to "my Father" (26:39).

This proposal leaves no room for any hypothetical source, whether Q or an Aramaic original. The LP is Matthew's devout creation out of his knowledge of Jesus derived from Mark. In this view, it is best seen as from the start liturgical and instructional in purpose. (This would sufficiently account for its apparent intrusiveness in the pattern of Matthew 6, and accords with its role in *Didache* 8.) It was produced (like the gospel as a whole) to serve his church's needs, while being faithfully consistent with Jesus' teaching as he understood it. We may note that Matthew shows a sense of liturgical usefulness elsewhere, e.g., in his rubrical precision compared with Mark ("Take, eat," 26:26) and his reference to forgiveness of sins as a fruit of sharing the cup (26:28). From its beginning, then, the LP was what it has continued to be even in our day: a prayer of the Church adapted like all prayer to the perception of those who used it.

Luke's version may then be seen as the first such adaptation (with the *Didache* providing a much less innovative, roughly contemporary parallel). For if Q is redundant, Luke's use of Matthew as well as Mark becomes a live option, and attention focuses freely on the Lukan character of his version of the LP. The Lukan amendments to Q, as soon on the usual view of the matter, now appear as amendments to Matthew.

In this perspective, the subject of a possible Johannine version comes alive more convincingly. Just as Matthew is seen as having produced a model for Christian prayer in accordance with *his* understanding of Jesus' teaching, based on his perception of Mark, and Luke did the same consistent with *his* understanding, so John 17 may represent the Johannine way of carrying out the same task. Not surprisingly, its conceptuality is more sophisticated and its vocabulary typical of the writer (so that, for example, "hallow" becomes the Johannine "glorify"). In formal and intellectual terms, it departs much further from its models (whether those were earlier Gospels or traditions used by them) but all the same it is the result of an exercise which is recognizably of the same kind (Walker 1982). Moreover, it is a procedure of adaptation which is discernible in other parts of the gospel of John in relation to various elements in the tradition of Jesus' words and deeds (e.g., the discourse on the Bread of Life in chap. 6, especially v 51, in relation to the Synoptic story of the Last Supper).

It is evident that the origins and early development of the LP are far from clear, and a number of possibilities may be entertained. Each of them depends on the view taken of more general and fundamental questions of source, form, redaction, and narrative criticism; that is, on the manner in which the development of the Jesus tradition is understood, and in particular the degree of creativity which is attributed to the individual evangelists.

D. General Meaning

The LP, in its fuller form in Matthew and *Didache*, consists of an address (1), three second-person petitions relating to the fulfillment of God's purpose (2–4), and three or four first-person petitions relating to human needs (5–8: structurally, 8 may be meant as part of 7). The subject of all the petitions is arguably the same: the realization of God's ultimate purpose for the world and for his people. The thrust is firmly eschatological. In praying for "now" its eyes are towards the future.

However, the question of the LP's overall context of meaning is inseparable from the issues discussed above. If it is regarded as an independent form of words, derived from Jesus and merely incorporated (albeit with amendments) into the gospels of Matthew and Luke, and then also the *Didache* (and, though more inventively, perhaps too the gospel of John), then it is necessary to characterize its sense in its own

right. The following points will then require consideration. LP is distinctly Jewish in character, with numerous parallels in Jewish forms of prayer, e.g., "Bring me not into the power of sin, iniquity, temptation or contempt; and let the good impulse have dominion over me but not the evil impulse" (*b. Ber.* 60b); Jewish piety is also reflected in the Matthean form of the LP's address (line 1). Its eschatological perspective, signifying the position of one for whom the decisive fulfillment is near and who longs for salvation, despite all hazards, is salient. The question of the relationship of the LP to other aspects of the tradition of Jesus' teachings immediately arises. The LP's sense of the imminence of the coming of the kingdom is in line with other sayings (e.g., Matt 12:28; Luke 11:20) that seem to speak vividly of its already realized presence. The prayer's eschatological concern comports with the detailed apocalyptic teaching found in Mark 13 and elsewhere, supposing that to be authentic in detail or general pattern.

If, however, each version of the LP is viewed as standing within the conceptual framework of the document in which it appears, then more detailed links with each of them can be presented and the LP can be tested for its Matthean or Lukan quality. General Jewish elements lead our attention to the specific relation to Jewish background discernible in each of those documents, with Matthew showing clear relations to forms characteristic of later rabbinic Judaism. General eschatological character is made more specific by being brought into relation with each evangelist's particular tendencies. We have already identified some of the links of the Matthean and Lukan versions of the LP with the rest of the Gospels concerned. We now mention some of their broader conceptual implications.

Matthew's version of the LP is wholly in line with his heightened awareness of the threatening nature of the approaching End, seen most plainly in the parables added to Mark in chap. 25, and his sense of the precarious nature of salvation in the light of the trials which will precede it (13:31–43, 47–50; 22:11–14). These features are echoed in lines 7 and 8. So, too, Matthew's sense of the balanced and reciprocal nature of forgiveness and responsibility for one's actions (6:14–15; 16:27; 18:23–35) is exemplified in line 6. Indeed, one might go further. In the light of 6:14–15, it looks as it forgiveness of sins is the sentiment uppermost in Matthew's mind in this passage, as indeed frequently in his gospel. On this ground, communal Christian life and relationship with God meet. Evidently it was in the light of this that Matthew understood the practical reality of the Kingdom's coming and the doing of God's will. For him the eschatological hope had concrete expression here. No wonder there is such stress on it in this gospel, no wonder that in the account of the supper, adding to Mark, he sees Jesus' blood as shed—and shared "for the forgiveness of sins" (26:28).

Luke's version also finds parallels in the character of Luke's understanding of Jesus' ministry and of Christian life. Prayer itself is accorded great importance in Luke's gospel. But the Lukan LP also has other features characteristic of Luke. Its content is probably best seen, as far as Luke's intention goes, as diverging from Matthew in the more practical and ethical way in which it sees the life of the kingdom. In this, too, as in its pithiness, it is parallel to his treatment of the Beatitudes (6:20–22). Line 5 in particular seems to substitute a concern with daily bread for Matthew's hope for the "bread of the kingdom" (see on line 5 below); just as his blessing (6:21) is for those who "hunger now" rather than Matthew's "hunger and thirst for righteousness" (5:6) and for the poor (6:21) rather than the "poor in spirit" (Matt 5:3). We recall, too, the strongly realistic picture of the new order Jesus brings depicted in the Nazareth sermon in Luke 4:16–20. It is possible that in line 7 Luke edges the sense of "temptation" toward a notion of everyday testing of faith in various moral predicaments and away from the ultimate (eschatological) test that will precede the End and that Matthew presumably has in mind. All the same, both evangelists see the present as already witnessing to the future, and the LP bears on both.

E. Points of Detail

As the foregoing discussion has made plain, the basic questions of gospel interpretation color the way in which the details are to be understood, but matters of detail also form the basis on which judgments of method and principle can reasonably be made.

1. Line 1. We have seen that both the Matthean and Lukan forms are typical of their writers. The idea of God as "Father" is well-established in Jewish usage (Isa 63:16; 1 Chr 29:10; Psalm 89:27; Sir 23:1, 4;

51:10), but it is more difficult to establish the spirit in which it is used. In particular, where does the LP stand in relation to a more personal style of piety in the period concerned? Certainly it lacks the national element often found in Jewish prayers, even though the eschatological tone involves the corporateness which the Matthean version makes explicit.

But the interesting issue concerns the background of "father" itself. Largely as a result of the work of Jeremias, the idea has become established that behind the term "father" lies the Aramaic ›*abbā*‹, and that this word, allegedly not found in Jewish addressing of God in prayer, expresses a peculiarly intimate, simple and even childlike relationship with God. Jesus both experienced and encouraged his followers to share this relationship. However, this view has been severely challenged, e.g., by Vermes (1973: 210), and Barr (1988), who affirm that ›*abbā*‹ was used of God and carried no specific associations with child language. See also ABBA.

In any case, we should recognize that the relevance of this discussion of ›*abbā*‹ to the LP rests on controvertible premises. It depends on the assumption that the LP's Lukan form is the more authentic, that it is an independent unit of tradition going back to Jesus, and that the inclusion of the Aramaic word in early Christian usage (Rom 8:15; Gal 4:6) above all on Jesus' lips (Mark 14:36), demonstrates its prominence in the self-understanding and piety of Jesus. On the other views of the LP's origin and development the issue is assessed differently. The simple address "father," appears as an established feature of Lukan usage, introduced as we have seen at numerous points, just as Matthew prefers "my/your/our father" (26:42; 5:16; 6:4, 9). Moreover, the connection of ›*abbā*‹ with Jesus is only tenuously witnessed. Its use by Paul is not linked to Jews in any way. Its single gospel occurrence in the Gethsemane episode comes at a point where there is no one to overhear, and the idea that it is included for its known typicality is not supported by the rest of the gospel narrative; even in the Gethsemane story Matthew and Luke both replace it, with "my father" and "father" respectively, in line with their wording of the LP. As for its allegedly childlike resonances, the fact that in all three cases in both Paul and Mark, it is rendered simply by the ordinary, formal term *patēr* may be taken to show that the writers concerned were not aware of such associations; though a childlike deposition before God is certainly enjoined in passages like Mark 10:13–16 and Matt 11:25.

2. Line 2. The petition for the hallowing of God's name is the first which looks for the realizing of God's power plainly in the world, that is for the coming of the End (the use of the aorist tense, here and in lines 3 and 4, indicated event rather than process). The language is well-established in Judaism, with God's "name" signifying the reality and majesty of his presence, and "holiness" being his essential attribute (2 Sam 6:2; Jer 7:11; Lev 11:45). While the verb does not occur elsewhere in the Gospels in relation to God, Matthew makes much use of the idea of God's name or Jesus' name in this highly charged sense (Matt 1:23; 7:22; 10:22; 12:21; 18:5, 20; 19:29; 21:9; 23:39; 24:5, 9; 28:19). The last reference, concerning baptism, may come closest to shedding light on its use in the LP. Matthew's Church may well have seen initiation into the Christian community as an anticipatory realization of the "hallowing" of God's name which would soon take place on the grandest scale. In this sense, the LP's links with baptism, and the teaching which accompanied it, may go back to the earliest stage of its use that is visible to us, just as they are implied by its context in the *Didache* and, more formally, in a work like Tertullian's *On the Prayer*.

3. Line 3. The hope for the coming of God's kingdom is at the heart of the eschatological expectation, and this language pervades the tradition of Jesus' preaching in the first three Gospels, though not Jewish sources clearly belonging to this period. Mark 9:1 and 11:10 establish the idea of its "coming" in Matthew's primary source. He himself has several relevant uses of the verb (3:11; 11:2; 16:27–28; 21:9; 24:30, 42; 25:10; 26:64), but all speak of Jesus as the coming one; and 16:28 and 21:9 pointedly alter "kingdom" references in Mark to speak directly of him. However, the imminence of the kingdom is amply attested in both Matthew (3:2; 4:17) and Luke (9:27; 10:9), though in both Gospels there is a considerable range of concept and imagery implicit in the use of the term.

4. Line 4. The realization of God's will refers again to his ultimate purpose but specifically to his moral imperatives, in mind throughout Matthew's gospel with its ample ethical teaching. The idea of carrying

out God's will occurs at 7:21; 12:50 and 18:14 (all reminiscent of the LP with the reference to "my father" or "your father"), as well as the crucial 26:42. This may be a conscious reproduction by Matthew of the language of the LP in a highly impressive context, by adaptation of Mark's different wording (14:36), using the noun rather than the verb, but in this added statement of his own. Luke has no reference to the idea of God's will apart from the Gethsemane saying (22:42), where he is close to Matthew's wording in 26:42 (but, as in lines 5 and 6 of the LP, substituting present for aorist), though see Acts 21:14 and 22:14.

The force of "as" in the final phrase is not wholly clear: does it mean "in the same way as" or "as much as," or simply "just as"? In heaven, God's will is already obeyed by angels (Matt 26:53) and that situation will be extended to earth where at present evil powers abound. So Jesus' exorcisms visibly presage the fulfillment of the LP. Then the remaining petitions of the LP shift the scene to earth and pray in effect for the working out of line 4.

It has long been suggested that this final phrase should be taken to accompany both of the preceding petitions. But though such a reading does not materially affect the sense, there is no good reason to suppose it was intended. If the prayer stood in Q or some other pregospel source in more or less its Lukan form, then the idea is gratuitous; and for Matthew any intended parallel with the ("as") clause in line 6 rules it out. If Luke knew and adapted Matthew's version, then he failed to understand his model in such a sense. In any case, the phrase bears all the marks of Matthew's style (e.g., 28:18), which suggests that Matthew sees the resurrection of Jesus as a decisive stage in the fulfillment of the LP (cf. also 16:28; 26:64).

5. Line 5. This most difficult (though apparently most straightforward) of the petitions raises two major questions: the meaning of Gk *epiousios,* usually translated "daily," and the bearing of the petition as a whole. The answer to the first affects the answer to the second, though not necessarily decisively.

The familiar English "daily" renders the Latin *quotidianus,* which established itself for lack of any better idea of how to render the Greek word and from a misunderstanding of its etymology. The fact is that, apart from its occurrence in the LP, *epiousios* has not yet been attested in literary or epigraphic sources (apart from one possible case, now unverifiable because the papyrus is not available; its text may have been inaccurately transcribed, the reference there being perhaps to daily rations; see Metzger 1957–58). This absence of parallels helps to create uncertainty about meaning as does obscurity of etymology. The word may arise from a compounding of the preposition *epi* with the verb "to be" (*eimi*), of which cognate examples are well established; or else from a compounding with the verb "to come" (also *eimi,* but differently accented and inflected). The former, more probable on semantic grounds, would yield a sense such as "essential," "necessary for subsistence." If it is thought that John has the LP in mind in the writing of chap. 6, then his reference to the "*true* bread from heaven" may represent an understandable "johannization" of such an interpretation with "bread" now allegorized. In the 3d century, Origen was already mystified by the word and took this interpretation further in a spiritualizing Platonist direction by rendering it "supernatural" heavenly bread as opposed to the mere earthly bread to which ordinary use of the LP refers.

The latter derivation of the word from "to come" pushes its chronological orientation into the future, though maybe with a backward look to the manna of the wilderness as a symbolic model (Exod 16:4). Manna is the morrow's bread, the bread of the coming day, the bread of the kingdom, now urgently longed for. This understanding, already found in some circles in the early Church, has the advantage of linking this petition with those that precede and follow it in the LP, thus giving it all its eschatological sense. It also confirms possible eucharistic associations of the LP, apparent in its context in the *Didache,* where the eschatological perception of the Christian meal is emphasized (*Did.* 9–10). Moreover, in Matthew's narrative the LP looks forward to the story of the Supper (26:26–29), mediated by the intervening feelings of the crowds (14:13–21; 15:32–39) if they were understood as foreshadowings of future messianic meals in the kingdom. The link with the Church's actual eucharistic observance may explain the uniquely "realized" quality of this petition ("today"), for it could be seen as answered in a measure by the rite itself. Though not ruled out, sense is less clear in Luke, where a plain request for food

is probably in mind. For Luke the meeting of practical human need is the essence of the gift of the kingdom, to be sought "each day." Luke may still see the meaning as being "the morrow's bread," for a cognate word appears in this sense in Acts (7:26; 16:11; 20:15; 21:18; 23:11). It is not impossible that since the word is a rarity and possibly even a neologism, our different sources did not all take *epiousios* in the same sense.

Whatever Aramaic or other original there may have been, Luke's "each day" is generally agreed to be his own (9:23).

6. Line 6. There is uncertainty about the force of "as" in Matthew's version. In part at least, it may be stylistic, and thus parallel with line 4. But Matthew consistently sees forgiveness by God as bound up with the Christian's readiness to forgive others. As we saw, he may have been picking up and greatly extending in scope the statement in Mark 11:25. Luke sidestepped unclarity in this respect by means of a confident, perhaps semi-hortatory statement, "for we too forgive." For him, a spirit of mercy and generous forgiveness is basic to his understanding of Christian discipleship and its place can be simply accepted (1:77; 3:3; 4:18; 24:47; Acts 2:38; 5:31; 10:43). Luke's "sins" is also typical of his usage in these passages; while Matthew is inclined to see sin in terms of debt, and forgiveness as dispensation from debt, notably in the parable of the Two Debtors (Matt 18:23–35; a parable perhaps itself interacting with Matthew's wording of the LP) Luke retains the concept "sin" in the second half of the petition. In any underlying Aramaic version, this would not surprise, for "sin" and "debt" are attested as synonymous parallels in Jewish usage (*ḥṭ'h wḥwbt'*). However, this may not exactly explain the wording of Luke 11:4. On the view that Luke is close to Q, as the fount of the LP's Greek tradition, Matthew then took the hint of "is indebted to us" (probably originally meaning "does wrong to us") and let it pervade the petition as a whole. If, however, Luke was adapting Matthew's version, then here, in embarking on "sins" but failing to sustain it into the petition's second half, he has shown signs of imperfect control, slipping back to Matthew despite himself—and betraying his dependence on him. There is nothing unusual with Luke's open-armed "everyone" or in Matthew's relative caution.

7. Line 7. The Greek word *peirasmos* can refer to temptations to sin or to the testing of faith and obedience. Sometimes, as in the *peirasmos* endured by Jesus in the wilderness, one sense merges into the other: the latter is uppermost in Mark 1:12–13, while the two coexist in the developed versions in Matt 4:1–11 and Luke 4:1–11. Here, given the dominant eschatological sense of the LP, the sense of "testing" is likely to be in view, for a period of suffering for God's elect was commonly seen as a preliminary to the coming of the End. It is well attested in apocalyptic literature, from Daniel onwards, where indeed it represented an interpretation of persecutions actually endured. It appears, then, in Christian apocalyptic expectation as expressed in the Gospels themselves (Mark 13; Matt 24; Luke 21). Closely germane to the LP, it appears in the Gethsemane story (Mark 14:38 and par.).

Given this sense of the word and so of the pattern, the difficulty often raised concerning the idea of God as a source of temptation to sin is a red herring; and the discussion in Jas 1:12–15, itself vacillating in its perception of the sense of *peirasmos*, is not relevant (though it is not impossible that it was prompted by the language of the LP). Nevertheless, once the original eschatological context of the LP faded and "temptation" came to be seen unequivocally as the subject of the petition, the difficulty inevitably arose. Hence the softening of the sense in some modern translations, and indeed in early interpretation, by shifting to the passive: as Tertullian said in comment, "that is, let us not be led." It is possible that Matthew is already sensitive to the point (see below on line 8). Given the early Christian perception of the conditions of the times of the End as already in existence in Jesus' ministry and their own lives, the risk of apostasy already colors this petition, perhaps especially in Luke (Acts 20:19; but see also Matt 13:21; and, once more, Gethsemane).

It may be felt that, all the same, there remains a problem of theodicy if God permits the undeserved suffering of his faithful ones, even if it be seen as a test of their faithfulness. The reply must be that the first Christians seem not to have experienced it as problem in this way. They were more conscious of the great prize beyond and indeed already present in the midst of their "light affliction." All the same, like

Jesus on the eve of his death, and modeling themselves on him, they could pray for release or at least that the time be shortened (Mark 13:20; Matt 24:22).

8. Line 8. The final petition, in Matthew and the *Didache* along, at first sight does little more than repeat the sense of line 7. As earlier, it is Matthew who has the longer form and in all cases he exhibits the Jewish tendency to parallelism, as in the Psalms. The new element is the reference to the devil, if indeed *ho ponēros* is to be taken as personal (if impersonal, it refers to "evil" as a principle). If Matthew's usage is to guide us, the matter is open. The word is certainly a Matthean favorite, occurring 24 times, far more frequently than elsewhere. It is used of the devil in 13:19 and 38. If that is his sense here, it is possible that the clause was added as a way of easing the problem raised implicitly by its predecessor—it is the devil not God who is the real source of trials that Christians undergo. Whatever degree of formal dualism is involved, the petition seeks deliverance from all such sufferings, which, as just discussed with reference to line 7, may well have been thought to include temptations to sin. The different spheres of reference were scarcely distinguished, as in the "temptations" of Jesus in Matthew 4 and Luke 4, which were, in a sense, a rehearsal for his final and climactic Passion.

LORD'S SUPPER. The ritual meal celebrated in the early churches after the first Easter. As such, it should not be confused with the LAST SUPPER, to which it is nevertheless related.

A. Introduction

The designation "Lord's Supper" is derived from the Greek collocation *kyriakon deipnon* in 1 Cor 11:20. *Kyriakos* means something like "belonging to the *kyrios* (lord)" "owned by the *kyrios*." In the papyri and inscriptions it designates Caesar's domain (in *OGIS* 669:18 [68 C.E.], *kyriakos logos* designates the imperial treasury). *Deipnon* was what the Greeks called the main meal of the day, eaten in the late afternoon or evening, in contrast to an early morning snack (*akratisma*) and to breakfast (*ariston*), eaten closer to noon (cf. Plut. *Quaest. conv.* 8.6.3–4). Moreover, *deipnon* also designated the festal meal or banquet (in the NT, e.g., Mark 6:21; Luke 14:16, 17, 24). Also, it was used quite frequently for cultic meals associated with sacrifices and the celebration of the Mysteries (cf. the Andania inscription [92 B.C.] *SIG*^{3} 736:96: *eis to hieron deipnon*).

In 1 Cor 11:17–34, Paul bases the Lord's Supper on the last supper Jesus ate with his disciples prior to his death (see also LAST SUPPER), and in that respect he is not alone. The Synoptic accounts of the institution of the Lord's Supper (Mark 14:22–26 = Matt 26:26–30 = Luke 22:15–20) also reflect the practice of communion in the church (Jeremias 1967: 100–102): on the one hand, they give the aetiological reason for the current practice of the church and lead it back to its sustaining foundation; on the other hand, they have received their shape and form from the liturgical practice of the church.

The situation is somewhat different in Acts 2:42, 46, where the expression "breaking bread," in summary fashion, is used for the celebration of the supper by the early church in Jerusalem. Whether that means that we are dealing with an essentially different kind of meal will have to be investigated. The search for the Lord's Supper in the text of the Johannine writings and in the Epistle to the Hebrews is problematic. The results of the research on these texts are equally controversial.

Among the early Christian writings outside of the NT the *Didache*, the letters of Ignatius of Antioch, and Justin Martyr's Apology deserve to be studied as witnesses to the Lord's Supper. In these writings the technical term for the Lord's Supper is *eucharistia* (cf. *Did.* 9:1; Ign. *Smyrn.* 8:1; Just. *Apol.* 66:1)—a word which took the lead in Christian tradition for a long time and which is still, as in the past, dominant in Catholic circles. At the same time *agape* becomes more independent as the Christian meal with its caritative and social characteristics. Aside from all this one needs to ask the history of religions question: Are there analogous phenomena in Judaism and in paganism, and to what extent have these influenced the development of the early Christian celebration of the Lord's Supper?

B. The NT Texts

1. Paul. a. 1 Cor 11:17–34. From a literary standpoint the oldest account of the institution of the Lord's Supper is found in 1 Cor 11:23–26. Paul reports the account essentially in the form in which he had learned to know it in Antioch in the 40's and as he had passed it on to the Corinthians when he established the church there. The traditional words "receive" and "deliver" (*paralambanein* and *paradidonai*) in v 23a are well known in the scholarly language of Rabbinism (cf. *Midr.* Qoh. 12:11) and of Hellenism (*Diod.* 5.2,3). They clearly indicate that the vv 23b–25 are a fragment of tradition (possibly with some Pauline touches). "From the *kyrios*" points to the earthly Jesus as the source of this catena of traditional elements. At the same time he is seen as the present exalted Lord who gives the sacrament its permanent validity. The rather scanty reference to the historic event of the passion in v 23b ("on the night when he was betrayed") sets the words of Institution off from the timeless, cyclic myths and formulae of the Mysteries.

The traditional text lays out another aspect of the meal in which the breaking of the bread at the beginning of the meal and the blessing of the cup at the end (cf. 11:25a "in the same way also the cup, after supper") surround the main meal. The words "for you," spoken at the breaking of the bread, are addressed to the participants of the Lord's Supper; they draw them into participation of the salvatory self-sacrifice of Jesus. The contents of the cup in v 25b are not directly identified as the blood. Rather, in the foreground stands the sealing of the eschatological new covenant in the death on the cross. Besides its vertical dimension (the God of the covenant creating a new people), this covenant has a horizontal aspect: the celebrants are brought together into covenant community.

Through the double *anamnesis* command the account of the Institution receives a special accent at the end of v 24 and v 25, which is missing from the Markan tradition. (Luke has one *anamnesis* command in connection with the saying about the bread.) The repeated command is aimed precisely at the partaking of the bread and cup, which suggests that this action was eventually separated from the main meal. From a theological viewpoint the *anamnesis* motif has certainly been influenced by the significant and broad meanings of the word "remembrance" (*zkr*) in the OT, in which the remembrance of the past is thought of as becoming actual in the present. The wording of the *anamnesis* command also resembles the commands in the institution of Hellenistic meals in memory of the dead (Chenderlin 1982: 143–45, 217), and in this way the Lord's Supper is brought into close association with this type of meal. Additionally, the doubling of the *anamnesis* command in v 25c possibly goes back to Paul and in any case he clearly expresses the relationship of the celebration to the Lord's death in v 26. The Lord's Supper, comprised of word and action, is a realistic proclamation of the past death of Christ on the cross. The celebrating church must not get lost in the present; the present Lord is the crucified and the coming one at the same time. Reminiscent of the eschatological outlook of Mark 14:25 ("until he comes"), Paul keeps the celebration of the Lord's Supper oriented to the longing expectation of the parousia.

In his quotation of the Words of Institution Paul has the Corinthian practice of the Lord's Supper in mind throughout. The members of the church presumably gathered in the home of a well-to-do Christian (e.g. in the house of Gaius, cf. Rom 16:23) on Saturday or Sunday night (cf. 1 Cor 16:2; Rev 1:10). They brought their provisions for the meal with them and these were then shared with others. The breaking of the bread and the blessing of the cup had already been combined as a special act at the end of the meal (Neuenzeit 1960: 69–76). At this occasion verbal acts of worship, such as the reading of the Scriptures, singing of Psalms, prophecy, and speaking in tongues, after the manner of 1 Cor 14:1–40, may have been added. At this point the Corinthian church clearly shows herself to be the *ekklesia,* the church of God (cf. 11:18, 22; 14:23).

The name "Lord's Supper" embraces the entire event, including the main meal, together with the concluding rite of the bread and wine. Besides the anamnetic component (looking back at the Lord's death) and the eschatological (looking forward to the parousia of the Lord; cf. the anticipation of "the day of the Lord" in the OT), the word *kyriakos* first and foremost takes on also the following meaning: one recognizes the presence of the Lord by his Spirit at the meal, both as host and Lord. And from his hands believers receive all the benefits of the meal. Even the provisions for the meal themselves have become the property of the Lord.

This ideal picture was rather badly disfigured by the misdemeanors occurring in Corinth. Poorer Christians and slaves, who could come only later, could participate in the rite of the bread and the cup, but were excluded from the main meal (Bornkamm 1970: 142–45). This social scandal, according to Paul, made it impossible for a true Lord's Supper to take place (11:20). Paul interprets such behavior as a violation of the very essence of the institution of the Lord's Supper (11:27). The intent of the salvatory Christ event—which is captured in the "for you" in the saying over the bread, and the notion of covenant in the saying over the cup—are thereby perverted.

According to Paul the consequences for the individual who sins in this way, as well as for the entire congregation, are disastrous (cf. 11:27–32). In his reference to the sick and the dead in 11:30 one cannot help but gain the impression that Paul ascribes the destructive powers of a tabu to the sacred food. One can readily document such thinking from the world of Paul (Klauck 1986: 327–28). On the other hand one should note carefully that Paul does not establish a direct relationship between sickness and personal guilt. Nor does he suggest that the worthy participation in the eucharist is a protection against one's own death. Rather, he has the church as a whole in mind; in the last analysis, it is the church that is sick. Moreover, those cases where death has occurred are seen in the light of the imminent parousia. Instead of hastening the parousia, the unworthy manner of celebrating the Lord's Supper permits the powers of destruction and death to carry on their activity in the present age.

Besides, Paul adds a few practical suggestions. In 11:33 he recommends that the Corinthians wait with the main meal until everyone has arrived and in that way the problems can be avoided. In 11:22, to be

sure, another possibility emerges ("Do you not have houses to eat and drink in?"); namely, in an extreme situation, Paul would even entertain the possibility of separating the main meal from the bread/cup rite (in the terminology of a later period: the separation of Agape and Eucharist).

b. 1 Cor 10:14–22. In the context of his discourse on the participation in pagan sacrificial meals, Paul (1 Cor 10:1–13) first of all sets the example of the wilderness generation before the eyes of the Corinthians (cf. Willis 1985: 123–63). This generation allowed itself to be lulled into a false sense of security through "spiritual food" and "spiritual drink," i.e., through the manna and water from the rock. Paul sees prototypes of the Christian sacraments in the OT, but with unmistakable paraenetic intent.

In 1 Cor 10:16 he quotes a linguistically-polished fragment of tradition which he has taken from the eucharistic teaching of his Hellenistic churches (Käsemann 1970: 12). He himself puts it in question form to make it fit better with v 17, and mentions the cup before the bread. This unit of tradition expands and deepens the words of interpretation given at the institution of the Supper. When we read in v 16a, "The cup of blessing which we bless," Paul not only sets off the cup of the Christian Lord's Supper from the last cup of the Jewish festal meal, but he also points to the full development of eucharistic prayers, since blessing according to Jewish custom is bestowed by prayer (cf. the allusions to table grace in 1 Cor 10:30; Rom 14:6). Christian prayers of blessing at the Lord's Supper have not been handed down to us in the NT, but we do find them in the *Didache* (cf. *Did.* 9:2–4).

By contrast to the older saying over the cup (1 Cor 11:25), the cup in 1 Cor 10:16 is not equated with the new covenant but with the blood (cf. Mark 14:24)—an indication of more advanced reflection. What is new is the concept of *koinōnia,* which is derived not from Judaism but from the vocabulary for sacral meals in Hellenism. It signifies fellowship through participation (Hainz 1982: 18–35; cf. Willis 1985: 168–81). The eating of the bread and the drinking of the cup mediate personal fellowship with the crucified and glorified Christ through participation in his body and blood. At the same time there is a fellowship among those who jointly participate, as 10:17 makes more explicit. The twofold emphasis, that there is only one loaf was used at the Lord's Supper in Corinth (as Diog. Laert, *Vit. Phil.* 8:35 and Iambl. *VP.* 86 indicate for the Pythagorians). Through the communal participation in the one bread "the many" (Mark 14:24, "for many") become one body, i.e., one church, which is constituted by the Lord's Supper and understands itself as the body of Christ. "Body" is transmuted here as in 1 Cor 12:12–27 into an ecclesiological concept.

Whereas some Corinthian Christians apparently thought that baptism and the Lord's Supper would protect them in magical fashion from all dangers and permit them to participate in pagan cults, Paul argues in 10:18–22 that the sacramental components of the concept of *koinōnia* clearly demonstrate the incompatibility of the Christian Lord's Supper and pagan sacrificial meals. To be sure, for Paul there are neither gods (1 Cor 8:5) nor idols (cf. 1 Cor 8:4), but there are demons which stand behind pagan sacrifice as a fearsome reality. With this demonological interpretation of Gk polytheism Paul follows an OT-Jewish line of tradition (cf. Deut 32:17). We hear from non-Christian authors that demons establish a relationship between the gods and the people in sacrifices (Plut. *De def. or.* 13–14). Demons are said to feed on some parts of the sacrifice such as smoke and blood, and they try to enter the human body through the sacrificial meal (Iambl. *Myst.* 6:3; Porphr. acc. to Euseb. *Praep. Evang.* 4.23.3). Whether Paul, too, entertained the notion that sacrificial meals cause a demonic infection to take place can only be posed as a question. As far as the external rite is concerned, Paul in 10:21 singles out the cup of libation and the table in the hosting by the deity (cf. Isa 65:11). The cup of libation, with accompanying drink offerings, consists primarily of wine at a sacrifice and a symposium. Paul sets the "cup of the Lord," which is identical with the cup of blessing in 10:6, over against this pagan cup. The table has a different function in pagan cults than the altar. On the altar before the temple the sacrificial offerings are burned; on the table, often found inside the temple, one lays them down. The table plays a significant role in *theoxenia* (where the gods act as hosts) and in the cult of the dead. In the OT, on which Paul leans linguistically (cf. Mal 1:7, 12), the "table of the Lord" means the table of showbread in the temple. The parallels in the celebration of the Christian Lord's Supper must be completely divorced from these contrasts. Paul, in fact, has the family table in mind around which a house-church would gather for the Lord's Supper.

One will not be able entirely to avoid the conclusion that Paul, by contrasting the Lord's Supper with pagan feasts, indirectly sets it into the category of sacrificial meals. However, one must then immediately ask for the basis of such an analogy. Paul first of all discovers parallels in the table fellowship which is established through the offering of a sacrificial gift. See SACRIFICE AND SACRIFICIAL OFFERINGS (NT).

c. Lord's Supper and Ministry in Paul. It seems strange that Paul, in the face of the disorders at the Lord's Supper mentioned in 1 Corinthians 11, and the confusion at the meetings of the church mentioned in 1 Corinthians 14, does not charge a single office bearer with the task of restoring order. Obviously presiding at the Lord's Table and at the meetings of the congregation was not yet restricted to one person. There are fellow-workers to whom people are to submit (1 Cor 16:16); there are administrative services (1 Cor 12:28); there are leaders (1 Thess 5:12; Rom 12:8). However, these are mentioned in so casual a manner and appear so late in the lists of gifts that one hesitates to give them a prominent place at the Lord's Supper or else the responsibility of presiding was not yet invested with great dignity. Different attempts have been made (among others the one based on *Did.* 10:7: "Permit the prophets to say thanks" [*eucharistein*], as often as they wish") to find the leader at the Lord's Supper in the ranks of the early Christian prophets. If one begins with the assumption that the early churches began as house churches, one has good reason to hold that the father of the household or the owner of the house in which the church met assumed the leadership at the Lord's Supper. When he was personally present, the apostle himself, as honored guest, very likely assumed this responsibility; but that need not have been so always and everywhere. At the ancient symposium, which may serve as a kind of analogy (see D.1 below), the symposiarch, the chairman of the event, was chosen at the occasion from among the guests. Women may also have presided at the Lord's Supper in early Christianity, like Junia the apostle (Rom 16:7), Phoebe the deaconness and leader (Rom 16:1, 2), Prisca the head of a house church (1 Cor 16:19; Rom 16:3–5), or Nympha (Col 4:15) as prophetess (cf. 1 Cor 11:5; Acts 21:9). Whether and in what capacity the bishops (note the plural) and the deacons (Phil 1:1) played a role at the Lord's Supper is hard to determine. The contours of the later monepiscopate become visible only in the post-Pauline Pastoral Epistles, but even here their duties are not restricted to the eucharist.

2. Synoptics. a. Mark. The Last Supper is here described as a Passover meal (Mark 14:12) and as Jesus' farewell banquet. The account of the Institution of the Lord's Supper in 14:22–25, however, shows no signs of a Passover. Everything that is typical of a Passover is missing: the paschal lamb, the stewed fruit, the bitter herbs, and the Passover haggadah. Various peculiarities of the text in fact seem to suggest that it served as aetiological cult-legend for the Lord's Supper. The breaking of the bread and the blessing of the cup have already been united into one act at the end of the meal—something that clearly emerges from Mark 14:26. The departure to the Mount of Olives follows immediately upon the interpretive words spoken over the bread and the wine (14:22–25). Moreover, this made possible the concentration of all interpretive additions, including the *hyper pollōn* ("on behalf of many") in connection with the saying over the cup (which seems to overload the text in its present form). Also, the extensive parallels in the saying over the bread and the cup in the first part ("this is my body"; "this is my blood …") is the result of liturgical practice. Hand in hand with that goes an increasing interest in the elements of the meal, the bread and the wine, interpreted as body and blood of Christ. The exhortation "take," at the beginning of the saying over the bread in 14:22, points in the same direction, and may express a certain reserve regarding the eucharistic gifts. The note, "and they all drank of it," in v 23b can be understood in the light of the custom of the use of one common cup by all the participants at the Lord's Supper, as long as the number of participants made this possible. Concerning the preferred OT paradigms, the new covenant of Jer 31:31 (cf. 1 Cor 11:25) is replaced by the covenant meal of Exod 24:6–11, which was accompanied by an unusual blood ritual. Thereby the writer introduces notions of sacrifice into the Synoptic tradition of the Lord's Supper. See also SACRIFICE AND SACRIFICIAL OFFERINGS (NT).

There can be little doubt that in the context of the present gospel text, the account of the Institution in Mark (as well as its side references) harkens back to the miracles of feeding (Mark 6:35–44; 8:1–10 par.), whatever its original source or form may have been. The Christian reader saw reflections of the Lord's

Supper in the blessing and breaking of the bread by Jesus (as well as in the disciples' distribution of these to the crowds; 6:41; 8:6). At the same time the accounts reminded him of his social obligations to the hungry (6:37), which in the early church were closely connected with the practice of the Lord's Supper, and not only in Paul (Reicke 1951: 21–38).

b. Matthew. Matthew's version of the account of the Institution (26:26–29) can be understood as a further development of the Markan presentation. What is questionable, however, is whether it is sufficient to think of it simply as a literary recension or whether one should see reflections of church practice, which developed on the basis of the identical wording of Mark 14:22–25. The exhortation "take, eat" in Matt 26:26 and "drink of it, all of you" in 26:27 could be arguments for the latter (cf. Patsch 1972: 69–70, 103–4). The setting for the imperatives is most naturally to be found in the liturgical celebration in which bread and wine have already attained the aura of a numinous consecration. "For the forgiveness of sin" in 26:26 (cf. Matt 3:1–2 diff Mark 1:4) offers a theological explanation of "for the many" in the Markan tradition.

c. Luke. The account of the Last Supper in Luke 22:14–20 presents us first of all with a textual problem. In the so-called Western text vv 19b–20 are missing. A number of interpreters choose to cross off also v 19a as secondary, and draw some broad historical inferences on the basis of this shortened text, which suddenly looks altogether different from the traditional account of the Institution in Paul and Mark. However, in spite of opposing voices, the originality of the longer text, including vv 19b–20, can meanwhile be considered as secure (cf. Jeremias 1967: 133–53; Marshall 1980: 36–38).

In 22:14–20 Luke combines the Markan text-tradition with his own, which in his account of the Institution (22:19–20) is very similar to Paul's (Schürmann 1970: 17–31) and points to the account of the Passover meal in particular (22:14–18; called "account of the passover" here because of v 15: "I have earnestly desired to eat this passover with you before I suffer"). The obvious inclusion of the Last Supper within the framework of a Passover meal, which is thereby validated, certainly agrees with the historicizing tendencies of Luke. Somewhat attractive is the conjecture that vv 14–18 have their setting in an early Christian Passover celebration which took place once a year at Easter in connection with the celebration of the Lord's Supper (Schürmann 1968: 72–73; Kuhn 1957: 91–92), but convincing proof has not yet been given.

In Luke we discover a comment in the Easter narratives that the risen Christ breaks bread with his disciples (Luke 24:30), that he eats before their very eyes or with them (24:41–43; cf. John 21:9–13). Acts 10:41 also looks back: "To us … who ate and drank with him after he rose from the dead," as does the enigmatic expression *synhalizomenos* (possibly "eat together") in Acts 1:4. Cullmann (1966: 510–16) wanted to derive the practice of the Lord's Supper in the early church from these appearances of Christ at meals after Easter, but thereby he paid too little attention to the precarious historical basis for the corresponding traditions. Much more significant is the twofold observation from a hermeneutical standpoint: (a) Without the resurrection of Jesus and the experience of Easter on the part of the disciples, there would never have been a regular practice of the Lord's Supper, because it would have lacked the central theological presupposition; and (b) the Communal Lord's Supper was the place at which every believer, who was temporally removed from the first Easter, could gain the assurance of the presence of the risen Lord. Seen as a whole, the resurrection of Jesus is the real foundation for the shaping of the practice of the Lord's Supper and the conceptual development of sacramental categories. This entire process, to a large degree, runs parallel to the post-Easter unfolding of an explicit Christology.

3. Acts. a. The Breaking of the Bread. In the first big summary of the life of the early church of Jerusalem (Acts 2:42–47), Luke mentions the breaking of the bread twice, in Acts 2:42 and especially in 2:46: "… and breaking bread in their homes, they partook of food with glad and generous hearts." Here possibly a distinction between a regular meal ("partook of food") and eucharistic rite ("breaking bread") is suggested, even though originally both were integrated into one event. One gets the impression from Luke that a regular meal was held daily as a Lord's Supper in the various Christian homes in Jerusalem in the early church. This supper (according to Acts 6:1–2) also had caritative, that is, diaconic functions. However, that reflects an idealized view of the golden age of the beginning and cannot be accepted as

historical reality. Household meals accompanied by eucharistic practices probably occurred only once a week, on the Sabbath (patterned after the Jewish Sabbath meal [*cena pura*?]) or on the Lord's day.

In Acts 2:7,11 the church at Troas gathers "on the first day of the week" (cf. Luke 24:1) to break bread, and Paul takes it in hand. Connected with that is the proclamation of the Word. The exact time seems to have been Sunday rather than Saturday night. The place is the upper room of a private house (20:8; cf. 1:13). That Luke at least has in mind the Lord's Supper, as he knows it from his church, could hardly be denied (cf. Wanke 1973: 19–24). Obviously he is connecting certain symbolic connotations with the meal. The place of the Lord's Supper is conspicuous ("upper room") as a place of fellowship (20:7) of light (20:8), and of life (20:12).

The same thing applies to Acts 27:35–36, in spite of the opinion of many exegetes to the contrary (cf. Wanke 1973: 25–30): on the ship that is in danger of shipwreck Paul takes bread (cf. Luke 9:16; 22:19; 24:30), gives thanks (*eucharistēsen,* cf. Luke 22:19), breaks the bread (cf. Luke 9:16; 22:19; 24:30; Acts 2:42, 46; 20:7,11) and eats it (Acts 27:35), as do the others until they have had enough (27:38). Here we come upon the same juxtaposition of the "breaking of bread" and "partaking of food" as in the summary in Acts 2:46. Luke knows how to distinguish these items. Paul's actions are distinguished from the main meal of his countrymen. There is hidden in it an unmistakable pointer to the Lord's Supper which lets all those in need experience the saving power of the risen Christ in the present.

b. Communion *sub una*? The fact that Luke mentions only the breaking of the bread has led variously to the assumption that the Lord's Supper was practiced *sub una,* i.e., with bread only, without wine or, as an alternative, water instead of wine. Among other things it has been suggested that wine would have been too expensive for the poor churches in the long run (Jeremias 1967: 108). A celebration of the Lord's Supper without wine can be documented from Jewish Christian tradition and apocryphal writings (Klauck 1986: 214–15, 225–32); however, it cannot have been the rule. Luke proceeds on the assumption that the breaking of the bread and the blessing of the cup has already been taken out of the context of the meal and has been isolated into a double act. On this assumption the breaking of the bread, a rite at the beginning of the meal only (as far as its origin goes), could include for him all the gestures and the words over the bread and the wine. They have become, in other words, names for the Lord's Supper. The absence of wine in Acts 2:46 would stand in contradiction to the strong emphasis on festal joy; for celebration and festivity at a meal were essentially determined by the availability of wine. For the Synoptic words of Institution it is important to note that the eschatological outlook (Mark 14:25 par.) which belongs to the earliest form of the text, explicitly speaks about "the fruit of the vine," and so a celebration without wine is no option.

c. A Dualistic Theory of Eucharistic Origins. Acts 2:46 plays a key role in Lietzmann's famous theory of a double origin of the Lord's Supper in the early church (Lietzmann 1979: 195–203)—an origin which had various forerunners and which to this day is given variegated forms (cf. Fuller 1963: 60–65). According to Lietzmann, the Jerusalem church celebrated its Lord's Supper with festive joy and as a continuation of the daily fellowship at meals with the earthly Jesus. This is contrasted by the Pauline example from 1 Cor 11:23–26, in which the Lord's Supper is tied to the sacrificial death of Jesus on the cross and which is consciously linked to Jesus' Last Supper. The texts of Acts 2:46, with its strong Lukan character, does not allow us to make such an historical conclusion (cf. the criticism, especially of Schweizer 1963: 344–47). The farewell banquet of Jesus stands in an unmistakable relationship to the fellowship meals Jesus provided for people during his earthly ministry. These two important facts must not be torn asunder. On the other hand, the celebration of the Lord's Supper experienced a rapid and stormy development which tended to go in various directions in the first few decades after Easter. But this process has not been sufficiently appreciated if one postulates a chronological sequence of distinct models or if one views them as mutually exclusive of each other. The reduction of two basic types means at the same time an illegitimate simplification of a very much more complex and differentiated situation.

4. Gospel of John. a. John 6 and John 13. John 13 reports in detail a farewell banquet which Jesus celebrated with his disciples in the face of his death (13:1–3). We discover that Jesus on that occasion washed the disciples' feet (13:4–11). Also we have the long farewell discourses in John 14–17, which

find their setting within the framework of the Last Supper. Apparently the account of the Institution which the Synoptists and Paul focus on is lacking in John.

Instead, one finds the OT manna-typology assimilated into the discourse on the bread in John 6 (cf. Borgen 1965). Note particularly the verse at the end: "The bread which I shall give for the life of the world is my flesh" (6:51c). The wording is reminiscent of the saying over the bread from the Pauline-Lukan account of the Institution (1 Cor 11:24 = Luke 22:19), combined with the universalistic "for the many" from the Markan saying over the cup (Mark 14:24). The verse apparently assimilates the tradition of the Lord's Supper as found in the Johannine church, that celebrated the Lord's Supper. In John 6:52–58 we have the so-called eucharistic discourse which calls for the eating of the flesh and the drinking of the blood of Jesus in crassly vivid terms.

The structure and origin of John 6 is still being debated in scholarly research (cf. Léon-Dufour 1982: 290–300). A possible solution (for a somewhat different but related concept, cf. Wehr 1986) looks like this: In the light of the practice of the Lord's Supper in his church John, in the discourse on the bread (John 6:26–51), is concerned about a deeper symbolical-theological interpretation of the sacramental event. Its true content is faith and the personal encounter with Jesus in sign and word. The Evangelist thereby takes issue with the danger of a magical misunderstanding of the sacrament which threatens the loss of the practical meaning of the Supper for faith and life. For the same reason he leaves off the account of the Institution in John 13. The signal act of feet-washing brings into focus the loving self-giving of Jesus, which puts the believer under obligation in a much clearer manner.

The Evangelist lets us know his intention by adding the saying over the bread from the Lord's Supper in 6:51c. In the context of the saying over the bread one could read into the Supper two ideas, the sacramental and the personal-communative. The concept "flesh" (Gk *sarx*) is probably not to be understood as a translation variant of "body" (Gk *sōma*), but makes a bridge to John 1:14: "And the word became flesh." The materialization of the salvation experience which occurs principally by faith and is drawn into the sacrament is understood by the Evangelist as analogous to the incarnation of the heavenly Son of Man. Here as there, we have a scandalous event which calls forth the protest of the average consciousness. The opposition of the disciples in 6:60 against this "hard saying," which in 6:61–62 is applied to the descent of the heavenly Son of Man (cf. 6:50, 51), is clearly aligned with it. The problematic saying in 6:63: "It is the Spirit that gives life, the flesh is of no avail," does not annul 1:14 and 6:51, but adds a necessary expansion. The incarnation and embodiment, the descent, would remain ineffectual if it didn't also lead to the ascent of the Son of Man (6:62). The resurrection of Jesus truly sets the Spirit free; it embraces the meaning of the words concerning the earthly and makes possible faith, which is also at work in the Lord's Supper in the church.

The reaction of the disciples makes the saying about the bread in 6:51c the occasion to integrate the eucharistic discourse (6:52–58) at this point. This blocks the attempts to see in it a lecture on symbolism; much rather is it an attempt to underscore in dramatic fashion the reality of the sacramental. The occasion for this view was provided by the controversies concerning the right understanding of the Lord's Supper. Opponents who looked at 6:52–58 were either more docetically-gnostically influenced, or they were at home in Jewish-Christian circles in which the understanding of the real presence of Christ in the bread and the wine of the Lord's Supper was decisively rejected. In the eucharistic discourse the older church traditions are integrated with the sacramental orientation (cf. Wehr 1986), which the Evangelist himself, insofar as he knew them, opposed with rather strong reserve.

b. Further Texts. Some want to see eucharistic allusions, among other things, also in the following Johannine texts (cf. Johansson 1944: 263–68; Léon Defour 1982: 311–14): the wedding at Cana, with the changing of the water into wine (2:1–11); the discourse on the True Vine (15:1–5); the blood and water from the pierced side of Jesus (19:34); the meal with the risen Christ in the redactional addendum (21:9–13; see also under B 2c); and the witness of the water and the blood in 1 John 5:6–8.

In the light of the dominant symbolical strains of the Johannine language it is difficult to make a definite decision. One cannot, however, dismiss out of hand the possibility of eucharistic allusions in every case. Nevertheless, one should be slow to make quick identifications and should instead move with caution

(Marshall 1980: 137). The hypothesis of an all-pervasive theology of sacraments does not explain the real concern of the Johannine Evangelist.

5. Revelation. According to 1:3 and 22:18, the author of the Revelation of John wrote with the purpose of having his work read in the meetings of the church. For this reason one must ask how the liturgical language of the book, which has its origin in Jewish apocalypses, is to be understood in the context of early Christian worship (cf. Delling 1970: 449–50). Once again this raises the question of what part the Lord's Supper played in worship.

In Rev 3:20 we have the salvatory promise (harkening back to the metaphoric language of the parable in Luke 12:35–38?): "Behold, I stand at the door and knock, if any one hears my voice and opens the door, I will come in to him and eat with him, and he with me." The passage captures the expectation of the messianic meal at the end of the age which, however, can be anticipated also in the present, wherever there is a meeting with Jesus through faith. It seems possible that we have here, as in John 6, a deepened spiritual interpretation of the practice of the Lord's Supper. The same theme is struck in 19:7: "For the marriage of the Lamb has come, and his Bride has made herself ready" (cf. the beatitude addressed to those invited to this meal in 19:9). Here one can hardly see any connection with the Lord's Supper. Rather the emphasis is on the union between Christ and his church in the present and in the future (cf. 2 Cor 11:2) as a further development of the OT imagery of the marriage between God and Israel.

In Rev 11:17 a thanksgiving prayer is introduced with *eucharistoumen* (cf. *Did.* 9:2–3), but its contents rule out the notion of a eucharistic prayer. There remains, then, the conclusion of the book (22:6–21) in which some have discovered a variety of elements taken from the celebration of the Lord's Supper (cf. Prigent 1964: 37–45; Klauck 1986: 356–64). In this regard v 15 includes an excommunication clause which is to keep the unrepentant and the non-Christians away from the Lord's Supper (cf. 1 Cor 16:22; *Did.* 9:5). The words of invitation, "and let him who is thirsty come, let him who desires take the water of life without price" (v 17b), is then said to be an invitation to the Lord's Supper. "Amen. Come, Lord Jesus!" (v 20b) is the equivalent of the Aramaic *maranatha*, which clearly stands in the context of the Lord's Supper in *Did.* 10:6 and possibly in 1 Cor 16:22. However, even if certain liturgical elements should have been integrated into the conclusion of the book, one must consider that they take on a different function in a different literary context and cannot (nor do they wish to) reflect the complete sequence of events in an early Christian celebration of the Lord's Supper.

6. Hebrews. The author of the Epistle to the Hebrews develops his theology in large measure with the help of linguistic models taken from the OT and the Jewish sacrificial cult. Among them one finds also concepts that are known to us from the traditions concerning the Lord's Supper. In 9:20 he quotes the saying about "the blood of the covenant" from Exod 24:8, and not with the introductory "behold" (*idou*) as in the LXX, but rather with "this" (*touto*), a word that one tends to connect with the words of interpretation. "Blood of the covenant" occurs also in Heb 10:29. In 2:4 (connected with the verb "to share," *koinōneō;* cf. the *koinōnia* in 1 Cor 10:16), the author speaks of the blood and flesh (in this sequence and also in 10:19, 20; cf. also 9:12–14 in the matter of the blood of Christ). In Heb 8:8 (cf. 9:15) we encounter the "new covenant" of Jer 31:31 (cf. 1 Cor 11:24). Furthermore, there is mention of the tasting of the heavenly gift (Heb 6:4) and of an altar (*thysiastērion,* cf. 1 Cor 10:18), from which those who serve in the tent have no right to eat (Heb 13:10).

This has led researchers (cf. Williamson 1975: 300–1) in part to see in the eucharistic emphasis the hermeneutical key to the understanding of the Epistle to the Hebrews as a whole, going even to the extreme position in which "the bigger and more perfect tent" (9:11) is understood as the eucharistic body of Christ (cf. Williamson 1975: 304–5). On the other hand, the exact opposite conclusions have been drawn from the same texts, namely that the writer of the epistle rejects the Lord's Supper of the larger church and polemicizes against it. It is said that the author is anti-sacramentarian and that he does not feel comfortable with the concept of eating the body and drinking the blood of the Lord.

One should from the outset realize that the Epistle to the Hebrews has a strong emphasis on the verbal aspect of worship and sees the meetings of the church as non-cultic (cf. 10:25). The concepts such as "blood of the covenant," and "new covenant," have been taken over directly from the OT and not via the

Lord's Supper tradition. "Blood" and "flesh" of Jesus Christ evoke memories of his bloody death on the cross. The cultic language is used by the author to explicate the non-cultic salvation events without creating new cultic forms. Whatever may be the reasons, the Lord's Supper appears to lie outside his theological interest (for further information and bibliography, see SACRIFICE AND SACRIFICIAL OFFERINGS (NT),, and Williamson 1975: 302–12; Klauck 1982: 149–51).

7. Jude and 2 Peter. In Jude 12, in the context of the polemic against false teachers who are making their influence felt in the church, we read: "These are blemishes on your love feasts (*en tais agapais,* in the majority of manuscripts), as they boldly carouse together, looking after themselves." For the first time in the NT the communion meal of the church receives the name Agape (cf. Ign. *Smyrn.* 8:2), which in the 2d century C.E. develops a character quite distinct from the eucharist. See AGAPE MEAL. In Jude a single unified church meal is assumed, in which the main meal and the two-fold eucharistic rite still go together. As a whole, the meal underscores the significance of love as the life-principle of the church. From that position the caritative aspects of the meal are opened. Already the very fact that false teachers participate in the practices of the church are seen by the author of the epistle as scandalous. Very likely he also wants to suggest to the false teachers that they no longer take the Lord's Supper seriously, but that they have perverted it into a voluptuous feast and profaned it (cf. on this and the following point Völker 1927: 107–10; Reicke 1951: 352–67).

In similar fashion 2 Pet 2:13b takes a position against the false teachers: "They count it pleasure to revel in the day time. They are blots and blemishes, reveling in their dissipation (*en tais apatais*), carousing with you." The majority of the textual witnesses read *apatais,* not *agapais* as in Jude 12. Since one can assume that the author of 2 Peter is familiar with the Epistle of Jude, one will have to understand this change as a deliberate wordplay and as a bit of irony. The author does not want to give the honored name Agape to the meals which are being held with false teachers present. They have nothing in common with the Lord's Supper but have already been perverted into revelry, as can be seen from the time in which they are held ("in the day time" instead of at evening). These love feasts (*agapai*) are actually a deception (*apatē*).

C. Outside the NT

1. *Didache.* The *Didache* (cf. Wengst 1984: 43–57) in chaps. 9–10 offers prayers for a church meal which was held on the Lord's day, i.e. on Sunday (*Did.* 14:1), a meal consisting of the breaking of bread (ibid.) and which was called *eucharistia* (9:1, 5). The procedure looks like this: A prayer is spoken, first over the cup of wine (9:2) and then over the bread (9:3–4). There follows, then, in reverse order, the consumption of the bread and wine (cf. 9:5; "eating … drinking"). In conclusion we have an afterdinner prayer (10:1–6), which gives the celebration the character of a regular meal (cf. 10:1: "After you have finished your meal, give thanks in this way"). The contents of these prayers closely resemble the Jewish-Hellenistic table prayers. They suggest that the elements of the meal are life-giving spiritual food (10:3): "To us you have given spiritual food and drink and eternal life through Jesus, your servant." Bread in particular is seen as the symbol of the eschatological gathering of the people of God into one church (9:4: "As this piece of bread was scattered over the hills and then was brought together and made one, so let your church be brought together from the ends of the earth into your kingdom"). Finally, they stress also the eschatological orientation of the entire celebration (10:6 "Let Grace come and let this world pass away … Maranatha"). In 14:1–3 the sacrificial aspect is added which, however, cannot be related generally to prayer and life-style. Directly related to that are the church offices of bishops and deacons, mentioned in 15:1–2. They take over the functions of prophets and teachers and play a role also at the celebration of the Supper.

It could be that this meal has nothing to do with the Agape but rather with a celebration that represents the Lord's Supper functionally, even when the words of Institution and the interpretation seem to be missing. Instead we encounter an idea that leads to the development of independent eucharistic prayers. For that the contours of the account of the Institution of the Lord's Supper ("… blessed it"; "… gave thanks") offered sufficient room for development (with reference to 1 Cor 10:16, see B.1 above; cf. Wehr 1986).

2. Ignatius. Ignatius repeatedly refers to the eucharist in his letters (cf. Schoedel 1985: 21–23, 97–99, 240–42; Wehr 1986). In *Eph.* 20:2 he mentions "the medicine of immortality" and "antidote against death" (cf. Christ as the "one physician" in *Eph.* 7:2). Thereby he introduces Hellenistic categories into the Lord's Supper. In *Smyrn.* 7:1 he formulates the confession for his theological opponents with their docetic Christology: "The eucharist is the flesh of our Savior Jesus Christ." The parallel between *eucharistia* and *thysiastērion* (altar of sacrifice in *Phld.* 4:1) suggests a strengthened consciousness with regard to the sacrificial character of the eucharist (Klauck 1982: 154–55).

What is particularly noteworthy is the fact that Ignatius ties the celebration of the eucharist closely to ecclesiastical office. In the absence of the bishop or one of his deputies there is to be no eucharist (*Smyrn.* 8:9). In retrospect that brings out our NT findings in bold relief. In the NT, presiding at the Lord's Supper is not closely connected with any specific office (see B.1.c above).

3. Justin. In Justin's *Apol.* 65–67, in which we have the most detailed description of the Lord's Supper in the early church, we encounter a situation that is similar to that of Ignatius. In his *Apol.* 65–67 the administration of the Supper is given over to a leader (*Apol.* 65:3,5; *prohestos*) who speaks the prayer of thanksgiving over the bread and the wine. Deacons distribute the eucharistic offering in the congregation (65:5). In a very difficult idiom Justin in 66:2 compares the efficacy of the prayer of blessing, which changes the bread and the wine into the flesh and blood of Jesus (the incarnation), and then he quotes the words of Institution. The words of interpretation have been reduced to the form: "This is my body," "This is my blood." Thereby the tendency to seek parallels which arise out of liturgical practice, and which in Mark distinguishes itself from Paul, arrives at its ultimate terminus (for bibliography, see Klauck 1986: 139 n. 324).

D. Religious-Historical Backgrounds

Religiously significant meals are a universal phenomenon in the history of religions (Bammel 1950), and not only in antiquity. In what follows we can sketch broadly the sociocultural context in which the development of the Christian Lord's Supper took place. Moreover, we need to inquire only about the post-Easter Lord's Supper, and not the Last Supper of Jesus, although they cannot be entirely divorced from each other. Thus, while the Pascha, Toda (Patsch 1972: 24–26, 39–40), the Kiddush and the Chabura (Jeremias 1967: 20–25) are possibly significant for the Last Supper, but are of no concern for our inquiry.

1. Jewish. Great significance must be attached to the daily Jewish meals and to Jewish banquets at which wine was used. The breaking of bread, the blessing of the cup, and the appropriate words of prayer have broken out of the framework of Jewish meals and have gradually been ritualized into a cultic rite. Of interest also is the fact that the breaking of the bread, seen terminologically, is found in the OT only in the context of funeral rites for the dead (Jer 16:7; cf. Lam 4:4; Ezek 24:17, 22). For the motif of festal joy (Acts 2:46) one might recall the joy-filled farewell meals of the patriarchs prior to their death (Johansson 1944: 29–38; Reicke 1951: 141–43).

A daily meal with bread and wine (or grape juice) over which a priest pronounces a blessing, is known also in the Qumran community (1QS 6:4–5): "And when a table has been prepared for eating or the new wine for drinking the priest shall be the first to stretch out his hand to bless the first-fruits of the bread and the new wine." In 1QSa 2:17–22 it is connected with the eschatological-messianic expectation. When the congregation gathers at the communal table and the new wine for drinking has been mixed, the priest shall first of all pronounce the blessing over the bread and then "the anointed one of Israel shall stretch out his hand for the bread" (1.20–21). Related are the meals of the Essenes (*JW* 2.8.5 §129–33) and in a broader sense also those of the Therapeutae in Philo *Vita Cont* 36–37 (on the sabbath), 73–74, 81–82 (at the weekly festival); cf. Kuhn 1957: 67–72, 76–77. One can tell from these examples how the anticipation of the end of the age and the separation from the Temple fundamentally enhanced the religious significance of private meals. Early Christian churches that came out of Judaism found themselves in a very similar situation.

It can be shown that as an interpretive model the OT-Jewish sacrificial meals had a pronounced influence on the tradition of the Lord's Supper, in particular the covenant meal in Exod 24:1–11. Nor should one underestimate the contribution of the wisdom literature, where Wisdom as hostess invites

people to a meal (Prov 9:1–6) and in which one can consume wisdom as one does food. That language played into the metaphoric way in which Philo of Alexandria, for example, speaks of eating (cf. *Vita Cont* 35). The Therapeutae are "entertained by Wisdom, who richly and lavishly offers her precepts so that they … hardly partake of the necessary food every six days" (Klauck 1986: 168–72, 184–87).

The metaphorical language used for meals in wisdom literature, together with false views arising from current Hellenistic cults, have had an influence on the mysterious stylized meal settings in the Hellenistic-Jewish conversion novel *Joseph and Aseneth.* Particularly striking is *Jos. Asen.* 19:5: "And a man came to me from heaven and gave me the *bread of life* and I ate and I drank the *cup of blessing*" (cf. 8:11). At other places the "cup of immortality" is found as a kind of pendant (8:5; 15:5; 16:16). In the Psalm of Aseneth the cup is expressly called "the cup of wisdom" (21:21). A wisdom-interpretation of the OT manna tradition also forms the background for the honeycomb from which the angel of God breaks a piece and puts it into the mouth of Aseneth (16:13–15). As a negative counterpart we have the pagan sacrificial meals and the distribution of wine from which Aseneth sets herself off (10:13) and which she interprets as bread that strangles and as a deceptive cup from the table of death (21:14). The concept of a sacred meal in *Jos. Asen.* serves the purpose of portraying the conversion of a proselytess to Judaism, which occurs concurrently with the invitation into a mystery cult and is superior to it (cf. Klauck 1986: 187–96; the numbering of the text according to C. Burchard, *OTP* 2: 177–247).

2. Pagan. Religious rites and prayers in part also accompany the daily meals of pagan antiquity. Epictetus recommends that one speak a prayer of thanksgiving for nourishment (*Diss.* 2.23.5). Among the Greeks one finds a drink-offering at the conclusion of the meal for the Agathos Daimon (Athen. 15), whom one must imagine to be the embodiment of the good spirit of the home.

The symposium had a socially-prominent place. The social drinking party of free men, which might be connected with supper, had well-defined ritual forms. The sequence of the main meal, including a drink offering for the gods, philosophical discussions, musical-artistic presentations, speeches and songs at a symposium, could provide a structural equivalent to a church's celebration with a meal (1 Cor 11:20–21): eucharistic double action (1 Cor 10:16–17), worship in word with prophecy, glossolalia, the reading of scripture, interpretation, psalms, songs and prayers (1 Corinthians 14).

The regular form of a Greek sacrifice was the communal offering. It flowed into a festive meal on the part of participants and could, depending on circumstances, be interpreted as if one thought of the deity as host and participant. Meals eaten by the members of the many Hellenistic associations, which looked upon communal dining as their main purpose, and the meals in the cult of the dead, find their basis and foundation in the sacrificial meal. See ASSOCIATIONS, CLUBS, THIASOI. Among other things there was also the memorial meal at which the person of the deceased founder was central (for this entire subject cf. Klauck 1986: 40–91).

The meals in the mystery cults have always drawn special attention (Klauck 1986: 91–166). See MYSTERY RELIGIONS. They do not represent a unified type, however. Rather they integrate items taken from the sacrificial cult and from the societies in a variety of ways (Kane 1975: 321–43). However, one notices a tendency toward a stronger participation in the fortunes of the deity, which can go so far—as it does, for example in the Dionysios cult—to the consumption of the deity itself.

This Hellenistic context (which, incidentally, has left its marks on Diaspora Judaism) must at least be considered as the horizon for the understanding of the Lord's Supper in gentile-Christian churches. It may well be that the clarification of the meaning of sacrament was not left unaffected by this context.

E. Conclusion

The practice of the Lord's Supper in the early church and its rapid breakthrough on a broad front is best explained by the fact that it is based on an historical event in the life of Jesus. One needs to take into account the farewell banquet which Jesus celebrated with his disciples in the face of his death and which he used as the occasion to explain the sacrificial service of his life in word and action. At the same time this last meal constitutes the final point in the continuous practice of participation in meals throughout the public ministry of Jesus (cf. Mark 2:15–17 par.; 6:32–44 par.; 14:3 par.; Luke 7:36; 11:37–38; 14:1, 7, 15; 15:1–2; 19:1–10) and receives some of its significance from the numerous images and parables in which

Jesus spoke of the coming banquet at the end of the age (Mark 2:19 par.; Matt 6:11; 8:11 par.; Luke 6:21 par.; 14:15–24 par.; 22:29–30). The determinitive theological impulse for the development of a new Christian meal, which is a kind of recapitulation of the communal eating with Jesus, comes first of all, from the Easter event. On the level of narrative one can detect such in the accounts of the meals which the risen Christ had with his disciples, meals at which he revealed himself. Related to that is the early tendency to tie the Lord's Supper to the Lord's day, to Sunday, as the day of the resurrection (cf. also *Ign. Magn.* 9:10).

Appropriately there may have been initially the dominant conviction that the exalted Lord was present as participant and host at the celebration of the meal in his church. This personal presence must be viewed as the sustaining basis for every form of the presence of the Lord in the sacrament. Besides that, the Lord's Supper was interpreted eschatologically above all in times of acute anticipation, as proleptic presence of the imminent end of the age which, in keeping with apocalyptic expectation, was to culminate in a festal meal. Through the deliberate step back to Jesus' Last Supper, and then, via the Easter event, an event that made the Supper possible, there is added another essential element: the commemoration of the death of Jesus on the cross in its saving power. This aspect of the presence of the death of Jesus was utilized above all by Paul within the framework of his *theologia crucis.*

All these forms of presence are naturally quite real. However, people have gotten into the habit of tying the real presence of the body and blood of Christ to the elements of the supper, i.e., the bread and wine. The words of interpretation in the account of the Institution are intended for this purpose. Within the NT such an understanding of the words of interpretation are to be found in John 6:52–58, possibly also in 1 Cor 10:16–22, certainly in Corinthians, and finally in the account of the Institution itself, if one reads it as cult-aetiology in the form in which Mark and Matthew give it. The significance of this model of interpretation for the ancient and medieval church's teaching on the eucharist is obvious. There is reason to suspect unmistakably the presence of a strong influence of Hellenistic thinking and Hellenistic cult-piety, both in the NT and in early Christian tradition.

Two factors are especially consequential for the external form of the celebration. First, the sacramental rite is separated from the main meal. The isolation of the cultic rite from the church's meal is certainly suggested in the NT, although there it is not yet complete. However, by the time of Justin, at the latest, this separation had become complete and permanent. From that time on eucharist and agape stand disconnected alongside one another. Second, the celebration of the eucharist was closely connected to a church office. In the NT we notice the gradual development of an abundance of official functions and services. These office bearers were certainly present at the Lord's Supper, but nowhere is their service explicitly related to the Supper. That, however, is exactly what happens in the 2d century C.E. in the three-tiered structure of church offices—a structure that is clearly visible from the standpoint of who is responsible to preside at the celebration of the eucharist.

The dialogue concerning the Lord's Supper that is going on today between Christian denominations is in many respects prejudiced by historical processes and decisions that have taken place outside the NT. It is, therefore, all the more necessary for a theological orientation that ecclesiastical tradition should be confronted critically with the witness of the NT. In the light of the NT one could legitimately conceive of several options within given limits.

LORD, DAY OF THE. See DAY OF THE LORD.

LOST TRIBES, THE. The 3d century Christian Latin poet Commodian (in the *Carmen* and *Instructiones*) and the author of the *Acts of St. Matthew* may preserve an otherwise lost Jewish apocalyptic and apocryphal work that apparently described the living conditions of the lost ten (or nine and a half) tribes which were taken into exile by the king of Assyria. According to early rabbinics Rabbi Akiba claimed these tribes would not return, but Rabbi Eliezer disagreed, arguing that they shall move from darkness to light (*m. Sanh.* 10.3). We cannot yet be certain that an early Jewish apocryphon existed; but it is clear that the legend was widely known and influential. Did a Jew, perhaps in the late 1st century compose an exegetical expansion based on OT passages, especially 2 Kgs 17:23 (cf. 1 Chr 5:26, Isa 11:11, Jer 31:8, and Ezek 37:19–28)? Around 100 C.E. three Jewish works—namely *4 Ezra* (13: 34–51), *2 Baruch* (77: 17–26), and Josephus' *Antiquities* (11.5)—referred to this legend or document.

If Commodian excerpts this apocryphon in his *Instructiones,* and if the passage that refers to the destruction of Jerusalem in 70 C.E. is from this Jewish work, then the document must postdate 70, and was probably contemporaneous with *4 Ezra, 2 Baruch,* and the *Antiquities.* The parallels with the *History of the Rechabites* are numerous and significant. M. R. James suggested that "there evidently was a writing (presumably Jewish) which described the conditions under which the lost tribes lived."

The lost tribes live in a place (to the East; *4 Ezra* 13, *2 Bar* 77, *Ant* 11.5) which is not cold but pleasant (Ethiopic *Acts of St. Matthew*), and where a son does not die before his father (Ethiopic *Acts of St. Matthew*, Commodian), where the body suffers neither pain nor sores and dies after a long life and in a state of rest (Commodian). The people of the lost tribes fulfill the Law (*4 Ezra* 13: 42, Commodian), are hidden beyond a river (Commodian; it is called Sambatyon in some Jewish works, e.g. *Tg. Ps.-J.* on Exod 34:10), and shall return to the Land of Israel in order "to rescue their captured mother [=Jerusalem]" (*Hic tamen festinat matrem defendere captam.* Commodian). They desire neither gold nor silver, neither eat flesh (Commodian, Ethiopic *Acts of St. Matthew*) nor drink wine; they are nourished by honey and dew, and drink water flowing from paradise (Ethiopic *Acts of St. Matthew*). A man has one wife, and each is free from sexual lust; they offer their first born to God (Ethiopic *Acts of St. Matthew*). They do not lie (Commodian, Ethiopic *Acts of St. Matthew;* cf. *Hist. Rech.*); and youths do not speak in the presence of adults (Ethiopic *Acts of St. Matthew*). See *PMR*, 147–49.

JAMES H. CHARLESWORTH

LOT (PERSON) [Heb *lôṭ* (לוֹט)]. Lot, the nephew of the patriarch Abraham, plays a role in the story of Israel's ancestral origins (Gen 11:26–50:26). The son of Abraham's deceased brother Haran (Gen 11:27–31), he accompanies his uncle on the epic journey to Canaan (Gen 12:4–5). Once there the two eventually separate (Gen 13:1–18). The separation notwithstanding, Abraham later rescues his nephew, who had been captured by foreign kings (Gen 14:1–16). Lot has a more independent part in the account of Sodom and Gomorrah's destruction (Gen 19:1–29). But there is still a connection with Abraham in that Lot's exemption from judgment was due to his relationship to his uncle (Gen 19:29). After his escape from Sodom and the death of his wife (Gen 19:17, 26), his two daughters managed to insure their and his posterity through incestuous relations (Gen 19:30–38). The offspring were the ancestors of the Moabites and Ammonites, who were often enemies of later Israel.

Three times Lot is mentioned in non-narrative texts. Twice in Deuteronomy (2:9, 19) Israel is commanded not to engage Moab or Ammon in battle since the Lord promised them territory for being Lot's children. The other reference (Ps 83:8) lists Lot's children (i.e., Moabites and Ammonites) among Israel's adversaries. In the NT, Lot is viewed as a righteous inhabitant of Sodom and Gomorrah who was greatly vexed by the wickedness of the two cities (2 Pet 2:6–8). Deut 23:3–6 forbids Ammonites and Moabites entry to the assembly of the Lord. But Ruth, who was a Moabite, played a decisive role in the life of Israel (Ruth 4:13–22).

Source critics (*HPT* 263–64; von Rad *Genesis* OTL, 162–69, 210–20; Speiser *Genesis* AB, 77–81, 95–98, 135–46) have assigned most of the Lot material to the Yahwist or J source (Gen 11:28–30; 12:4a; 13:1–5, 7–11a, 13–18; 18:1–33; 19:1–28, 30–38) and a few verses to the Priestly (P) source (Gen 11:27, 31–32; 12:4b–5; 13:6; 13:11b–12; 19:29). Genesis 14 continues to elude classification. Some scholars hold that it is an ancient source (von Rad *Genesis* OTL, 170; Speiser *Genesis* AB, 106; *YGC*, 51), while others argue that it presupposes and therefore is more recent than the other narrative traditions (Kilian 1970: 24–25). In terms of the history of traditions, Lot is dependent on the Abraham-Sarah story everywhere except Genesis 19 (Westermann 1985: 127).

The essential historicity of the Lot pericopes, along with the ancestral narratives to which they belong, was accepted until recently (*BHI*, 103; Speiser *Genesis* AB, 108; Millard and Wiseman 1980). This assessment was based on claims that the names, customs, and socio-cultural background of the stories were parallel to and thus authenticated by actual 2d millennium documents from the ANE (*BHI*, 74–96; *YGC*, 64–109; Dever and Clark *IJH*, 92–102; Selman 1980: 93–99). But the consensus has shifted (Thompson 1974: 315–16; Van Seters 1975; Dever and Clark *IJH*, 102–48; Gottwald 1985: 161–78;

Selman 1980: 99–103), in part because of the alleged lack of methodological rigor practiced by proponents, in part because of the emergence of new data and new interpretations of old data, and in part because of the growing awareness of the particular literary nature of the biblical traditions. It has also been common to view the patriarchal traditions as tribal histories told as individual histories (McKane 1979: 67–104). However, at best the question of the historicity of the traditions in which Lot appears is presently at an impasse.

For the last few years scholars have emphasized interpreting biblical narratives like those in which Lot appears along more literary and canonical lines. Without denying that there has been a long history of the various strands of the Lot traditions or that the story is composed of many separate sources and discrete units (Coats *Genesis* FOTL, 97–148), the final form is also a datum to be taken seriously (Alter 1981; Sternberg 1985; Clines 1978: 7–15; Miscall 1983: 1–10; *IOTS*, 1979). Whatever original purposes such traditions might have had—historical, etiological, legitimation of social, political or religious practices or ideas—they have now been put into a form of "poetics" (Sternberg 1985: 2) in which they function primarily as a work of literature with corresponding aesthetic, theological, and religious features.

From this perspective, Lot's importance in the story of Abraham and Sarah transcends the fact that he just happens to be a relative of the patriarch. In the narrative in its present form his role is strategic from the outset. Only a couple of verses after learning that Haran was Lot's father, we are informed that Abraham's wife Sarah was barren (Gen 11:27–30; Brueggemann *Genesis* IBC, 95–96). The couple's childlessness is highlighted by Lot's very presence. In a story which will soon turn on God's promise of a son and innumerable descendants (Gen 12:2, 7; 13:14–16; 15:1–6, 13, 18; 17:5–8, 16, 19–20; 18:10, 13–14; 21:1–7; 22:15–18), the fact that Sarah is barren while Abraham's brother already has a son (without any divine promise!) enriches the texture of the narrative. First the narrator subtly contrasts Abraham's childlessness with the fact of his brother's offspring. Later, Lot will be a nagging reminder that God's promise of progeny is yet to be fulfilled.

Abraham's allowing Lot to travel with him to Canaan cannot therefore be dismissed as an incidental detail (Alter 1981: 79–80) or merely as a preparation for chaps. 13 and 19 (von Rad *Genesis* OTL, 157; Speiser *Genesis* AB, 97; Westermann 1985: 152). God commanded Abraham to leave his country (*ʾereṣ*), kin (*môledet*) and father's house (*bēt ʾāb*) (Gen 12:1). Was Abraham then wrong to bring Lot along? Typically, interpreters have viewed this as an example of Abraham's sense of responsibility toward his brother's family (Speiser *Genesis* AB, 98). But it may perhaps more readily be seen as the first example of disobedience or weak faith on the part of Abraham. Abraham and Sarah certainly move back and forth constantly between faith and doubt, obedience and disobedience (cf. Gen 12:10–20; 16:1–16; 17:15–18; 18:9–15). Also, every episode in which Lot has a role is at best ambiguous and at worst negative relative to the future God has in mind for Israel's ancestors.

Once in Canaan, the first encounter between Abraham and Lot is problematic (Genesis 13). Their success in acquiring possessions (Gen 12:5, 16; 13:1–2, 5–6) leads their respective herdsmen to quarrel, thus obliging uncle and nephew to separate (Gen 13:5–7). When Abraham offered to allow his kinsman first choice of the land, taking whatever was left for himself, Lot opted for territory which the narrator distinguishes from Canaan (Gen 13:11–12; Helyer 1983: 79–80). What makes this significant is the possible if not probable intimation that Abraham brought Lot along with him in the first place not out of some sense of family responsibility (Westermann 1985: 176), but because he saw Lot initially as a security deposit toward God's promise of nationhood (Gen 12:2) and secondly as a potential heir for the land that was promised (Gen 12:7). It is instructive that immediately after Lot leaves, God appears and promises Abraham that Canaan will be given to *his* descendants, conspicuously excluding the nephew (Gen 13:14–17). It must be remembered that Abraham thought of the slave Eliezer (Gen 15:2) and later his son by Hagar (Gen 17:18) as potential heirs, even though this went against God's explicit statements. So Abraham gave Lot first choice not so much on the basis of a pious generosity which has the effect of emphasizing Lot's greed (von Rad *Genesis* OTL, 166–67) or because of his strong belief in the promise of land (Brueggemann *Genesis* IBC, 130). Rather, he was thinking in terms of Lot's proleptic inheritance of the land.

However, even after the separation Abraham is jeopardized by Lot's presence in the vicinity. When his nephew is captured by the alliance that attacked the cities of the plain (Gen 14:8–12), Abraham felt he had to intervene (Westermann 1985: 199). While his rescue attempt was successful, it involved a military venture which could have had disastrous results and in any case forced him to stray far from the land of promise (Gen 14:14–16). In the end Abraham (and God's plan) suffered no ill effects, but the episode would have been completely unnecessary had the patriarch left Lot home in the first instance.

Even in the story which focuses on Lot and his family almost exclusively, the ancestral saga remains in focus. There are two explicit connections. One is the similarity of the hospitality type-scenes (Alter 1981: 47–62) at the beginning of Genesis 18 and 19. Another is the notation that Lot was spared on account of his relationship to Abraham (Gen 19:29). In this light, Abraham's famous debate with God over the ethics of destroying the righteous with the guilty is telling (Gen 18:22–33). Why does Abraham argue in this vein? Is he simply making an abstract argument that God on principle should judge fairly (von Rad *Genesis* OTL, 207; Speiser *Genesis* AB, 135; Westermann 1985: 286)? Is he obliquely "instructing" God that there is another way to respond to sin than *quid pro quo* (Brueggemann *Genesis* IBC, 168–69)? The omniscient narrator (Sternberg 1985: 84–128; Alter 1981: 155–77) after all has long since informed us that Sodom and Gomorrah would in fact be destroyed (Gen 13:10), something which is also already in God's mind (Gen 18:17). God therefore broaches the subject with Abraham not simply because of the future greatness of the patriarch (Gen 18:17–19), but also to see how he responds, which explains why God puts the question to Abraham as though the decision were not yet made (Gen 18:20–21). To be sure, God's action here is based on Abraham's future role as a teacher of righteousness and justice in Israel. But the placement of the episode between another example of unfaithfulness (Gen 18:9–15) and a judgment potentially involving Abraham's nephew, links the matter of righteousness and justice to Abraham's concrete circumstances. In a sense, God is forcing Abraham to ponder justice and righteousness for intensely personal reasons, since there was apparently no possibility that destruction would be averted (Gen 13:10; 18:17; Westermann 1985: 292). How else could he become a teacher of righteousness and justice to his children?

Abraham responded positively and negatively to this "test." Positively, he deplores the possibility of destroying the innocent with the guilty—he does know something about justice and righteousness. Negatively, and doubtless more to the point, he is attempting to talk God out of indiscriminate destruction because he knew of Lot's presence there (Gen 13:10–12; 14:11–14). Abraham had to present his case abstractly, for were he more specific he would naturally have called attention to his awareness that Lot dwelt in one of the targeted cities. That in turn would underscore his initial disobedience to the very deity with whom he was bargaining. Only when Abraham is assured that God will not judge indiscriminately, does he stop debating and leave (Gen 18:33). Has Abraham concluded that he has succeeded in saving Lot by demonstrating a theoretical understanding of justice and righteousness, without the embarrassment of having had to mention his nephew by name? It seems so. But that God was only testing Abraham and not seeking his advice is shown by the fact that later Lot is removed from the city. Presumably, had Abraham's logic been the determinative factor, the whole city would have been saved by the presence of one or more righteous person(s) (Gen 18:26).

In the account of the destruction of the cities of the plain, Lot is the protagonist, not simply a supporting actor (Westermann 1985: 299). In this role he demonstrates a quality of character that measures up to his uncle's. His hospitality toward the divine visitors is equal to that which Abraham extended (Gen 18:1–8; 19:1–11); indeed, it may surpass it in that he goes to great lengths to protect his visitors from the wicked inhabitants of the city (cf. Judg 19:22–26). Though the visitors end up saving Lot rather than the other way around (19:9–11), his effort cannot be faulted. In spite of Lot's actions, however, he seems to be rescued only partially for his hospitality (19:19). The main accent falls on his relationship to Abraham (19:29), as though he would have been rescued no matter what his behavior (or Abraham's argument) had been. This is illustrated by his ineptitude, his reluctance to follow instructions precisely, and the fate of his wife (19:9, 14, 16–22, 26).

The story of Lot ends on an ironic note. Though he was rescued, there is still a final consequence to Abraham's having brought him to Canaan in the first place. After escaping to Zoar, Lot became frightened and repaired to a cave in the nearby hills to live with his daughters (Gen 19:30). The older daughter, apparently believing that they were the world's last survivors (Gen 19:31), suggested to her younger sister that they get their father drunk and sleep with him to preserve offspring. This the sisters do, resulting in two sons being born: Moab and Ben-ammi (Gen 19:33–38). Although the kinship ties with Abraham guaranteed a measure of future blessing to the offspring of these incestuous unions (Deut 2:9, 19), just as Abraham's offspring by Hagar also received a blessing (Gen 16:10; 21:17–18), that did not obviate the fact that in the future Israel's neighbors Moab and Ammon would be persistent enemies (Ps 83:8; Numbers 22–24; Judg 3:12–30; 1 Sam 11:1–11; Amos 1:13–15). This would serve as a poignant reminder of the first act of disobedience committed by their ancestral father Abraham. Whether Lot is to be seen as sinful in this story or not (von Rad *Genesis* OTL, 219; Brueggemann *Genesis* IBC, 176), the end result of his and his family's actions would not have been deleterious for Israel were it not for Abraham's initial failure. A further irony may be seen in the contrast between the way Lot's future was finally secured and the way Abraham's and Sarah's was (Genesis 21).

FRANK ANTHONY SPINA

LOTAN (PERSON) [Heb *lôṭān* (לוֹטָן)]. A son of Seir "the Horite" (Gen 36:20, 22, 29; 1 Chr 1:38–9), the father of Hori and Heman, and the brother of Timna (Gen 36:22). See also SEIR. As can be concluded from the tribal leader (Heb *ʾallûp*) mentioned for Lotan and his brothers in Gen 36:29–30, the "sons of Seir" were a group of tribes which formed a major segment of Edomite society in the 7th century B.C. See also HORITES. The tribal name may refer to a special garment worn by this particular tribe; cf. Heb *lôṭ*, "veil"; Akk *lîṭu* II, "some sort of cloth" (*AHW* 558); Eth *loṭä*, "change/put on clothes" (Leslau 1987: 321).

It is tempting to regard Abraham's nephew Lot (Genesis 13; 19) as the eponymous ancestor of this tribe. In this case, the Abraham people who may have come from the N (Knauf 1985: 46) came to an understanding with the indigenous Lot people after their arrival in the Hebron region (Gen 13: 5–13), and later witnessed the Lot people's retreat from the Wadi ʿArabah into the E mountain range (Gen 19:17–19, 30). As a pastoral group which lived on both sides of Wadi ʿArabah in the LB/early Iron Age and joined Edom in the later Iron Age, Lot/Lotan has a parallel in Reuel (Knauf 1988: 158–9; and cf. Ahlström 1986: 58–60).

ERNST AXEL KNAUF

LOTHASUBUS (PERSON) [Gk *Lōthasoubos* (Λωθασουβος)]. A leader of the people who participated in the assembly of the returned exiles when Ezra read the law of Moses (1 Esdr 9:44). His prominence in the community is suggested by his position on the platform with Ezra. In the parallel Neh 8:4, the name "Hashum" appears in place of "Lothasubus."

MICHAEL DAVID MCGEHEE

LOTUS. See FLORA, BIBLICAL.

LOVE. This entry consists of two articles, one covering "love" as it is used in the Hebrew Bible, and the other covering "love" as it is used in the New Testament.

OLD TESTAMENT

The word love in English translations of the OT may represent any one of a variety of Hebrew terms. In translation, love appears with the wide range of meanings usually associated with this term in English usage: affection, friendship, loyalty, desire, liking, attachment. Yet each of the two commonly used Hebrew terms has a range of meanings that extends beyond the usual range of the English word love, and the range of meaning of the Hebrew terms overlaps but is not fully synonymous. The meaning of each Hebrew term is therefore best described separately.

The Hebrew terms translated by English love include the frequent noun *ḥesed,* the frequent verb *ʾāhēb* and its related nominal and adjectival forms, the less common nouns *dôd* and *raʿyâ,* the adjective *yādîd,* and the infrequent verb *ḥāšaq.*

———

A. *dôd* and *raʿyâ*
B. *yādîd*
C. *ḥāšaq*
D. *ʾāhēb*
1. Secular Usage: Love Between Human Beings
    2. Love of Things and Qualities
    3. Religious Usage
    4. Theological Usage: God's Love
E. *ḥesed*
    1. Secular Usage: *ḥesed* Between Individuals
    2. Theological Usage: God's *ḥesed*
    3. Religious Usage: Human *ḥesed* to God and Neighbor

———

A. *dôd* and *raʿyâ*

Although in a number of occurrences *dôd* is the term for a paternal uncle (father's brother), its more frequent usage is for a man loved by a woman in a relationship anticipating marriage. Thus the term is most often translated "beloved" or "betrothed." The word in this meaning appears regularly in Canticles (e.g., 1:13, 14, 16; 2:3, 8, 9, etc.), a series of love poems celebrating the beauty of a betrothed couple in one another's eyes and the joys of their tender and intimate relationship. Connotations are personal, physical and sexual. Whatever literal or symbolic interpretation of these poems one adopts, these connotations of *dôd* remain constant. Outside of Canticles the meaning "beloved" for this term appears only in Isa 5:1.

The companion term for *dôd* in Canticles is *raʿyâ,* the term used for the woman as beloved in this intimate relationship (e.g., Cant 1:9, 15; 2:2, 10, 13). As with *dôd, raʿyâ* is peculiar to Canticles, with no clearly attested example outside this book.

B. *yādîd*

An adjective sometimes also used as a noun, *yâdîd* appears primarily in poetic passages in the Hebrew text. Most often the poet uses the word to refer to all or some part of the people of Israel as the beloved of God. Although the number of occurrences (less than 10 times) is not sufficient to draw a clear conclusion, the frequent association of this term with concern for the safety provided by divine protection is

noteworthy. Ps 60:7—Eng 60:5 (= Ps 108:7—Eng 108:6) petitions God to come to the rescue of the beloved oppressed by military enemies; Deut 33:12 speaks of the tribe of Benjamin as beloved and therefore protected by God; Jer 11:15 challenges the false sense of security of God's beloved people who think that temple worship will avert God's judgment upon their unfaithfulness. Ps 127:2 refers primarily to individuals, but here too the theme of divine protection is present in the context.

C. *ḥāšaq*

This rare *Qal* verb has only five clear occurrences, but they span the range of secular, theological (God as subject), and religious usage. All the examples connote the desire of one party for permanent attachment to the other. Gen 34:8 speaks of Shechem's longing for Dinah, the young woman he hopes to marry. This longing includes a sexual component, since he has already "seized her" (RSV) and had sexual relations (v 2). Connotations of affection are possibly also included, since the text suggests that Shechem liked her more rather than less after he had forced himself upon her. In the other secular example of the term (Deut 21:11) appearance and physical desire are presumably primary factors, given the context of victorious warriors' selection of female prisoners as potential wives. The term is used of God's love for Israel in Deut 7:7 and 10:15; in both instances the more common term *ʾhb* (see below) also appears and the two should be understood synonymously. Finally, in Ps 91:14 deliverance is promised to the one who loves God.

D. *ʾāhēb*

This verb together with its cognate nouns occurs over 200 times in Hebrew Scripture. The pointing of the verb is generally *Qal,* with both stative and active forms. The *Qal* active participle is often translated "friend," while the root appears a number of times as a *Piʿel* participle with the meaning of "illicit lover." The verb can refer to love between human beings, to love of concrete things or behavioral qualities, to human love for God, or to God's love for individuals or groups. The frequent cognate noun *ʾahăbâ,* formed in the typical way for a Hebrew abstract noun, has the same range of usage. Positive or negative evaluation of love depends on the appropriateness of its object.

1. Secular Usage: Love Between Human Beings. The term is frequently used for the desire or attraction of one person to another of the opposite sex, with the end goal sometimes marriage, but sometimes primarily a sexual encounter. Examples resulting in marriage include Jacob's love for Rachel (Gen 29:18), and Michal's love for David (1 Sam 18:20). Focus on sexual desire is illustrated by Amnon's love for Tamar (2 Samuel 13) that results in rape. Often the balance between abiding attachment, romantic feeling, and sexual attraction cannot be clearly determined from a text; this ambiguity may well reflect the ambiguity of the situation such texts describe.

The word also refers to the positive feeling of attachment of one person for another in familial relationships, such as a husband's love for his wife (e.g., Elkanah and Hannah, 1 Sam 1:5), love of mother or father for child (Abraham and Isaac, Gen 22:2; Rebekah and Jacob, Gen 25:28), or love of a daughter-in-law for her mother-in-law (Ruth 4:15). These uses seem to focus on affection, care, and delight. A number of examples express explicit preference for one family member over another.

A specialized and important nuance of love between human beings, not normal to English usage, is its connotation of political loyalty. This usage is well illustrated in extra-biblical political texts of the 2d and 1st millennia from various parts of the ancient Near East outside of Israel (Moran 1963: 78–80), and is seen in the OT especially in the narratives concerning David, where we read that David is loved not only by Michal, but also by Saul (1 Sam 16:21), by Saul's servants (1 Sam 18:22), by all Israel and Judah (18:16), by all Israel (18:28, following the LXX), and by Jonathan (18:1, 3; 20:17; 2 Sam 1:26). This range of persons and groups who love David requires at least that the term be extended to include admiration of his special qualities, such as musical ability or military prowess. More than that, there are clear political overtones. Jonathan's love for David "as [Jonathan] loved himself" involves committing himself not just to David personally, but also to David's political cause (Fishbane 1970: 314); this love is the narrator's cue to the reader that even the potential blood heir to Saul's throne has cast his lot with God's anointed successor David. The references to the love of "all Israel" and of "all Israel and Judah" for

David continue this nuance of political loyalty, and it is seen subsequently in the reference to Hiram of Tyre as David's *ʾōhēb* (*Qal* part., "friend"), his political ally.

2. Love of Things and Qualities. That which a person loves may classify the person as upright or wicked, wise or foolish. In such contexts the word carries the general connotation of setting one's heart and mind upon the object mentioned, giving it special attention or dedicating oneself to pursuing it. References to such things or qualities occur primarily in Psalms and Proverbs, but also in prophetic literature. Material goods are mentioned only infrequently as objects of love (e.g., wine and oil, Prov 21:17; silver, Eccl 5:9—Eng5:10), and even these seem to function symbolically to indicate the person's attitude or focus in life. Much more common as objects of the verb are qualities or abstractions related to the life of the upright believer: righteousness (Ps 45:8—Eng 45:7), God's law (Ps 119:97) or commandments (Ps 119:47), pureness of heart (Prov 22:11), wisdom (Prov 29:3), good (Amos 5:15), truth and peace (Zech 8:19). By contrast there are other things it is obviously undesirable for people to love, such as evil (Ps 52:5—Eng 52:3), lying (Ps 119:163), strife (Prov 17:19).

3. Religious Usage: a. Human Love for God. A series of texts concentrated especially in Deuteronomy exhorts and indeed commands that Israel shall love God. The classic example comes in the commandment that concludes the *Shĕmaʿ* in Deut 6:4–5: "you shall love the LORD your God with all your heart, and with all your soul, and with all your might." This love that can be commanded by another has its conceptual roots, like the love of Jonathan, Israel, and Judah for David (see above), in the rhetoric of international relations in the ANE of the period, rather than from the sphere of conjugal intimacy. Rulers write to their equals with whom they are in treaty relationship concerning the importance of love; a ruler may command subject vassals to show love to the ruler as expression of their faithfulness to a treaty of protection provided by the ruler. Deuteronomy speaks of Israel's love for God in the context of the covenant established at Sinai, using terminology familiar from the political rhetoric of the culture. Here the love that God commands from Israel is not primarily a matter of intimate affection, but is to be expressed by obedience to God's commandments, serving God, showing reverence for God, and being loyal to God alone (10:12; 11:1, 22; 30:16). Despite the demand formulation, however, the inclusion of love in this series of requirements probably highlights the willingness with which Israel should walk with God.

Deuteronomy's usage of love as a duty owed to God in the covenant context probably had its roots not only in Near Eastern secular political terminology, but also in Israel's own early covenant vocabulary, since Deuteronomy 6 develops its emphasis by references to the Decalogue (Moran 1963: 84–87), generally taken to be much older than Deuteronomy. In the second commandment God offers "steadfast love (*ḥesed*, see below) to thousands of those who love (*ʾhb*) me and keep my commandments" (Exod 20:6 = Deut 5:10); Deut 6:5, 17 make allusion to this phrase.

b. Love of Neighbor and Stranger. Two important passages command the love of neighbor (Lev 19:18) and of stranger (Lev 19:34; Deut 10:19). Lev 19:34 seeks to bring "stranger" into the realm of "neighbor" by insisting that strangers be treated as native Israelites. Jesus cites the Leviticus 19 command to love the neighbor along with the Deuteronomy 6 command to love God in response to the question about the first or great commandment (Mark 12:29–31 [= Matt 22:37–39; Luke 10:27]). Despite the rarity of OT reference to love of neighbor, Israel's tradition strongly emphasized practical assistance as the right way of relating to others, especially the weak and underprivileged. As Rücker (1981: 14–15) suggests, this emphasis on practical action rather than on personal feeling may account for the rarity of formal reference to love of neighbor.

4. Theological Usage: God's Love. Love shown by God to an individual or to Israel is mentioned less than 25 times. Nevertheless, the concept of God's love is an important aspect of OT thought (especially when God's *ḥesed* is also considered: see below). Only Solomon is singled out as a named individual loved by God, and the early form of this claim (2 Sam 12:24) seems associated with an explanation of his alternate name "Beloved of the LORD" (from a different Hebrew root). References to Jacob as loved by God focus on the people as a whole, not the individual ancestor (Ps 47:5—Eng 47:4; Mal 1:2). In a number of examples God's love for the people is especially associated with the election of Israel and the

ransom or redemption of Israel from its enemies. Deut 4:37, for example, joins God's love of Israel's ancestors with the choosing of their descendants; Isa 43:4 and 48:14 speak of God's love for Jacob/Israel in the context of redemption, ransom, and the defeat of Babylon. Although the Psalms make clear that God loves righteous persons (Ps 146:8) and righteousness and justice (Ps 33:5; 37:28), the persistence of God's love despite Israel's failings is highlighted in Jer 31:3: "I have loved you with an everlasting love."

A special play on the imagery of God's love for Israel appears in Hosea, who moves beyond general references (14:5—Eng 14:4) to root his usage explicitly in the nuances of familial relationships, especially the love of husband for wife (Hos 3:1) and parent for child (11:1). In both these texts the election/redemption theme is also prominent. The covenant between God and Israel, expounded in its fundamental political imagery in Deuteronomy (see above), is elaborated in Hosea using the imagery of a marriage relationship. The use of marriage imagery for the God-Israel relationship in Jeremiah 2–3 and Ezekiel 16 and 23 probably developed from Hosea's usage. A husband's authority over his wife, presupposed in Israel's culture, allows Hosea (and Ezekiel and Jeremiah) to maintain the political pattern of ruler (God) and subject (Israel) while at the same time highlighting caring and intimacy as appropriate aspects of the covenant relationship. Hosea focuses on the frustration of God with Israel's constant searching after other "lovers" (*mĕʾahăbîm* [*Piʿel* part.], 2:7, 9, 12, 14, 15—Eng2:5, 7, 10, 12, 13) to provide material sustenance. These references to Israel's lovers generally point to other gods, and the imagery of adultery and harlotry underscores Hosea's stinging criticism of the cultic sexual activity he associates with the worship of Canaanite fertility deities. The mention of hired "lovers" (*ʾăhābîm* [noun], 8:9) focuses on other nations as a source of military aid alternative to reliance upon the LORD. Here the political connotation of love resurfaces, but the imagery of marital unfaithfulness may continue in the background. Beyond Israel's futile search for security apart from God and God's judgment of this infidelity, it is God's love rather than any achievement by Israel that makes possible restoration of the covenant/marriage relationship (Hos 3:1; Jer 31:3).

E. *ḥesed*

A frequent noun (approximately 250 times) in the OT, *ḥesed* has no verbal counterpart. The noun itself is frequently the object of the verb "to do" (*ʿśh*). Neither the cognate languages (Sakenfeld 1978: 16–21) nor the ancient versions (Goodman 1968) provide any significant help in interpreting the Hebrew term.

No one English term corresponds precisely to the Heb *ḥesed,* and the exact nuances of the term have been much debated. The King James Version (1611) sometimes used "kindness" or "loving kindness" (following the Coverdale Bible of 1535), but most frequently translated "mercy," as suggested by the regular rendering *eleos* in the LXX. The Revised Standard Version translators decided on four categories for translation: "kindness" in references to a particular act of one person toward another; " (deal) loyally" in reference to continuing behavior of one person toward another; "steadfast love" or "love" in reference to God's consistent behavior toward individuals or Israel; and "love," "devotion," "faithfulness," or "loyalty" (according to context) in reference to Israel or individuals in relation to God (Hyatt 1953: 20–21). Sakenfeld (1985) preferred the noun "loyalty," although she highlighted many discontinuities between the English and Hebrew words. Because of the inadequacies of all these English options, this article uses the transliterated Hebrew term rather than any one of the English words, each of which is misleading in a different direction.

Modern investigation of the meaning of the term began with the study by Nelson Glueck that quickly became a classic. Glueck (1927: 3) summarized the meaning of *ḥesed* in its secular usage as "conduct in accord with a mutual relationship of rights and duties"; he also emphasized the mutual or reciprocal and the obligatory character of the term in its religious usage for persons in relation to each other and to God (Glueck 1927: 34). Glueck did view God's *ḥesed* as a gift, rather than as a right, yet the mutuality of the relationship between God and the recipient of *ḥesed* remained central to his analysis (1927: 52). More recent scholarship has questioned and largely abandoned Glueck's emphasis on rights and duties as quasi-legal or traditional-cultural categories within which the term should be interpreted, and has greatly modified his understanding of mutuality by deemphasizing reciprocity. Nonetheless, Glueck's emphasis

on the centrality of a relationship between the parties within which *ḥesed* is offered and received remains a basic and lasting contribution.

Elements contributing to a fresh understanding of the term include recognition of the importance of the existence of superior and inferior parties in a relationship when *ḥesed* is done (Masing 1954), an emphasis on unilateral assistance in a situation of special need (Sidney Hills, unpublished 1957 paper quoted in Sakenfeld 1978: 11–12), and greater attention to the specific types of relationships and circumstances in which *ḥesed* is done (Sakenfeld 1978 and 1985).

Three general aspects of the term may be noted before turning to subcategories of usage. First, *ḥesed* is not associated with inanimate objects or concepts (contrast love [*ʾhb*] of silver or righteousness; see above); it always involves persons. Second, *ḥesed* is requested of or done for another with whom one is already in relationship; the term does not appear in contexts where no relationship between the parties has been established. Third, *ḥesed* in its most basic form is a specific action, but from a series of such actions the term may also be abstracted to refer to an attitude that is given concrete shape in such actions.

1. Secular Usage: *ḥesed* Between Individuals. The secular meaning of *ḥesed* in stories of relationships between individuals remains reasonably constant across the various authors and periods of OT prose narrative. It is useful to distinguish between *ḥesed* in intimately personal relationships, usually familial, and in sociologically secondary relationships, usually political.

Intimate personal relationships in which an act of *ḥesed* is requested or done for another include Sarah and her husband Abraham (Gen 20:13), Abraham and his kinsmen Bethuel and Laban (Gen 24:49), Jacob and his son Joseph (Gen 47:29), and Ruth and her mother-in-law Naomi and Naomi's family (Ruth 3:10). Also to be considered in this category are ties between rulers and key court officials, notably Abner and Ishbaal (2 Sam 3:8) and David and Hushai (2 Sam 16:17). From such narratives a series of common features can be identified that together describe the character of an act of *ḥesed* and provide a baseline for assessment of other usage (Sakenfeld 1978: 44–45). First, the help of another is essential; the person in need cannot perform the action. Second, help itself is essential; the needy person's situation will turn drastically for the worse if help is not received. Third, the circumstances dictate that one person is uniquely able to provide the needed assistance; there is no ready alternative if help is not forthcoming from this source. Fourth, the person in need has no control over the decision of the person who is in a position to help, and there are no legal sanctions for failure to provide help; often no one else will even know of a negative decision. The potential helper must make a free moral decision, based essentially on commitment to the needy person within the relationship. While self-interest might occasionally encourage a positive response, the term *ḥesed* focuses the rationale for action on commitment to the other, not on advantage to the actor. Each of the English translational options—love, loyalty, kindness, and even the less viable mercy—highlights some of these characteristics of *ḥesed* while severely underplaying others of them; the possibilities and limitations of the English words are further heightened when the following examples of human *ḥesed* are considered.

An act of *ḥesed* may also be performed or requested in the context of secondary, non-intimate relationships. Examples include Joseph and the Pharaoh's Cup-bearer (Gen 40:14), Ahab and the Syrian ruler Ben-hadad (1 Kgs 20:31), Rahab and the spies sent by Joshua (Josh 2:12–14), Abraham and Abimelech of Gerar (Gen 21:23), David and the Ammonite king Hanun (2 Sam 10:1–2a = 1 Chr 19:1–2). In these narratives the person requesting *ḥesed* is careful to show that the relationship between the parties is in good repair, sometimes by pointing to an act of *ḥesed* done by the suppliant on a prior occasion when the relative circumstances of need of the parties were reversed. This overt emphasis on the quality of the relationship stands in contrast to the narratives featuring intimate personal ties, where requests for *ḥesed* are simply made and no reason for compliance is proposed; the requests in such cases are based on the very nature of the relationship, which need not be mentioned. In the secondary relationships there is more frequently a potential for self-interest in an actor's willingness to offer *ḥesed* (although the focus remains on commitment to the other); and in some of the examples the strength or even existence of a prior relationship between the parties has been disputed (Kellenberger 1982: 50–52, 118–20). The central

features of critical situational need, unique opportunity to assist, and freedom of decision are common to *ḥesed* in both intimate and secondary relationships.

As with the term *ʾhb* (see above) there is a concentration of usage of the term *ḥesed* in the David narratives and especially in describing David's relationship with Jonathan (I Sam 20:8, 14–15; 2 Sam 9:1, 3, 7); and as with *ʾhb* the narrator's use of *ḥesed* calls the reader's attention to both the personal and the political dimensions of the relationship between these two men. David and Jonathan enter into a covenant relationship (1 Samuel 18) which not only seals their personal friendship but also introduces the political complexities of their interaction as two potential successors to Saul's throne (Jonathan by blood descent, David by divine anointing). Jonathan does *ḥesed* for David by informing him of Saul's murderous plans; David does *ḥesed* for Jonathan after Jonathan's death by bringing Jonathan's son Meribaal back from exile to live at the royal court.

It is important to note that in all examples *ḥesed* is done by the circumstantially more powerful person in a particular situation and is requested or received by the circumstantially less powerful person. The giver and receiver of *ḥesed* within a relationship are always determined by the immediate circumstances, not necessarily by the established roles of the participants. Hence in circumstances of need conforming to their established cultural roles, the Jabesh Gileadites did *ḥesed* for their ruler Saul (2 Sam 2:5). But in circumstantial reversal of cultural roles, Abraham the husband requests *ḥesed* from his socially subordinate wife Sarah; David the king receives *ḥesed* from his politically subordinate adviser Hushai. The critical need of one of the parties, not the role, is always the criterion for identifying the recipient of *ḥesed.*

2. Theological Usage: God's *ḥesed.* The combination of factors involved in *ḥesed* in human interaction provides the basis for understanding its theological use and suggests why it became a central term for expressing God's relationship to Israel. Israel understood God to be committed to the community in covenant relationship as the One who provided for all needs, yet One also always free and uncoercible. The Hebrew term *ḥesed* compactly incorporates all three of these dimensions (commitment, provision for need, freedom) in a single word. This shorthand theological claim is given various emphases, however, in different streams of OT literature (Sakenfeld 1985: 39–82).

Within the theological stream of the Sinai or Mosaic covenant tradition, *ḥesed* highlights the freedom of God within the covenant relationship. Paradigmatic for this perspective is the decalogue's description of the LORD as One who brings judgment on those who "hate" God, but who shows *ḥesed* to those who "love" God (*ʾhb,* see above) and keep God's commandments (Exod. 20:5b–6 = Deut 5:9b–10). Here God's *ḥesed* is conditional, dependent upon the good repair of the covenant relationship that it is up to Israel to maintain. The need-providing content of this divine *ḥesed* receives some concreteness within this Mosaic covenant tradition in the deuteronomic picture of divine blessings: in fulfillment of the ancestral promises Israel will become a numerous people living in safety in the land given them by God. By contrast, Jer 16:5b speaks of the withdrawal of God's *ḥesed* in the face of Israel's disobedience; the consequences are life without gladness, decimation of the people by death with no time for burials or mourning, and exile to an unknown land.

But even the Mosaic covenant tradition does not make God's *ḥesed* completely dependent upon Israel's obedience; rather, it stretches the meaning of the term beyond its usual secular usage to incorporate the possibility of forgiveness as an act of divine *ḥesed.* (The term *ḥesed* is never related to forgiveness in secular examples.) Narratively this possibility is introduced immediately after the conditional statement of the decalogue, in the context of the apostasy of the Golden Calf (Exodus 32–34). As part of God's response to this apostasy, Moses hears the Lord's self-proclamation as One who is "merciful and gracious, slow to anger, and abounding in *ḥesed* and faithfulness, keeping *ḥesed* for thousands, forgiving iniquity and transgression and sin," even though sin will not be ignored and there will be punishment for iniquity (Exod 34:6b–7). Even in the face of the ultimate apostasy—worship of other gods—God does not end the relationship but offers the possibility of pardon. The phrasing of this proclamation was probably very ancient and was surely basic to Israel's liturgical life, as is apparent by its use in the Psalms (e.g., 86:15; 103:8), as well as in late texts such as Ezra's prayer (Neh 9:17b) or Jonah's protest to God (Jonah

4:2). The phrase "abounding in (Heb *rab*) *ḥesed*" is used only in reference to God and appears regularly in contexts involving divine forgiveness. Thus "abounding in *ḥesed"* conveys the essential way in which divine *ḥesed* moves beyond the normal parameters of *ḥesed* in human relationships. Forgiveness springs from God's radical commitment to the relationship with Israel (and indeed with all humankind, as the story of Jonah is meant to show). God's forgiveness fulfills a "need" that is basic to all other needs within the divine-human relationship—the very possibility of the continuation of the relationship. Forgiveness comes as a freely offered act and gift from God.

Yet in this Mosaic tradition, the emphasis on God's freedom means that continuation of the relationship never seemed fully assured. The interpretation of divine *ḥesed* by two other streams of Israelite covenant tradition, God's perpetual covenant with the Davidic line (so-called "royal" theology) and God's perpetual covenant with Abraham and his descendants as developed in the P strand of the Pentateuch, provides a theological counterpoint with greater emphasis on the commitment of God to Israel.

God's irrevocable commitment to David's line is described as God's *ḥesed* to David, especially in Psalm 89 and 2 Samuel 7. The underlying political imagery from ancient Near Eastern culture is that of a "royal grant," in which a royal figure gives to a faithful servant land and the right of his descendants to control it in perpetuity (Weinfeld 1970: 185–88). God by analogy grants to the faithful David and his descendants perpetual rule over the nation-state of Judah. Psalm 89 praises the incomparable Creator of the universe, whose throne is founded on justice and righteousness, before whom stand *ḥesed* and faithfulness almost as divine attendants (v 15—Eng v 14). Within this larger context of *ḥesed* as divine commitment to created order rather than chaos, God's perpetual and irrevocable commitment to the Davidic line is presented as divine *ḥesed* (vv 25, 29, 34—Eng vv 24, 28, 33). The relationship will be like that between father and first-born son, the covenant will stand firm, the line will be secure as the very heavens, and all enemies will be defeated. Even if disobedient rulers must be chastised, God swears that the relationship itself will endure: "I will not remove from him my *ḥesed,* or be false to my faithfulness. I will not violate my covenant, or alter the word that went forth from my lips" (vv 34–35—Eng vv 33–34).

In a similar vein, the deuteronomistic author of 2 Sam 7:11b–16 insists on the perpetual establishment of God's relationship with David. Here the word "covenant" is conspicuous by its absence; this author refers to covenant only in reference to the whole people, never to the king alone. Nevertheless, the passage describes a special relationship with the royal line, a relationship which will endure because divine *ḥesed* will never be removed (v 15). Since Israel's king is understood as "channel of blessing" through whom God provides for justice, peace, good crops, and long life for the whole people (Psalm 72), this tradition of God's *ḥesed* to the Davidic line indirectly insures blessing for all the people.

Probably developed in the context of Exile when both the Davidic and Mosaic theologies are in need of radical reinterpretation, the Priestly strand of the Pentateuch highlights the perpetual covenant with Abraham as ancestor of the community. While *ḥesed* is never explicitly mentioned in connection with the Abrahamic covenant, P's reuse of old traditions in Num 14:17–19 brings together the emphasis on the freedom of God from the Mosaic tradition with the emphasis on divine commitment from the royal theology (Sakenfeld 1985: 72–76). God's forgiveness is seen as an always surprising gift from One who is free to end the relationship with Israel. Yet at the same time, that forgiveness is ultimately grounded in the perpetual and unconditional commitment to Abraham that was made apart from and prior to commandment, land, nationhood, or kingship. As the refrain of Psalm 136 insists, God's *ḥesed* endures forever.

Key aspects of the concrete manifestations of God's *ḥesed* (ranging from maintaining the created order to provision of descendants, sustenance, land, leadership, and especially forgiveness) have already been mentioned. These are reinforced and supplemented by attention to the many references to divine *ḥesed* in the psalter (over 70 times scattered through over 45 psalms). Most frequently associated with *ḥesed* is a plea for deliverance from enemies (e.g., Ps 17:7; 143:12) or thanksgiving for such deliverance (e.g., Ps 138:2). This theme is echoed narratively by Jacob's appeal to God's *ḥesed* in his plea for deliverance from Esau (Gen 32:11–12—Eng32:10–11). Related to petitions for deliverance are petitions for general divine protection so that trouble can be avoided (e.g., Ps 40:12—Eng 40:11), illustrated in narrative by God's

protection of Joseph in prison (Gen 39:21). Finally, even as the covenant traditions associate God's forgiveness of the community with divine *ḥesed,* so also forgiveness of individual suppliants is closely associated with *ḥesed* (e.g., Ps 6:2, 5–6—Eng6:1, 4–5; 25:6–7; 51:3—Eng 51:1). For individuals as much as for the community corporately, God's forgiveness as an act of *ḥesed* that continues the divine-human relationship is foundational to life itself and undergirds all other manifestations of *ḥesed.*

3. Religious Usage: Human *ḥesed* to God and Neighbor. Although religious usage is relatively infrequent (scarcely a dozen examples), it develops a special aspect of Israel's relation to God. In its secular usage, as outlined above, *ḥesed* involves aid for the circumstantially weaker and needy party in a relationship. When Micah declares the Lord's requirement to "do justice, love (*ʾhb*) *ḥesed,* and walk humbly with God" (6:8), he expands the sphere of relationship of each Israelite so that *ḥesed* involves active concern for the well-being of all the people of God, not just those known personally to each one, with particular concern for the poor or any others whose status lacks advocacy within Israelite society. This advocacy for the weak, through rescue or protection and especially through correct functioning of the courts, is to be taken on freely (as the content of *ḥesed*), even though it would be easy not to do so and there would be little or no consequence to the actors for failing to do so. In all these respects, this religious usage continues the emphases of secular usage, except that the sphere of relationship is enlarged.

There is, however, a distinctive nuancing of *ḥesed* in Hosea (as also with *ʾhb,* see above) that is carried forward in subsequent prophetic usage. In Hosea the word appears six times (2:21—Eng2:19; 4:1; 6:4, 6; 10:12; 12:7). Although the subject of *ḥesed* in 10:12a (and in the related text in Jer 2:2–3) is disputed, it appears likely that in every instance *ḥesed* is something which Israel should do for God, rather than *vice versa.* Given the basic secular usage in which a circumstantially powerful party does *ḥesed* for a party in need, Hosea's use of the word must have been jarring, seemingly nonsensical, to his hearers. Yet by his seemingly illogical move in speaking of Israel's *ḥesed* to God, Hosea is able to convey a new dimension of the relationship between God and Israel (Sakenfeld 1985: 104–23).

In Hosea *ḥesed* is used as a summary term for Israel's carrying through on covenant commitment both to exclusive worship of the LORD and to communal justice; that is, *ḥesed* represents the entire decalogue in a single word. By using *ḥesed* for what Israel does for God, Hosea is able to emphasize that observance of the decalogue is not just something that God commands, but is more importantly what God desires or asks from Israel. Even though God is powerful and Israel dependent, *ḥesed* is nevertheless an attitude and action that Israel is somehow free to offer or to withhold. Divine judgment might "coerce" such behavior, but judgment by its nature cannot produce the *free* and *willing* behavior and commitment that is essential to *ḥesed.* Thus in speaking of Israel's *ḥesed* to God, Hosea is able to convey both the freedom of Israel within the covenant relationship and also the deep and urgent desire of God for Israel's free response.

Hosea's images of marriage and parent-child for the covenant relationship (see above) provide a context of intimacy in which the usual covenant usage of God's *ḥesed* offered to Israel can be reversed. God expresses frustration at the repeated failure of the people to live out their part of the relationship, and asks, even as a husband might ask a wife, that Israel show *ḥesed* by doing what is needed (namely, observing the decalogue) to save the relationship. Israel fails to respond, but Hosea declares that God will overcome this failure. Continuing the marriage image, God promises to remarry Israel and to provide Israel's *ḥesed* as a wedding gift, along with gifts of righteousness, justice, mercy and faithfulness (2:21–22—Eng2:19–20). By this divine initiative a right relationship will be restored between God and Israel in the context of peace in the whole creation (v 20—Eng v 18), and Israel itself will finally reflect the qualities of its God.

Although Hosea speaks only of Israel's *ḥesed,* his climactic introduction of true human *ḥesed* as God's gift to Israel is connected to divine *ḥesed* as an expression of God's commitment to the human community. Even as God's *ḥesed* manifested in forgiveness makes relationship possible at all, so God's *ḥesed* manifested as care for the needy undergirds any human caring that makes for a just and peaceable world. From an OT point of view any human loyalty, kindness, love, or mercy (to refer again to the translation options for *ḥesed*), is rooted ultimately in the loyalty, kindness, love, and mercy of God.

KATHARINE DOOB SAKENFELD

NT AND EARLY JEWISH LITERATURE

One of the principal concepts of the NT, love is an important element of the teaching of Jesus, constitutive of much of Paul's theology, and fundamental to the doctrine of the Johannine writings. Love describes the nature of God, provides the basis of Christian ethics, and manifests the object of Christian faith and the culmination of Christian hope.

A. Love in the LXX

The LXX shows a decided preference for the Greek verb *agapaō* and the noun *agapē* in translating biblical Hebrew words for love. For the Hebrew terminology, see LOVE (OT). Greek *agapaō* predominates as a translation of Heb *ʾāhēb* in the Pentateuch and in 1–3 Kingdoms; the Greek noun *agapē* similarly serves to represent Heb *ʾahăbâ* in the majority of instances. Other words more common in non-biblical Greek as signifiers of love are used very little in LXX as equivalents of Hebrew terms to which they could be said to correspond. The Greek verb *eraō,* which can connote sexual love, is avoided altogether in the Pentateuch as a translation of Heb *ʾāhēb* (which can have the same connotations). (The cognate noun *erōs* could also serve as the name of the Greek god of love, whose veneration was widespread and popular.) *Phileō,* a milder term (though capable of indicating amorous interest: Tob 6:17), is restricted in the Pentateuch to Gen 27:9, 14 (both times translating Heb *ʾāhēb*) and Gen 37:4.

The range of meaning expressed by *agapaō* in Greek of the classical period and later includes affection, fondness, and simple contentedness. Its extensive use in the LXX as an equivalent of Heb *ʾāhēb* seems to indicate that the Hellenistic Jewish translators sought the least marked Greek term for expressions of love in their sacred texts, weighted as those scriptures had become with religious and theological importance. The lexical selectivity of the LXX probably brought the *agapē* word family into greater prominence as a vocabulary suitable for religious and theological discourse in early grecophone Judaism. To a considerable extent, the NT writers continued this preference for the *agapē* family in their vocabulary choices.

B. Love in the Writings from Qumran

The principal vocabulary of love in the Dead Sea Scrolls is associated with the Hebrew verb *ʾāhēb* "to love" and the cognate noun *ʾahăbâ* "love" (both of which were used in biblical Hebrew as well). Uses of *ʾāhēb* in the Qumran literature are all religious or theological (theological uses predicate acts of love on the part of God; religious use concerns human actors).

Love, and its opposite, hatred, are closely allied to the deterministic theology that informs the eschatological program evident at Qumran. In a passage of the Community Rule contrasting the divine creation of spirits of Light and spirits of Darkness, it is asserted that God "loves the one everlastingly … but the counsel of the other He loathes and for ever hates its ways" (1QS 3:26–4:1 [Vermes 1987: 65]). The prayer of a pious "servant" of God is that he may "[choose all] that Thou lovest and loathe all that Thou [hatest]" (1QH 14:10–11 [Vermes 1987: 200]), the rationale again being a predetermined division of spirits (and their "lots") between good and evil (1QH 14:12; cf. 17:24). Even the straightforward statement from the *Damascus Document* that "God loves knowledge" (CD 2:3 [Vermes 1987: 83]) emerges in a passage of instruction concerning the "ways of the wicked" that is explicit in declaring God's loathing for those predestined to wrath (CD 2:8–9).

The special love of God for the patriarchs is a theme of the *Damascus Document* that is elaborated with Torah citations and allusions (Deut 7:8–9, cited in CD 8:15; 19:2). It is love for these "first" fathers (CD 8:16) that guarantees God's love for "those who come after them" (CD 8:17 [Vermes 1987: 90]). The patriarchs Abraham, Isaac, and Jacob are honored with the designation *ʾwhbym lʾl* "friends of God" (CD 3:2–3 [Vermes 1987: 84]).

The predestination of spirits and the apportionment of divine love and hatred accordingly is taken as the model and guide of the Qumran community's ethic. The primary purpose of the saints who enter the

community is "that they may love all that He has chosen and hate all that He has rejected" (1QS 1:3 [Vermes 1987: 62]). These categories correspond directly to the divinely predetermined "lots," a knowledge of which has been granted the Qumran community so that "they may love all the sons of light, … and hate all the sons of darkness …" (1QS 1:9 [Vermes 1987: 62]).

In such a precarious situation, the community member must be ready to love and hate according to proper criteria (1QS 9:16, 21) and to give and accept reproof accordingly (1QH 2:14). Love is proportionate to a hierarchy of merit: "according to the greatness of his portion / so will I love him" (1QH 14:19 [Vermes 1987: 201]). Correction must be administered in humility and out of a mutual bond of *ʾhbt ḥsd* "loving kindness" (1QS 2:24; 5:4, 25; 8:2; 10:26; 13:18).

Yet even within this context of strict separation from the outside world, there is a concern for loving engagement between individuals: "They shall love each man his brother as himself; they shall succour the poor, the needy, and the stranger" (CD 6: 20–21 [Vermes 1987: 88]). The sectary's love for God is the fundament of membership in the community. "I have loved thee freely and with all my heart" (1QH 14: 26; cf. 15: 10), a hymn verse intones; the sentiment is striking amidst the strongly deterministic language of Qumran theology. Expressions of love for God are in fact confined to the hymns; the hymnist petitions to be granted the place "which [Thou hast] chosen for them that love Thee" (1QH 16:13 [Vermes 1987: 204]), in keeping with the allotted destinies of the righteous and the wicked.

C. Love in the Greco-Roman World

Love in the vocabulary of Greek philosophy is expressed by means of words from the *erōs* family and the *phileō* family. A primary question addressed in Plato's dialogues is the nature and end of *epithymia* "desire, longing" and the role of love in the fulfillment of desire. The answer spoken by Socrates in the *Symposium* (211b; 212b; 297d) is that mortality inspires the longing for immortality. Immortality is accessible to mortals by generation; the desire whose fulfillment results in reproduction of the self—in offspring and in education—communicates to us a higher mystery of an absolute, simple, and everlasting beauty towards which the individual soul aspires. Love (*erōs*) is both the aid and medium of the soul's ascent to immortality. (For an elegant analysis of sexual love in Plato, see Despland 1985: 157–62; on the *Symposium,* pp. 230–39.) The ultimate object of love in Plato's system is not the individual person but the transcendent Good. Human loves manifest the excellence of the ideal (Vlastos 1981: 107, 111).

In Aristotle, the *erōs* doctrine of Plato is the center of a metaphysics of the cosmos. Aristotle explains motion in the universe as the successive ascent of matter to form. The ultimate Pure Form from which all actual forms derive is itself unmoving, but moves all matter to receive form by means of the desire (*epithymia*) that *erōs* awakes in it. In Aristotle's famous formulation, the unmoved mover of the cosmos *kinei hōs erōmenon* "moves by being loved" (*Metaph.* 1072b3).

Aristotle's doctrine of human love (the *phileō* family) begins from self-love. The natural love of the soul for itself is the basis for the mutual love of souls that is friendship (wherein the other is a sort of second self; *Eth. Nic.* 1155a–72a).

It is not possible to describe adequately the views on love in the world in which Jesus lived and the NT was written. Nevertheless, it is useful to note some distinctives against which we can view the ways in which NT writers looked at love.

Some writers in the 1st century wrote primarily about love as sexual technique. Ovid's *Ars Amatoria* (written in Latin about the time of Jesus' birth) may be in this category, although he is concerned with more than merely technique. Ovid surely promotes the idea that the erotic is enjoyable and that sexual encounters are more pleasurable if they are illicit. Above all one gets the impression from Ovid that concerns of morality or responsibility can only tarnish sexual encounters. True love must not be encumbered by ethical questions. An element of parody is detectable in Ovid; nevertheless the main instructions (addressed to men) concern how to find, win, and keep a female lover.

There were also groups who advocated celibacy; how strictly, for how long, and for what reason is not always clear. We are baffled by the Qumranites on this score, for it seems difficult to imagine a Jewish sect dedicated to celibacy, even though Josephus (*JW* 2.8.2–13) and Philo (*Hypo* 11.14.18), portray the Essenes as misogynists. The question is not irrelevant, because one might think Jesus would have

married, but those who have tried to convince us that he was married have not been successful. At the same time no shade of misogynism is found in Jesus; on the contrary, the evidence seems to suggest that Jesus was the only first century teacher who invited women to follow him and incorporated them fully into his group of disciples. Judaism certainly had a high view of marriage and spoke much of love, although public discussion of conjugal love was not in high favor, if the begrudging reception of the Song of SolomonSolomon among Second Temple Jewish leaders offers a reliable guide. The sources abundantly demonstrate that God's love formed the basis of Jewish existence, that God's command to love God and the neighbor was the highest demand affirmed in the recital of the *shema*ʿ.

Among Stoics and Cynics, Epictetus (ca. 60–120 C.E.) prefers to consider such matters of secondary importance; the ideal Cynic or wise man had more important things to do; he ought not to destroy the divine "messenger" that he is by the "distraction" of marriage or feeding babies in the middle of the night. There is no surer way to lose one's "kingship" (*Disc* 3.22.67–76). In respect to love, since the Stoics were down on loss of control and ecstasy, they had little use for sex, and the loss of autonomy inherent in marriage was abhorrent to them and "under the present circumstances not a matter of prime importance." The married state of Crates and Socrates is dismissed as having been consummated because of passion (*erōs*); besides, the former's wife was herself another Crates (*Disc.* 3.22.76).

At the same time, Epictetus speaks of something very close to enemy love when he says that the true Cynic must "while he is being flogged … love (*phileō*) the men who flog him, as though he were the father or brother of them all" (*Disc* 3.22.54–55). Like Plato, he conceives of *erōs* as a disruption of peace of mind (3.13.10), and as robbing one of freedom (4.1.15–23).

Epictetus deals at length with the question "How then shall I become affectionate (*philostorgos*)?" (*Disc* 3.24.58). The answer is, "as a man of noble spirit, as one who is fortunate; for it is against all reason to be abject (*tapeinos*), or broken in spirit, or to depend on something other than yourself or even to blame either God or man." He would have people become affectionate but maintain the rules. Natural affection profits nothing if you remain a slave or miserable. Why not love someone "as subject to death" (mortal) as one who may leave you, as Socrates loved his own children, in a free spirit as one whose first duty is to love the gods (*Disc* 3.24.58–60). Socrates succeeded in everything that becomes a good man because he remembered that his first obligation was to love the gods. It is becoming for us to be happy on any person's account and "to be happy because of all, and above all because of god, who has made us for this end."

A further model of love is the earlier Cynic philosopher Diogenes. "Come, was there anybody that Diogenes did not love, a man who was so gentle (*hemeros*) and kind-hearted (*philanthropos*) that he gladly took upon himself all those troubles and physical hardships for the sake of the common weal?" (*Disc* 3.24.64). The manner of his loving (*phileō*) was such as becomes a servant of Zeus, caring (*kedemos*) for men indeed, but at the same time subject (*hypotasso*) to God. "That is why for him alone the whole world, and no special place, was his fatherland" (*Disc* 3.24.64).

It is a general rule that "every living thing is to nothing so devoted as to its own interest. Whatever, then, appears to it to stand in the way of this interest, be it a brother, or father, or child, or loved one (*eromenos*) or lover (*erastes*), the being hates, accuses, and curses it. For its nature is to love (*phileō*) nothing so much as its own interest; this to it is father and brother and kinsmen and country and God" (*Disc* 2.22.15).

Does Epictetus teach that God loves? The question is addressed when he asks why God has sent him here, and "exhibits me to mankind in poverty, without office, in sickness, sends me away to Gyara, brings me into prison. Not because he hates me—perish the thought? And who hates the best of his servants?" (3.24.113–14). This statement is the closest Epictetus comes to affirming the love of the Deity. At the same time he affirms that humans serve "wholly intent upon God, his commands and ordinances" (3.24.113–14). That God is helpful (*ophelimos*) is about as far as he can go in his definition of God (*Disc.* 2.8.1) and he equates God with the Good. The true nature of God certainly is not flesh, land or fame. It is intelligence (*nous*), knowledge (*episteme*) and right reason (*logos orthos*) (ibid.). Love is conspicuously absent.

His teacher, Gaius Musonius Rufus (ca. 30–101 C.E.) had stressed the "beneficence and kindly" nature of God (*Ep.* 16.30; 17.15; Lutz 1947) and assumed that people could become like God. For Epictetus the chief element of piety is to have correct opinions about the gods: as existing and as administering the universe well (*kalos*) and justly (*dikaios*) and to resolve to obey them and to submit to everything that happens (*Enoch.* 31).

Musonius Rufus, who embodies the highest view of marriage in the 1st century, perhaps of any philosopher, is unique in forcefully suggesting that the highest form of love is that between two equal partners in marriage. To be sure, he suggests that coitus be restricted to procreation. One nevertheless suspects that the logic of his views on male-female roles is such that he and his wife lived higher than his own ideal. The purpose of marriage was not, however, to have children but, having been joined, to grow in common interest and build a unity (*koinonian mallon auxein pephyken hosper oud homonoian;* Lutz 1947: 91). Against the canard that marriage is a hindrance to philosophy Musonius cited Pythagoras, Socrates, and Crates, all of whom married, "and one could not mention better philosophers than these" (Lutz 1947: 92–93).

Human beings, Musonius holds, do not look only to their own interests but rather, like the bees, bend their energies to the common task, "and toil and work together with the neighbor (*plesion*)" (Lutz 1947: 93). "For humans evil consists in injustice and cruelty and indifference to a neighbor's trouble, while virtue (*aretè*) is benevolence (*philanthropia*) and goodness (*chréstotés*) and justice and beneficence and concern for the welfare of one's neighbor." In marriage this common life is nourished most fully; and because marriage contributes to the peace of the city, "he who destroys human marriage destroys the home, the city and the whole human race" (ibid.). But of most importance to Musonius is that "all consider first of all in rank the love (*philian*) of a man and woman." Even the gods, Eros, Hera and Aphrodite watch over it "when they bring together man and woman for the procreation of children" (Lutz 1947: 95).

Musonius brought together *agapaō* as a form of love present in the family between parent and child (Lutz 1947: 40, 104), between man and woman, *philia* (Lutz 1947: 94) and unlawful love between two people as *eran* and *aphrodisian* (86). His favorite word for love is *kedomia,* which combines the concept of care with that of affection and responsibility. While it lacks the warmth of the other words it has the virtue of stressing responsibility within a relationship. It is to Musonius' tribute that in marriage he (like Paul) saw that men and women are equal; "there is a common life, in which nothing private can be said to exist, not even the body" (Lutz 1947: 89; cf. 1 Cor 7:1–2). In the later history of the West Epictetus' view of love and marriage dominated, not that of his teacher, Musonius.

Musonius was an outspoken critic of pederasty, an institution embedded in Greco-Roman society for at least four hundred years, while Lucian and Plutarch in their dialogues seriously debate which is better, pederasty or heterosexual love.

Plutarch (ca. 45–120) also stresses brotherly love. In his treatise on that theme he remarks: "according to my observation brotherly love is as rare in our day as brotherly hatred was among the men of old" (*Moralia: On Brotherly Love,* [1] 478C). He notes the harmonious functioning of the body and concludes that nature has created from one seed and one source brothers "that for being separate they might the more readily co-operate with one another" (478 F). "… through the concord of brothers both family and household are sound and flourish, and friends and intimates, like an harmonious choir, neither do, say nor think anything discordant …" (479).

Most friendships are in reality shadows and imitations and images of that first friendship which nature implanted in children towards parents and in brothers towards brothers. The highest deed or favor one can render to parents is to love one's sibling; "to love one's brother is forthwith a proof of love for both father and mother" (480).

Perhaps the most intriguing evidence with respect to word usage is found in Plutarch's *Dialogue on Love.* Here in a way similar to Demosthenes' *Erotic Essay* (5–7; 4th century B.C.E.) all three words for love appear in the same sentence.

Plutarch traced how love moves as "Divine chaste love to be physician, savior and guide, coming to it through the medium of bodily forms from that "to the realm of truth" heavenly love contrives for us, as in a glass beautiful reflections of beautiful realities. Some because their parents have squelched this "fill themselves instead with the smoke of humbug and passion and slip away to dark and illicit pleasures and fall into a shameful decay" (765C).

Before long lovers (*erōmenoi*) learn to disregard the body of the beloved; "they move inward instead and attach themselves to his character." When they catch a trace of the Divine emanation or beguiling resemblance, they are intoxicated with joy and wonder and pay court to it, basking in the memory of ideal beauty and renewing their radiance in the presence of that genuine object of love (*era*), blessed (*makarion*) as it is, and beloved of all (*philion*) and worthy of all affection (*agapēton* 765D). Is it accidental that agapē comes as a climax of his discussion?

Popular ethical teachers discussed the relation of love to coitus. Plutarch's judgment that "love is a very complex emotion … one must know the right time (*kairos*)" (*Moralia: Table Talk* II 1.633F). Discussion on the matter (see Question 6, "Concerning the Suitable time for coition" *Moralia: Table Talk* III 5–6.653–55) belongs "among one's companions and friends, wine cup in hand." However in his *Advice to Bride and Groom* the topic of love does not figure prominently. At the same time he uses *agapao* to describe the love of a mother for her son and *phileō* for the love of a woman for her in-laws. If angry disagreements come the goddess Aphrodite is "the best physician for such disorders" (*Advice* 143). "The bed as a union of loving (*phileō*) enjoyment" will settle such quarrels.

Where does the NT community fit into this debate? Clearly "marriage is honorable among all and coitus is nondefiling [*amiantos*]" states Hebrews (13:4). One wonders why the point has to be made. It is noteworthy that Paul in all he says about love never joins it with sexual relations, and wherever he discusses sex or marriage, does not mention love. Marriage is a covenant; there are obligations and responsibilities, but erotic passion seems to be of no interest to Paul.

Paul freely advised married couples how to determine whether they should engage in sex in 1 Cor 7:3–5. His advice: Have it when one of you wants it. Either party can obviously take the initiative in making their wishes known. Even abstinence from one another must be done upon agreement (1 Cor 7:3–5). Paul does not, like Musonius, laud marriage as the highest form of love. What would he have said to such a notion?

Probably that marriage is an anodyne to sexual passion (1 Cor 7:2; 1 Thess 4:2–8). If Paul wrote Eph 5:25–33, then he pays marriage the highest compliment by using the analogy between marriage and Christ's love for the church. The center of that discussion is how a man loves his wife. Strangely he does not urge wives to love their husbands (a possible exception, Titus 2:4).

There is a vast field of discourse about love which has nothing to do with sex or marriage. The distinction is not easy to accept in our post-Freudian age, for love by definition has for moderns sexual dimensions and all human relationships have in them a sexual component. The acknowledgment of that fact makes it inevitable that the 20th century reader may detect an erotic dimension in the NT view of love even though the word *erōs* never appears on its pages.

D. NT Terms and Meanings

The English word "love" translates a group of Greek words in the NT, among which two word families, the *agapē* family and the *phileō* family, predominate.

1. The *agapē* Family. The Greek verb *agapaō* "to love" and the related nouns *agapē* "love," *agapēsis* "love," and the adjective *agapētos* "beloved, dear" are very frequent in the NT. The *agapē* family is critical to our perception of the nature and self-understanding of the early Christian communities. Words from the *agapē* family occur 341 times and are found in every book of the NT. Acts has only one occurrence of the adjective *agapētos,* but in Luke's Gospel both noun and verb appear. The *agapē* family is most frequent in some of the shortest books, e.g., 1 John (52x) and Ephesians (22x). It appears in the Pauline writings 96 times (excluding Ephesians and the Pastoral Epistles).

Agapan describes a life-enhancing action that flows from God to humans (Rom 8:37; 2 Cor 9:7) and vice versa (Matt 22:37). The commandment to love regulates human conduct within the church: "love one

another" (John 13:34; 15:12, 17; 1 Thess 4:9; 1 Pet 1:22; 1 John 3:11; 2 John 5); and husbands are commanded to love their wives (Eph 5:25, 28; Col 3:19). But those outside also are to be loved: the neighbor (Rom 13:9), and enemies (Matt 5:44; Luke 6:28, 35). In particular love is directed towards fellow Christians (1 John 2:10; 3:10, 14; 4:20, 21) and within the family (1 Peter 3). It includes theology, for God is defined as love (1 John 4:9, 16), and ethics, for all of the Christian commands can be summed up in the command to love (Rom 13:8–10). The mandate for Christians to "love their enemies" stretches human capacity to its limits but is based on God's love for humans, "while we were his enemies" (Rom 5:10). Paul says that of the three things that last for ever, faith, hope and love, "the greatest of them all is love" (1 Cor 13:13).

2. The *phileō* Family. The Greek verb *phileō* "to love, fall in love" is used in the NT. This word family is also represented by a variety of compounds of more specific meaning: *philagathos* "loving goodness"; *philotheos* "lover of God"; *philostorgia* "natural love"; *philostorgos* "loving"; *philoteknos* "loving a child." Two other Greek words, *eran* and *stergeō,* were used in the 1st century. Of these *eran* does not appear in the NT, although it is debated whether the concept of *erōs* does. *Stergein* appears in the NT only in the compound word *philostorgos* (Rom 12:10).

3. Agape and Eros. The *agapē* family is most favored by the writers of the NT. Anders Nygren (1953: 48) described *agapē* as the "centre of Christianity, the Christian fundamental motif *par excellence.*" He argued that sharp distinctions could be drawn between *agapē* and *erōs* and that Paul had given "the Christian idea of *agapē* its highest and … final expression" (143). By contrast the "Johannine idea of *agapē* … occupies a somewhat uncertain position between unmotivated and motivated love" (152).

In the last four decades Nygren's thesis has been all but discredited, in part because he sets such a sharp dichotomy between the Pauline and Johannine ideas of love. W. Thimme (1953: 108) proposed that in the NT there is a synthesis of *erōs* and *agapē* and that in particular *erōs* based on *agapē* plays a significant role. He saw *erōs* in the adoration of the miracle of the incarnation, in the love commandment itself, which assumes that love can be achieved, in the moral teaching based on union with Christ and in the longing of the earthly pilgrim to arrive in glory. If ecstasy is at the center of the idea of *erōs,* then surely there is no true *agapē* without it; a God who does not care whether people respond is hardly the God portrayed in Hosea or in the NT image of Jesus weeping over Jerusalem.

E. Love in the Synoptic Gospels

One of the striking features of the Synoptic Gospels is that they say nothing explicitly about God's love. Jesus himself never speaks about it, except to point out concretely in parables how gracious and accepting God is, especially of people who fail or who are marginalized in other ways.

The double commandment to love the Lord God with one's whole being and the neighbor as oneself appears in the triple tradition (Matt 22:37–40 = Mark 12:29–31 = Luke 10:26–28). The double command arises from a citation of Deut 6:5 and Lev 19:18, 34, both from LXX. There is, moreover, the commandment to "love your enemies" found in both Luke 6:27, 35 and Matt 5:44. Finally, there is the parable of the good Samaritan in Luke 10:29–37. This Lukan parable immediately follows the double command and has always been seen as in some way describing what love for the neighbor means. It is clearly one of the most difficult parables to interpret.

1. The Double Command to Love. Mark avoids the word "love" almost entirely, using it only to describe Jesus' affection for the rich young ruler (10:21), where neither Luke nor Matthew follows him. Only Lazarus, his sisters and the "beloved disciple" of the Fourth Gospel have a similar designation. When Mark describes the encounter with the lawyer (Mark 12:28–34) he shows little interest in it. Indeed "Mark's ethic is not articulated in terms of obedience to the love command …" (Furnish 1972: 74).

All but three of the eleven uses of the *agapē* family in Matthew derive from LXX. The verb *agapaō* in Matt 19:19 and 22:37, 39 occurs in citations of LXX. The adjective *agapētos* used in Matt 3:17 derives from Isa 42:1 (LXX), which is cited in full at Matt 12:18; the reiteration of 3:17 at Matt 17:5 is thus of the same derivation. The only use of the noun *agapē* (Matt 24:12) is a unique Matthean saying in the apocalyptic discourse; note that the verb *psychō* "grow cold" occurs nowhere else in the NT. The verb *agapaō* in Matt 5:43, 44, 46 (2x) (= Luke 6:27–28, 32–35) and 6:24 (= Luke 16:13) is the only member of

the *agapē* family used in the "Q" tradition of sayings in Matthew. Its application in 6:24 is not theological or religious, but secular: divided loyalties produce conflicts of allegiance. The final statement "You cannot serve God and mammon" (note the shift to second person) relates the secular observation metaphorically to the theological realm.

For Matthew, the double commandment plays a formative role and has constitutive importance. Its importance is already seen in Matt 19:19, where in a recitation of the commandments Matthew alone adds: "and love your neighbor as yourself" as if it were one of the commandments.

Matthew also holds up the model of God's love when he urges the members of the kingdom to love their enemies: "only so can you be children of your heavenly father, who makes his sun to rise on the good and bad alike …" (Matt 5:45). Only in Matthew's gospel does Jesus predict that when false prophets will arise and lawlessness spreads, "the love (*agapē*) of many people will grow cold" (24:11). Although Matthew shows concern for the integrity of his community it is incorrect to see in the directive to admonish the fellow believer (Matt 18:15–22) a "certain tension" between this and teachings concerning love and forgiveness (Furnish 1972: 78, citing Bauer 1917: 39). Matthew sees such patterns of interaction as the true path to forgiveness and would follow Jewish belief that there is joy for those who rebuke in the name of peace (Prov 10:10; cf. 12:20; note the Qumran examples also). Genuine love is shown in Judaism by restoring the erring one, not by allowing that one to proceed as if no one cared (Klassen 1966: 192–200). For Matthew it is clear, however, that one obeys the great commandment as one shows love towards those one meets daily.

Scholars have devoted much research to the question whether Jesus was the first to combine the two commandments (Deut 6:5 and Lev 19:18b), and have come to conflicting conclusions. Burchard concluded that the double command was not created by Jesus and did not come into the Christian tradition through him (1970: 61). He was persuaded that those sections of the *T.12 P.* which presupposed the double commandment were pre-Christian, and thus gave evidence that Deut 6:5 and Lev 19:18, 34 were associated in pre-Christian Jewish ethical teaching. Jürgen Becker, on the other hand, considers it "beyond dispute that the love command came into Christianity through Jesus" (1981: 6). Despite Becker's confident assertion, however, the consensus of recent research is that the association of the two Pentateuchal passages that give rise to the double commandment did not originate with Jesus himself.

It is true that in the Synoptic Gospels Jesus speaks very seldom about the neighbor, and apart from the command to love enemies did not himself issue any command to love, or even use the word "love" with any frequency. Rather, the neighbor is described concretely: tax collector, prostitute, victim of a robbery, debtor, woman threatened with divorce. Likewise the deed of love is concretely viewed and described: table fellowship, emergency aid, release from debt, healing. Interpreters of Jesus are appropriately united in seeing the command to love one's enemy as a normative summary of the attitudes and action of Jesus, even though the words "neighbor" and "love" are not current terms of Jesus. He thinks in concrete terms. Nevertheless, the double commandment and the command to love the enemy are variations on the theme of going beyond set limits, a theme enunciated by Jesus (Becker 1981: 16).

The command to love the enemies is grounded ultimately in the patience and forgiveness of God and his compassion (Sir 18:8–14). Hebrew thought also affirmed that God had created both good and evil but could derive from that affirmation the sort of skepticism voiced by Qohelet: "one fate comes to all, to the righteous and the wicked" (Eccl 9:2). Jesus takes this typical experience and exalts it to the insight at a productive level that God is indiscriminately good. God guarantees to everyone without exception the constant provision of elementary essentials for life prior to their human self-actualization into good or evil. People are to imitate this aspect of God's character. If they do so they become children of God, a salvation predicated of the just (Wis 2:18; Sir 4:10).

The enemy is not the most distant neighbor—rather the enemy defines the basis for the love. The extreme case becomes the model for every social relationship. "Consequently a division into personal, social, vocational or political enmity is rejected, for love imitates God who, everywhere, constantly creates new possibilities for life." Love never asks, "Who is the other?" but only what the present possibilities might allow that one to become. Then it is also clear: "The imperative is no legal

exaggeration, but rather an opening of a perspective, without exception, to meet everyone in a life-promoting or enhancing way, just as God the Creator does" (Becker 1981: 7). Any attempt to limit the scope of love of neighbor to the resolution of daily squabbles, or to interpret the love command as a call to "local cooperation" (Horsley 1987: 255–72), is out of touch with that social situation.

This grounding of the command to love enemies in the benevolence of the creator is integral to the dominant teachings of Jesus. First, in Jesus' proclamation of the Kingdom qualifications or determinations of the love object are meaningless. The goodness of God promised in this message on the human side presupposes a universal inclusion under the judgment of God (as seen in the preaching of John the Baptist [Luke 13:1–5]). If all are universally under judgment, then it is not their innate goodness which calls forth divine or human love. The radical quality of this starting point is clear when it is placed alongside the teaching of the Stoics, who based their doctrine of philanthropy on the belief that all people carry the same divine nobility. This demands reciprocally noble human relations—thus love. Love as Jesus defines it aims first of all at unconditionally overcoming lostness; it does not begin with nobility but with human misery (Becker 1981: 8). Moreover, love is a consequence of the rule of God; it arises out of the experience of salvation. Jesus tended toward a world-wide human horizon. The Samaritan did not ask whether the one he was helping was an Israelite (Luke 10:25–37; Mark 2:27; 7:15; 9:40).

A review of the references to the double command in Judaism indicates that *T. Iss.* 5:2 comes the closest: "Love the Lord and the neighbor," while 7:6 is a questionable reading. *T. Zeb.* 5:10 does not refer to love for God or neighbor. The oldest apparent appearance of the dual command is in *T. Dan.* 5:3, in the pithy formula, "Love God with your entire life and one another with an upright heart" (Becker 1974: 94). The other references often cited either stress the fear of the Lord and promise that those who keep the law will be loved by God (e.g., *T. Jos.* 11:1), or place so much stress on the fear of the Lord that the separate themes of love for God and love for neighbor are not kept discrete but run together. This blending of themes is evident in *T. Benj.* 3:3–4: "Whoever fears God and loves his neighbor cannot be plagued by the spirit of Belial because he is protected by the fear of God. Not even an attack of man or beast can coerce him because he is helped by the love of the Lord which he demonstrated to his neighbor" (*OTP* 1: 825–26). At the same time, since fear and love are not seen as polar opposites (Bamberger 1929: 50; Sander 1935: 52) it would appear that close ties exist between the *T. 12 P.* and the earliest Christian traditions. The direction of influence remains in dispute. Both the Jesus tradition and *T. 12 P.* bring together love for God and neighbor, on the one hand, and fear (where it is mentioned) and love, on the other, in an indissoluble way. The Gospels leave the impression that part of the point of Jesus' coming was to grant God's people "freedom from fear, to worship him …" (Luke 1:74) and that Jesus dropped the motif of fear entirely.

Great difficulties are created by this for scholars who are determined to treat Jesus as a Christian rather than as a Jew. For the argument goes that the coupling of these two commandments is an un-Jewish act, indeed that broadening the concept of neighbor to include the enemy is inimical to Judaism. Little wonder that Nissen (1974: 416) concludes with a question: "If indeed Jesus' double command of love was the sum and measure of God's Will, what does it then mean when it is said: Jesus was a Jew?" John Piper, however, saw the answer clearly: "The perceptive Jew must have viewed Jesus' love command as an attack on the Torah … Jesus' command to love the enemy as well as the friend contained the seed for the dissolution of the Jewish distinctive" (1979: 91–92; 204, n. 83). The problem is one of Piper's own creation: to see Christianity as unique he must posit a Jesus who attacked the Torah. How can this be, since there is no evidence of such an attack in the NT sources themselves? The problem does not exist when the sources are carefully read.

Apparently the early church found the summary of covenant obligations in the double love commandment left by Jesus convenient and useful. Jesus and his followers in this respect built solidly on Jewish foundations and in continuity with Jewish teaching. To Simon the Just is attributed the statement that the fundamentals of life are summed up in Torah, worship and brotherly love (Herford 1971: 37–38); the saying brings together divine and human relations. There is abundant evidence that Judaism had over many years sought to isolate central affirmations and distill formulas which can be described as the

summary of Torah (Nissen 1974: 389–415). That they did not seek to distill the law into "principles" is obvious; equally obvious is the fact that Jesus refused to treat love as a principle. There is no evidence that he sought to do away with Torah when he summarized it in the double love command. Jesus appears more interested in people and relationships than in principles.

Luke shares something of the polemical stance of Matthew. Polemic is evident in particular in the story of the woman who showed affection for Jesus at Simon's house (Luke 7:36–50). The contrast between her and the Pharisee is sharply drawn; three times Jesus points out that the host failed to perform his duties. In each case the woman went beyond what one would expect from a host. But the sharpest rebuke of all comes when Jesus says that he knows full well she is a sinner: "Her sins, which are many, are forgiven, for she loved much; where little is forgiven little love is shown" (Luke 7:47). The incident is unique in the early Christian records in its depiction of a woman's love for Jesus publicly displayed and highly commended. See KISS. Furthermore the measure of love (less/more) is seen again only in the narrative of the Fourth Gospel, where the Risen Lord presses Peter on whether he loves Him more "than these" (John 20:15–20).

Both Luke and Matthew have the statement "you will love the one and hate the other" (Matt 6:24; Luke 16:13), expressing in Hebrew idiom the sharp dichotomy between these two. Only Luke has retained the sharper word "hate" (14:26) where Matthew had chosen "to love (*philein*) more" (10:37) in the parallel saying. The same sharp antithesis between hate and love is seen also in 1 John. Within the context of family relations it is a convention seen in polygamous marriages (Deut 21:15), among the Levites (Deut 33:9), and, closer to Luke's time, as a theme in Epictetus, who uses similar language to describe how the wise man relates to his family (*Disc.* 3.3.5–10). Ernest Renan accused Jesus of insensitivity toward his immediate family. Overall the evidence does not support that accusation, but it does indicate that Jesus was able to devote himself to the larger family.

2. Love of Enemies. Although the command to love enemies is found only twice in the Gospels, seldom has its authenticity been questioned (Lührmann 1972; cf. Sauer 1985). Furthermore it is recognized that the idea is found in the epistles without the precise commandment. It was frequently cited, especially by the Apologists, as evidence that the early Christians were not haters of humankind (Osborn 1981). From the end of the 2d century to modern times, however, the idea has been either relegated to the personal realm or confined to a select group of Christians in religious communities; since the Reformation, Protestants advocating love of enemies have been dismissed as "enthusiasts."

This century has experienced a wave of interest in the teaching. Through the work of Michael Waldmann (1902) and Hans Haas (1927) the doctrine of disinterested love was demonstrated to be far from unique to Jesus. What had begun in this century as an attempt to show that enemy love was even found in the natural realm (Randlinger 1906; Bach 1914) soon became a deadly earnest pursuit during World War I, when scholars began seriously to study the idea of enemy love within Judaism (Fiebig 1918), and its uniquely Christian aspect was explored (Kattenbusch 1916). Moreover, the history of the idea and the extent to which it was practiced were analyzed (Bauer 1917).

It was not until the outbreak of World War II and the threat which international enmity now posed to human civilization, however, that scholars were drawn more deeply into the discussion and devoted much research to the theme. Nevertheless, the subject has so far brought forth only two book-length English contributions by biblical scholars. One (Klassen 1984) proposes that the source of the commandment can be traced to Judaism, from which Jesus took it, and that it has fundamental relevance for guidance on how to live today. The other (Piper 1979) derives the idea directly from Jesus and sees it as a radical departure from Judaism. Like Nissen's, Piper's understanding of Judaism makes it impossible for him to see enemy love arising within that religious framework. He is, however, able to follow his teacher Leonhard Goppelt and find in Jewish texts support for the practice of resisting wrong for the sake of one's neighbor. As long as this is done without hatred (from which faith will free) this will accord with the Sermon on the Mount. How this position is derived from a particular text itself is not clear; but the shades of Luther's two-kingdom view, now largely discredited, are obvious.

The argument for the genuineness of Matt 5:43–46 (= Luke 6:27–35), based by Bultmann and others on its alleged discontinuity with Judaism, must now be re-opened. Indeed, the argument has been challenged recently by the theory that the gospel materials on enemy love are antedated by the materials in Paul (Sauer 1985). It seems to make the most historical sense to give full credit to Jesus himself as having first turned the idea of enemy love into a bold command for his community. The early Christian communities developed their traditions in response to what they considered Jesus to have said, but they did so selectively.

Luke and Matthew appear to be drawing from a common source which included at least the words: *agapate tous echthrous hymōn* "love your enemies" (Matt 5:44b = Luke 6:27b). Luke repeats the command (6:35a) after giving illustrations:

do good to those who hate you,
bless those who curse you
pray for those who abuse you (Luke 6:27c–28).

These three further imperatives spell out what it means to love enemies but they also spell out more fully the category "enemy":

LOVE	ENEMY
do good	those who hate you
bless	those who curse you
pray for	those who treat you spitefully

The first of these instructions is rooted in Greek thought, especially the maxim enunciated in many places that the goal of education to maturity (= *paideia*) is to learn to treat your friend properly and to take revenge on those who do evil to you (Klassen 1984). That same idea appears in Hebrew thought. Joab, for example, is astonished that King David inverts that pattern: "You love those who hate you and hate those who love you" (2 Sam 19:6).

Luke's second and third instructions are found throughout Jewish ethics in admonishments to return a soft answer for wrath, to return a blessing for a curse, and to pray for the abuser. Only in Judaism, which believed in the power of a blessing and in a sovereign God who answers prayer, could such an attitude emerge. But the power of prayer is here used not to curse but to invoke good. With this statement Jesus declared decisively that the curse no longer has a place. The Kingdom in which God rules has no room for curses.

Luke then offers four concrete examples of what the disciple is to do:

if hit on the cheek	offer the other one also
if your coat is taken	offer the shirt as well
to everyone who asks	give
from one robbing you	do not demand it back (6:29–30)

In sharp disjunction to this, Luke (6:31 = Matt 7:12) then introduces the so-called Golden Rule, a guideline which is based on reciprocity. "Treating others as you would like them to treat you" is to be understood here as putting oneself in the place of the other. This idea emerges first in Greek literature in Isocrates, but most likely originated in the Greek theater (Klassen 1984: 14). It is found in Jewish literature also. Both cultural traditions invite the actor to consider the effect of the action as if roles of agent and patient could be reversed. It is one of the wisest and most useful rules for human relations, even though it could be construed to contradict the non-reciprocal teaching on loving the enemy (Dihle 1962).

Luke follows the Golden Rule with three queries (6:32–34 = Matt 5:46–47), each one ending with the same question: "What credit is that to you?" What is in Matthew the expected reward of intensified righteousness is in Luke the "credit." The adversative *plēn* in verse 35 introduces the higher standard to which Jesus invites his hearers: "But you must love your enemies and do good and lend without expecting any return. Then you will have a rich reward: you will be children of the Most High, because that one is kind to the ungrateful and wicked. Be compassionate as your Father is compassionate" (Luke 6:35).

What is most important for Luke is that the disciple can become a child of God. The attribute of God which is most important is compassion towards the ungrateful and the wicked. Lacking is any utilitarian motive. This ethical guidance is fully and exclusively rooted in the nature and behavior of God. The only reward which is in sight is a relationship with God.

Can the enemy mentioned here be more closely defined? Some have argued that the illustrations point to personal life and that therefore the doctrine should not be applied to international or civic enmity. Others are persuaded that the term *echthros* is the standard NT term for "enemy" in its broadest sense and that the occurrence of the plural may indeed stress an inclusive usage. Of course between the time Jesus spoke those words and the gospel editors transmitted them the definition of enemy changed; few definitions change as quickly. Nevertheless an increasing number of scholars take this in its broadest sense even as they seek to find the sociological background of the original "Q"source as well as the Matthean and Lukan sources.

For Matthew the "love your enemies" teaching has a bit of an edge against the Jewish tradition, for it is found in the series of antitheses he presents in chap. 5. The first problem which presents itself here is the introduction: "You have heard … Love your neighbor, hate your enemy" (5:43). Much time has been spent trying to understand why Matthew added, "and hate your enemy." The answer seems to be quite simple. The formula "be good to your friends and hate your enemies" was very widespread in the ancient world and occurs in many layers of documentation. Rather than look in vain through Jewish sources, including Qumran, for these exact words, we should simply treat them as a part of general folk wisdom which Jesus' listeners had heard and which was well known to Matthew's audience as well.

The motivation for Matthew is the same as for Luke: becoming a child of God. "Only so can you be children of your heavenly Father" (Matt 5:45a). Instead of stressing the gentleness and compassion of God, Matthew stresses God's impartiality. The sun rises on good and bad alike, the rain is sent on the just and the unjust alike. An insight appearing in Jewish wisdom literature which there drives to cynicism—(so who cares?)—here is used to strike forth into a new ethical sphere. Both Luke and Matthew ask: "If you love only those who love you, what credit is that?" (Matt 5:46; Luke 6:32).

Matthew adds only one further point, the question of greeting (a topic not introduced by Luke). Johanan ben Zakkai, who escaped from Jerusalem when it was under siege to found the Academy at Javneh, had the reputation of greeting gentiles and others before they would greet him. In this way there could never be any doubt about his prayerful desire that the one he met should have God's *shalom.* Along the same lines Matthew invites his readers to exceed the friendliness of the heathen and to greet all whom they meet. It is a striking illustration, too often overlooked, bringing the entire discussion about enemy love into the concreteness of daily life.

Matthew's concluding statement, "Be you therefore mature even as your Father in heaven is mature (*teleios*)" (Matt 5:48), refers to the way in which enemies are treated. Don't play favorites. (The translation of Gk *teleios* by Eng "perfect" creates difficulties not found in the original text and suggests an impossible standard—hardly the intention of Jesus for his followers. Rather he provided them with permission and the empowering freedom to live as a child of God who loves even enemies.)

Both Matthew and Luke appeal to God's mercy, although they use different examples to demonstrate that mercy. In both God's example is to be followed; this becomes in Paul an *imitatio Christi* (Gerhardsson 1987).

The Gospel of Luke has one parable, the parable of the good Samaritan, which seeks to address the question posed by the lawyer: Who is my neighbor? (Luke 10:29). What is its point? A recent author (Monselewski 1967) listed a series of distinguished interpreters who see the parable as an illustration of how someone viewed traditionally as an enemy can love his enemy, the Jew, and help him in his distress. Thus to be a neighbor you love your enemy. The Samaritans were favored by Luke, to be sure, for he almost always portrayed them in a favorable light. From Josephus we learn that the Samaritans occasionally terrorized the Jews (*Ant* 20.6.1–3) and little love was lost between these two groups. Yet in the parable, it is the Samaritan who proves neighbor to his "enemy" and shows that categories, like

enemies and friends, can change. The "enemy" may be the one assaulted, and the neighbor the one who assists the assaulted one.

Did Jesus himself love his enemies? Matthew 24 seems to suggest that he did not, and other events of his life are often cited in this way. If, however, he saw the injustices around him as capable of being righted only through the death of those who truly cared for their people, then his teaching and self-sacrifice do harmonize.

3. Love of Self. The question whether the text of the double commandment legitimates self-love in its directive to "love the neighbor *as yourself*" has been much debated. In our narcissistic culture inundated with popular psychology, many have taken this as a command for self-love. The text does not *command* self-love; possibly it recognizes its existence; at the very most it legitimates it.

The measuring rod is not "self-love." Certainly "as yourself" does not include the command to love oneself nor state that one should love oneself. The comparison was not intended to recognize the legitimacy of self-love but to point to the power of self-assertion (Michel 1947). In Nygren's scheme "*Agape* … excludes all self-love … [It] recognizes no kind of self-love as legitimate" (1953: 217).

The comparison appears quite frequently in Jewish sources beyond the Bible itself, e.g., *T. Sim.* 4:6: "In all his days [Joseph] did not reproach us for this deed, but he loved us as his own life …" It even appears in the context of enemy love: *T. Benj.* 4:3: "For a good man does not have a blind eye, but he is merciful to all, even though they may be sinners. And even if persons plot against such a one for evil ends, by doing good this man conquers evil, being watched over by God. He loves those who wrong him as he loves his own life" (*OTP* 1: 826; cf. *Jub.* 36:4; CD 6:20; *Arm* B 2:71; Sir 7:21; 31:14; Nissen 1974: 287–88). Could it be that what is meant in these texts is the same thing Epictetus means in his repeated references to "self-interest"?

F. Love in the Johannine Community

Love in the Johannine corpus merits a separate treatment. Not only does John use the term most often, which alone calls for some special attention, but his peculiar perspective also deserves analysis. The verb *agapan* appears 35 times in John and 28 times in 1 John. The noun *agapē* appears 7 times in the Gospel and 18 times in the epistle. In addition the adjective *agapētos* "beloved" appears 6 times in the epistle. The verb *philein* appears 13 times in the Fourth Gospel as well.

Fundamental to the message of the Fourth Gospel is that God loved (*ēgapēsen*) the world to the extent that he gave his Son to die for it (John 3:16). It also stands to reason that God loves the Son (3:35), but it is surprising to read that the reason God loves his Son is "I lay down my life" (10:19). This laying down of the Son's life is necessary so that the world "may know that I love the Father" (14:31). In the last prayer attributed to Jesus in John's gospel, he prays that the followers who come after him will all be one (*hen*), and that once they are "perfectly one" "the world will learn that you sent me, that you love them as you did me" (17:23). This interdigitation of the mission of the church and oneness is a very striking phenomenon; it is as if the world is kept from discovering the love of God by the brokenness of the church. The love which God has for the Son is not meant to stop with him. That love existed before the world began (17:24) and Jesus made it known to the disciples "so that the love God had for him might be in them, and I may be in them" (17:26). At times this love is viewed almost as an abstract entity, for Jesus says to his opponents, "the love of God is not in you" (5:42).

Jesus too is described as loving his own (13:1) even to the point of death. In preparing for that death, Jesus renders one last act of loving service to them when he washes their feet; in this act he provides them with an example of what they are to do for each other: "love one another so much that they are ready to lay down their life for their friend" (Sabbe 1982: 307). In particular Jesus loves Martha and Mary and Lazarus (11:5) and a special unnamed disciple who is described as the disciple whom Jesus loved (*agapaō*) (13:23; 21:7, 20) or the "beloved disciple" (19:26).

Of special interest is the discussion between Peter and Jesus after the Resurrection (John 21:15–23). Three times Jesus asks, "Simon Peter, do you love me?" It is not clear whether Jesus is asking whether Peter loves him more than the other disciples do, or whether he loves Jesus more than he loves his fishing nets, his crews, and family. Only in the first instance is the comparative question asked, and Peter never

answers it directly. Both terms *philein* and *agapan* appear; the first two times Jesus asks Peter whether he loves him in the *agapan* sense; Peter answers with *philein.* There are no hidden meanings to be sought in the choice of words here (Brown *John XII–XXI* AB, 1102–3). Rather we must conclude that the terms were fluid for John and the context gave them their depth and their meaning.

What is most revealing in this pericope is that the love of the founding apostle is being tested by the Lord himself. This at once tells us something about the level of intimacy with which Jesus dealt with his disciples. It also indicates that the compassion of Jesus was extended even to the disciple who had most shabbily denied him. The purpose of the three questions was to reestablish the covenant in a threefold way, and above all to commission Peter to feed the lambs. Peter's love for Jesus is the only issue, which says a great deal about the type of Kingdom community Jesus wanted to build. The word "love" is probably equivalent to "be loyal to" here. The incident illustrates that Jesus loved Peter enough to renew his commission in spite of Peter's denial.

1. The Old and New Commandments. Greatest attention in this writing is given however to the love command. Introduced in 13:34 as a "new commandment," the standard is set: "As I have loved (*ēgapēsa*) you, so you are to love (*agapate*) one another." If that kind of love is present among them, then they will be recognized as his disciples. In a later discourse the test of this love is obeying Jesus' commands (14:15, 21, 23) and the result of such obedience is that the Father and Jesus will love such a one and come and disclose themselves to such a person (14:21), indeed make their dwelling with that one (14:23–24).

Furthermore much stress is laid on dwelling in Christ and in his love (15:10a). Doing so means to heed the Father's commands and to dwell in his love. The new commandment is repeated in John 15:12 and again at 15:17 the model of Christ's own love is cited. "There is no greater love (*agapē*) than this, that one should lay down one's life for one's friends (*philoi*)" (John 15:13).

In the Johannine epistles love is the dominant concept. And yet anyone expecting to find here a fuller development of the idea of loving the neighbor (Gk *plēsion*) or enemy (Gk *echthros*) finds nothing, for neither concept appears here. Instead we have the repeated exhortation to "love one another" (1 John 3:11, 23; 4:7, 11, 12; 2 John 5), or the criterion of "loving the brother" (1 John 2:10; 3:10, 14; 4:20, 21; 5:2 [= children of God]). There is not one reference to loving the neighbor.

Some observe a fundamental change here between the teaching of Jesus and the later church, including Paul. They find it most marked in the Johannine epistles. The intention of Jesus' view of love was "to disengage the idea of neighbor from every relation of 'proximity,' whether of family, friendship or nationality … The neighbor in Christian language is, man" (Spicq 1963: 1.183). Since there is consensus on the belief that the early Church underwent a change on this issue, it is necessary to deal with it.

It is especially important to attempt to reconstruct the Johannine communities and try to ascertain the type of struggles going on in their midst (Rese 1985). Before rushing to judgment it may also be useful to remind ourselves that there is always a considerable gap between a leading pioneer and what comes after. There is especially a tendency to exalt what the leader said while bringing it in closer harmony with what the community themselves believe. To be sure Jesus taught love for the neighbor, and that teaching is retained in at least three epistles (Gal 5:14; Rom 13:9; Jas 2:8); but what Jesus taught is available to us primarily through the beliefs of established communities. Bultmann, while admitting that "John 13:34–36 refers not to love for humans in general, not to love for neighbor or enemy, but rather love within the circle of the believers" (*Johannes* MeyerK, 405–6) has not been able to persuade his colleagues that "it is obvious that" this love commandment does not render invalid but rather includes love of neighbor and enemy. What Bultmann considered obvious has been rejected by a consensus.

The three sections of 1 John dealing with the love command present an expanding circle of issues. The first instance pursues the question of "newness" and "oldness" of the command to love: it is old (2:7), a commandment which they had from the beginning. At the same time it is a "new" command, "which is true in him *and in you*" (2:8a). Evidence for this truth is that "the darkness is passing away and the true light already shining" (2:8b). The epistle considers three possible responses to this:

1. One says he is in the light and hates his brother—he is in the darkness still (2:9).

2. Another loves his brother and remains in the light, and there is no cause for stumbling in him [or it = the light] (2:10).
3. A third hates his brother; he is in darkness, walks in darkness and has no idea where he is going for the darkness has blinded his eyes (2:11).

The author's major concern is with those who hate the brother. While there may have been problems among the disciples when Jesus lived with them, a problem as serious as this is not reported. "God is light" the author has written at the beginning of the epistle (1:5) and when we walk in that light "we have *koinonia* with each other …" (1:7). The one who lives with integrity and keeps his word, truly in that one the "love of God has been fully realized" (2:5).

The difficulties within the Johannine fellowship have been indicated. To describe those who hate their fellow Christians as blinded and lacking in orientation and direction seems relatively mild. But the author of 1 John sees the problem as very urgent. This is not the time to talk about how to love an outside enemy when the love within the fellowship is degenerating into hatred.

The second section (1 John 3:10–18, 23) is on the one hand more condemning, but on the other also much more tender. The tenderness comes to expression in the form of address, "brothers" in 3:13 and "children" in 3:18 and "beloved" in 3:21. The tenderness is also manifest in the repeated use of the personal pronoun plural; thus the author identifies with his audience (1 John 3:11, 14b, 18, 23) when he refers to the love command. It is also more condemning because the lines are more sharply drawn: Cain killed his brother, thereby signifying that he was of the evil one. He hated Abel because Abel's works were righteous. The one who does not love (1 John 3:14) remains in death. So hatred and manslaughter are closely joined together. The writer of the epistle presumably had not only the story of Cain, but Jesus' own words of warning (Matt 5:22) against anyone who is angry with his brother, consigning to the fires of Gehenna anyone who called his brother a fool. So with all the discussion of hatred it is still clear that the author wants to stress Jesus, the positive model of love, and not the model of hatred, Cain.

"In this way we know love, that that one [Christ] laid down his life for us, and we ought also to lay down our lives for our brothers" (1 John 3:16). In a pronounced shift, the author turns from the prospect of martyrdom to the beggar on the street—"if anyone has the substance of this world and sees his brother having need and closes his heart of compassion, how can it be said that the love of God dwells in him?" (3:17). In this single illustration the act of love is stripped of all pomp and glory and placed within the reach of everyone. The deed of love may lead to laying down one's life for our fellow Christian. But in the meantime it can begin with concrete help to the needy on the street.

After one of the most penetrating treatments of how a guilty conscience can be stilled before God he moves to a short creedal statement: "This is his commandment, that we might believe in the name of his son Jesus Christ and love one another just as he gave us commandment" (1 John 3:23).

This section begins with an affirmation that love and doing justice reveal whether we have our origin in God or in the devil. Since our *angelia,* reason for existence, "which we have heard from the beginning" is "that we should love one another" one can only say that one who does not love his brother is not of God. This is not an eternal decree. One can change one's base of origin by doing justice and loving one's fellow Christian. To be transferred from death into life can be a state of certainty, and can be tested simply by the question, Do you love the brothers? (3:14). Jesus demonstrated that love by laying down his life on behalf of his community, and Christians should be willing to do the same for their brothers and sisters. This is not a theoretical test, nor one that has to wait for martyrdom; it can be undertaken the next time a person walks down the street and sees someone in need. Even if one closes the springs of compassion the author does not condemn, but merely asks, How can it be said that the love of God continues to remain in such a person? (1 John 3:17).

The author then appeals for love in deed and not just in verbal expression; therein alone lies true certainty and the great gift of boldness of expression, freedom of speech (Gk *parrēsia*) before God, and loss of the condemning heart. Ultimately our case, the author affirms, rests in the God who is greater than our hearts, knows all things, and is above all a God of love. The great commandment for this author is, Believe in the name of the son of God, Jesus Christ, and love one another.

The stress on "remaining," original with this author (Heise 1967: 171), is seen throughout this epistle (23x) and also in the Fourth Gospel (43x). "This is how we can make sure that he dwells within us: we know it from the Spirit he has given us" (1 John 3:24b). The ultimate test that they are remaining comes from beyond them but resides within. While "Greek philosophy contemplated that which is eternal [remains] the OT confesses the One who remains" (Heise 1967: 28).

2. God as Love. The third section which deals with love is 1 John 4:7–21. It begins with the call "Beloved (*agapētoi*), let us love one another" (1 John 4:7). The reason is that *agapē* has its origin in God and therefore anyone who continues to love signifies birth from God and knowledge of God. On the other hand, the person who remains in a state of not loving (so the pres. part) does not know God, because God's very nature is *agapē.* This famous and pithy definition of God has to do with ethics and not with essence. It is not to be turned into its converse, as if wherever there is love, there is also God. Again (as the plural pronouns indicate) the author identifies deeply with his readers and as he enters into the depths of the incarnation the readers (or listeners) are reminded that God's love was manifested among us (*en hémin*) by this means: "he sent his only begotten son into the world in order that we might live through him" (4:9).

To anyone who accuses this author of stressing human love too much he answers directly: "In this is love, not that we loved God, but that he himself loved us and sent his son to undo and remove our sins" (1 John 4:10).

The obligation to love springs directly out of that Divine initiative. We ought to love one another, because God thus loved us (paraphrasing 1 John 4:11). The importance of this love for each other is stressed as a manifestation of God (1 John 2:5; 4:17–18).

The introduction of the formula, "By this we know" (4:13) signals the uppermost matter in the author's mind: How can one be certain? He returns to the presence of the Spirit; God's gift to the believers, first brought into the discussion in 3:24. The community is eyewitness and continues to bear witness to the Son as Savior of the world. Whatever may have been the content of the creed for this community, the essence of their faith is: "We know and have believed (both verbs in the perfect tense) the love which God has for (*en,* stressing internalized and personalized love) us" (4:16). More basic than that one cannot get!

With that the author comes to the second affirmation that God is love (1 John 4:16b). Here it serves to stress the abiding nature of God and the unchanging nature of God's way of dealing with the community. God remains in love. Love is made complete by its abiding presence in the community. Love banishes fear; for this author love and fear cannot exist side by side.

Two other appeals are made to the union between loving God and loving the brother. If someone says, "I love God" but hates his brother, "that person is a liar" (4:20a). Typical of this writer is a refusal to call people names. But similar to Paul certain conditions are outlined and if one places oneself under those conditions then one also must accept the title that goes with it. The judgment is reinforced by a strange bit of logic: "If he does not love the brother whom he has seen, how can he love God whom he has not seen?" (4:20b). It would seem that the power to love the brother who is visible should come from the invisible God. Indeed the author has previously established that God's love was prior to our loving him. Now, however, he is dealing with the conclusions to be drawn from evidence provided and removing from love that delightful trip into the general on which evasion thrives. He brings it down concretely into the reality of daily living. The liar must be exposed.

Finally, he makes an appeal to being born of God. Children act like their parents. If God the parent is loving, why should not the children be the same, unless, of course if they want to deny their parentage (5:1). "When we love God and obey his commands, we love his children too" (5:2).

3. The Scope of Love for the Other. This survey has shown that John's agenda is to restore love as the central reality of his community. Some modern writers accuse him of lacking the very love he espouses in his dealings with those who hate their brothers (e.g., Brown 1979: 131–35). But is this really true? He does not condemn them irrevocably to damnation or to separation from God. Those who have left are not told they cannot return. At the same time the community is to be one of love and not of hatred. To hate the brother is a serious offense, which if left unchecked will destroy the community as it may well destroy

those who through hatred have lost their way and are wandering around in the dark. Hatred can lead to murder. Above all the community of Christ must begin within its own midst to nurture the tender plant of love. Paul likewise in his appeal to the Galatians urges that while working for the good of all, the "members of the household of faith" (Gal 6:10) are to receive priority. Jesus, when a woman brought an expensive gift of love and some criticized this as a waste which could have been used to help the poor, allowed the gift to stand; and Mark adds, "wherever in all the world the Gospel is proclaimed, what she has done will be told as her memorial" (Mark 14:3–9). In this way Mark and his community affirmed their belief that love begins with those closest to you. Love for enemies and for fellow Christians are not in conflict with each other—they nurture and nourish each other. Both are empowered by the divine initiative of love.

It has been stated that "where the command of brotherly love is understood as it is in 1 John, the command to love the neighbor is at least restricted, if not repealed" (Rese 1985: 54). Surely this does not stand. The NT author's writing addresses the topic which is the most pressing at the moment. It is incorrect to argue that because he does not mention it therefore he does not believe that husbands should love their wives! Nor is it clear that he has "a shrunken point of view in which there is room only for a conventicle of brothers who love each other and keep the world at a distance" (Rese, ibid.). He affirms that the whole world is redeemable (2:2) and indeed that God who is love sent his son *into the world* that we might live (4:9). There is clearly a sense of mission in this epistle, although at the same time it is written to restore the community to a correct sense of priorities. It is doubtful that we dishonor him by taking seriously his view of the world. Certainly his message that love within the brotherhood is essential is in harmony with Peter's admonition to his people, "love the brotherhood" (1 Pet 2:17).

G. Love in the Writings of Paul

From every aspect, however, it is Paul who makes the profoundest contribution to the Christian understanding of love. Paul sees himself profoundly loved by God/Christ, and his life depends upon that love; indeed, the life which he now lives is not his, but the life which Christ himself lives in Paul: "I live by faith in the Son of God, who loved me and gave himself for me" (Gal 2:20). Personal faith in divine personal love sustained Paul and had called him into service. This is so basic that God becomes for Paul "the God of Love" (2 Cor 13:11), probably his way of saying that God is love.

Striking as the personal reference in Galatians is, Paul seems most comfortable speaking about the love of God/Christ in the first person plural. He addresses the Christians in Thessalonica as the "brothers beloved of God" (1 Thessalonians 14; 2 Thess 2:13) and twenty-one times addressed fellow Christians, including one Persis, a woman, as *agapētoi* "beloved" (Rom 16:12). Paul repeatedly affirms that the life in Christ is what it is "through him who loved (*agapēsantos*) us" (Rom 8:37). He lives, furthermore, in the unshakable conviction that "nothing in all creation can separate us from the love of God in Christ Jesus our Lord" (Rom 8:39). Not only his personal history, but also the history of God's people is determined by God's love: "Jacob I loved, Esau I hated" (Rom 9:13); but even Jacob's people became a "no people," an "unloved nation" until God again called them, "My beloved" (Rom 9:25).

In the midst of the imponderables of history there is hope, and such "hope is no mockery, because God's love has flooded our inmost heart through the Holy Spirit he has given" (Rom 5:5). The proof of that love is that while we were still sinners, indeed God's enemies (Rom 5:10), Christ died for us (Rom 5:8). Consistent with Pauline theology the pre-Christian state of any individual is described as "under the dreadful judgment of God. But God, rich in mercy, for the great love he bore us, brought us to life …" (Eph 2:4).

Paul also speaks of the love of Christ as so commanding we have no choice (Gk *sunexō,* 2 Cor 5:14). "God's love 'sustains' us because it redeems and reconciles, and also because it draws believers into the realm of grace and places them under the command of their sovereign Lord" (Furnish 1972: 93). The whole of the Christian mission is a response to Christ's sacrifice. In a lofty prayer offered on behalf of the Ephesians the author's culminating request is that they "may be strong to grasp, with all God's people, what is the breadth and length and height and depth of the love (*agapē*) of Christ, and to know it, though it is beyond knowledge" (Eph 3:17–19). This is described as "the fulness of being."

Finally, Paul implores the Romans by the love of the Spirit (Rom 15:30) to be his allies in the fight. Possibly the author of Colossians was trying to relate the Spirit to love as well, but probably is speaking of the way in which love is demonstrated in the community of the spirit (Col 1:8). The central place which Paul attributes to love is seen most clearly in those passages where he attempts to define the essence of union with Christ. The letter to the Galatians forced that issue. In reviewing the alternatives Paul concludes: It is either freedom under Christ or trying to live under the law. Take it from me, he says: as for those who choose the latter alternative and receive circumcision, Christ will profit them nothing (Gal 5:2). He repeats, "anyone who undergoes circumcision obligates himself to keep the whole law" (5:3). The third statement moves to the one who seeks justification through the law; those people are "cut off from Christ and have fallen from the domain of God's grace" (5:4).

In contrast to those options Paul emphatically affirms, "But we await our hope of justification by the Spirit through faith. In Christ neither circumcision nor uncircumcision amounts to anything: all that matters is faith activated by love (*agapē*)" (5:6). This fundamental affirmation is supported throughout Pauline writings.

Love stands at the head of the list of the fruits of the Spirit Paul enumerates in Gal 5:22, and appears in a number of other series or lists (Eph 4:2; 4:32–5:2; Col 3:12; 2 Cor 6:6; 2 Pet 1:7).

1. Love in 1 Corinthians 13. This part of one of Paul's letters holds a special place as the highest tribute paid to love (*agapē*) in any Christian literature. The quality of its literary style and the problems in relating it to its context, but above all its lack of theology or Christology, have led interpreters to question whether it derives from Paul. The question of its relationship to the preceding and following portions of the letter is also vexing. Some have considered it an interpolation which seeks to bring Stoic values into Christianity; if written by Paul, it must have been written at a time when he was deeply influenced by Stoicism (Lehmann and Fridrichsen 1922: 56, 67). Others have pursued the Jewish background, either specifically in rabbinic thought (Gerhardsson 1978) or in the wider Jewish wisdom literature (von Rad 1953). Increasingly, interest is shown in seeing this treatment of love as part of the ongoing debate between Paul and the Corinthians, and above all in taking seriously the theological connections between 1 Corinthians 13 [where neither the word "God" nor "Christ" appear] and the rest of Pauline theology (Wischmeyer 1981; 1983; also Pedersen 1980).

When Paul promises to show a "better way" (Gk *kath'hyperbolēn hodon*) he is availing himself of a term much used in Judaism, but also commonly used by Epictetus (Weiss 1910). His better way is to reject the passion for charismatic gifts and concentrate instead on *agapē,* which he does not see as a charismatic gift.

The chapter (1 Corinthians 13) divides into three clearly distinguishable parts. Love is compared to tongues, to prophecy and to an act of charity.

1 Cor 13:1–3: (a) Speaking in tongues of men or angels without love is a clashing cymbal or noisy brass, perhaps reminiscent of the clashing cymbals of Cybele's procession conducted by priests who were, along with poets dubbed "drums and cymbals of self-advertisement" (DeWitt 1954: 146). (b) The gift of prophesy; knowing all mysteries and all knowledge; "Paul takes a specifically Christian factor—Spirit-inspired utterance in community—and transposes it into the universal style of wisdom teaching" (Conzelmann *1 Corinthians* Hermeneia, 220). If one has in addition to knowledge, faith sufficient to move a mountain, without love, "I am nothing." (c) If I give all I own, even deliver my body to be burned, without love, that profits nothing. This series moves from unusual speech to self-sacrifice. It highlights what can be done with the mind and what can be done by faith. By putting them all together in this way he covers all that is generally seen as religion: liturgy, articulate prophecy, and acts of charity. The case of self-immolation had numerous antecedents and was a standard illustration of the time (Weiss 1910: 315). Paul stresses that in the Christian community, one thing is essential: love.

1 Cor 13:4–7: The nature of love is here described in a single sentence comprising vv 4–7. The sentence is divided into four parts. First, verse 4a has two positive assertions: Love is patient, it is gentle. Then there follow seven negative affirmations about love (4b–5): love is not envious, boastful, conceited, rude, selfish, touchy, keeps no score of wrongs. The third part has a contrasting antithesis: Love does not gloat

over other peoples' sins but rather delights in the truth (v 7). The fourth part consists of equal principle statements about the positive nature of love: love sustains everything, embraces everything, hopes everything and holds its own against everything.

The organization of the sentence is not logical but rather rhetorical, with an eye to the listener's response. There is general agreement that this paragraph has its closest connection with Jewish wisdom teaching (von Rad 1953); Wischmeyer (1981: 92–116) has isolated the connections with painstaking care. She concludes that although Conzelmann's observation is correct that the chapter contains no Christology, nevertheless "the Christian dimension is buried in the definition of the three concepts: faith, hope and love." Wischmeyer sees the Christology behind the way in which the attributes of love are put together here. In part, there is a literal copying of the traditional materials from Judaism, only what is in Judaism attributed to God and to the faithful sufferer is here attributed to *agapē.* Thus "*agapē* in Pauline theology is a theological and christological entity which at the same time constitutes the basic category of the life of faith. Consequently the forms of behavior belonging to *agapē* in Judaism, patience, hope and faith and being friendly towards one's neighbor can be taken over into the Pauline *agapē* concept" (Wischmeyer 1981: 115).

The difference from Jewish exemplars is also important. In Judaism it is the Torah which causes Job, Abraham and the martyrs of the Maccabean times to exhibit noble characteristics. Thus the new value placed upon *agapē* in the NT points to an implicit Christology without which the Pauline description of *agapē* seems inconceivable. The last verse of this section (1 Cor 13:13) points to the eschatological dimension of Paul's view of love, and with its stress on that which endures opens up the remaining part of the literary piece.

1 Cor 13:8–12: In a declaratory manner Paul describes the superiority of love in that it "never fails." It endures beyond the other three categories, tongues, prophesy, and knowledge, that he has already mentioned at the beginning of this chapter.

2. Love of Enemies in Paul. Because the specific command "love your enemies" does not appear in Pauline letters, it is sometimes argued that Paul does not know this command. A closer study of his writings makes it evident that the substance of the teaching is there (Huber 1982; Sauer 1985). The center of Pauline teaching on this matter is found in his grounding all of the Christian commands in the affirmation that "God loved us while we were his enemies" (Rom 5:10). In addition, Paul prescribes behavior towards those who persecute and those who curse along the same lines as Jesus does (Rom 12:9–21; 1 Cor 4:12–13). All vengeance is to be avoided and all retaliation in kind rejected. From the Jewish wisdom tradition he cites Prov 25:21 and urges that Christians feed a hungry enemy and give him something to drink. The victory he foresees of good over evil through this course of action is expressed in the image of coals of fire; the image employed in the Proverb derived ultimately from Egypt (Klassen 1963a) and has no direct connection with a desire to increase vengeance upon the enemies (contra Stendahl 1962). Paul uses Jewish and perhaps some Hellenistic wisdom concepts of battle and victory here and his concept of vengeance is related more to divine sovereignty than to personal satisfaction.

Paul did not himself consistently live up to this teaching if we take as historical Luke's account of his encounter with the High Priest Ananias (Acts 23:1–5). The pressures to omit this incident, given the Stoic age in which Luke wrote and the frequency with which his contemporaries discussed what a wise man does when hit in the face inclines one to treat the incident as genuine.

H. Love in the Catholic Epistles

1. Hebrews and James. The Epistle to the Hebrews has a total of five occurrences of words from the *agapē* family. Heb 6:9 provides the only use of the vocative *agapētoi* "beloved." The part. appears in a catena of citations from LXX (1:9, citing Ps 45:7) describing the Son who "loved righteousness and hated lawlessness" and the verb in 12:6 (citing Prov 3:11–12 [LXX]) where God's discipline is based on God's love. The motivation of all the service and love (*agapē*) shown by the Christians addressed was "for [God's] sake (lit. name)" (6:10). One of the exhortations is to stir up one another to love (*agapē*) and good works" (10:24). Notable here is the combination of faith (10:22), hope (10:23) and love (10:24) although from a rhetorical point of view the stress is on the three verbs, "let us draw near" (10:22), "let us hold

fast" (10:23) and "let us attend to arousing each other to love" (10:24), a threefold "mandate for the church in the world" (Glombitza 1967: 147). In Hebrews there is also an admonition for the continuance of *philadelphia* or brotherly affection (13:1).

James has three uses of the word "beloved" (1:16, 19; 2:5). At a more theological level the basic relationship to God is described as "those who love God" (1:12; 2:5) and the commandment to love the neighbor is described as "the royal [*basilikon*] law laid down in Scripture" (2:8). The meaning is that the law of love has its origin and derives its authority directly from God the King. Dibelius demonstrated the rich Jewish background for this expression and why it need not be attributed to Jesus. Its inspiration is more likely Lev 19:18 (LXX) and the warning not to despise the poor and favor the rich (Lev 19:15).

2. 1 Peter. The first chapter of 1 Peter includes love prominently among its themes (1:8). The love (*agapaō*) referred to is the love disciples have for Jesus Christ. But in the same context the writer urges his readers to love one another wholeheartedly with all their strength (1:22; note also 2:17; 3:8; 4:8). Given the frequency of this exhortation in the NT (14x) in the Pauline, Petrine and Johannine traditions, it has to be singled out as characteristic of the earliest Christian tradition. The occurrence of *agapaō* in 1 Pet 3:10 is traditional, deriving from Psalm 34 (LXX). In the gnomic saying "love covers a multitude of sins" (4:8), the verb *kalyptō* has generated considerable discussion. The context indicates that the writer is urging his audience to keep their love strong. A similarly worded statement appears in Jas 5:10. Both may allude to Prov 10:12. Finally, for this author the stress is on the way in which love comes into being through the power of regeneration, and his concern is that that love become an enduring state as indicated by his use of the term *ektenōs* (1:22; 4:8). This concern is also supported by his appeal at the end for Christians to greet each other with the "kiss of love" (5:14).

3. 2 Peter and Jude. Apart from the presence of both the word *philadelphia* and *agapē* at the close of the list of virtues in the first chapter (2 Pet 1:7) the author has little interest in love as an enabling and dynamic force to overcome the evils he sees in the church. He has the distinction of being the only NT writer to utter an unequivocal curse (2 Pet 2:14). The persons in mind may be the same as "those who live in the love of God" (v 1) and who are greeted: "Mercy to you and peace and love be multiplied" (v 2). The most unusual reference is found however in v 12 where reference is made to "men who are a blot on their love feasts, … drinking shamelessly and shepherding only themselves." This is the only reference to an *agapē* meal in the NT. Neither 2 Peter nor Jude contribute anything significant to our understanding of love in the NT.

I. Love in the Revelation of John

The writer of Revelation has been described as "living from a high pitch of hatred" (Bousset *Offenbarung* MeyerK, 271), as missing the "glow of enemy-love" and displaying instead a "virtuosity of hatred" (Preisker 1949: 205), and a "glowing hatred against all enemies" (Bauer 1917: 40). W. D. Davies saw in the book an "abortive hatred" towards the powers (*IDB* 2: 176) but the strongest indictments against the book have come from D. H. Lawrence (1931) and C. G. Jung, both of whom failed to see its rich symbolism as a carrier of truth. The latter saw the book as the hateful explosion of an old man at the end of his life who had spoken about love so much that he had repressed all feelings of hatred (Jung 1954: 125).

An examination of the text of Revelation reveals that the verb *agapaō* appears only four times, the noun *agapē* only twice and the verb *phileō* only three times. Of these usages, 1:6 joins with other NT witnesses in placing Christ's redemptive love (*agapē*) as the cornerstone of the Christian community. Love (*phileō*) is related to discipline leading to repentance (3:19, alluding to Prov 3:12; cf. Heb 12:5, which follows the LXX in using *agapaō*). The church at Ephesus is rebuked for having lost her first love (*agapē*) (2:4), the warm affirmation of affection for each other, and the translation of emotion into responsible moral action. Thyatira is praised for her "love (*agapē*) and faith, service and fortitude" (2:19).

At the core of our understanding of the Revelation is the symbol of the Lamb. Introduced in chap. 5 at a critical stage of the drama, it stands without modifier and from that point on is the main actor. Clearly the description of this Lamb epitomizes love as self-giving: "he was slain and by his blood persons of every tribe and language, people and nation" were purchased for God and made into a royal house (5:9). There

is no direct love command in the book; nevertheless since the church is tested by its love and above all since the call to steadfastness revolves around remaining faithful in following the Lamb and at no place are readers urged to use violence or commanded to hate their persecutors, we may see the book as an example of leaving the execution of wrath in the hands of God and of the Lamb. There is, according to recent work on the book (Caird *Revelation* BHNTC), no need to see the book as a deviation from the NT ethic of love (which in any case is not incompatible with a deep commitment to the sovereignty of God). Indeed G. B. Caird states that the author had "learned from Christ that the omnipotence of God is not the power of unlimited coercion but the power of invincible love" (*Revelation* BHNTC, 19). Especially in chap. 22 Caird finds the image of Paradise restored to the nations "still bearing the wounds of those battles by which their hostility to the Lamb has been beaten down, smashed by the iron bar of his inexorable love" (Caird, 280). The message of the book would seem to be that those who follow the power of love rather than the love of power will conquer. But only those who follow the Lamb in serving others unto death will share in that victory. It may well be that in the Apocalypse of John the symbol of sacrifice is taken over by a small beleaguered community and is transformed into a victory symbol.

J. Conclusions

Our survey has shown that as a whole the early Christian writings share the appreciation for love found in the Hebrew scriptures, especially in the wisdom tradition and later Jewish literature. We know of no Greek or Roman community in which love played such an important role, and it may be that Luke's reticence to use the word in Acts stems from his Hellenistic roots. For the early Christians, although there is little mention of love in the Gospels, the coming of the Kingdom in the person of Jesus was a sure sign of God's love for all people, indeed for the world. At the same time Paul's own strong sense of call was grounded in the love of God, and the church's constitution rested on that love. In turn a fruit of the spirit was love (Gal 6:22) and for Paul it was the greatest gift of all. Love was therefore freely commanded to Christians, first towards each other, then to all people, including the enemy. The NT documents show considerable tension between insider and outsider, no doubt stemming from an awareness that the boundaries of a community have to be established and maintained. The emergence of formulas like "the God of Love" (2 Cor 13:11) and the "love of Jesus Christ" (Rom 8:35) in early communities shows that they were able to develop both a theology and a Christology of love. This theology, built in the first instance on the Jewish experience, was given a strong impetus first by Jesus, who spoke little about love but practiced it in an exemplary fashion, and by Paul, who (like the Johannine community and the Petrine group) placed love into a central place. To understand the early Christians, one must give serious attention to the liberating and empowering view of love that they brought to the world.

LOWER CRITICISM. See TEXTUAL CRITICISM.

LOZON (PERSON) [Gk *Lozōn* (Λοζων)]. See DARKON (PERSON).

LUBIM. See LEHABIM; LIBYA (PLACE).

LUCIUS (PERSON) [Gk *Loukios* (Λουκιος)]. **1.** Lucius of Cyrene, a Jewish Christian prophet and teacher in the church at Antioch in Syria (Acts 13:1). He is listed in this text from Acts along with Barnabas, Simeon who was called Niger, Manaen, and Saul. Lucius is distinguished by his place of origin, Cyrene, which is the capital city of the Roman province of Cyrene in Northern Africa, a city famous for its Jewish inhabitants (see CYRENE). Thus, he probably was a Hellenistic Jew. Because of his Cyrenian origin, Lucius may well have been included among those from Cyrene who, along with those from Cyprus, traveled to Antioch after the persecution of Stephen to help found the church there (cf. Acts 11:20).

2. Lucius, a "kinsman" of Paul, who along with Jason and Sosipater, sent greetings from Corinth to the church in Rome (Rom 16:21). These three are identified by Paul as "my kinsmen," to be understood as Paul's fellow countrymen, that is, Jewish Christians. It is possible that Lucius 2 is identical with Lucius 1. If so, then at some point Lucius of Cyrene traveled from Antioch to Corinth.

The name Lucius is a Latin Praenomen common throughout the Roman world. It is one of the Latin equivalents for the shortened Greek name *Loukas* (cf. *Loukanos*), "Luke," as is apparent from two inscriptions referring to a family who put up memorials in honor of the god Men Ascaenus at Antioch in Pisidia. The son's name is given as *Loukas* in one and as *Loukios* in the other (Cadbury 1920–33: 491). Some authors from patristic times to the present have identified Lucius of Cyrene with Luke the evangelist and companion of Paul (see Cadbury 1920–33: 494). For example, Ephraem of Syria adds "and Luke the Cyrenean" after "Mark" in Acts 12:25 (Armenian *Comm. on Acts* 12:25–13:3), thus suggesting such an identification (Fitzmyer *Luke I–IX* AB, 47). Also, the Western text (D) for Acts introduces the first "we" passage at Acts 11:28, implying that the author (Luke) was present in Antioch. This too has led to an identification of Luke with the Lucius present at Antioch in Acts 13:1.

The Lucius of Rom 16:21 has likewise been identified from the early Christian period to the present with Luke the evangelist. Origen was aware of some who made such an identification (*Comm. in Rom.* 10.39). If so, Luke would then be a kinsman of Paul, and thus a Jewish Christian. Though this is possible, the problem, as Fitzmyer (43) remarks, "is to explain why Paul would refer to Luke there as *Loukios,* when he elsewhere uses *Loukos* of him" (Philemon 24; Col 4:14; cf. 2 Tim 4:11).

While it is true that Lucius and Lukas can be used interchangeably, an identification of Lucius (of Cyrene) with Luke the evangelist and companion of Paul is unlikely because: (1) Lucius was a very common name; (2) the author of Acts, who does not identify himself elsewhere in the narrative, would be unlikely to present himself with the robust description of "teacher and prophet" in Acts 13:1; (3) Lucius of Cyrene was probably a Jewish Christian, and Luke the evangelist was probably a gentile Christian; and (4) a tradition from the end of the 2d century (Ancient Greek Prologue) is that Luke was a Syrian, native to Antioch.

JOHN GILLMAN

LUD (PERSON) [Heb *lûd* (לוּד)]. LUDIM. The Table of Nations (Gen 10:13) and the parallel genealogy in 1 Chr 1:11 identifies Ludim as one of the sons of Mizraim (Egypt), son of Ham, son of Noah. Further along in the same genealogy is a reference to Lud, a son of Shem and a grandson of Noah (Gen 10:22; 1 Chr 1:17). There appear, therefore, to be two peoples in the Israelite purview showing similar names. One of these is Semitic, the other not.

Several biblical texts associate Lud with Egypt. An oracle concerning Egypt in Jeremiah 46 affiliates Ludite warriors with those of Cush (Ethiopia) and Put (Libya; Jer 46:9). Egypt is warned that at the Day of the Lord, she and her allies, including the Arabs in addition to the three peoples just mentioned, will be destroyed (Ezek 30:5). These could all be allies, or possibly mercenary troops supporting Egypt. The latter is the case in an oracle to Tyre (Ezek 27:10), where these soldiers were drawn from Persia, Put and Lud. All of these references seem to point toward, or are amenable to, an interpretation placing the Ludim in N Africa. Neo-Babylonian texts place the *Ludu* in alliance with Egypt as well (see Parpola 1970: 227). The LXX and Syriac read Ezek 30:5 not as Ludim but Lubim. Some read this as a reference to Libya, strengthening an African connection for these people. The textual evidence for this alternate reading here or elsewhere is not compelling.

Another identification is made with the Lydians, inhabitants of west-central Asia Minor (Josephus, *Ant* 1.144). The origins of the Lydians are obscure (*CAH*^{3} 2: 438–9), so any possible Semitic origin is uncertain. So is the relationship between these Lydians and the previously mentioned Ludim. Perhaps these groups shared a common ancestry. The Sea Peoples who tried to settle on the Egyptian coast in the second half of the 2d millennium do seem to have roots in the Aegean region (see CAH^3 2: 374, 361). The

reference to Ludim in Isa 66:19 places them among several witnesses to God's glory. These include groups associated with both Africa (Put, "Libya") and the Aegean (Javan, "Greece").

On the basis of these different points of evidence, a definite identification cannot be proposed. Groups from two different geographical areas sharing common ancestry, while not provable, would correspond to the available evidence.

LUHITH (PLACE) [Heb *lûḥît* (לוּחִית)]. A town in SW Moab, mentioned in the oracles of Isaiah (15:5) and Jeremiah (48:5). In both passages, Luhith (Heb *lûḥît* "terrace") is named as a prominent point on the slopes of Transjordan's escarpment, on or near the route that connected the plain of the Dead Sea with the tableland. On the "ascent of Luhith" the ancient Moabites sought to escape calamity in the Ghor (drought?), or they fled from the plateau in the face of war, depending on how the prophetic texts are understood. In either case, emphasis is placed upon laments that transcend topographical barriers. Modern Katrabba is probably the site of ancient Luhith.

GERALD L. MATTINGLY

LUKE (PERSON) [Gk *Loukas* (Λουκας)]. A physician and "fellow worker" with the apostle Paul (Philemon 24; cf. Col 4:14; 2 Tim 4:11). Luke apparently accompanied Paul on his journey to Rome, and is the reputed author of the gospel of Luke and the Acts of the Apostles. See LUKE-ACTS, BOOK OF. This entry consists of two articles assessing Luke's accomplishments as an historian and as a theologian.

LUKE AS HISTORIAN

The author of the two-part Lukan opus at no point comments on the literary character of his work, not even in the prologue. Only to the efforts of those who had earlier reported "of the things which have been accomplished among us" (Luke 1:1)—not to his own work—does he apply the technical terminology often used by contemporaries to describe historical or biographical writing (*diegēsis:* Luke 1:1; cf. Dion. Hal. *Ant. Rom.* I.7.4; Joseph, *JW* 7, 42; and Plut. *Lyc.* 1.7). With less sharply defined language Luke describes his own purpose as "to write down in proper sequence" (*kathexēs grapsai*; Luke 1:3). If indeed the author's purpose communicated at the beginning of Luke 1:3—to take up his pen in imitation of the precursors mentioned in Luke 1:1—was intended to refer not only to the fact of writing itself but also to the literary genre of the work, then the prologue would carry at least an indirect reference to the literary character of the twofold project: Luke would then also have undertaken to write a narrativation (*diegesis*).

Luke was more precise about his activity in preparation for the writing of his work than he was about its literary form. Before he wrote he had investigated everything carefully from the beginning (Luke 1:3). This is the same claim made centuries earlier by another author, the historian Thucydides: not writing down the events according to his whim but rather investigating the details with as much precision as possible (1.22.2). Such assurances became customary in the writings of later historians. Similarity in content and vocabulary between Luke's prologue and Thucydides' chapter on method clearly shows that Luke sought to be a historian. He need not necessarily have read Thucydides directly; rather he could have drawn on historiographical tradition or perhaps on rhetoric textbooks.

We find Luke's claim to be a historian recorded elsewhere in Luke-Acts, namely in the use of the first person plural or the so-called "we passages" in Acts 16:10–17; 20:5–8, 13–15; 21:1–18; 27:1 to 28:16. The reader can and should conclude from these passages that the reporter of these events was himself involved in them. Yet the "we" in these passages is intended to indicate merely a walk-on role. It implies and is intended to imply only that those involved (above all Luke himself) frequently traveled by ship and in the process endured all of the things that went with maritime travel in those days, e.g., storm and shipwreck. For it is only in conjunction with maritime travel that the "we" references occur. What initially appears to be an idiosyncrasy of the author has the deeper purpose of demonstrating his role as a historian. He wants to be taken for well-traveled, especially by ship, in order to prove that he has the experience necessary for him to be considered a pragmatic Hellenistic historian. Travels were an important part of the

historian's expected range of experience (Polyb. 12 25h.1f; Diod. Sic., 1.4.1; cf. Lucian, *Hist. conscr.* 29). Thus Odysseus became an obligatory example for these historians—Polybius noted that writing history tests the mettle of a man (12.28.1; cf. 27.10). This led to the expectation that the true historian, like Odysseus, also have maritime experience. Lucian expresses this most clearly in his treatise on the writing of history. Because Lucian merely wants to give historians a few tips, rather than write history himself, unlike them he has no need to put up with the " 'spray and surf' (Hom. *Od.,* 12.219) and anxieties that afflict the historian" (*Hist. conscr.* 4). The assumption that the historian must undertake sea voyages is found already in Polybius (12.27.8–11), has been worked into the Homer-legend (*Vita Herodotea,* 6), and is even incorporated into comedy (Plaut., *Men.,* 234–238; 247f.). Since Lucian, who merely reflects widely transmitted assumptions, knew this rule, the presence of the "we passages" in Luke is not particularly surprising.

If Luke set out to be a Hellenistic historian then one could assume that his intentions would be apparent in the literary shaping of his work. To be sure, the Gospel of Luke reflects only a few characteristics of a historical account, but Acts makes up for this with a large number. The reasons for this discrepancy are obvious. As he wrote the first work (*prōtos logos*) (Acts 1:1), Luke had in front of him extensive source materials, Mark as well as the Sayings Source. The first of these already had a firmly established and apparently indispensable literary form, namely that of a gospel. In contrast Luke had a freer hand as he wrote Acts, since there were neither formal examples to follow nor large collections of source materials that might have limited his ability to give literary shape to his work. The source materials for Acts consisted largely of short discrete traditions which dominate what are normally referred to as the "itinerary" passages. Such brief units were much more easily melded into a narrative with its own character.

Luke reveals himself as a historian most visibly in the numerous speeches he placed in the mouths of the actors in the book of Acts. A total of about 24 speeches together makes up about one-third of the book (such speeches constitute approximately one-fourth of Thucydides's history and of Sallust's *coniuratio Catilinae*).

As with the speeches in the writings of Greek and Roman historians, those of Luke are not repetitions of addresses that were actually given; like those of secular historians, the speeches in Acts often do not fit the situation in which they are said to have been spoken or, if they do fit their context, they nonetheless extend far beyond that context. Thus, for example, the setting and speech in 17:16 and 17:22 contradict each other diametrically: 17:16 reports that Paul was extremely annoyed by the profusion of pagan statues in Athens; in his Areopagus speech (17:22–31), in contrast, the same profusion of idols led him to praise the piety of the Athenians in his captatio benevolentiae (17:22). Paul's self-defense (20:20–21, 27, 33–34) threads its way through his speech to the elders at Ephesus (20:18–35) yet no accusations are made by his listeners nor are such found elsewhere in Acts. In Acts 22:1–21 Paul is supposed to be defending himself (22:1) against allegations that he had defiled the temple (21:28), yet he devotes the speech itself solely to his Jewish upbringing and piety and to his conversion and commission to preach to the gentiles.

Problems of this sort can be resolved when the speeches are interpreted not in their immediate contexts but within the framework of the entire book, i.e., in light of the author's intention. Only then does it become apparent that Luke did not seek to report a particular historical event when he wrote up these speeches, rather, through the speeches he wanted to give his readers "insight into the suprahistorical meaning of the historical moment at hand," or insight into the "event's trajectory of meaning" (Dibelius 1951: 120–21). Thus he selected Athens, despite the fact that the actual results of evangelization there were rather meager (17:32ff.), to be the stage for Paul's speech. As the intellectual center of the world and a prime location for Hellenistic piety (thus the captatio's reference to the piety of the Athenians in 17:22), Athens had special meaning for Paul—it was the proper place for a programmatic confrontation between the Christian Paul and Greek thought. Luke's concern is with the "typicality of this confrontation, which in a larger sense is historical and which had perhaps more relevance in Luke's own day than it had at the time of Paul" (Dibelius 1951: 133), not unlike Thucydides' desire to illustrate an "ideal competition between two principles" in the speeches of the Melian dialogue (Thuc. 5.85–113; Jaeger 1936: 501). The

address in Acts 20:18–35, which belongs to the genre of farewell speeches, must also be understood as the Acts-author's statement about the situation at hand. It is likewise directed solely at the readers of the book. Luke lets them know here that an epoch of the Church's history, the era of the apostles' disciples (second generation), was coming to an end with Paul's farewell to his mission field and that the Lukan "present" was beginning. Unlike the earlier period, which had been troubled by heresy (cf. 20:29–30), the present period possessed the complete and undiminished tradition that Paul had transmitted (20:27) and need not be made anxious by secret heretical teachings (20:30). The surprising irrelevance to its context of Paul's self-defense (22:1–21) also ceases to be unsettling if one does not see it in connection with the charge that Paul had profaned the temple, but instead applies Luke's historiographical intention as an interpretive key. It then becomes apparent that the author of Acts views the moment in which Paul reaches the end of his free activity as a moment of special historical significance, a moment that requires that the missionary to the gentiles look back and reflect on how he was led into a mission to the gentiles that was not bound by the Law. Ostensibly he does this in front of the crowd; actually he is addressing the readers' forum.

When Luke inserted speeches at the most important transitions in his narrative in order to illuminate the meaning of the particular moment and the trajectory of the events, he was basically doing nothing other than what Thucydides had done. For Thucydides "the ultimate aim of the speeches was to help the historian to interpret the events: they shed light on the inner interrelationships that otherwise … would be visible only indirectly in the structure and tone of the portrayal" (Gundert 1940: 98, cf. Luschnat 1942: 113ff. with reference to Thuc. 1.68–71, 73–78; 2.87, 89, and elsewhere). Luke was no Thucydidean in the style of Polybius. Yet the influence of the great Athenian is clearly perceptible in the speeches of the book of Acts, even if it most probably was transmitted over many stages of historiographical tradition rather than directly taken up by Luke.

In the case of one group of speeches, which have an obvious common pattern of organization, are all addressed to a Jewish audience, and are much better integrated into their context. Dibelius (1951: 142) sought to deny any connection with Greco-Roman historiographical tradition, suggesting instead that they reflect the pattern of Christian sermons of the time of Luke as can be seen in the so-called "mission speeches" (2:14–39; 3:12–26; 4:9–12; 5:29–32; 10:34–43; 13:16–41). Wilckens has shown (1961: 72ff.), however, that such a sermon pattern did not exist, and that these speeches must be interpreted as a peculiarly Lukan portrayal of what the author of the Acts wished to be understood as the essence of the apostolic proclamation. Thus they are examples not of preaching contemporary with Luke but of historical preaching characteristic of a particular epoch. Like the other speeches of Acts these invariably occur at decisive turning points in the Church's history. This is done, however, not by illuminating through the speeches the time-transcending meaning of the turning points, rather it is done in such a way that "in each decisive point of transition in mission history the verbally recounted sermon is offered as the dynamic factor that produces the events and directs their course" (Wilckens 1961: 96). A typical example is the sermon by Peter in 3:12–26, which produces the confrontation between the Jesus' gospel and Judaism that is so decisive for the future (cf. 4:1–3). Another example comes in Paul's speech in 13:16–41. Its conclusion takes the form of a final exhortation to repentance directed at the Jews. Out of Jewish unwillingness to respond to this call to repentance (13:44–45) comes Paul's shift from a Jewish to a gentile mission (13:46–47) that dominates the events described in Acts.

In this too Luke was dependent on Greco-Roman historiography. Speeches intended in a literary sense to set in motion decisive historical processes and thereby to make history are found in the great deliberation scenes of Livy's history. According to Livy the war between Rome and Antiochus III was sparked primarily by a speech delivered by Hannibal in the king's council, since "this speech not only impressed the king, but also reconciled him to Hannibal. Thus the result of this council-session was the decision to go to war" (35.19.7, cf. 5.49–55; 21.19.8ff.; 33.13.13). That this assumption about the history-making power of speeches was widely held among historians in the Greco-Roman world is most evident in the paradigmatic words of an otherwise not particularly original writer (E. Schwarz in PW, 5: 934), Dionysius of Halicarnassus. He tells us in his *Antiquitates Romanae* (7.66.3) that he was astonished at

how many historians waste words on wars and the conditions that go with them yet, when recounting the political developments and crises, fail to transmit the speeches that brought forth such extraordinary and astonishing events. To recount words that shed light on the events that came to pass was the historiographical expectation Luke sought to fulfill in composing the "mission-speeches." Not for its own sake did he seek to meet this expectation, but in order to prove legitimate the historical process through which Jewish Christianity became the gentile Christian church of his day. He succeeded in this by showing how the proclamation of the Gospel by the apostles and by Paul, the ones chosen by the Lord himself to be witnesses "in Jerusalem and in all of Judaea and Samaria and even to the ends of the earth" (1:8; 13:47; 22:21), was, at each decisive turning point, the dynamic force responsible for the developments.

The narrative portions of Acts reveal their author as a Hellenistic historian almost to a greater degree than do the speeches (occasionally the narrative portions of Luke do the same, e.g., 4:16–30, cf. Busse, 1978: 55–67).

Luke offers no continuously advancing course of action. Instead he portrays the events as a sequence of individual episodes that normally lack any or have only minimal connection to the context, indeed, his episodes do not require the context in order to be understood. Examples of abrupt openings for new narrative episodes are found in Acts 10:1ff. and Acts 18:12, where the story begins in each case with the introduction of someone significant for the episode that follows. In other instances information that has already been given is retold in a new context (cf. Acts 10:5–6 with 9:43). Almost never does the action of one episode affect another event. For example, although the events of Pentecost in 2:1ff. fulfill a promise given at the Ascension (1:8) the Ascension is never mentioned in telling the Pentecost story. Even at their conclusions episodes are seldom linked factually with the context (cf. 14:18 and 14:19; 16:40 and 17:1; 19:40 and 20:1). The episodes of Acts were written above all as dramatic scenes, as living, vivid illustrations, concise and purposefully put together. Luke heightens the drama through climactic turning points (14:8–18; 16:16–40; 19:23–40) and dramatic effects (1:9; 10:44; 16:27–28; 18:12–17), both of which take the form of marvels (1:9; 10:44) or unusual acts of nature (16:26).

Luke employs the "dramatic episode" style (E. Haenchen *Acts* MeyerK) particularly effectively whenever he arranges specific assertions and their consequences into scenes. Stripped of their drab abstraction, such assertions are thus able to work upon the reader. For instance, nowhere does Luke say in the abstract that the state and its legal system are not suited to decide religious issues, or that such controversies are not adjudicable. Instead he demonstrates this thesis by way of concrete cases in scenes found in 18:12–17, 25:13–22, and 25:23–26, 32. Luke tells the reader the things he considers to be important doing so not in dry reports but in the action of vivid individual scenes, out of which the reader can draw all that is essential with his or her own eye.

Luke uses the style of a particular type of Hellenistic historiography here, the style of the tragedy/pathos-centered historiography. Its aim was "sub oculos subiecto" (Gellius 10.3.7 regarding Cicero's style), that is, the gripping shaping of graphic, true-to-life images that should lock in the reader's attention like a scene in the theater (Lucian, *Hist. conscr.* 51). Adherents of this school of historiography included Duris of Samos (cf. Diod. *Sic.* 19.108–9; 20.33–34), Phylarch (cf. Plut. *Cleom.* 19–20, 29, 38), Cleitarch, the historian of Alexander (cf. Diod. *Sic.* 17.26–27, 98–99), and Curtius Rufus (cf. 4.1.38–4.21), as well as the author of 2 Maccabees (cf. 3:1–40). All of them exhibit, more or less, those stylistic peculiarities that are characteristic of the Lukan episodes: frequent irrelevance to the context, a striving for vividness and a sensitivity to dramatic effects and climactic turning points. The individual stories of Livy are especially characteristic examples of this tragedy-pathos approach to history writing—they are "visually conceived, and their strength is found in their powerful imagery, in their vividness" (Burck 1964: 200–201; cf. Livy 2.40; 31.17; 45.12).

The inspiration and motivation for the tragedy-pathos approach was a portrayal of historical events that achieved complete reproduction of lived truth through imitation of reality, i.e., through *mimesis,* or *enargeia* (see the paradigmatic statement of Duris, *FGrH* 76 F 1). This did not mean that one aimed at historical facticity, indeed one viewed *mimesis* often as a suitable means to make history vivid even when

historical facts were distorted through a recounting that aimed at a greater sense of "real life," or a portrayal that replaced facts with a "fictional or potential reality" (Strasburger 1975: 80; cf. Avenarius 1956: 130–40). Polybius' criticism of Phylarch is significant in this context: Phylarch makes use of the concerns of tragedy when he tried to "appeal to the emotions of the reader and to make the reader a fellow-sufferer in the events portrayed," but he neglects the concerns of the historian, namely, "to remember without distortion what had been truly done and said" (2.56.7–10). Tragedy-oriented historiography was concerned solely to lead the reader to enjoyment whether to mere entertainment (Cicero, *Fam.* 5.12.4), or also to *katharsis,* to "cleansing and/or freeing of the soul, which is the particular outcome of reliving the tragedy" (Strasburger 1975: 82). Livy once more offers the best illustration of this psychagogy, above all where his specific stories place before the reader "examples of the ancients" with their power for the present (e.g., 2.10; 2.12; 2.13.6–11), permitting the events portrayed to act as "salutary examples … for the human race" (5.27.13).

This style was perfectly suited to Luke's purposes. Given the delay of the *parousia,* Christians needed to find their place in the world. Yet this world was, even if not a priori (Acts 26:28, 31–32), certainly de facto becoming increasingly hostile towards Christianity (see Plin. *Ep.* 10: 96–97; Acts 20:25, 36–38, where Luke hints that he knew of Paul's death). Luke resisted some of the conclusions that might be drawn from this situation. On the one hand he opposed the sort of uncompromising Christian hostility toward the state and the society that is visible in the renewal of apocalyptic expectations shared by the Apocalypse of John. On the other hand he did not want to be content and not stand out (a later example of this stance is found in Tertullian, *de corona,* 1). Instead, the triumphal images in Acts 14:8–18, 16:16–40; 17:16–33; and 19:23–40 were intended to show that Christianity despite all resistance to it had always managed to succeed in the world. Such lively and therefore convincingly portrayed examples of successful actions in the past were supposed to arouse in the reader the hope that what was so clearly described in the past could become reality in the reader's present. Luke's psychagogic purpose is even clearer in those scenes in which he offers his political apologetic (18:12–17; 25:13–22; 25:23–26:32). These scenes reach their climax in the quasi-acquittal of Paul in 26:31 and the programmatic closing passage asserting that Paul worked for two years in Rome with no restrictions (28:31). Suffused with an aura of authenticity which seems fully credible because it is consistent, they place on the stage Luke's political argumentation.

Luke not only had to explain the problems resulting from the delay of the *parousia* and Christianity's consequent settling down in the world, but one of the most pressing questions had to do with the place in God's plan of salvation for a church made up solely of gentiles and lacking any outward continuity with Israel, to whom the gospel had originally been addressed (13:46). How Luke responded to this question is evident in the way he employed the "mission speeches" discussed above. Luke's answer to Christians' doubts is given in the narrative portion of his work, not in the form of an abstract exposition, but rather through incorporation into the action of dramatic scenes (8:26–39; 10:1–11, 18; 22:17–22). The historical information given is the fact that the shift from Jewish to gentile mission had taken place in earlier times not arbitrarily but under the stimulus of divine providence, that Paul was indeed explicitly commanded by the Lord to preach the gospel to the gentiles. This in turn offers the thesis that the gospel had been transferred from the hands of the Jews to those of the gentile church. Furthermore it is the history itself that gives the answer to pressing questions; once more the events described by Luke carry the marks of Livy's *salutaria exempla*—they do not merely tell history but in the telling offer help to resolve contemporary problems. This fits precisely the general purpose of Luke's historical writing as he himself tells us: to give the reader certainty about the traditions they had learned in the church's catechesis (Luke 1:4), i.e., to assure them that their Christianity was indeed in good shape.

Although Luke ought to be viewed as a Hellenistic historian, he clearly does not fit into a single type of Greco-Roman historiography. The expectation that a historian should have had personal experience (*empeiria* and *autopatheia*), the expectation that leads Luke to write his sea voyage passages in the first person plural, comes from pragmatic historiography. Luke is linked to this by the Thucydideisms of the prologue and his desire to emphasize the significance of historical events and to outline their trajectory

through speeches. The dramatic episode approach, in contrast, was the narrative form of the tragedy-pathos historiography. He drew his method of imitating the Septuagint (Plümacher 1972: 38–72) from the Attic classicism that in his day was common not only to historians but to writers in other genres. Thus the author of Luke-Acts obviously chose his literary equipment with a view to expediency and not out of allegiance to a particular historiographical school.

It is just as difficult to locate the external form of Luke-Acts within the traditions of Hellenistic history-writing. On the basis of Acts's possessing the character of a historical monograph (corresponding to the pattern sketched by Cicero, *Fam.* 5.12, and similar to 2 Maccabees or Sallust's *coniuratio* and/or *bellum Iugurthinum*) and in view of the growing tendency to monographic classification in universal history (cf. Diod. *Sic.* 16.1), Luke-Acts could best be seen as an attempt to write a general history of Christianity (including the destiny of its founder, see Acts 1:1) in two loosely connected monographs.

Because Luke had no successors, Eusebius has received the title "Father of Church History." Yet the honor of having been the first Christian historian belongs to the unknown author of this twofold opus, a person later identified with the companion of Paul mentioned in Philemon 24, Col 4:41, and 2 Tim 4:11, even if he has only been (re)discovered as a historian in modern biblical studies.

TRANS. DENNIS MARTIN

LUKE AS THEOLOGIAN

Luke-Acts, occupying as it does one quarter of the text of the NT, is a major theological work, although some would question whether Luke should be called a theologian in the sense that this was his primary aim in his writings or that he was a deep theological thinker. Theological concerns and a theological outlook come to expression consciously and unconsciously in his work. Even those who emphasize that Luke was a historian agree that he uses history in the service of theology and that he intends his work to have a pastoral purpose.

Luke-Acts is later than Mark and Paul's Epistles, although it shows little if any use of the latter. Luke's work differs from that of Mark in that (a) he wrote a two-volume account which included the story of the continuation of the work of Jesus by his followers to the point where Paul reached Rome, and (b) he told the story of Jesus differently. The differences under the latter heading are not due simply to the use of material from other sources (including Q). Matthew shared much of the same resources, and yet he produced a different effect. The differences must, therefore, also reflect Luke's own approach. Yet the contrast between Luke and Mark should not be exaggerated. He incorporated Mark into his gospel without substantial change.

H. Conzelmann gave the decisive impulse towards recognition of Luke as a theologian with his thesis that Luke wrote under the influence of the delay of the parousia. He coped with this situation by abandoning the primitive belief that Christians were living in the last days and substituting a salvation-historical understanding of the Christ-event which made it the mid-point in a series of divine activities, preceded by the period of Israel and followed by the time of the Church (in which he and his readers now found themselves) which would last until the parousia at some indefinite point in the future. Before Luke developed this new understanding Christian existence was defined by the hope of the imminent parousia, but it was now seen to take place in the age of the Spirit which functioned as a kind of substitute for the hope.

Luke's framework of thought is salvation-historical, i.e., he operates with the concept of the saving acts of God taking place in historical sequence. But it is questionable whether he virtually created this framework. Mark was also under the same pressure of the time-factor which had already persuaded Christians that, even if the resurrection of Jesus was a sign that the last days were here, the parousia was not necessarily to follow immediately. It is still debated whether Luke envisaged salvation-history as falling into three periods with the time of Jesus (the middle of time) separated off from the parousia by the time of the Church (Fitzmyer *Luke* AB). More probably Luke saw a period of promise followed by an extended period of fulfilment. Yet even so for Luke, Christians were living in the last days and the

parousia was still imminent and relevant though not immediate. Since then, Luke's theology is not decisively different from that of his predecessors at this point, it is dubious whether Conzelmann has correctly unearthed Luke's theological motivation and purpose.

A more satisfactory view starts from the recognition that Luke wrote an account of the origins of Christianity. He felt that the account of the ministry of Jesus had to be supplemented by the story of the founding of the church. The two parts of his work together were meant to enable Christians like Theophilus to know that their faith was not a matter of groundless speculation and credulity; rather the instruction which had led them to faith could be corroborated by the evidence of eyewitnesses and servants of the gospel which Luke had wrought into an orderly narrative. Luke's purpose was thus to create and strengthen faith by a narrative which showed how God was at work for human salvation. Luke's theme is accordingly salvation (O'Toole).

The fact that Luke found it necessary to tell the story of the Church as well as the story of Jesus indicates that the latter alone was insufficient for his purpose. The salvation-event includes both the ministry of Jesus and the proclamation of salvation by the Church. Jesus continues to be active by the Spirit and in the Church, so that the salvation which was manifested in his ministry is still effective for people separated from him geographically and temporally. It is not accidental that parallels can be traced between the gospel and Acts, between the activities of Jesus and his followers. Luke expresses the continuity between the message of Jesus and the proclamation of the Church and shows that what Jesus proclaimed has become a reality in the Church and in the time after Jesus.

Luke emphasizes the prophetic aspect of Jesus' ministry within the context of seeing him as Son of God and Son of man. Unlike the other Evangelists, he refers to Jesus as Lord in the gospel even before his exaltation.

The apostolic preaching in Acts pays little attention to the teaching and actions of Jesus in exactly the same way as the apostolic kerygma, as it can be reconstructed from the Epistles, concentrates on the death and resurrection of Jesus as the saving event. This further indicates why Luke was not satisfied merely to tell the story of the earthly ministry of Jesus. Luke takes over the church's doctrine of the death of Jesus reflected in Luke 22:19–23 and Acts 20:28, but he appears to incorporate it in a wider understanding of the work of Jesus. He is the Servant of God who has undergone suffering and has been exalted in order to continue his function of offering salvation to humankind.

An important element in Luke's theology is the universality of salvation and specifically the place of the gentiles among the people of God. The church is probably to be seen as the new Israel rather than as a renewed Israel incorporating the gentiles (Jervell). Both the coming of the Messiah and also the proclamation of salvation to the gentiles are constituent parts of God's plan revealed in prophecy. The gentiles are "saved" by faith, just like the Jews, and therefore they are not required to be circumcised or to keep the law, even though believing Jews may continue to observe the law. Yet Luke recognizes the problem of tensions over table-fellowship (Esler) and notes how gentiles were—at least in some churches—required to avoid unnecessary offense to Jews. Although the attempt has been made to see Luke as a passionate hater of Jews as such (Sanders), it is more likely that he simply expresses opposition to attempts to impose Jewish legalism upon gentiles.

The question of Luke's understanding of sin and salvation has been reopened by J.-W. Taeger who argues that for Luke the problem of humankind prior to faith is sins rather than sin as an alien force and that, consequently, humankind is in need of repentance and moral progress rather than a divine gift of salvation. But Luke's understanding does not differ significantly from that of Mark and Matthew. In any case, Acts is not a theological treatise and it contains doctrines largely in the form of evangelistic addresses, hardly the ideal medium for deep theological reflection on human sinfulness in the manner of Paul. What is important is that Luke sees a *praeparatio evangelica* in Judaism and perhaps even in the religious longings of paganism.

Luke appears to see the Spirit as especially the Spirit of prophecy which equips Jesus and the Church for their roles. He says little about the Spirit as the gift of salvation. The Spirit provides divine power for witness and salvation.

The new life associated with salvation is seen in terms of repentance and conversion. Particular stress is laid on self-denial, especially with regard to wealth. More than the other Evangelists Luke teaches the need for the rich to share with the poor and shows how this ideal found expression in the Jerusalem church.

Luke attaches great significance to the Twelve as the initial witnesses to the resurrection of Jesus who provide the continuity between Jesus and the Church and thus constitute its initial leaders. But he is aware that within a short time the leadership passed into the hands of James and a body of elders, although he says nothing about how this happened or about the details of church organization and structure. The position of Paul is ambiguous, the question of his apostleship and letter-writing being passed over in virtual silence, although clearly he is *the* missionary to the gentiles. Indeed, Luke shows little interest in the internal life and growth of the Church. He is primarily concerned with its missionary expansion from Jerusalem to Rome. This shows that we are not to expect from Luke a full, systematic account of his theology, if he possessed one, and should make us wary of drawing too far-reaching conclusions from the limited evidence which he provides.

A. Introduction

Ancient manuscripts do not place the Gospel of Luke and the Acts of the Apostles together, though canonical lists (e.g., the *Muratorian Canon*) attribute them both to Luke, who is regarded as a companion of Paul. The designation Luke-Acts reflects the conviction of virtually all contemporary scholars that the gospel and Acts were from the beginning a single literary work in both conception and execution (Cadbury 1927).

The writings invite this appraisal. Each volume is introduced by a prologue addressed to the same reader, Theophilus, possibly the patron who sponsored the composition (van Unnik 1973; Fitzmyer *Luke I–IX* AB, 299). The prologue to Acts provides a short summary of the first volume (Acts 1:1–2). The gospel prologue is more elaborate. It provides important clues to the nature and purpose of the two-volume work (Luke 1:1–4). In addition to the prologue, an intricate skein of sylistic, structural, and thematic elements binds the two writings together.

The decision to read these separate texts as a single literary work represents the triumph of a literary-critical approach to the NT writings, concerned less for the historical data contained in a writing, or the prehistory of its discrete parts, than with its distinctive voice. The method uses the discoveries of source and form criticism, but unlike them is concerned with a writing in its literary integrity (Beardslee 1970). To adopt the category "Luke-Acts," therefore, means to accept a contemporary literary designation in preference to the traditional perception of the texts or even their canonical placement.

Although the designation of Luke-Acts as a literary unity is now widely accepted, its implications have only begun to be developed. Commentaries, for example, continue to be written on each volume separately, with only minimal attention to the literary truncation involved. The Anchor Bible volumes devoted to these writings (Fitzmyer on Luke; Munck on Acts) do not entirely escape the problem.

Luke-Acts takes up fully a quarter of the NT canon. It is pivotal both for the history of earliest Christianity and for the development of its theology. See LUKE (PERSON). Although some overlapping is unavoidable, the specific topic of the present entry is Luke-Acts as a literary work. Attention must be given as well to some of its historical and religious claims, but only insofar as a connection can be drawn between them and the literary shape of the writing. The concern here is not only with what Luke-Acts says, but how it speaks.

B. Circumstances of Composition

Any discussion of the circumstances accompanying the production of Luke-Acts is inevitably circular. There are few external guideposts, so conclusions must be based on internal evidence, which can—notoriously—be construed in quite different ways. The issues of dating and authorship, for example, mutually impinge; and to a remarkable degree, each depends on a reader's overall conception of the writing.

The ancient manuscripts attribute the gospel to a certain Luke, whom patristic writers unanimously identify as the companion of Paul (Philemon 24; Col 4:14; 2 Tim 4:11), a supposition apparently supported by the so-called "we passages" of Acts (cf. 16:10–17; 20:5–15; 21:8–18; 27:1–28:16) in which the narrator suddenly shifts from third-person to first-person narration, suggesting the presence of an eyewitness (Fitzmyer *Luke I–IX* AB, 36). Critical scholarship has challenged the traditional attribution, arguing that the tone, perspective, and purposes of Luke-Acts better fit a later, "second-generation" composition (Loning 1981). A very late dating would obviously disqualify any companion of Paul as author. "Second-generation," however, is scarcely a precise designation. To place Luke-Acts as late as the

2d century (O'Neill 1961) is excessive. In fact, nothing in the writing prohibits composition by a companion of Paul and an eyewitness to some events. A thirty-year-old man who joined Paul ca. 50 C.E. would still only be sixty in the 80s, old enough and at sufficient distance to describe the beginnings of the movement with a certain nostalgia. Luke's failure to use Paul's letters or even to mention that Paul wrote letters argues in favor of an earlier rather than a later date. It is far more likely for Paul's letters to be ignored before the time of their collection and canonization than after. Some contemporary scholars argue the opposite way. They attribute some of Paul's letters to Luke's authorship, particularly the Pastoral Letters (Wilson 1979) perhaps even as the third volume of Luke-Acts (Quinn 1978). Such hypotheses fall short of proof and are less convincing than the traditional attributions for Luke-Acts and Paul's letters.

To state that Luke-Acts could have been composed by a companion of Paul by the end of the 1st century (probably between 80 and 85, though possibly earlier), does not by itself tell us anything about the nature of the writing or its historical accuracy. That the author is an admirer of Paul is obvious from the text in any case, and the number of events he could himself witness would have been small. For the rest, the author admittedly relied on other witnesses and written sources (Luke 1:1–2).

Nor does this attribution tell us anything about the author. Like the other gospel writers, Luke recedes modestly behind his narrative. Attempts to discover in his style the marks of a physician, for example, have been massively refuted (Cadbury 1920). The text does reveal more important characteristics of the author: his stylistic ability, which enables him to use various Greek dictions; his Hellenistic education, shown by his facile use of rhetorical conventions (Kurz 1980); his wide reading in Torah, manifested in his dense textual allusions and in the structure of his story; his storytelling ability, demonstrated by his striking vignettes and parables. The text reveals most of all a synthetic narrative imagination, enabling him to make the story of Jesus (already current in the church) and the story of the church's beginnings into one coherent and interconnected story, showing in the process that it continued the still longer story of God and his people.

The provenience and audience of Luke-Acts are impossible to fix precisely. Ancient tradition wavers regarding the place of composition, and the text gives no firm clues (Fitzmyer *Luke I-IX* AB, 37–40). The circumstances of Luke's readers also escape easy detection, as the many suggestions concerning them suggest (Karris 1978; 1979). Certainly, his readers were Greek-speaking, and sufficiently acquainted with scriptural traditions to grasp at least the gist of his allusions. They were already Christian. They were almost certainly gentile; indeed, a great deal of Luke-Acts makes little sense if they were not gentile believers (Fitzmyer *Luke I–IX* AB, 57–59). Given the length, complexity, and literary sophistication of the work, it is far less likely that it responded to a specific or local crisis than that Luke intentionally addressed a much wider readership with magisterial ambition (Johnson 1979). If there is a crisis addressed by Luke-Acts—and there is—it is not one occasioned by momentary circumstance, but rather by the nature and development of the Christian movement itself.

C. Genre and Purpose

Luke is above all a gifted storyteller. His writing is filled with short vignettes, each of which imaginatively summons for the reader an entire world (Haenchen 1966: 259–60). In the gospel, Luke alone tells the parables of the Rich Fool (12:13–21), of Lazarus and Dives (16:19–31), of the Good Samaritan (10:30–35), and, most memorably, of the Prodigal Son (15:11–32). These parables are, of course, attributed to Jesus, although much of their shaping may be due to Luke himself (cf., e.g., Schweizer 1948). Luke weaves a delicate tapestry in his infancy stories (Luke 1–2) and in his resurrection accounts (Luke 24), which have an almost novelistic tone (Wanke 1973: 1–32). No less in Acts is his storytelling ability revealed: the death of Ananias and Sapphira (5:1–11), Peter's release from prison (12:6–17), and Paul's shipwreck (27:1–44) are small masterpieces of narration.

Luke is, however, considerably more than a miniaturist. His most impressive accomplishment is the forging of these short stories (many of them already circulating in some form) into one long, coherent narrative, which with masterful control brings the reader from the mists of antiquity all the way to a rented apartment in the empire's capital city, and within the space of 52 chapters creates out of sometimes unlikely material an uncanny sense of historical movement. Luke had at least one antecedent for the

gospel narrative (Mark), which he used. But his unexampled contribution to Christian literature was the extension of that story to the time of his first readers, connecting them by narrative not only to the first days of the church and to Jesus' life and ministry, but as well to the whole story of God's people, reaching back even to Adam (Luke 3:38) (Kurz 1984).

Luke's choice of the narrative form is deliberate. He explicitly designates his work a *diegesis* "narrative" (1:1) and emphasizes that he tells events "in sequence" (*kathexes*,1:3). It is clear from several other places that Luke regards the narration of events "in order" to have a peculiarly convincing quality (e.g., Acts 9:27; 11:4; 15:12–14). For him, the development of the plot itself, in sequence, has a persuasive force (Dillon 1981: 217–33). In this, Luke shares the conviction of Hellenistic rhetoric, which regards the *narratio* as critical to historical argument or personal defense, as he shows also in the construction of Paul's "defense speeches" (Acts 22:3–21; 24:10–21; 26:4–23) (Neyrey 1984). How this literary emphasis serves Luke's religious purposes will be discussed. But first, the implications of the narrative form for intepreting Luke-Acts should be mentioned.

To say that Luke-Acts is a story means, at the least, that it cannot be read as a systematic treatise filled with theological propositions. To use rhetorical terms as old as Aristotle (cf. *Poet.* 6: 19–22), for the reader to grasp Luke's *dianoia* ("theme" or "meaning"), it must be done in and through his *mythos* ("story line," "plot"), for it is found only there (cf. Frye 1969: 52–79). The meaning is fitted to the narrative form. Consequently, it is of the most obvious importance to locate where something occurs in Luke's story. The connections between individual vignettes are often as significant as their respective contents. The sequence itself provides the larger meaning.

To say that Luke-Acts is a single story also bears the implication that Acts not only continues but also provides Luke's own authoritative commentary on his gospel (van Unnik 1960). The determination of Luke's purposes or the understanding of a specific theme, therefore, must take the whole story into account, precisely in its narrative development. To discuss the "christology" of Acts mainly in terms of contrast to the gospel, for example (Moule 1966), betrays Luke's clear literary intention. Likewise, any discussion of "the poor" in Luke-Acts must take seriously the sudden disappearance of that terminology after chap. 16 of the gospel (cf. Karris 1978) and consider whether the theme might have had a limited literary function for the first part of Luke's story (Johnson 1977). The discussion of what Luke says on any subject is qualified by where he says it.

The category of story also points the reader to the importance of plot and characters, which are the constitutive elements of the *mythos.* The characters motivate and enact the plot; the plot reveals the characters in action. In Luke-Acts, the most important character is arguably the God who never appears but who in various ways directs the action, and with reference to whom all of the narrative unfolds. Special attention must be paid as well to Luke's stereotypical descriptions of his protagonists (Jesus and his successors). Finally, there are the interactions between Luke's heroes and those who respond to them, whether positively or negatively.

Does Luke's narrative match any conventional literary form of the ancient world? The question of genre is notoriously difficult in literary analysis, not least because the nature of genre itself is disputed. But it is certainly the case that Hellenistic culture, unlike our own, prized and employed conventional literary patterns. The question is of particular importance because if genre has a function, it is to create certain expectations in readers, and to program certain responses. When genre works, function truly follows form. If we can determine the generic character of Luke-Acts, therefore, we are given important clues to the way in which it would have been read and understood by its first readers—or at least the way Luke intended it to be understood.

The question of genre is here asked of Luke-Acts as a two-volume work, leaving aside whether a "gospel" is a separate genre (Talbert 1977) or "Acts" becomes one. In the 2d century "Acts" of various Apostles proliferated (e.g., *Acts Thom.* or *Acts Paul*). The suggestion that Luke-Acts resembles a Hellenistic Romance or Novel (Goodenough 1966: 57) will not be pursued here, however striking the similarities may be (Cadbury 1955: 57, and especially Pervo 1987). That classification is not only broad but it misses some of Luke-Acts' most important features. In Luke-Acts something more than aesthetic

delight is operative, even in formal terms. The most common genres to which Luke-Acts is assigned are the Hellenistic History or Biography, and Jewish Apology. The decision requires a close consideration of the text.

The reasons for regarding Luke-Acts as a History are obvious and, to most scholars, compelling (Barrett 1961; Marshall 1970):

1. His gospel prologue not only looks like those prescribed for Greek historiography (cf. Lucian, *Hist. conscr.* 47–54), but also examples of such prologues (cf. Joseph. *Ant.*). He tells the reader that he is using earlier oral and written sources (Luke 1:1–2). But he has also done personal and accurate research (*akribos*, 1:3), implying that he can handle those sources critically. He is writing a "sustained and sequential" narrative (*kathexes*), the purpose of which is to give the reader certainty rather than surmise concerning the past and even present events (1:4).

2. Luke places the community traditions—the story of Jesus and the church—in the context of world history, connecting it not only to the story of Israel (cf. 1:5) but also to that of the *oikoumene.* Of the NT writers he alone provides chronological references for pivotal events (cf. Luke 1:5; 2:1–2; 3:1–2; Acts 18:12). He identifies power blocs and rulers in Palestine (Acts 12:20–22), Asia Minor (Acts 19:31), and Europe (Acts 18:12–17).

3. Above all, Luke shows the historian's instinct for causality. His narrative is essentially linear, moving the reader from one event to another. The term "in sequence" (*kathexes*) in the prologue is critical to understanding his composition (Schneider 1977). He draws connections between events, so that a thread of purpose is seen to run through his entire narrative.

The question of Luke's accuracy as a historian is discussed fully elsewhere—see LUKE (PERSON)—but some comments are appropriate here because the issue of genre demands consideration of what sort of historian Luke might be.

To a considerable extent, historians are dependent on their sources. Luke says that he had some reports from eyewitnesses (Luke 1:2). Perhaps his unusually good information on Herod's household came from such a source (Luke 8:3; 23:6–12; Acts 12:20–23) (Hastings 1958). The "we" source in Acts could also have come from an eyewitness, whether the author or another. But since the first-person plural was sometimes used conventionally in travel narratives, we cannot be certain (Robbins 1978). Luke also had written sources (Luke 1:1). For the gospel, he used Mark, materials from the source called Q, and other distinctive materials usually designated L. We can check his use of a source only in the case of Mark, since it alone remains independently intact. Q gives no real help, since the shape of this hypothetical source must be abstracted from both Matthean and Lukan versions.

Luke's use of Mark differs considerably from Matthew's use of the same source. When Luke follows Mark he does so more closely, though he tends to omit blatant doublets, such as the feeding stories, whereas Matthew increases them (Fitzmyer *Luke I–IX* AB, 62–82). Instead of inserting great blocks of discourse material into the narrative, Luke more subtly interweaves deeds and sayings. The sayings of Jesus in Luke's gospel consequently have a greater air of biographical plausibility (see esp. Luke 9–19). Luke uses Mark with reasonable fidelity. The larger problem is determining where Luke has a source. If Matthew and Mark were not available for comparison, it would be doubtful that we could detect where Luke is using Mark and where he is not.

The difficulty in detecting Luke's sources has two causes. The first is that Luke follows the respectable Hellenistic practice of rewriting his sources (cf., e.g., Joseph. *AgAp* 54). We can observe how he modifies the Greek of Mark's gospel, bringing it closer to his own liking. The second reason is Luke's capacity for writing convincingly in a variety of styles. If one were to excerpt and compare the Greek of Luke's prologue, the infancy accounts, Peter's Pentecost sermon, and Paul's defense speeches, one could reasonably think that they were from different writers. Luke follows the Hellenistic rhetorical ideal of "writing in character" (*prosopopoeia*), which fits style appropriately to character and occasion (Kurz 1980: 186). Paul in Athens, consequently, is much more "Greek" than Paul in the synagogue of Antioch. Similarly, the Greek of the infancy accounts has a semitic coloration. Some conclude that Luke was using Hebrew or Aramaic sources (Winter 1956). But when we observe elsewhere that Luke shows a flair and

fascination for a biblical or—more accurately—septuagintal style, the determination becomes very difficult (Turner 1955–56).

The search for Luke's sources in Acts is even more frustrating, since there is no way to check his usage. It would appear that he had fewer sources and was able to exercise more literary control in Acts than in the gospel. Apart from the "we" sections—which are otherwise stylistically consistent with the material around them (Harnack 1907)—we can identify no certain sources. Attempts to find a "Jerusalem" or "Antioch" source in the first fifteen chapters of Acts have proved to be more complex than convincing (Dupont 1964).

How reliable—factually—is Luke the historian? Taking into consideration his use of the one source we can check, his general accuracy in matters we can otherwise confirm from archaeological or documentary sources, and the overall agreement between his account of Paul and that in the letters, we can conclude that Luke is accurate in what he tells us, certainly by the standards of Hellenistic historiography (Hengel 1979). The phrase "in what he tells us," however, is critical. Luke writes selectively. In the gospel, he omits portions of Mark (the so-called "great omission" of Mark 6:45–8:27), and he fails to mention any Galilean appearances of the risen Jesus. In Acts, Luke either does not know or chooses not to mention things otherwise known to us. He describes no Galilean mission of the church (notice the conspicuous silence in Acts 1:8 and 15:3). He tells us nothing of rural evangelization, since as a good Hellenist, his interest is exclusively urban. Of the first missionaries, he concentrates on Peter and Paul to the virtual neglect of all others. Although Paul's arrival in Rome is the climax of Acts, for example, he never bothers to inform the reader when the Christian movement itself reached the capital city (cf. Acts 28:14–16).

So much does Luke concentrate on Jesus and a few of his followers that he is considered by some to be less a historian than a biographer. It has been argued that the biographies of some Hellenistic philosophers (as in Diogenes Laertius' *Lives of the Philosophers*) provide the closest formal analogy to Luke-Acts: first the life of the Founder is considered, with a concentration on his wondrous birth and its portents, his deeds, and his teachings; then a succession narrative, which recounts the deeds and teachings of his disciples (Talbert 1974: 125–34). The suggestion is attractive and corresponds to some features of Luke's writing. The Lukan addition of infancy and appearance accounts certainly pushes the Markan gospel closer to a Hellenistic Biography, as does his placement of sayings material. The portrait of Jesus and the disciples, furthermore, is shaded to resemble the Hellenistic *Sophos* ("sage"). Thus, Luke emphasizes Jesus' innocence and courage during his passion (cf. below), and the disciples also show boldness (*parresia*) in their teaching (Acts 4:13); indeed, like Socrates, they choose to obey God rather than human authorities (Acts 4:19).

Careful analysis of extant Hellenistic biographies, however, does not adequately support the suggestion that Luke-Acts fits that genre (Barr and Wentling 1984: 72–76). The hypothesis must also leave out of account the clear clues of the prologue that Luke considers his work to be a history. He writes not simply of Jesus and his followers, but of the "matters (*pragmata*) accomplished among us." His narrative has a scope far wider than Jesus and his school. The people of Israel form one of the most important characters in his narrative, and much of Luke's concern is for the fate of this historic people. Because the story of Jesus and his disciples is placed within this broader story, his writing is more properly if roughly categoried as a form of History (Ehrhardt 1958: 45–46).

What sort of history, then, did Luke set out to compose? He was obviously a committed member of the movement he depicted. On the other hand, he was not attempting a comprehensive record of the Christian past. If, as the prologue suggests, Luke's composition was intended for publication, perhaps he meant to influence the wider world, and Luke-Acts is the first Christian *apologetic* literature.

Noting Luke's positive view of gentiles and in particular of Roman officials, some have suggested that Luke wrote an apology for the Christian movement as a whole (Cadbury 1927: 306–16; Easton 1936). By observing the political harmlessness of the movement magistrates might be convinced to grant Christians the same freedom enjoyed by "other Jews." In this light, Luke's portrayal of Christianity as rooted in Judaism makes a critical political point. The proconsul Gallio's decision in Acts 18:14–15 is therefore to be taken as exemplary: in matters of dispute among "Jews," magistrates need not meddle (Conzelmann

1961: 137–44). Luke's positive outlook on the empire has been interpreted in the other direction: Luke writes an apology for the empire, encouraging among the politically restive of his fellow Christians a non-apocalyptic, politically cooperative attitude (Walasky 1983).

Other scholars have noted the concentration on Paul in the latter half of Acts and have contended that Luke-Acts is an apology for Paul and his teaching (e.g., Goodenough 1966: 54). A variant of this theory has it that to appease a significant and theologically vocal minority of Jewish believers within the Christian movement (Jervell 1972: 153–207), Luke presents Paul not as one opposed to Torah and a renegade within Judaism, but as a true teacher of Israel, whose views are consonant with those of the Pharisees (cf. Acts 23:6; 28:17–20). Certainly Paul's dominant role demands explanation, but Luke's entire narrative ill fits such a narrow and specific function (cf. Maddox 1982: 20–21).

These suggestions are on the right track, but they define "apologetic" itself much too narrowly. They isolate one theme or emphasis in the narrative and make it determinative, directing it to specific inside or outside audiences. But Jewish apologetic literature of that period had a dual function. Ostensibly it defended Jews against misunderstanding and persecution. It also had an equally important function for Jewish readers, because it reinterpreted their traditions within a pluralistic context by bringing an outsider perspective to bear on them. Thus, in Philo, the symbols of Greek philosophy and history provided the categories for the interpretation of Moses (cf. *Vita Mos* I–II). Apologetic literature thus provided "security" to Jewish readers by demonstrating the antiquity and value of their traditions in a pluralistic context.

Luke-Acts has a similar double-edged function. To a hypothetical outside reader, it presents Christianity as enlightened, harmless, even beneficent. Its more immediate function is to interpret the gospel within the context of a pluralistic environment, composed of both Jews and gentiles (Tiede 1980: 1–18).

The gospel prologue (Luke 1:1–4) indicates that although Luke-Acts may have been published and thereby made available to a wider audience, it was addressed first of all to a Christian readership (Fitzmyer *Luke I–IX* AB, 299–300). Theophilus has already been "instructed" (*katecheo*) in the Christian story (1:4). Why, then, does Luke provide still another version for him? Luke writes, he says, to give his readers "security" (*asphaleia*) (1:4) in their knowledge of "the things brought to fulfillment among us" (1:1). Not only the distant past, therefore, but also present circumstances required interpretation: the "among us" reaches up to Luke's own day. The expression "brought to fulfillment" (or "accomplished") is in the passive voice. In the biblical idiom, this equals "realities which God has brought to fulfillment." The narrative, then, is about the fulfillment of God's promises, up to the present. But why is "security" required? And how will a narrative written "in sequence" provide it? Here we reach the key element in Luke's statement of purpose, and the single most important literary clue for the understanding of his narrative (Maddox 1982: 186).

The text of Luke-Acts overwhelmingly suggests that Luke's audience was made up predominantly of gentile believers. There may have been Jewish members among his readers, but the Jewish mission, which Acts shows up so repeatedly failing, appears to be if not completely over, less than vigorous. In contrast, the outlook regarding the gentile world is entirely positive. The closing statement concerning them is "They will listen" (Acts 28:28). Luke's readers are themselves evidence that Paul's prophecy came true. But precisely the two facts of gentile acceptance and Jewish rejection of the Good News create a severe "uncertainty" for thoughtful gentile Christians.

The problem is simple but profound. God's promises had been made to Israel, to the Jewish people, through Abraham (Gen 12:1–3). If that historical people was not now in possession of the promised blessings, but someone else was, what did that imply about God's faithfulness to his promises? Did God utterly betray his people and his word? This is a difficulty as much for gentiles as for Jews. Could they rely on the "things fulfilled among them" any more than the Jews could? If God failed the Jews, could he not betray the gentiles even more easily?

The problem addressed by Luke's narrative is precisely and properly one of theodicy. No less than does Paul in Romans 9–11, he defends the word and work of God in history. How does the literary shaping of his narrative accomplish this? By telling how events occurred "in order" (*kathexes*), Luke intends to show

that God first fulfilled his promises to Israel, and only then extended the blessings to gentiles. Because God had shown himself faithful to the Jews, therefore, the word that reached the gentiles was also trustworthy. Here precisely is the importance of "order" or consecutiveness for Luke's narrative purposes. The saving of Israel was necessary for the security of gentile believers.

Luke is therefore an apologetic historian of a very special sort. He sets himself to write the continuation of the biblical story (Dahl 1966: 152–53), not to defend the Christian movement as such but to defend God's ways in history. By showing the story of Jesus to be rooted in that of Israel, and by demonstrating how God kept his promise by restoring Israel, Luke assured his gentile readers that they could have confidence in God's word to them. Luke's purposes are not determined by a momentary crisis or a doctrinal deviance (Talbert 1966). They are generated by the mystery of a messianic sect existing among gentiles. So successful was Luke in addressing the problem that his narrative has become the etiological myth of gentile Christianity (Johnson 1979: 94).

D. Literary Aspects of Luke-Acts

Luke's literary techniques serve his overall literary and religious purposes. We consider here aspects of Luke's style, his narrative techniques, and his structuring of the two volumes as a single narrative. These observations and examples are not exhaustive, but representative.

1. Style. Technical discussions of Luke's diction and syntax are readily available (Cadbury 1920; Fitzmyer *Luke I–IX* AB, 107–27). These sometimes fail, however, to touch on Luke's characteristic concerns, which can be illustrated by his use of Mark and of the OT.

a. Redaction of Mark. A careful comparison of Luke 8:26–39 (the healing of the Gerasene demoniac) with its source (Mark 5:1–20) shows that Luke follows Mark much more closely than does Matt 8:28–34 (which is virtually a different story). Nevertheless, he amends Mark carefully. His adjustments tend toward correctness, clarity, and consecutiveness.

First, Luke corrects Mark's infelicities. He considers the *horkizo,* "I adjure," of Mark 5:7 inappropriate as addressed to Jesus, so changes it to *deomai,* "I beg" (Luke 8:28). In Mark 5:9–10, he found a confusion of number, which he renders more consistent (Luke 8:30–31), as he does also the tense sequence of Mark 5:14 (in Luke 8:35).

Second, Luke clarifies the many small confusions Mark's narrative creates. Thus, he makes clear where the country of the Gerasenes was (8:26) and assures the reader that when Jesus stepped out of the boat, it was onto land, and not water (8:27). He takes note that the herdsmen saw the wondrous events before they fled (8:34) and supplies the appropriate motivation for the townspeople's request that Jesus leave (8:37). Mark's diffuse report in 5:16 Luke condenses into a succinct summary and interpretation (Luke 8:36).

Third, Luke arranges the narrative into a more logical order. He describes the demoniac's condition in 8:28 as an explanation of the statement in 8:29 rather than as an opening description, as in Mark 5:3–6. Luke's concern for consecutiveness is shown most of all in his avoidance of narrative surprises. He prepares the reader for later plot developments. Mark says that the herdsmen went into the city (5:14), without ever having stated that they or the demoniac were from there. In contrast, Luke prepares for the later statement by noting at the beginning that the man was from the city (Luke 8:27). He signals the restoration of the man by having him preach "in the city" (8:39), in contrast to Mark's "Decapolis" (Mark 5:20). Similarly, we read in Mark 5:15 that the exorcised man was "clothed," but have not been told he was naked. Luke supplies this deficiency by stating in the beginning that the man wore no clothes (8:27). Luke's concern for connections shows how consistently he thinks in terms of "in order" (*kathexes*), and also forms a narrative pattern: by preparing the way for every subsequent plot development, Luke in effect creates a literary pattern of "prophecy and fulfillment" within his narrative.

b. Biblical Imitation. Luke is a stylistic chameleon. His account of Paul's speech in the agora (Acts 17:16–31) could be from Dio Chrysostom, and the riot of the Ephesian silversmiths (Acts 19:23–41) from Lucian of Samosata. In these stories, Luke is the Hellenistic fabulist. He also shares the Greek literary fondness for archaizing (Plümacher 1972: 32–79). In apologetic literature, the claim to antiquity is enhanced by language derived from ancient scriptures. Luke is no less the Greek littérateur, then (Schubert 1954: 85), when in great stretches of his narrative he imitates the rhythms of the LXX. It is a

diction wonderfully suited to his purposes. That Luke consciously adapts this "biblical mode" is shown by his facile use of other modes when the rhetorical ideal of prosopopoeia demands them. It is in fact one of the subtle pleasures of reading Luke-Acts to observe how his Greek becomes less "biblical" and more "Greek" as the gospel makes its way into the gentile world.

Beyond direct citations from Torah (discussed below), Luke uses biblical diction variously. In the Stephen speech (Acts 7:2–53) he excerpts and fits together pieces from a very long section of Torah (Richard 1978) so artfully that the result appears both as a seamless and spontaneous speech by Stephen, and as a straightforward recital of the biblical narrative, while it is neither. Similarly, the Magnificat (Luke 1:46–55) places in Mary's mouth words inspired by, and sentiments derived from, 1 Sam 2:1–10 (Hannah's song), yet with a remarkable freshness.

Luke also uses a range of allusions, which reveal a thorough knowledge of biblical cadences. The annunciation scene (Luke 1:28–38) not only builds on the "type-scenes" (Alter 1981) of previous bibilical annunciations (e.g., Judg 13:2–7) but overlays them with a dense texture of other allusions. The angel's greeting carries with it echoes of Zeph 3:14 and Zech 2:10 (Laurentin 1957); likewise the Transfiguration's conclusion. "Listen to him" (Luke 9:35) suggests that Jesus is the prophet, like Moses (Deut 18:15), to whom the people should listen (Schubert 1954: 181–82).

These examples also show the ways that Luke uses biblical prototypes to construct entire scenes. In both volumes, uniquely Lukan stories appear to depend on the imitation of biblical models, either for details of language or for the entire structure of the story. The death of Ananias and Sapphira (Acts 5:1–11), for example, is reminiscent of the stoning of Achan in Josh 7:1–26. Luke is particularly fond of stories involving the prophets Elijah and Elisha (Dubois 1973), both in smaller vignettes (cf. Luke 9:54 with 2 Kgs 1:9–16 and Luke 9:61 with 1 Kgs 19:20) and in more elaborate combinations. Luke 7:1–16 "fulfills" the allusion to Elijah and Elisha made earlier in Luke's narrative (4:25–27) by having Jesus do deeds which mirror theirs in 2 Kgs 5:1–14 and 1 Kgs 17:17–24 (Johnson 1977: 96–103). The use of the Elijah–Elisha cycle is most obvious in the distinctive Lukan rendering of the ascension and giving of the Spirit. The prophet Jesus departs and leaves his prophetic followers with a "double share" of the Holy Spirit so that they can do deeds as great as or greater than his own, just as Elijah did for Elisha when he departed in the fiery chariot (see Luke 24:51–53; Acts 1:9–11; 2:1–13, with 2 Kgs 2:1–14; cf. Lohfink 1971: 73). Luke's way of employing these biblical allusions is subtle and eludes the detection of his method, whether he worked directly from the text of Torah (Brodie 1984) or depended on reminiscence.

2. Narrative Devices. The impression of fullness given by Luke's narrative is due, particularly in Acts—where he had fewer traditional materials with which to work—to literary artistry. Out of disparate fragments he creates a sustained and coherent narrative by extending and amplifying the traditions available to him.

a. Summaries. He extends the narrative by means of summaries. These generalize details from specific stories, giving the impression of repeated or customary occurrence (Cadbury 1933; Zimmerman 1961). In the gospel, Luke took over from Mark (cf., e.g., Mark 1:39; 3:7–12) the use of such summaries, but he uses them far more extensively (Luke 1:80; 2:52; 4:14–15; 7:21–22; 8:1–3; 13:22; 19:47; 21:37). In Acts, the use of summaries is even more important. In the first chapters of Acts, there are three so-called "major summaries" (Acts 2:42–47; 4:32–35; and 5:12–16). They provide critical spacing for the narrative and provide the reader with the sense of time's passing. They also offer a "typical" glimpse into the life of the community in its earliest stages and are, as a result, highly idealized (Dupont 1969). Luke also uses smaller summary statements to advance his narrative in the later sections of Acts (cf. 5:42; 6:7; 9:31; 12:24; 19:20).

b. Speeches. Even more important is Luke's use of speeches. In the first eight chapters of Acts, there are nine speeches of greater or lesser length (Acts 1:4–8, 16–22; 2:14–40; 3:12–26; 4:8–12, 24–30; 5:35–39; 6:2–4; 7:2–53), which as a whole make up fully half of the narrative. Luke uses these speeches precisely the way a Hellenistic historian would (Dibelius 1956: 138–85). Whatever fragments of tradition or patterns of preaching they may retain (Dodd 1936), in their present form they are Luke's handiwork, reflecting his thought rather than that of the original speaker (Wilckens 1961). Luke provides what ought

to have been said on a particular occasion. It is in the speeches above all that Luke observes prosopopoeia ("writing in character"). As a narrative device, the speeches interpret the story for the reader. Peter's Pentecost speech (Acts 2:14–36) interprets the wind and tongues far more directly for Luke's reader than for the diaspora Jews in Jerusalem. The interpretive function of speeches holds for the gospel as well. Luke arranges Jesus' sayings so that they both reflect and interpret the narrative progress surrounding them (e.g., Luke 4:16–30; 14:7–24; 15:1–32).

c. Journeys. Luke also uses journeys as a narrative device, as do other Hellenistic historians. Luke's narrative about Paul is dominated by a series of journeys, climaxing in his long sea voyage to Rome (Acts 27:1–44) (cf. Robbins 1978). And the central portion of Luke's gospel is taken up by the great "travel narrative" of chaps. 9–19 (Conzelmann 1952). Analysis of the chapters reveals that Luke created this dramatic stage of his story out of a variety of sayings material and a series of travel notices (9:51, 53, 56, 57; 10:1; 13:22, 31, 33; 14:25; 17:11; 18:31, 35; 19:1, 11, 28), which by careful editing he has made into a coherent and compelling whole.

d. Parallelism. Luke makes extensive use of parallelism in his narrative. His habit of matching events and characters throughout the two volumes has frequently been noted. As Mary is overshadowed by the Holy Spirit in Luke 1:34–35, for example, so are Mary and the disciples overshadowed by the Spirit at the beginning of Acts (1:13–14; 2:1–4). Peter and Paul work similar miracles (Acts 3:1–10 and 14:8–11; 9:36–40 and 20:7–12), which in turn mirror the miracles of Jesus (Luke 5:17–26; 8:40–56). Peter and Paul face similar threats (Acts 8:9–13 and 19:13–19) and enjoy similar miraculous escapes (Acts 12:6–17 and 16:25–34). The trial of Stephen in Acts 6:8–15 overlaps that of Jesus in Luke 22:66–71, and the connection between them is rendered unmistakable by Acts 7:56 (cf. Luke 22:69). The "passion" of Paul bears some resemblance to that of Jesus (see esp. Acts 21:1–14). By the device of parallelism, Luke accomplishes two things. First, he establishes connections among his main characters; second, he joins parts of his narrative together. Attempts to make parallelism (or chiasmus) the dominant architectonic element of his narrative, however, gain their plausibility by forcing the textual evidence (Morgenthaler 1949; Goulder 1964; Talbert 1974). They above all fail to reckon with the essentially linear character of Luke's narrative.

3. Literary Structure. Two structural components help Luke give shape to his overall narrative: geography and prophecy. They ultimately point in the same direction and serve his overall purposes.

a. Geography. Luke uses geography as a literary and theological instrument (Conzelmann 1961). The center of his story is the city of Jerusalem and the events which take place in it. The whole movement of the gospel is toward Jerusalem. The infancy account moves toward the presentation of Jesus in the Temple (2:22) and his discovery there as a young boy (2:41–51). The Lukan temptation account reverses the Matthean order of the last two temptations so that the climax is reached in Jerusalem (4:9). At the end of the Galilean ministry, the transfiguration account explicitly prepares for the journey to Jerusalem and Jesus' death (9:31). The journey itself begins with a solemn announcement (9:51) and continues with multiple references to Jesus' destination (13:22, 33–34; 17:11; 18:31; 19:11, 28). All of Jesus' resurrection appearances take place in the environs of Jerusalem. In the last of them Jesus instructs the disciples, "Stay in the city" (24:1–49).

The geographical movement in Acts is away from Jerusalem. The announcement of Jesus in Acts 1:8, "You shall be my witnesses in Jerusalem and in all Judea and Samaria and to the end of the earth," is carried out by the narrative (Menoud 1954–55): the ministry in Jerusalem (chaps. 1–7) is followed by the evangelization of Judea and Samaria (chaps. 8–12), then Asia Minor and Europe (chaps. 13–28). Each movement outward, however, also circles back to Jerusalem (see Acts 12:25; 15:2; 18:22; 19:21; 20:16; 21:13; 25:1).

Jersualem is therefore in spatial terms the center of Luke's narrative. The middle twelve chapters of the two-volume work narrate events there. Why does Luke make Jerusalem so central? The city and the Temple, which Luke treats as virtually identical (Bachmann 1980), were of obvious historical importance for Judaism and for the nascent Christian movement. But more than historical recollection is involved. For Luke, the city and Temple stand as symbols of the people of Israel. The death of Jesus and the

beginning of the church there provide the paradigmatic expression of the Jewish people's acceptance or rejection of God's visitation. Jerusalem is the pivotal place in the story of the prophet and the people.

b. Prophecy. Proof from prophecy was a standard element in early Christian apologetic. In it, texts from Torah were said to be "fulfilled" by events in Jesus' life, death, and resurrection. Matthew uses a sophisticated form of this proof in his so-called "formula citations." Luke expands and refines the notion of prophetic fulfillment (Dahl 1966: 152). Not only do the events of Jesus' ministry fulfill Scripture, but stages of the church's life and mission do as well: they are among the things "fulfilled among us" (see Acts 3:24; 13:40; 15:15; 28:25–27). Unlike Matthew, Luke does not mechanically align texts and events. His references are more general and inclusive. He often uses the term "It must" *(dei)* of various situations, indicating how events were determined by prophecies: the suffering and glorification of the Messiah (Luke 9:22; 17:25; 24:7; Acts 3:21; 17:3), the apostasy of Judas and the election of Matthias (Acts 1:16–22), the sufferings of Paul (Acts 9:16), and of all Christians (Acts 14:22).

(1) Literary Prophecy. Specifically Lukan is the use of literary prophecy. Not texts from Torah, but utterances of characters in the narrative are explicitly shown to be later fulfilled. Only Luke has the three passion predictions (Luke 9:22, 44; 18:32–33) noted in the resurrection accounts as having been fulfilled (24:6–8, 44). Jesus' prediction of his witnesses' tribulations (Luke 21:12–15) is literally fulfilled in the narrative of Acts (4:3–5, 14; 5:17–42). His instruction about the proper response to unbelieving cities (Luke 9:5; 10:11) is carried out by the missionaries in Acts (13:51). Jesus says that the Twelve are to be judges over Israel (Luke 22:30), and they exercise such judgment among the people in Acts (5:1–11). The prophet Agabus predicts sufferings for Paul (Acts 21:10–14) that speedily come true (21:30–35).

(2) Programmatic Prophecy. Of particular importance for Luke's narrative are literary prophecies which serve a programmatic function. They are spoken by characters at critical junctures to interpret the narrative which follows. The reader understands the plot development as a fulfillment of the prophecy. The most obvious example is Jesus' statement in Acts 1:8, which serves as a guide to the rest of Acts (Dibelius 1956: 193–94). Similarly, at the end of Acts Paul's final statement, "the salvation of God has been sent to the gentiles, they will listen," is understood as having reached fulfillment among Luke's readers. Prophecies at the end and beginning of the gospel are also important. Jesus' promise of a "power from on high" (Luke 24:49) enables the reader to perceive the ascension (Luke 24:50–53; Acts 1:9–11) not as an absolute departure but as a transformed presence, and the gift of the Spirit (Acts 2:1–4) as fulfilling Jesus' saying, "I will send the promise of my Father upon you." The saying of Simeon, "This child is set for the fall and rising of many in Israel and for a sign that is spoken against" (Luke 2:34), prepares the reader to understand the entire gospel narrative as the story of a prophet whose ministry creates a division among God's people (Johnson 1977: 86–91).

(3) Speech-narrative Prophecy. Luke even arranges speech and narrative to form a "prophecy-fulfillment" pattern. He places speeches so that the narrative following them fulfills their point, often ironically. Jesus declares that a prophet is not acceptable in his own country, and his townspeople immediately reject him who is a prophet (Luke 4:16–30). Luke states that sinners accepted the prophet John, but the Pharisees rejected God's plan for them (7:29–30). Next he quotes the charge that Jesus was a friend of tax collectors and sinners (7:34), then shows Jesus in the following story to be accepted by a sinful woman and rejected by a Pharisee (7:36–50). Stephen, described as a prophet filled with the Holy Spirit, accuses the Jewish leadership of rejecting the prophets and of resisting the Holy Spirit; they respond by killing him (Acts 7:51–60). Paul warns the Jews of Antioch in Pisidia not to reject the good news lest it be given to others; they reject it, and the gospel goes to the gentiles (Acts 13:40–48). Speech and narrative are mutually interpretive.

4. Prophetic Structure. The prophetic structure of Luke's entire work is established by the relationship between the two volumes. First, the book of Acts both continues the story of the gospel and confirms it (van Unnik 1960). In Acts, Luke provides the first and authoritative interpretation of his own gospel. Acts' perspective is all the more important since Luke had much more freedom to shape it. Second, the two volumes are parts of a two-stage prophetic model. To demonstrate this, it is necessary to move from a

consideration of the prophetic image of the main characters in Acts, to the implications of Luke's portrayal of Moses.

a. The Apostles as Prophets. Acts is appropriately called the Book of the Holy Spirit (Lampe 1955). The Spirit actively intervenes in the story, impelling and guiding it (8:29, 39; 10:19; 11:15; 13:2; 15:28; 16:6; 20:22). Indeed, Luke includes five separate accounts of the Spirit's manifest "outpouring" on believers (2:1–4; 4:28–31; 8:15–17; 10:44; 19:6). For Luke, all Christians "have" the Holy Spirit. But the most important of his characters are described as "men of the Spirit" in a special fashion. Luke does not call them "prophets," reserving that title for relatively minor actors (see 11:27; 13:1; 15:32; 21:10) (Ellis 1970). He does however, describe them in terms which mark them as prophets. The characters in Acts who fundamentally advance the plot (Peter, John, Philip, Stephen, Barnabas, and Paul) are described in stereotypical terms. They are "filled with the Holy Spirit" (4:8; 5:32; 6:3; 7:55; 11:24; 13:9). They are bold (*parresia*) in their proclamation (4:13; 13:46; 28:31). They proclaim "good news" (5:42; 8:4, 12, 25, 40; 11:20; 13:32; 14:7; 15:35), or the "Word of God" (4:29; 8:14; 13:5). They are witnesses (2:32; 10:41; 13:31; 22:20). They work signs and wonders (*semeia kai terata;* 4:30; 6:8; 8:6; 14:3; 15:12). They preach and perform these wonders "among the people" (*laos*), the Jewish population considered as God's people (3:12; 4:1; 6:8; 13:15). These characteristics suggest one image in the biblical tradition, that of the prophet.

b. Jesus the Prophet like Moses. When Peter interprets the outpouring of the Spirit at Pentecost for his hearers—and Luke's readers—he cites the prophecy of Joel 2:28–32 that the Spirit will be poured out on all flesh (Acts 2:17–21). Luke makes three small but significant changes in the Joel citation. He changes Joel's "after these things" to "in the last days," thereby defining Pentecost as an eschatological event. He adds the words "and they shall prophesy" in v 17, accentuating the prophetic character of the Spirit already suggested by the citation. He adds the words, "and signs on the earth below" in v 19, to form the combination "signs and wonders." By these changes, Luke brings together three elements—an eschatological Spirit of prophecy, manifested by signs and wonders—which in the biblical tradition suggest the specific image of Moses, the first and greatest of the prophets (cf., e.g., Ps 78:11–12, 32, 43). The text of Deut 34:10–12, in fact, had given rise to the messianic expectation of a "prophet like Moses":

> There has not arisen a prophet since in Israel like Moses, whom the Lord knew face to face, none like him for all the signs and wonders which the Lord sent him to do in the land of Egypt … and for all the mighty power and all the great and terrible deeds which Moses wrought in the sight of all Israel.

This expectation remained alive (cf. 4QTestim, 1–5) despite the statement of Deut 34:9 that "Joshua son of Nun was full of the spirit of wisdom, for Moses had laid his hands on him" (Teeple 1957).

The notion of a prophet whom "God raised up" had obvious potential for the proclamation of a resurrected messiah (Dupont 1967: 149). Immediately after the Joel citation, in fact, Peter refers to Jesus in this fashion:

> Jesus of Nazareth, a man attested to you by God with mighty works and wonders and signs which God did through him in your midst … this Jesus you crucified … but God raised him up.

Jesus is described in terms which in this connection unmistakably recall the prophet Moses.

In the narrative about the apostles, Luke emphasizes that the power active in their prophetic witness is the Spirit of Jesus (Acts 2:33; 3:13; 4:10; 13:30; 33). As Elijah gave a twofold portion of the Spirit to Elisha, so have the apostles received a manifest bestowal of Jesus' Spirit. The specific imagery is Mosaic, but so in fact was the biblical portrayal of Elijah and Elisha. The rejection of the apostles is foreshadowed by the passages recalling Jesus' rejection by humans and vindication by God (2:23, 36; 10:39). The longest of these statements relieves the people of responsibility because of their ignorance (3:17). And when he offers repentance to them, Peter draws an explicit connection between Jesus and Moses (Acts 3:22–23; Deut 18:15, 18–19):

> Moses said, "The Lord God will raise up a prophet among your brethren as he raised me up. You shall listen to him in whatever he tells you. And it shall be that every soul that does not listen to that prophet shall be destroyed from the people."

Both the apostles and Jesus, therefore, are described in terms reminiscent of Moses. The connection is made unmistakably in the description of Moses found in Stephen's speech (Acts 7:17–44). It appears to be a straightforward retelling of the biblical story. Closer analysis shows that Luke selected and structured the account of Moses so that it matches precisely the story of Jesus and his witnesses (Johnson 1977: 70–76).

c. The Mosaic Pattern. Moses' story falls into three stages: a first sending and rejection; an installation in power; a second sending and rejection. At the time when the promises to Abraham were about to be fulfilled (7:17), Moses is sent by God to "visit" the people and "save" them. They are "ignorant" of his identity and role, so they reject him a first time. Moses is forced into exile (7:23–29). While in exile, Moses encounters God and is empowered by him to return to the people a second time (7:30–34). Moses then leads the people out of Egypt with "signs and wonders." But the people reject him and his words a second time, preferring an idol made of their own hands. Those who reject him this second time are themselves to be rejected (7:39–43).

Moses is therefore sent twice, the first time in weakness, the second time in power. There are two offers of salvation to the people. The first is rejected out of ignorance, and leads to a second chance; when this is refused despite the experience of manifest signs and wonders, God rejects the people. These elements are striking enough, but Luke goes on to make the connection between Jesus and Moses absolutely clear. At the heart of Moses' story we find precisely the sort of statement concerning him made elsewhere about Jesus (Acts 7:35–37):

> This Moses, whom they refused, saying "Who made you ruler and judge?" God sent as both ruler and deliverer by the hand of the angel that appeared to him in the bush. He led them out, having performed wonders and signs in Egypt and at the Red Sea and in the wilderness for forty years. This is the Moses who said to the Israelites, "God will raise up for you a prophet from your brethren as he raised me up."

Did Luke's perception of Jesus' death and resurrection shape his portrayal of Moses? Or did the influence move in the opposite direction? We cannot know. It is clear, however, that this understanding of Moses shows the "necessity" of a prophet's suffering before glory and explains why Luke begins with "Moses and all the prophets" to demonstrate that necessity (Luke 13:33–34; 24:25–26, 44–46). The Mosaic pattern also establishes the typology and succession of spiritual authority important for Luke (Minear 1976: 81–147). Jesus is the prophet like Moses. Jesus had not, however, only been "raised up" in the sense of being "chosen"; he is "raised up" by the resurrection as Lord (Ps 110:1; Acts 2:34–36). As Moses "received the living words and gave them" to the people in the desert (Acts 7:38), so does the resurrected Jesus receive the Holy Spirit from God and pour it out on his followers (Acts 2:33). In the proclamation of these witnesses, the saving message of Jesus is filled with prophetic power and bears an equally powerful threat: those not listening to the voice of "this prophet" will be "cut off from the people" (3:23).

d. The Gospel in the Light of Acts. The pattern of the Moses story provides the basic structure for Luke's two-volume work. The gospel is the story of God's first sending of the prophet Jesus to "visit" his people for their "salvation" (Luke 1:68; 7:16; 19:44); of their initial rejection of this salvation, out of ignorance; and of Jesus being "raised up" out of death. Acts recounts Jesus' establishment in power, manifested by the gift of the Holy Spirit; the sending out of his witnesses empowered by that Spirit; and the second offer of salvation to Israel "in his name" (Acts 4:12; 5:31). This time, however, the cost of refusal is separation from God's people.

This pattern explains why Luke's geographic structure makes the Jerusalem narrative central. In Jerusalem the first rejection, the empowerment, the second offer, and the issue of the acceptance or rejection by the people are all played out. The geographic structure serves the story of the prophet and the people.

Luke was freer to shape this pattern in Acts than in the gospel. But if Acts provides Luke's understanding of the gospel story, we can expect to find within the gospel's tighter constraints intimations of this image of Jesus (Lampe 1955–56), and we do. When Jesus raises a widow's son (Luke 7:11–15), the story concludes (7:16):

Fear seized them all, and they glorified God, saying, "A great prophet has arisen among us," And, "God has visited his people!"

The reader cannot but hear echoes of this earlier acclamation when later reading Acts 3 and 7. Likewise the voice at the transfiguration, saying "Listen to him" (Luke 9:35), anticipates Luke's development of the Mosaic image for Jesus in Acts 3:22. Finally, the disciples on the road to Emmaus (Luke 24:19) speak of "Jesus of Nazareth who was a prophet mighty in deed and word before God and all the people." The accuracy of their description is apparent only in the light of Acts (Gils 1957).

Stylistic tendencies, narrative devices, and literary structuring all help define the *mythos* of Luke-Acts as the story of the Prophet and the People. The next section will follow the plot through the gospel and Acts. The Markan framework is assumed, and particular attention is paid to specifically Lukan redaction. This reading will in turn make the *dianoia* of Luke-Acts clearer.

E. The Prophet and the People

1. The Gospel Narrative. a. The Infancy Account. Luke's infancy account (chaps. 1–2) is a form of haggadic midrash (cf. R. E. Brown 1977: 557–62), with language evoking both specific texts and the general atmosphere of the biblical world. After the elegant Greek period of the prologue (1:1–4), the reader is immediately transported to the world of Ruth and the Judges (1:5). The story of Jesus is thus rooted in the longer story of God's people. The infancy narrative also points forward, establishing by means of programmatic prophecies motifs that are later developed (Minear 1966).

The infancy account has a complex internal structure. It contains two sets of contrasting diptychs (Laurentin 1957). The annunciation to Zechariah (Luke 1:8–23) is contrasted to that made to Mary (1:26–38), and the birth of John (1:57–66) is placed against that of Jesus (2:1–21). The first diptych is followed by the visitation of Mary to Elizabeth (1:39–45) and the canticle of Mary (1:47–55). The second diptych is followed by the Purification, with its canticle and prophecy by Simeon, and praise by the prophetess Anna (2:22–38). A transition to the ministry is provided by the discovery of the young boy Jesus in the Temple (2:41–51). Short summaries describing the growth of Jesus and John also point to their future roles (1:80; 2:52). As always, the geographical center is in Jerusalem, with the narrative beginning (1:8) and ending (2:42) there.

The prophecies and canticles alert us to the significance of John and Jesus. They are both prophetic figures. John will "go before him in the spirit and power of Elijah … to prepare a people for the Lord" (1:16–17). Luke does not need to make a connection between John and Elijah later (cf. Luke 9:36 against Matt 17:11–13), for he has already made it here. Zechariah says of John, "You, child, will be called prophet of the most high" (1:76–77). John will be "great before the Lord" (1:15). But Jesus "will be great and will be called Son of the Most High" (1:32). They both stand in the line of the prophets, but whereas John remains precursor (cf. 7:24–35), Jesus is Messiah and Son and Lord (cf. 1:32–33).

Luke's characteristic preoccupation is the meaning of John and Jesus for Israel. John will "prepare a people for the Lord" (1:17), and in his canticle, Zechariah praises God for the "visitation" of his people to redeem them in fulfillment of his promises to Abraham (1:68–69; see Acts 7:17). The figure of Abraham and the fulfillment of God's promises to him play a more central role in Luke-Acts than in the other gospels (e.g., Luke 16:22–31; 19:9; Acts 3:25; 7:2–8; 13:26), precisely because Luke is concerned to connect the church's story to that of Israel (Dahl 1966). The language of "God's visitation" is echoed later (Luke 7:16; 19:44; Acts 7:23; 15:14) and signifies God's intervention to save his people (Comblin 1956).

Jesus' ambiguous relationship with the people is shown in the presentation scene. The "righteous and devout" Simeon had been awaiting the "consolation of Israel." When he takes the child in his arms, he praises God for allowing his eyes to "have seen thy salvation," which will be a "light of revelation unto the gentiles and for glory to thy people Israel" (2:29–32). The reader is here prepared for the spread of God's message to the gentile world (cf. Acts 13:47), but Luke's interest centers on the fate of Israel (cf. George 1968). The salvation brought by Jesus is to be its "glory." But then Simeon projects a harsher vision: Jesus will cause a division in the people (2:34). This programmatic prophecy is critical for understanding Luke's subsequent narrative. The pattern of the prophet like Moses would lead us to expect a complete rejection of the prophet sent by God, but Luke's alteration of that pattern shows the reader

instead a *division* within the people of God (Jervell 1972: 41–72). Some accept God's prophet, and some do not. Whether they are part of God's authentic people depends on their choice.

b. The Prophetic Messiah. In the ministry narrative Luke continues to link John and Jesus. Luke makes clear that John is a prophet by stating, "the word of God came to John" (3:2). From this point, the "word of God" becomes thematic in Luke-Acts. It provides an explicit theological valuation of the speech of John, Jesus, and Jesus' followers and links them together in a succession of prophetic authority. In the parable of the sower, "the seed is the word of God" (Luke 8:11; see also 5:1, 8:21, 11:28), and in Acts, "the word of God" is synonymous with the Christian mission, "so the word of God grew and prevailed mightily" (Acts 19:20; see also 4:31; 6:2, 7). Jesus' baptism by John also suggests a prophetic anointing. Luke removes John from the scene to show that it is God who bestows the Holy Spirit on Jesus (Luke 3:21–22).

That Jesus is a prophetic Messiah is the point of Luke's version of the rejection in Nazareth (4:16–30). He moved the story from its later position in Mark to the beginning of Jesus' ministry, expanding it into a programmatic statement on the nature of that ministry (Tiede 1980: 19–63).

The reader has learned that Jesus received the Spirit bodily (3:22), was "full of the Spirit" when tempted (4:1), and began his preaching "in the power of the Spirit" (4:14). Now Jesus reads from Isaiah, "The Spirit of the Lord is upon me because he has anointed me to preach good news to the poor …" (4:18; cf. Isa 61:1–2; 58:6), and announces starkly, "Today this scripture has been fulfilled in your hearing" (4:21). Luke understands Jesus literally to be a prophet "anointed" by the Spirit, and therefore messianic (cf. also Acts 4:27; 10:38). His mission is to proclaim deliverance to the outcast and afflicted.

The other aspect of the prophetic ministry is that it causes a division in the people. The townspeople hear him gladly at first, but turn against him when he compares himself to Elijah and Elisha (4:25–27). They were prophets through whom God "visited" people outside the historical Israel. The townspeople represent those Jews who resist a visitation to any but themselves.

The next section of the gospel showing intensive Lukan redaction (chaps. 6–7) continues the prophetic pattern. Jesus proclaims blessings to the poor and woes to the rich in his Sermon on the Plain (6:20–26), thus fulfilling the programmatic prophecy of 4:18 (Schubert 1954: 180). Likewise, when Jesus sends a message to John (7:21–22), his list of wonders culminates in "the poor have the good news preached to them." The language of "rich and poor" in the first 16 chapters of the gospel is used in thematic statements and has the literary function of demonstrating that Jesus is the prophetic Messiah who proclaims Good News to the outcast, and as such is rejected by the rich and powerful. In the narrative itself, the role of "the poor" is played by the sinners and tax collectors, while the role of "the rich" is played by the Pharisees and teachers of law. Because God visits his people in Jesus' ministry, those who reject the prophet are themselves rejected from the people (Johnson 1977: 132–44).

The pattern is rounded out in chap. 7. Jesus compared himself to Elijah and Elisha in 4:25–27; now he works miracles that imitate theirs: as Elisha healed a foreigner through the intercession of a Jewish girl (2 Kgs 5:1–14), Jesus heals a gentile centurion through Jewish intercession (Luke 7:1–10). As Elijah raised a widow's son (1 Kgs 17:17–24), Jesus raises the widow of Nain's son (7:11–15). In the response Luke's thematic concern is explicit: Jesus is a "great prophet whom God raised up" and in his actions, God is "visiting his people" (7:16). Precisely at this point, Jesus sends word to John that "the poor have the good news preached to them" (7:22).

The conflict within the people generated by Jesus' prophetic ministry now emerges. Jesus praises John as a prophet and more than prophet (7:26). But John had been accepted as such only by "the people and the tax collectors"; in contrast, the "Pharisees and teachers of law" had rejected John, and therefore, "rejected God's plan for themselves" (7:29–30). They rejected John because he had a demon. They now reject Jesus because he is "friend of tax collectors and sinners" (7:34). Luke makes the following story "fulfill" the point of the sayings. Jesus is accepted by the sinful woman; he is rejected by the Pharisee who does not recognize in him a prophet sent by God (7:36–50).

The division in Israel is between the people of the land—in particular, those decreed outcast or marginal by ritual law—who by accepting this prophet are thereby being accepted into the people God is forming

around him, and the leaders who already enjoyed "consolation" (6:25; 16:25; cf. 2:25) and accepted neither John nor Jesus, seeking to "justify themselves" (see 16:15; 18:9).

c. Formation of the People. Luke shows a faithful people forming around Jesus from the beginning of his ministry, as sinners (5:1–11) and tax collectors (5:27) leave all (18:28–30) to follow him. From among them he chooses the twelve apostles who will be his prophetic successors (6:13; 9:10; 11:49; 17:5; 22:14; 24:10; Acts 1:2; 1:26; etc.). In 8:1–3, Luke shows us the small core of the restored people, the Twelve and a small group of women in Galilee.

Beginning in 9:1, Jesus prepares a new leadership for the people. Luke sends out the Twelve with authority and power like his (9:2, 11) and has them share in the distribution of food to the needy (9:10–17). Authority over the people and service at table are thereby linked. That these twelve will rule over Israel is suggested by the Lukan Parable of the Pounds (19:11–27) (Johnson 1982), and the parable of the Vineyard (20:9–18). It is made explicit in the bestowal of *basileia* (authority) on them at the last supper (22:30), which is fulfilled by their leadership over the Jerusalem community in Acts (S. Brown 1969: 164).

The formation of the people is sketched dramatically in the journey narrative (9:51–19:44). The transfiguration establishes that this journey is that of the prophet like Moses (Moessner 1983). Luke inserts into the travel framework the largest portion of his sayings material and surrounds Jesus with three groups: the crowd, the disciples (used more often here than in all the rest of the gospel), and his opponents (above all, in this section, the Pharisees). Luke notes editorially exactly what Jesus says to whom. To the opponents who test him, Jesus tells parables of rejection; to the crowds, he gives warnings of judgment and calls them to discipleship. To the disciples, he directs instructions on discipleship: prayer, hospitality, suffering, and the use of possessions (Reicke 1959). Luke arranges these materials, moreover, so that the audiences are alternated; Jesus appears to speak to each group in turn.

As Jesus journeys to Jerusalem to face his rejection and death at the hands of the leaders, Luke shows the prophet forming the true people of God around himself. When the Pharisees test him by asking when the kingdom of God will come (17:21), Jesus answers, "the kingdom of God is in the midst of you." In context, the statement is meant literally: the people obedient to God's rule is being formed by its positive reception of the prophet.

So effective is Luke's literary skill that the reader is not shocked to see a "whole multitude of disciples" (19:37) greet Jesus when he enters Jerusalem nor that the Pharisees typically respond by ordering him, "rebuke your disciples" (19:39). At the end of the journey, Jesus voices a lament over this city which does not recognize "the time of its visitation" (19:44).

d. The Passion Narrative. Luke deviates more substantially from Mark in the passion narrative than does Matthew. He deletes some incidents (like the anointing at Bethany), transposes others (like the charge against the temple, which is applied to Stephen in Acts), adds still others (like Satan entering Judas' heart). And he consistently edits Mark's account. Two emphases emerge from his redaction: the image of Jesus as a *sophos* (sage), and the diminished role of the populace in his death.

Luke shades the image of Jesus to resemble the ideal Hellenistic *sophos* whose self-control, freedom from fear, and courage are a model to his followers. At the supper, Jesus delivers a farewell address, handing over authority to his followers (22:29–30), instructing them and preparing them for the future (22:35–38) (Kurz 1985). In the garden, his followers are overcome with sorrow—a sign of cowardice—unlike Jesus (22:45) (Neyrey 1980). Jesus is still able to heal (22:51) and goes willingly to do his father's will (22:42). He shows his self-control and prophetic authority by his warning to the women of Jerusalem (23:28–31) (Neyrey 1985) and by his offer of paradise to the thief (23:39–43). The wise man is also a just man (*dikaios*). Jesus' innocence, so emphasized by Acts 3:14, is here demonstrated by Pilate's threefold declaration of innocence (23:4, 14, 22), as given again by Herod as well (23:15). It is confirmed by the centurion's statement at the cross. Rather than identifying Jesus as God's Son (as in Mark and Matt), he declares, "Truly this man was righteous" (23:47). More than innocence is implied here, as Luke's other uses of the concept of "righteousness" indicate (cf. Luke 1:6, 17; 2:25; 16:15; 18:9, 14; 20:21; 23:50; Acts 3:14; 7:52; 22:14). Jesus is the "Just One" (Karris 1986).

Luke also minimizes the responsibility of the populace for the death of Jesus, in contrast to Matthew's heightening of it (cf. Matt 27:25). Luke knows and cites traditions blaming the whole people for Jesus' death (cf. Acts 3:14). But in his passion narrative he does all he can to exclude them from the action (Kodell 1969). The leaders of the people actively reject Jesus; the people are at most passive. The division is stated succinctly by the men on the road to Emmaus (Luke 24:20–21):

> … how our chief priests and rulers delivered him up to be condemned to death, and crucified him. But we had hoped that he was the one to redeem Israel.

With the anomalous exception of 23:13 (cf. Rau 1965), Luke makes some fifteen small alterations in Mark to remove the people as far as possible from the proceedings against Jesus (cf.19:45–47; 20:1–2; 21:38; 22:2, 6, 47, 52; 23:1, 2, 27). Characteristically, Mark 15:29 and Matt 27:39 have all the passersby mock Jesus on the cross. In contrast, Luke has only the rulers mock him (23:35). Likewise Luke heightens the leaders' rejection of the prophet, portraying them as challenging Jesus to "prophesy" (22:64; cf. 22:52, 54). The common people, who had come to the death as to a spectacle, turn away "beating their breasts" (23:48). They show signs of repentance. Luke thus prepares for their conversion in Acts.

e. Resurrection and Ascension. As Moses was vindicated by God after his first rejection and sent back to the people with new power (Acts 7:34–38), so is Jesus vindicated by his resurrection, becoming the "prophet whom God raised up" in power (Acts 2:24; 3:13–15). Luke's presentation of Jesus' resurrection is particularly complex, spanning both volumes.

Unique to Luke-Acts is the ascension of Jesus (Luke 24:50–51; Acts 1:9–11; cf. Luke 9:31, 51). Although the ascension appears as a temporary departure, it is clear that Jesus is more present than ever, only in a new, more powerful mode. He is seen by Stephen (Acts 7:55–56) and by Paul (9:1–9; cf. 22:14). The presence of Jesus continues moreover in his spirit, which works through the deeds and words of his witnesses: they preach, teach, and heal "in the name of Jesus" (Acts 2:33; 3:6, 16; 4:10, 29–31; 5:32; 10:43; 16:18; 19:13).

The resurrection accounts of the gospel have several distinctive characteristics. They center in Jerusalem: the women at the tomb are not told to go to Galilee, but are told, "remember how he told you in Galilee" (Luke 24:6). This points to the second feature of Luke's accounts: he shows how Jesus' passion predictions came to fulfillment (Schubert 1954). Third, Luke has Jesus demonstrate "from Moses and all the prophets" how Jesus' sufferings were in fulfillment of the Scripture (Luke 24:25–26, 44). Fourth, the appearances combine matter-of-factness with mystery: on one hand, Jesus' bodily presence is stressed (24:30, 41–43; Acts 1:4; 10:41); on the other hand, he can be mistaken for a stranger (24:13–35), and his appearance can be met with incredulity (24:11, 24, 41). Fifth, the resurrection appearances provide a bridge to the second part of Luke's story: the risen Lord utters programmatic prophecies (24:47–49) which are fulfilled by the narrative of Acts (Dillon 1978).

2. The Acts Narrative. a. The Restored Israel in Jerusalem. The next part of Luke's story is most critical. In the Jerusalem narrative of Acts (chaps. 1–7), he must answer the fundamental question of God's fidelity to his promises, so that his readers will have security (*asphaleia*). To do this, he must demonstrate that in fact God did keep his promises to Israel, which can only be done by showing a restored Israel receiving the blessings God had promised to Abraham. Only then can gentile believers have confidence in the gift given them. Luke must show the identity of this restored people of God, the nature of its leadership, and the transfer of the Good News from Jew to gentile.

Luke's perception of the church as the restored Israel (Schmitt 1953) is signaled by Matthias' election (1:15–26). Luke has created an expectation for the outpouring of the Spirit (Luke 24:49; Acts 1:4, 8), and his natural tendency is to have fulfillment follow prophecy as rapidly as possible. The delay of this particular fulfillment shows how necessary Luke perceived the replacement of Judas in the apostolic circle to be. This can only be because the Twelve symbolize the twelve tribes of the restored Israel (Jervell 1972: 75–112). They are the nucleus of the people that is to be constituted and empowered by the Spirit. When the leadership of the people is in place, then the promised spirit could be given (S. Brown 1969: 94–97).

We have seen how Luke emphasizes the eschatological nature of Pentecost and the prophetic character of the Spirit. The conclusion of Peter's Pentecost speech is particularly important for revealing Luke's understanding of the first community in Jerusalem. After demonstrating that the messianic texts of Torah applied not to David but to Jesus, Peter declares, "Let all the house of Israel therefore know assuredly that God has made him both Christ and Lord, this Jesus whom you crucified" (Acts 2:36). The focus is on Israel. They had rejected the prophet and are now called to repentance. This is their second offer of salvation: "Save yourself from this crooked generation" (2:40).

If the people repent and are baptized, they will receive the Holy Spirit (2:38). But Luke defines this Spirit precisely as "the promise" (2:39). Here the visitation of God according to the promise made to Abraham is brought to fulfillment. For whom is the promise? "To you and to your children." First of all, then, for the Jewish population of Jerusalem, but not only for them: "And to all that are far off, every one whom the Lord God calls to him" (2:39). Those who respond make up the authentic people of God. In his idyllic portrait of the first community, Luke stresses its Jewish character (2:41–47). The community enjoys favor and steadily increases in size. In principle, therefore, the people of God have been restored within historic Israel, even having a universal character since it includes Jews from the Diaspora (2:12–13). Luke could have stopped here, for he has shown that God was faithful to Abraham and that part of the Jewish people enjoyed the blessings of the Spirit. But another issue remains: who are the leaders of this people?

b. Leadership over the People. Peter's speech following the healing of a lame man (Acts 3:11–26) interprets the next part of the narrative. He concludes with a promise and a warning. Those who repent will share in the "times of refreshment" (3:20) within the restored people of God:

> You are the sons of the prophets, sons of the covenant which God gave to our fathers, saying to Abraham, 'And in your posterity shall all the families of the earth be blessed.' God, having raised up his servant, sent him to you first. (3:25–26)

But Peter also warns that those who reject this offer will definitively be separated from the people (3:22–23).

The narrative following this programmatic prophecy focuses squarely on the apostolic witnesses. From the outside, their authority is threatened by the Sanhedrin, and they are twice brought to trial (4:1–22; 5:17–42). Within the people, however, they are established in power and "rule over Israel" (4:23–5:16).

The difference between the two trials is striking. In the first, the apostles are warned to cease preaching (4:21). But after they are newly empowered by the Spirit (4:23–31), they exercise even more authority: collecting and distributing possessions, boldly proclaiming, healing, and radically "cutting off from the people" those who do not acknowledge their prophetic authority (4:32–5:16). The second trial is occasioned by the Sanhedrin's "jealousy" of the apostles' success (5:17). The authorities cannot hold the apostles in prison; an angel frees them (5:19). Afraid of being stoned by the people, the Sanhedrin is reduced to requesting the apostles' presence at a hearing (5:26). And despite the beating they receive, the apostles continue to proclaim Jesus as Messiah (5:42).

The essential narrative point is clearly made. Whatever political machinations are still available to the Sanhedrin, religious authority over Israel—considered as God's people—has passed to the apostles. They rule over "the twelve tribes of Israel."

Once more, Luke could have stopped. But another question remained, which could only be answered by continuing the story "in order." How did the blessing of Abraham reach the gentile world? Was the community represented by Theophilus in essential continuity with Israel, or was it a new thing altogether, only artificially connected to the story of Abraham? Luke must now show how the gospel reached the gentiles. He first prepares a new leadership, using a fragmentary tradition concerning a dispute over the feeding of widows (6:1–6). The seven Hellenists were supposedly to serve at tables. Actually, they too are prophets who carry the mission beyond Jerusalem.

The Jerusalem narrative is effectively concluded with the trial, speech, and stoning of Stephen (6:8–7:60). With his death, the missionaries (except for the Twelve) are scattered and begin spreading the word beyond the city (8:1). We saw above how Stephen's speech offers an interpretation of Luke's entire

narrative. It also contains a startling element of irony. Here is one described as a prophet attacking the leaders (cf. 6:12) for always resisting the Holy Spirit, killing the prophets, and murdering Jesus, the righteous One (7:51–52). They reject this prophetic attack and kill him who is full of the Spirit. And, at the moment of his death, he sees "the righteous one." Luke ends the Jerusalem narrative with a condemnation. It is a condemnation, however, not of the entire people of Israel, but of its leadership (contra Sanders 1984: 113–17). And the narrative's point is essentially positive: despite the hostility and rejection by the leaders, God's blessings were given to the Jewish people in Jerusalem and were accepted.

c. The Gentile Mission. God had always willed in principle that Israel's blessing should be extended to the gentiles (cf. Luke 2:32; 3:6; 4:25–27; 10:1–12; 24:47; Acts 1:8) (Dupont 1979; Wilson 1973). In the narrative of Acts, however, the gentile mission proceeds in a more haphazard fashion than the prophecies might suggest. Although gentiles are preached to because of Jewish rejection, that rejection is never portrayed by Luke as total. Some Jews, even in the Diaspora, convert to the Way. Believing Jews and gentiles together make up the authentic Israel, the people of God (Jervell 1972: 64–69).

As the Hellenist missionaries spread the message, the connection with Jerusalem is maintained. Representatives from Jerusalem confirm the work of Philip in Samaria (8:14–24). Barnabas, shown to be twice loyal to the apostles by receiving a name from them and laying his possessions at their feet (4:36–37), is sent to confirm the Antiochean foundation (11:22). Peter too works wonders beyond Jerusalem, in Lydda and Joppa (9:32–43), ending up in Caesarea. In his conversion of the centurion Cornelius, we are given the first narrative description of gentile conversion and its confirmation in Jerusalem (chaps. 10–11). The church grows organically from its roots in the restored Israel in Jerusalem.

From within this context Luke's hero, Paul, emerges. Glimpsed first as a collaborator at Stephen's death (8:1) and as a rabid persecutor of the Way, he encounters the risen Lord (9:1–9). After his baptism and instruction from Ananias, he preaches Jesus in Damascus and is persecuted, but is given access to the Jerusalem community through the intercession of Barnabas (9:27). He meets still more opposition and is sent to Tarsus (9:30). From there, Barnabas recruits him for the Antiochean church (11:25). Together they take a collection to Jerusalem (11:30) and, upon completing that task (12:25), are sent by the Antiochean church on mission (13:1–3). This summary is culled from a considerably more complex narrative, in which Paul's movements are intermixed with the mission of Philip, Peter, and John in Samaria and Judea, the conversion of Cornelius with its sequel and the imprisonment and release of Peter.

Literary art and theological purpose are here intertwined. Peter, Barnabas, and Paul appear and reappear as the central characters. The complexity of their interactions creates an impression of historical movement, and it also places Paul squarely within the overall missionary effort of the church. Luke thereby makes two points essential to his overall purpose. First, Paul's mission to the gentiles is not idiosyncratic but part of the Spirit-guided mission of the whole church. Second, his mission is intimately connected—and Barnabas' role is here critical—to the believing Jerusalem community and therefore to the restored Israel.

Luke's continuing concern for Israel is demonstrated as well by Barnabas and Paul's first missionary tour. Paul's sermon in Antioch of Pisidia emphasizes the fulfillment of the promises realized in Jesus: "We bring you the good news that what God promised the fathers, this he has fulfilled to us their children by raising Jesus" (13:32). And only when the Jews reject their message do the missionaries turn from them to gentiles. In Iconium and Lystra, the same pattern is repeated (Acts 14:1–21). Jewish rejection leads to a gentile mission. This is how God "opened a door of faith to the gentiles" (14:27), as Paul and Barnabas report on their return to Antioch.

Before Luke can describe Paul's far-ranging missionary work, however, he must first address the legitimacy of gentile inclusion within a messianic community. What were the implications for the church's identity as the people of God? The issue is joined by the Jerusalem Council (Acts 15:1–35). The council forms a watershed in the Acts narrative (Haenchen 1971: 461–62). Before it, all of the apostles were at least ostensibly in view. After it, Paul's work totally dominates. The council brings Peter back into the narrative for the last time. At the council, James is the chief spokesperson for the Jerusalem church, and he appears only once again to ratify its decision (21:18).

The story of the council itself forms the climax of a complex plot development that had quietly been providing the background for Paul's emergence. Acts 15 is intelligible only if read in conjunction with the conversion of Cornelius, for Luke shows in the narrative itself how the decision to recognize the full status of gentiles within the messianic people resulted from the interaction of divine guidance and human obedience (Johnson 1983).

The Jerusalem leaders had confirmed Peter's decision to baptize gentiles (11:18), but the issue of fellowship remained, an issue critical above all for Jewish believers, since they were already bound to Torah. Did gentiles belong to the people on an equal footing? Pharisaic believers attacked the foundations of gentile membership in the church, claiming that only full observance of Torah (including circumcision) could lead to salvation (15:1–2). The attack coincides with the arrival of Paul and Barnabas in Antioch, announcing the new mission to the gentiles (14:27–28). Luke effectively draws his main characters from their diverse missions to this one critical decision. The reader already knows God's will in the matter; will the church ratify God's action by its decision?

In the end, it does. No burden is placed on gentile believers beyond the norms already familiar to them by their contact with Torah in the Diaspora (Wilson 1983). The regulations were not conditions of membership in the people, but observances which enabled fellowship with Jewish believers. The decision opened the way for a free gentile mission, for it recognized that gentile believers too were a part of the restoration of Israel (cf. James' citation of Amos 9:11–12 [LXX] in 15:16–17), and that God had "visited them to take from among the nations a people for his name" (Acts 15:14) (Dahl 1957–58). In the narrative of Acts, the council opens the way for a full concentration on the missionary work of Paul.

d. The Mission of Paul. The differences between the Paul of the letters and the Paul of Acts have been thoroughly cataloged; in apostolic style and in theological perspective Luke presents not a historical replica of Paul but one shaped by his own agenda (Vielhauer 1966; Müller 1981). The differences can also be overdrawn (Dupont 1962). More importantly, the divergences result from specifically Lukan literary and religious concerns that affect not only Luke's portrait of Paul but also of all his major characters: the connection to Jerusalem and Judaism; the powerful works and rhetoric; the stereotypical teaching.

Luke's treatment of Paul is decidedly positive. He designates him an apostle together with Barnabas (14:4), and—more tellingly—a witness (22:15; 26:16) (Rétif 1951). Like the other major figures of the church's mission, Paul is described in specifically prophetic terms (14:3), in his case sharpened by calling him a "chosen instrument" in 9:15 (cf. Jer 1:5 and Gal 1:15), and "light to the gentiles" in 13:47 (cf. Isa 49:6 and Luke 2:32). Paul is also the pastor of the church, as shown by his farewell discourse to the Ephesian elders. Luke here explicitly makes Paul a model for those succeeding him (Acts 20:17–35) (Prast 1979).

Paul was not alone or even the first in bringing good news to the gentiles. For Luke, however, he was preeminent in that mission. His ministry was in obedience to Jesus' command, a point emphasized in all three versions of Paul's apostolic call. The first is in direct narrative (9:1–9), the others in Paul's defense speeches (22:6–21; 26:12–23). The three versions tell the same story but with variations: his companions, for example, hear the voice but see nothing in 9:7, but in 22:9 they see the light but are deaf to the voice. The element of shining light is constant, and is connected to the commission to be a light to the gentiles. The climax of each version in fact is reached with the command to go to the gentiles (9:15; 22:21; 26:23). In the defense speeches, this causes an angry reaction (22:22; 26:24). As with the rejection of Jesus in Nazareth, the Jewish rejection of this prophet's message has something to do with its universal scope.

Yet Paul by no means preaches exclusively to gentiles. He turns to them only after repeated rejection in the synagogues. The first time it happens, Paul solemnly announces a redirection of his efforts to the gentiles (13:46). But we still see him preaching to Jews and even converting some, though he twice more declares a turn to the gentiles (18:6; 28:23–29). Even in the last and most somber of these pronouncements, made to the Jewish leaders of Rome, some Jews believe (28:24–25). Indeed, throughout Paul's ministry in the Diaspora, Luke shows a continuing division within the people. Some accept the gospel, others do not (see 17:4; 18:4; 19:9–10). The emphasis in Paul's ministry is definitely on those

who do not, indicated by the distancing characterization "the Jews." It is used once in the gospel (Luke 7:3) and only nine times in Acts apart from Paul. But with reference to those who oppose Paul, Luke uses *Ioudaios* some seventy times.

Despite his rejection, Paul continues to define his mission in terms of God's care for Israel. In the defense speeches above all, Paul portrays himself and his work in terms of Jewish messianic expectation, specifically the Pharisaic hope in the resurrection, which he insists has come to fulfillment in the resurrection of Jesus (see 22:3–4; 23:6; 24:14–21; 26:4–11) (cf. O'Toole 1978). To the Jewish leaders of Rome, this "apostle to the gentiles" declares, "For this reason, therefore, I have asked to see you and speak to you, since it is because of the hope of Israel that I am bound with this chain" (28:20). However much Paul carried the gospel to the "end of the world" (Acts 1:8), he remained for Luke the "teacher of Israel" (Jervell 1972: 153–83).

F. Literary-Religious Themes in Luke-Acts

The *mythos* (story line) of Luke-Acts is the story of the prophet and the people. The *dianoia* (meaning) is God's fidelity to his promises giving gentiles security in their belief. Within this framework other literary and religious subthemes are developed.

1. World Affirmation. Luke-Acts has a positive view of the world. It is perhaps the least apocalyptic of the NT writings. Not only is Luke relatively unconcerned about the end time, but his historical enterprise bestows value on time itself. Luke approves as well those outside the Christian movement. Outsiders are generally regarded as reasonable and open-minded, the highest compliment paid by apologetic literature. The empire is not the instrument of Satan, but the condition for the safety and spread of the gospel itself. Luke-Acts recounts the conversion of gentiles and entirely lacks Matthew's xenophobia: gentiles can be "God-fearers," and even the uncoverted show kindness and intelligence (Acts 28:7–10). The portrayal of Christians corresponds to this perception of outsiders as enlightened. The apostles appear as self-controlled, courageous, just, law-abiding, reasonable men, the farthest thing from fanatics.

Luke-Acts affirms the value of human culture simply by the beauty of its fashioning. By shaping the Good News into literature, Luke implies the compatibility of Christianity and culture: human symbols are adequate vessels of the Good News.

2. The Great Reversal. The prophetic imagery of Luke-Acts is, however, joined to a prophetic critique of human religious expectations and values. In the "visitation of the people" by the prophet, there is effected a great reversal. Human security and complacency is challenged by the Good News. Those who are powerful, rich, and "consoled" within the people, who "seek to justify themselves," and who respond to the prophet only with "testing" and rejection, are themselves "cast down," or "lowered," or in the end, "cut off from the people." Those ordinarily deemed unworthy, lowly, marginal or even outcast are accepted by God and "raised up," becoming part of the restored people. This is the significance of the language of the "rich" and the "poor" (Luke 1:53; 4:18; 6:20–24; 7:22; 14:21; 16:19–31). The rich stand for those who have no need of consolation and who reject the prophet. The poor stand for all who have been rejected by human standards but are accepted by God, and who themselves accept God's visitation in the prophet. Among them are the crippled, lame, blind, and deaf, the sexually mutilated, and all those ritually excluded from full participation in the people. It includes the religiously unrighteous, the "sinners and tax collectors," and those who by virtue of their gender were denied full participation in the people. Luke's portrayal of Mary is emblematic of the way that God reverses the poverty and powerlessness of the human condition. Throughout his narrative, Luke gives positive attention to the role of women. The theme of reversal is emphatically expressed by the inclusion of gentiles (and Samaritans, whether Luke considers them gentiles or not) in the people of God.

3. Salvation. Human values are reversed by God not for the destruction of the wicked but for the saving of the lost. God's "visitation" is for their salvation (cf. Acts 7:25). Luke emphasizes the salvific aspect of the Good News more than any of the other gospels, first of all in the way he shapes the image of Jesus. The Prophet is also Savior (Luke 2:11), who brings salvation (1:69; 19:9) and works saving acts (7:50; 8:36; 8:50). He has "come to save the lost" (19:10). What is said of Jesus in the gospel applies to the apostles' mission in Acts as well. The message of God delivered by these prophets is above all one of

salvation (Acts 15:11; 28:28). The theme of salvation is dominant in distinctively Lukan parables, above all in the parables of the lost sheep (13:3–7), the lost coin (15:8–10), and the lost son (15:11–32) (cf. Marshall 1970: 77–187).

4. The Word of God. The theme of God's word is obviously related to that of the Prophet and the People, for it is through the prophetic word that God addresses the people. Luke emphasizes the power of this word in Acts by showing it empowered by the Spirit and accompanied by signs and wonders. The mission itself can be described as the word of God growing and expanding (Acts 6:7; 8:14; 10:36; 11:1; 12:24; 19:20). In the parable of the sower, Luke interprets the seed explicitly as "the word of God" (Luke 8:11), and the human response of faith is defined in terms of hearing and obeying the "word of God" (Luke 5:1; 6:47; 8:13–15; 8:21; 11:28).

5. Conversion. The word of God, which reverses human expectations, demands a "turning" and acceptance of the prophetic word. Conversion is an important theme in Luke-Acts, intimately connected to the story of Prophet and People. Jesus' ministry is preceded by the word of God spoken through the prophet John, calling to repentance (Luke 3:7–14). Acts opens with the prophetic preaching of Peter, calling for repentance (Acts 2:37–40). Those who enter the people that God is restoring must "turn around" (Luke 5:32; 10:13; 11:32; 13:3–5; 24:47; Acts 3:19; 5:31; 8:22; 11:18; 17:30; 20:21; 26:20). The most impressive example of all, of course, is the "turning" of Paul from persecutor to apostle, and whose conversion/call is so paradigmatic that it is repeated three times (Acts 9:1–9; 22:6–11; 26:12–18).

6. The Response of Faith. God's restored people answer his visitation with "fruits worthy of repentance" (Luke 3:8; Acts 26:20). In the first place is faith. God requires faithfulness in return for his fidelity. In Luke-Acts, faith combines obedient hearing of the word and patient endurance (S. Brown 1969). It is not a momentary decision, but a response which grows and matures (Luke 8:15; 17:5–6). Essential to the response of faith is prayer, which is made thematic by Luke (Trites 1978). Jesus prays throughout his ministry (3:21; 5:16; 6:12; 9:28–29; 11:1; 22:41–44) and teaches his disciples to pray (11:2–4; 18:1; 22:46). Luke also provides splendid examples of prayer, showing that for this people, life is defined first of all by its relationship with God (1:46–56, 68–79; 2:29–32; 10:21–22; 22:42; Acts 1:24–25; 4:24–30).

Conversion demands that humans change their behavior in imitation of God. As God welcomes all into his people, so are Christians expected to show hospitality. The opening of the home and heart to the stranger is explicitly connected to the theme of accepting or rejecting the prophet (Luke 9:3–5; 10:2–16), and Luke provides explicit models for this response (Luke 10:38–42; Acts 16:11–15). Similarly, Luke's instructions on the use of possessions have their logic in the pattern of God's visitation. The prophet permits a place in the people for the poor and outcast. Those who accept the prophet are to share their possessions with the needy, whether through almsgiving (Luke 12:32–34; 16:1–13) or by the total donation of what they possess in a community of goods (Acts 4:32–37) (Johnson 1977). Finally, as God's visitation of the people for salvation is a revelation of his loving-kindness above all to the outcast (Luke 1:52–53, 58) so are his people to reach out in love to all (Luke 6:32–36; 10:27–37).

These are not all the literary and religious themes of Luke-Acts, but this listing demonstrates how the rich subthemes find their coherence in the story of the Prophet and the People by which Luke convinces his gentile readers that God's fidelity to his promise should give them confidence in their commitment to him.

LUZ (PLACE) [Heb *lûz* (לוּז)]. **1.** Formerly the place name for Bethel (Gen 28:19; 35:6; 48:3; Judg 1:23; *Jub.* 27:19, 26). According to Gen 28:10–22, it was Jacob who renamed the place Bethel after he encountered God in that place (M.R. 172148).

The tribal-boundary descriptions locate Luz on or near the common boundary between Joseph (Josh 16:1–3) and Benjamin (18:11–13). These two texts have occasioned some dispute regarding the actual geographical relationship between Luz and Bethel. One could interpret *wĕyāṣā᾽ mibbêt-᾽ēl lûzāh* "going from Bethel to Luz" (Josh 16:2) to mean that the border ran from Bethel to Luz and thus that the names indicated two distinct sites. Then the note that identifies Bethel with Luz in Josh 18:13 might be judged an interpolation, especially if one understood Beth-aven of 18:12 to be a distortion of Bethel. Having argued in this way, Noth located Luz at Beitîn, and he regarded Bethel as the name of a sanctuary in its immediate proximity which eventually gave its name to the town of Luz (Noth *Josua* HAT, ^{2}1953: 101, 106, 109).

According to another interpretation, Luz and Bethel were successive names for one place. In favor of this position one may argue that the *āh* ending on *lûzāh* in Josh 16:2 is not necessarily locative (cf. the second *lûzāh* in Josh 18:13). Then one may interpret Bethel-Luzah as a compound name, as both LXX A (v 1) and LXX B (v 2) seem to have done (Kallai *HGB*, 129–31, 143).

2. A city built in the land of the Hittites by a former citizen of Bethel whom the conquering house of Joseph spared because he had shown them an entrance to Bethel (Judg 1:26). It has generally been understood that "the land of the Hittites" refers to the territory of Syria or Lebanon, which belonged to the Hittite empire before its collapse at the end of the LB Age. Another possibility, however, is that in Judg 1:26 the designation refers to the hill country of Palestine (as in Num 13:29; cf. Genesis 23 and 26:34) and that the new city of Luz was located W of Bethel, as suggested by the boundary description of Josh 16:2 (Gottwald 1979: 559–60).

LYCAONIA (PLACE) [Gk *Lykaonia* (Λυκαονια)]. The territory of the Lycaones was a region of Central Asia Minor N of the Taurus range, bordered on the W by Phrygia, on the E by Cappadocia, and on the N (after 232 B.C.) by ethnic Galatia.

A. General History

The name Lycaones is probably related to Lukka, an Anatolian people and territory mentioned in Hittite texts (Houwink ten Cate 1961: 195–56). One detached group of Lycaones, distinguished by W. M. Ramsay (1897: 664, 694; 1906: 366) as the "inner Lycaones," formed a western enclave in the heart of Phrygia; it is mentioned in inscriptions of the 3d century A.D.

In 401 B.C. Cyrus the Younger led his army through Lycaonia (a five days' march of ninety miles) on his way east to contest the succession to the Persian throne with his brother Artaxerxes II. Lycaonia evidently remained loyal to Artaxerxes, for Cyrus treated it as hostile territory and allowed his Greek followers to plunder it (Xen. *An.* 1.2.19).

In 333 B.C. Lycaonia became part of the empire of Alexander the Great and, after his death, of his Seleucid successors. In 188 B.C. the Romans transferred Lycaonia from the Seleucids to the kingdom of Pergamum. When the Romans accepted the bequest of the kingdom of Pergamum in 129 B.C., they bestowed its easternmost regions on neighboring rulers, Lycaonia going to the king of Cappadocia. Mark Antony gave western Lycaonia to Polemon of Laodicea in 39 B.C.; three years later he transferred the whole of Lycaonia to Rome's ally Amyntas, king of Galatia. Soon afterward Amyntas seized the eastern cities of Derbe and Laranda and added them to his realm. When Amyntas fell in battle against unruly tribesmen of the Taurus region in 25 B.C., his augmented kingdom was reconstituted by Augustus as the Roman province of Galatia. In 20 B.C. Augustus gave eastern Lycaonia to Archelaus, king of Cappadocia

(Strab. 12.1.4; 12.2.7; 14.5.6; Dio Cass. 54.9.2). In western Lycaonia he planted two colonies of veteran soldiers—at Parlais and Lystra—and these were linked by a road system with Pisidian Antioch in Phrygia, another colony.

Eastern Lycaonia was bestowed by Emperor Gaius on Antiochus IV, king of Commagene, in A.D. 37. It was taken from him almost immediately afterward, but was restored to him by Claudius in 41 (Dio Cass. 59.8.2; 60.8.1). About that time Derbe, on the frontier between the province of Galatia and the kingdom of Commagene, received the honorific title Claudioderbe. Eastern Lycaonia now became known as Lycaonia Antiochiana (Ptol. Geog. 5.6.17; *CIL* 10.8660); Pliny the Elder calls it *Lycaonia ipsa* "Lycaonia itself" (*HN* 5.95). Western Lycaonia, which remained part of the province of Galatia, may have been distinguished as Lycaonia Galatica.

Under Vespasian (ca. 72) Lycaonia was reunited as a region of the amalgamated province of Galatia-Cappadocia; under Trajan (106) the two provinces were divided again; under Hadrian (137) a new province, the Triple Eparchy, combined Lycaonia, Cilicia, and Isauria.

The *koinon* or league of cities of Lycaonia comprised Laranda (its principal city for long periods), Barata, Ilistra, Derbe, Hyde, Dalisandos, and Savatra, but not Lystra, Axylon, or Iconium (which was a Phrygian city but sometimes, because of its proximity to the regional frontier, reckoned to Lycaonia, as in Cic. *Fam.* 15.4.2; Strab. 12.6.1; Pliny *HN* 5.25).

B. Lycaonia in the NT

Lycaonia first appears in the NT when Paul and Barnabas, forced to depart from Iconium because of a riot stirred up against them, "fled to Lystra and Derbe, cities of Lycaonia, and to the surrounding country" (Acts 14:6). This form of words implies that Iconium, which they had left, was not in Lycaonia. When they heard the Lycaonian language spoken in Lystra (Acts 14:11), they may have recognized that it was sufficiently unlike Phrygian for the difference to be obvious even to people who understood neither language. Whereas Phrygian was related to Thracian, the Lycaonian language was probably descended from Luwian, a language represented in Hittite texts.

Paul and Barnabas had an early opportunity of hearing Lycaonian when the people of Lystra, excited by Paul's healing a congenitally lame man, shouted that the gods had come down to them in human form. The two missionaries did not understand the words, but soon gathered their purport when preparations were set afoot to pay them divine honors. When Luke says that Barnabas and Paul were called Zeus and Hermes, respectively, we may infer that two corresponding Lycaonian gods were mentioned. On the other hand, there is evidence for the joint worship of Zeus and Hermes in that neighborhood: a 3d-century A.D. inscription from Sedasa (some 25 miles from Lystra) records the dedication to Zeus of a statue of Hermes by men with Lycaonian names (Calder 1910: 1–6), and an altar found near Lystra in 1926 is dedicated to the "hearer of prayer" (Gk *epēkoos*), i.e., Zeus, and Hermes (*MAMA* 8.1).

The Lystrans were naturally offended when their attempt to worship Paul and Barnabas as gods was repudiated, so they lent a willing ear to opponents of the missionaries who came from Iconium and fomented an attack on them. Paul in particular was fortunate to escape with his life after being stoned and left for dead at the roadside. On the next day the two set out for Derbe, some 60 miles distant. Here they reached the provincial frontier, if indeed they did not cross it: Derbe may have belonged to Lycaonia Antiochiana, as Ptolemy says (5.6.16; cf. Van Elderen 1970: 159–61). Derbe, in any case, was the farthest point they reached in their present journey; they retraced their steps. But they had made converts both in Lystra (notably Timothy, according to Acts 16:1–3) and in Derbe (among whom one Gaius is specially mentioned in Acts 20:4).

Paul passed through Lycaonia on at least one later occasion, and most probably two. On his way from Antioch to Troas with Silas, "he came also to Derbe and to Lystra" (Acts 16:1); at the latter place he persuaded Timothy to join him as his personal assistant. When, a few years later, on his way from Antioch to Ephesus "he went from place to place through the region of Galatia and Phrygia, strengthening all the disciples" (Acts 18:23), Galatic Lycaonia was almost certainly one of the areas visited. On the "south Galatian" view, the Christian communities of Lycaonia were among "the churches of Galatia" to which Paul's Letter to the Galatians is addressed (Gal 1:2; cf. 1 Cor 16:1).

F. F. BRUCE

LYCIA (PLACE) [Gk *Lysias* (Λυσιας)]. A rugged, mountainous district on the SW coast of Asia Minor. According to 1 Macc 15:23, Lycia was among the recipients of a letter from the Roman consul Lucius Calpurnius Piso in the 2d century B.C.E. concerning the Roman alliance with the Jews. Lycia is also mentioned twice in the context of Paul's missionary travels in the book of Acts. Paul changed ships at the Lycian port of Patara on his way to Jerusalem (Acts 21:1) and again at Myra on his journey to Rome (Acts 27:5–6).

The only level land of the district is on the alluvial plains formed by the Limyrus and Xanthus rivers. The elevations of five of the mountains in this W spur of the Taurus range are over 7,600 ft. with the highest reaching 10,125 ft. The mountainous topography accounts for the inhospitable coastline and the complete isolation of Lycia from Pamphylia to the E. The only suitable harbors were at Patara at the mouth of the Xanthus, Myra at the entrance to the Andriacus valley (both silted), Limyra at the mouth of the Limyrus river, and Telmessus on the Gulf of Fethiye (still in use). Pliny stated that Lycia had once had 70 towns, but by the time of his writing only 26 remained.

Little is known about the early history of Lycia, and much of what is known is of a legendary nature. According to Herodotus (1.73), the Lycians came from Crete under Serapedon (the exiled brother of Minos), perhaps via Miletus. The land was originally inhabited by a warlike people called the Solymi, who were driven out of the land by the followers of Serapedon (Homer *Il.* 6.180, 184; 10.430; 12.30). These followers were originally called Termilae, which may be attested in some 4th-century epichoric inscriptions. Lycia was named after the Athenian Lycus, son of Pandion, who was also exiled by his brother Aegeus and settled among the Termilae (Strabo 14.3.10).

The earliest Bronze Age inhabitants were related to the Hittites. Archaeological discoveries indicate that Elmali was inhabited in the EB Age. A tribe called the "Lukka" (or Eg *Lk*), which may have been Lycians, appears in Hittite, Ugaritic, and Egyptian records. In an Amarna letter (EA 38:11f.), the king of Alashiya complains of the aggressions of the Lukki people. In a letter from a Ugaritic king to the king of Alashiya, Lukka Land is mentioned in conjunction with a coastal region; the area is similarly described in Hittite sources as a turbulent region. The Lukka may have been allies of the Hittites at the battle of Qadesh between Rameses II and Mawatalis. Merneptah boasted that he won a victory in his 5th year against an alliance that included the *Lk* (Lukka?) in Libya.

Linguistic evidence indicates that a dialect of the Luwian language was spoken, and Luwian deities can be detected in personal names. The Lycian language and script, with an alphabet containing 29 letters (more than half of which appear to be Greek in form) were in use through the 4th century B.C.E. The language is only imperfectly understood, and some phonetic values are uncertain.

According to Homer (*Il.* 2.876–77), the Lycians allied with Priam and defended Troy against the Achaeans. Xanthus (modern Gunuk) was the principal city of Lycia, which headed a federation of cities and towns. Apollo and his mother, Ledo, and perhaps Hephaestus were the principal Lycian deities. A

lyre on Lycian coins represented Apollo, who had a famous temple and oracle in the city of Patara, where he was fabled to spend his winters.

Lycia was the only power W of the Halys that was not subdued by Croesus (Hdt. 1.28). The Persians conquered the Lycians in 546 B.C.E. after a valiant resistance staged against Cyrus' general, Harpagus, who was stationed at Xanthus. The Lycians supplied Xerxes with 50 ships in his expedition against the Greek mainland (Hdt. 7.92). Lycia was temporarily liberated by Cimon and joined the Delian League for a short time before falling again under Persian control. Lycia was included in the Hecatomnid dominions, submitted to Alexander the Great and, after his death, passed into the hands of the Ptolemies. In 197 B.C.E., Antiochus III conquered the land. After his defeat at Magnesia in 189 B.C.E., the Romans placed Lycia under the control of Rhodes.

The Lycians were given their freedom in 169 B.C.E. The Roman generals Brutus and Cassius, however, sacked Xanthus for money in 42 B.C.E. The Lycians organized themselves into a confederation consisting of 23 cities with six cities (Xanthus, Patara, Pinara, Olympus, Myra, and Tlos) rising to predominant political positions (Polyb. 30.5; Strabo 14.3.2–10). The Lycian constitution was revoked in 43 C.E. by Claudius because of dissension between the cities, and in 74 C.E. Vespasian established the province of Lycia-Pamphylia under a praetorian prefect (Suetonius *Claud.* 25; idem. *Vit. Vespas.* 8; and Dio Cass. 60.17).

In the 4th century C.E., Myra was the seat of a Bishop Nikolas, who was martyred during the Diocletianic persecution of the Church. Saint Nikolas endeared himself to many by his generous habit of gift-giving. He became the patron saint of children and sailors, and through Dutch tradition became the Santa Claus of western Christendom.

SCOTT T. CARROLL

LYCIAN LANGUAGE. See LANGUAGES (INTRODUCTORY SURVEY).

LYDIA (PERSON) [Gk *Lydia* (Λυδια)]. A devout Jew from Thyatira who was converted by Paul in the city of Philippi, as recorded in Acts 16:11–15. Lydia was a worshiper of (the one true) God, i.e., she was a practicing Jew. This may have been a lifelong commitment since there was a colony of Jews in Thyatira (Josephus *Ant* 12.119; Bruce 1951: 312–14). That she was meeting beside a stream on the Sabbath for prayer suggests that there were not enough Jewish men in Philippi to make up a quorum and establish a proper synagogue. Here we see a subtle but important point that Luke is trying to make—while Lydia could not be a founding member of a Jewish synagogue, she can be and is the first European convert to Christendom, and in fact is the founding member of the Christian community which begins to meet in her household (16:40). Jewish women in the Diaspora did participate in the Hellenistic renaissance and may have formed their own religious groups and held meetings for worship or prayer (as may be the case in this story). Nevertheless, there is no evidence of their being allowed to make up the quorum of a synagogue even in less restrictive environments like Macedonia. The evidence of women being financial patrons of Diaspora synagogues does not support another conclusion.

Note also that Lydia felt free, perhaps because of the liberating effect of the Gospel, to go against Jewish custom not only in speaking to Paul in public but also in inviting Paul and those with him, who were total strangers, to come and stay in her house (16:15). Herein we see a story of how the Gospel can free women from previous restraints, giving them new roles even as founding members of new Christian house churches.

It may be that, since the women of Macedonia were often noted for taking leading roles in society even before the time of Alexander the Great (Witherington 1988: 12–13), Lydia's new roles would have caused little or no surprise in the larger community. If, however, there were male Jews in Philippi her leadership role probably would have been surprising to them. Lydia, upon hearing the word of the Lord from Paul, was baptized, receiving the covenant sign of the new religion, something she could not do in Judaism. Thus Luke presents a story illustrating how the Gospel is for all sorts of people regardless of their gender, previous religious background, or economic status.

The name "Lydia" originally designated a person from the country called Lydia, i.e., the Lydian (Bruce 1951: 314). If this is the case in Acts 16, then we do not actually know this woman's name. However, at least as early as Horace (*Carm.* 1.8) Lydia had also become a personal name, and because the country of Lydia had been absorbed into the province of Asia when this story took place it is likely that Lydia is a personal name here (Conzelmann *Acts* Hermeneia, 130; Williams 1985: 273).

The city of Thyatira did exist in Paul's day and had long been a famous industrial center where purple dye was made. We are told that Lydia was associated with her hometown trade by being a seller of cloth colored with this royal purple dye (Acts 16:14). This means that Lydia was probably a financially independent woman, since material dyed royal purple was a luxury item that only royalty and the wealthy could normally afford, and since she has a house which will accommodate not only herself but also both her household (servants?) and guests. Homer (*Il.* 4.141–42) mentions two women who were famous for the art of purple dyeing in Lydia, so apparently the biblical Lydia was following a precedent of women being involved in this trade. It is likely she had come to Philippi, a Roman colony city, to sell her goods to some of the wealthy clientele there.

A. Geography

Ancient Lydia is located in western Asia Minor (modern Turkey). Its original territory included the Hermus (modern Gediz) and Cayster (modern Küçük Menderes) River valleys. The Meander (modern Büyük Menderes) River formed its southern boundary. Separating the Hermus and Cayster valleys is the Tmolus mountain range (modern Boz Daĝ), where the once gold-bearing Pactolus stream rises and flows N to the Hermus plain. The Hermus valley provided a natural overland route from the Aegean coast to the Anatolian plateau. The modern Izmir–Ankara Highway follows this ancient road for much of its length. Under King Croesus in the 6th century B.C.E., the Lydian empire reached its greatest extent, from the Aegean to the Halys (modern Kızıl) River (Hdt. 1.28). Throughout its long history, the chief city of Lydia was Sardis, now the main source of archaeological evidence for Lydian material culture (Hanfmann 1983).

B. History

1. Prehistory. Little is known about Lydia in the prehistoric periods. Small settlements dating to the EB Age (3d millennium B.C.E.) were scattered on the shores of the Gygean lake (modern Göl Marmara) N of Sardis, and traces of LB Age (mid–late 2d millennium B.C.E.) activity have been found in the area of the ancient city. Hittite interest in western Asia Minor is attested by two 2d-millennium rock reliefs with

Hittite hieroglyphic inscriptions, one a seated female on Mt. Sipylus (Manisa Daĝ), the other a warrior figure in the Karabel pass, the latter attributed by Herodotus (2.106) to the Egyptian king Sesostris. Hittite records contain no reference to "Lydia" but "Assuwa" (as "Asia") may refer to Lydian territory in western Asia Minor. The Greek epic tradition concerning the Trojan War names as allies of the Trojans "Maeonians" who come from "Tarne," equated with Sardis by a scholiast (*Il.* 5.43–44). The *Iliad* also refers to "snowy Tmolus" (20.385), the Gygean lake, and the Hermus and Hyllus rivers (20.391–92). Contact between Mycenaean Greeks and Lydians is indicated by mainland-type pottery and its local imitations at Sardis and other sites in Lydia. The Greek historical tradition tells of a dynasty born of Herakles and a Lydian slave woman, the Heraclidae, who ruled Lydia for twenty-two generations prior to the time of Candaules. The last Heraclid king, the uxorious Candaules, was supplanted by Gyges in ca. 685 B.C.E., the first Mermnad dynast (Hdt. 1.7–12).

2. Lydian Kingdom. Greek sources, especially Herodotus (1.6–95), and Near Eastern texts for Lydia during the Mermnad dynasty (ca. 685–547 B.C.E.) record the territorial ambitions and international contacts of the Mermnad kings. Gyges (ca. 685–652 B.C.E.) initiated expansion to the W by attacking Greek coastal settlements (Hdt. 1.14). His relationship with the Greeks, however, was not always hostile. Gyges was the first foreigner after Midas of Phrygia to place offerings in Apollo's sanctuary at Delphi (Hdt. 1.13–14). In response to Cimmerian raids in Asia Minor, Gyges sought an alliance with Ashurbanipal. In the Rassam Cylinder, Gyges is called Guggu of Ludu (perhaps the Gog of Ezek 39:1). Apparently the treaty with the Assyrians and his success against the Cimmerians were short-lived. In ca. 654 B.C.E., Gyges sent troops to help Psammetichus I of Egypt in his war of liberation against Lydia's former allies, the Assyrians (Luckenbill 1927: 297–98). And two years later Gyges himself was dead, the victim of another Cimmerian raid. Gyges' son and successor, Ardys (ca. 652–615 B.C.E.), and his successor, Sadyattes (ca. 615–605 B.C.E.), still had to contend with periodic Cimmerian incursions while pursuing their predecessor's policy of territorial expansion in Ionia. It was not until the reign of Alyattes (605–560 B.C.E.) that the Cimmerians were finally driven from Lydia. The appearance of the Scythians and Medes to the E, however, posed a new threat to Lydian security. After five years of indecisive battles between Alyattes and Cyaxares the Mede (during the sixth of which Thales of Miletos predicted the solar eclipse of May 28, 585 B.C.E.), peace was concluded under the auspices of the rulers of Cilicia and Babylon. To seal the pact, Alyattes' daughter was married to Astyages, son of Cyaxares (Hdt. 1.74). The offspring of this union, Mandane, became the mother of Cyrus the Great. Alyattes' son, Croesus (560–547 B.C.E.) ruled a vast empire, the downfall of which is well known to readers of Herodotus. Croesus' political connections extended from the Near East to the city-states of mainland Greece, Sparta and Athens chief among them. His extravagant dedications at Greek sanctuaries, from the quantities of precious metal at Delphi to the columns of the archaic Artemision at Ephesus, are attested in literary and archaeological sources. During his reign, he reduced all of the Greeks in Asia to tributary status (Hdt. 1.26). To the Greeks, Croesus' life followed a classically tragic pattern, a king whose great wealth and power so blinded him that he lost everything. Less than 50 years after his downfall, this last Mermnad king appears in all his Hellenized Oriental finery on a red-figure amphora painted by Myson, an Athenian (Louvre G 197), and, by the early 5th century, in the *Epinicia* of Bacchylides (3.23–62).

3. Persian Period. The agent of Croesus' fall from power was Mandane's son (and Croesus' nephew) Cyrus, the king of Persia. Under Cyrus and his successors, the former Lydian empire became a prized satrapy, Saparda, with its capital at Sardis. This city, third in importance after Persepolis and Susa, was the target of the unsuccessful Ionian revolt in 499 B.C.E. (Hdt. 5.100–102) and the mustering point for Cyrus the Younger's march to Cunaxa in 401 B.C.E. (Xen. *An.* 1.2.2–3). The satrapy itself was subject to the plundering raids of the Spartan king Agesilaus in the early 4th century B.C.E. (Xen. *Ages.* 1.33–34). Linked by the Royal Road to the Aegean coast and inland areas, Lydia continued to prosper under the influence of Ionian Greek and Achaemenid/Persian cultures.

4. Hellenistic and Roman Periods. In the course of liberating the Greeks from their Persian masters, Alexander the Great acquired Lydia in 334 B.C.E. (Diod. Sic. 17.21.7). Subsequently, the Seleucid kings ruled the region until 189 B.C.E., when Antiochus III was defeated by the Romans at Magnesia (Livy

37.44–45; 1 Macc 8:8). Lydia passed into the hands of the Pergamene kings, where it remained until the death of Attalus III in 133 B.C.E. This last Attalid king bequeathed his kingdom to Rome under the terms of his will, and Lydia soon became part of the proconsular province of Asia. The Mithridatic Wars (88–63 B.C.E.) and a disastrous earthquake in 17 C.E., which leveled twelve cities in western Asia Minor, Sardis foremost among them, contributed to the general decline of the region. Under the Roman emperors, however, Lydia regained some of its former glory. Diocletian created the "new" province of Lydia (ca. 300 C.E.), included in the diocese of Asiane. Three of the seven churches of Revelation were located in Lydian cities, a reflection of the importance of the province in early Christian times.

C. Language

Lydian is related to the Indo-European languages of Anatolia, such as Luvian and Hittite. Knowledge of the language is based on a relatively small corpus of inscriptions, around 100, including casual graffiti (Gusmani 1964: 1980). The alphabet makes use of modified Greek and Phrygian letter forms. The earliest inscriptions recovered so far date to ca. 650–600 B.C.E. Lydian persisted through the Persian period, to which the majority of inscriptions belong, including several Lydian-Aramaic bilingual funerary texts. Even when Greek became both the common and official language during the Hellenistic period, Lydian graffiti could still be found as late as the 2d century B.C.E.

D. Religion

Lydian gods emerge as an enigmatic mixture of native Anatolian, Near Eastern, and Greek elements (Hanfmann 1983: 90–96). To identify the uniquely Lydian elements is difficult. Artemis and Cybele (*Kuvava* in Lydian) were the most important goddesses, and Zeus (Lydian *Levs*) is chief among the gods. The Lydian god of wine, *Baki*, entered the Greek world as Bacchus/Dionysos. The major Persian contribution to the native tradition was the introduction of Anahita, the Persian Artemis. Hellenization appears to have changed the form but not the substance of native deities and their cults. Artemis, Cybele as Meter, and Zeus Lydios remain important. In the late 3d century B.C.E., Judaism entered W Asia Minor with the resettlement of Mesopotamian Jewish veteran families in Phrygia and Lydia by Antiochus III (Joseph. *Ant.* 12.3.4). A large synagogue dating to the Roman period at Sardis reflects the enduring influence of Judaism in the region (Hanfmann 1983: 168–90). Christianization was a gradual process, completed in Lydia by the establishment of three of the seven churches of Asia at Sardis, Thyatira, and Philadelphia.

E. Material Culture

Long before the widespread hellenization of Lydia under the Seleucids, the influence of Greece, especially Ionia, is evident in painted pottery, terracotta revetments, and sculpture. Although native elements are observable in these forms of cultural expression, Greek traditions are the formative force. Lydian contributions mainly lie in the luxury arts, such as perfumes and scented ointments (Ath. 15.690b–d), carpets, textiles, and dyes (Pliny *HN* 7.196). According to Herodotus (1.94), the Lydians were the first to coin silver and gold, an attribution now supported by the discovery of a 6th-century B.C.E. gold refinery near the banks of the Pactolus stream at Sardis (Hanfmann 1983: 34–41). To Herodotus in the 5th century, the Lydians appeared close to the Greeks in their customs. The material evidence does not contradict this evaluation.

LYSANIAS (PERSON) [Gk *Lysanias* (Λυσανιας)]. According to Luke, Lysanias was the tetrarch of Abilene when John the Baptist began his ministry (Luke 3:1). Lysanias is not mentioned again in the NT, but the name appears several times in the works of Josephus. A ruler named Lysanias in Josephus died in

36 B.C.E. This has led some scholars to argue that Luke made a chronological blunder by depending on Josephus for the name Lysanias and thereby naming an individual long dead as the tetrarch in ca. 28 C.E. The apparent problem is heightened because Luke gives every indication that his gospel was written with critical care (Luke 1:3). The evidence seems to suggest that there were two individuals named Lysanias who ruled in the same general area but at different times, supporting the accuracy of Luke's account.

1. The earlier Lysanias mentioned by Josephus was the son of a certain Ptolemy (Joseph. *Ant.* 14.13.3; 15.4.1; *JW* 1.13.1). Lysanias, son of Ptolemy, ruled Chalcis in Lebanon (Joseph. *Ant.* 14.13.3). Later references to the name Lysanias in Josephus and Luke do not refer to the father, perhaps indicating a different individual. Because Chalcis was a larger territory than Abilene, it is likely that each was ruled by a separate person.

2. Thus it appears that another individual named Lysanias ruled over the district of Abilene. Josephus mentions that Gaius (Caligula) gave to Agrippa I all of the territory which had belonged to Herod the Great and added Abila to this territory (Joseph. *Ant.* 14.5.1; *JW* 2.11.5). Further inscriptional evidence may bear witness to a second Lysanias who ruled at a later date in the territory of Abilene. An inscription dated no later than 14 C.E., which states that it was the work of a certain Nymphaeus, a freedman of Lysanias, has been found near Abila. It appears that Josephus referred to two rulers named Lysanias but failed to distinguish one clearly from the other, whereas Luke mentioned only the later one.

SCOTT T. CARROLL

LYSIAS (PERSON) [Gk *Lysias* (Λυσιας)]. **1.** See CLAUDIUS LYSIAS.

2. A Syrian of royal lineage appointed regent of the area from the Euphrates to the Egyptian border by Antiochus IV Epiphanes, when Antiochus raided Persia for money ca. 165 B.C.E. (1 Macc 3:33). He was also made guardian of the king's son, Antiochus V Eupator. Lysias was provided with half of Antiochus' army, including soldiers, cavalry, and elephants, and was instructed to defeat the Jews in Jerusalem. Lysias dispatched Ptolemy, the son of Dorymenes, Nicanor, and Gorgias to destroy Jerusalem (1 Macc 3:32–39), but Judas Maccabeus defeated them at Emmaus (1 Macc 3:40–4:25). 2 Maccabees (10:15–23) speaks of Gorgias waging war with mercenaries (presumably the same battle) and another battle between Judas and some Idumeans, but it is not clear whether the Idumeans acted with Gorgias or merely simultaneously.

The next year Lysias himself marched to Idumea and encamped at (or besieged) Beth-zur. Apparently Judas defeated Lysias, who retreated to Antioch for more mercenaries (1 Macc 4:27–35), though 2 Macc 11:6–15 says that the peace terms were negotiated, perhaps implying a standoff, and that Lysias returned to Antiochus V (in Antioch?). The retreat of Lysias gave Judas the opportunity to cleanse the temple in Jerusalem. Next, Judas waged his highly successful campaign in Transjordan (1 Macc 5:19–51 [= 2 Macc 12:2–28]). According to 2 Macc 12:27–28 Lysias was defeated at Ephron, but 1 Maccabees makes no such claim, and Lysias had been previously reported with the king (2 Macc 12:1). Judas meanwhile returned to Jerusalem (1 Macc 5:52–54 [= 2 Macc 12:31]) and next fought the Idumeans (1 Macc 5:65–68 [= 2 Macc 12:32–37]).

Antiochus IV Epiphanes, meanwhile, had been frustrated in his attempts to raise money in Persia (1 Macc 6:1–4). Learning that Lysias had failed in his attack upon Jerusalem and knowing himself to be near death, Antiochus appointed a new subordinate, Philip, to be regent and guardian over Antiochus V (1 Macc 6:14–15), thus setting up Lysias and Philip as competitors for his throne. Lysias heard of this action and set up young Antiochus V as king under his supervision. Seizing the moment of transition, Judas attacked the citadel built by Antiochus in Jerusalem in 167 (1 Macc 6:18–20; cf. 1:33). Lysias and Antiochus marched again on Beth-zur, but 1 and 2 Maccabees disagree about the details. According to 1 Macc 6:32–49, Judas left the citadel for Beth-zur, camped opposite it at Beth-zechariah, engaged in battle, but lost when his troops saw the elephants of the Seleucids. According to 2 Macc 13:14–22, there was a previous skirmish at Modein, won by Judas through an attack on the elephants, followed by another victory by Judas at Beth-zur. A Jewish traitor revealed a secret to Lysias, who negotiated again with Beth-zur, presumably from a victorious posture.

One may surmise that the secret was that the city was out of food since the year was a Sabbatical year when no one could plant crops. So both sources ultimately agree that Lysias was victorious at Beth-zur. Next he besieged Jerusalem, which was facing the same food shortage. During the siege Lysias learned that Philip had set himself up as king in Antioch (1 Macc 6:48–56). Lysias made peace quickly with the Jews and took Antiochus back to Antioch, which he captured from Philip. In 161, however, Demetrius I Soter captured the city and had both Lysias and Antiochus V executed (1 Macc 7:1–4).

PAUL L. REDDITT

LYSIMACHUS (PERSON) [Gk *Lysimachos* (Λυσιμαχος)]. 1. Lysimachus is reported to have composed the additions to the book of Esther (Add Esth 11:1), where he is identified as the son of Ptolemy and a Jerusalemite.

2. According to 2 Macc 4:39–42, Lysimachus appropriated sacred vessels from the temple after being made deputy by his brother, the high priest Menelaus (2 Macc 4:29). Lysimachus, with the apparent support of his brother Menelaus, armed some 3,000 men and attempted to enter the temple treasury. Inflamed by Lysimachus' sacrilege, the crowd attacked the would-be thieves, and Lysimachus was killed near the treasury. Menelaus was charged for the actions of his brother but he escaped punishment by winning the support of Antiochus IV through a substantial bribe to a confidant of the Seleucid king (2 Macc 4:43–50). Lysimachus, along with his brothers Menelaus the high priest and Simon the chief administrator of the temple, were leaders in the hellenizing party in Jerusalem. Although these three brothers were probably not Tobiads (a major family and political power among the pro-Seleucid hellenizers) they certainly would have been closely allied with these opponents of the Oniads, who favored the Egyptian Ptolemies (Tcherikover 1959: 153–54). The Oniad former high priest, Onias III, was murdered at the instigation of the Tobiad Menelaus (2 Macc 4:34). Josephus confuses the family relationships, making Menelaus (formerly known as Onias) the brother of Onias III and Jason (formerly Jesus), high priest and brother of Onias III (*Ant.* 12.5.1 §239; cf. 2 Macc 4:7–20). Lysimachus does not appear at all. (Josephus' confused account did not make use of 2 Maccabees, which chronicles the machinations of the hellenizers in detail, unlike 1 Maccabees, which Josephus did employ.) The illegitimate transfer of high-priestly power from the Oniads to Menelaus and the misdeeds of the hellenizers, including those of Lysimachus, would have embarrassed the priestly Josephus. Josephus would have sought to gloss over uncomfortable facts, including the attempted robbery of the temple treasury at the hand of the high priest's deputy and probably at his instigation. That Lysimachus' attempted robbery should have incited the crowd to murder indicates not merely the gravity of his offense but the growing outrage of the populace of Jerusalem at the activities of the hellenizers. Funds belonging to religious institutions were deemed inviolate by Hellenistic custom regardless of the religion, and Lysimachus' action was thus improper (Goldstein *II Maccabees* AB, 205). Later rabbinic literature would consider the theft of a sacred vessel a capital offense (*m. Sanh.* 9:6). It would, however, be in error to assume that this injunction was in force in the 2d century B.C.E. The reaction of the crowd to Lysimachus' attempted robbery reflected moral outrage at the behavior of the Hellenists, culminating in a sacrilegious act by the brother and deputy of the high priest.

MICHAEL E. HARDWICK

LYSTRA (PLACE) [Gk *Lystra* (Λυστρα)]. A site located at Zoldera near Hatun Saray and lying about 24 miles S of Konya (37°36´N; 32°17´E); it was a moderately important, if somewhat rustic, market town in the relatively backward region of Lycaonia in south-central Turkey. In antiquity, Lycaonia was bounded on the W by Phrygia, by Galatia on the N, Cappadocia to the E, and the Taurus mountains on the S. The most important city in the area, then as now, is Iconium (Konya).

In the years of Roman rule over Asia Minor, Lycaonia owed its importance to its situation on the main road from the west-central coast through the Cilician Gates to the broad plain of Cilicia (Ruge PW 26:

2253–65). Lystra itself was about a day's journey from the main road, at the junction of two other roads which ran N from the northern Isaurian slopes of the Taurus, on the route that was known in antiquity as the *via Sebaste*. The city was a Roman colony, founded by Augustus in 26 B.C., and it was situated on a low hill rising out of the valley (Levick 1967: 51–52). The original settlers of the Augustan colony were veterans of the Roman army; and, despite the fact that they became thoroughly integrated with the local population within a generation or so, Lystra retained some vestiges of its Italian settlement for centuries (the predominance of the native Lycaonian element of the city, however, is illustrated in the story of Paul's visit in the A.D. 40s). One of these Italian features was the use of Latin rather than Greek for public inscriptions and on coin legends. Another was the town's constitution, which retained the traditional civic organization of a Roman colony. The chief magistrates were a pair of officials known as *duumviri*, the town council was referred to as the *ordo decurionum* instead of as the *boule*, as would have been the case in a Greek city, and the Latin word *populus* was used to describe the citizen body. Some Italian cults came to be celebrated along with those of the native gods.

Augustus' choice of the site for this colony was dictated by military considerations. In the course of the civil wars after the murder of Julius Caesar in 44 B.C., Mark Antony had taken control over the E provinces of the Roman Empire—this by arrangement with Augustus after the defeat of Brutus and Cassius, two of Caesar's assassins, in 42 B.C. In the course of a thorough reorganization of the region, Antony had abolished the great province of Cilicia, of which Lycaonia had been a part, because it had not been economically practical for Rome to continue direct control over an area whose economy was seriously underdeveloped. He placed these areas under the control of various local dynasts who could keep better order than the Romans. Lycaonia had fallen to Amyntas of Galatia, and Augustus left him in power after his victory over Antony in 31 B.C. But when Amyntas died in 26 B.C., Augustus had no choice but to reinstate direct Roman government, and the kingdom of Amyntas became the Roman province of Galatia (Syme 1939: 325–32; cf. Levick 1967: 29–41, 195–97). To safeguard this territory, Augustus established a number of veteran colonies at strategic points. Lystra was the southernmost of these colonies, and its location suggests that Augustus intended it to be a base for the campaigns that his governors would wage against the tribes of the Taurus.

Lystra was founded as a military colony to protect Roman invasion routes into the Taurus and, conversely, to protect the main road in the N from raiders out of the mountains. Since the highlands were never brought completely under Roman control, Lystra probably retained its character as a frontier town throughout its history and, despite its Italian foundation, it became very much a Lycaonian town, rather than a Roman one. The nature of the place is best illustrated by Luke's account of the visit to Lystra that Paul and Barnabas made in the A.D. 40s. After Paul healed a cripple, according to the account in Acts (14:8–18), they were greeted by the local inhabitants who called out to them in Lycaonian. These people identified them as the local gods who, through a form of local syncretism, were identified with the Greek gods Zeus and Hermes. This is of some interest because the local Zeus, Zeus Ampelites, was portrayed on reliefs as an elderly bearded figure, and because he is sometimes depicted with a young male assistant. The identification by the people of Lystra of Barnabas as Zeus and Paul as Hermes "as he was the bringer of the word" suggests that they thought that the two men were functioning in the way that they envisaged their own gods as acting: the bearded Zeus was the initiator of the action and Hermes was his agent in carrying out the action. This further suggests that the people may have thought that Barnabas resembled their Zeus, while Paul resembled his helper. The passage is therefore of considerable importance as evidence for the physical appearance of Paul at this stage in his career, as well as for the nature of life at Lystra in this period (Robert 1987: 383; Lane Fox 1987: 99–100).

There is no description of any event at Lystra in literary works later than the Acts of the Apostles, but it is clear from inscriptions, coin finds, and administrative records that the community retained its urban identity until at least the 11th century. The latest finds are very close in time to the Seljuk conquest, and the toponym Zoldera, which preserves the memory of the name Lystra, suggests that it continued to exist for some time after the establishment of the Turkish kingdom at Iconium (Levick 1967: 183). Records of the church councils also make it clear that Lystra was substantial enough to have a bishop of its own and

that its importance was not completely eclipsed by Iconium. The story of Paul's visit may have made it a place of some interest to people living in the Christian empire.

M. The abbreviation used in NT source criticism for the solely Matthean material found in the Synoptic Gospels. See SYNOPTIC PROBLEM; MATTHEW, GOSPEL OF.

MA‹IN (PLACE). See MEUNIM.

MAACAH (PERSON) [Heb *ma‹ăkâ* (מַעֲכָה)]. **1.** Son/daughter (?) of Nahor (Abraham's brother) and the concubine Reumah (Gen 22:24). Maacah's name appears in the genealogy of Nahor (Gen 22:20–24), where it is fourth and last in the list of Reumah's children (the others were Tebah, Gaham, and Tahash). Maacah is often considered to be the eponymous ancestor of the region S of Mt. Hermon (Josh 13:11; 2 Sam 10:6, 8). See also MAACAH (PLACE).

2. Wife of Machir; mother of Peresh and Sheresh (1 Chr 7:16). Maacah's name occurs twice in the genealogy of Manasseh's descendants found in 1 Chr 7:14–19. She is called first the "sister" (v 15) and then the "wife" (v 16) of Machir. Either there were two Maacahs, one Machir's sister and the other his wife, or more probably, vv 15–16 are textually corrupt, the identification of Maacah as Machir's wife (v 16) being preferred.

3. Concubine of Caleb, the son of Hezron; and mother of Sheber, Tirhanah, Shaaph, and Sheva (1 Chr 2:48–49). Maacah's name appears in the Calebite genealogy found in 1 Chr 2:42–55. She is the second of Caleb's two concubines, Ephah being the first (v 46).

4. Wife of Jeiel, father of Gibeon (1 Chr 8:29; 9:35). An ancestress of Saul, Maacah is named in the Benjaminite genealogy found in 1 Chr 8:29–40 and 1 Chr 9:35–44.

5. Wife of David; mother of Absalom (2 Sam 3:3 = 1 Chr 3:2). Maacah is the third wife/mother mentioned in two lists of David's sons born in Hebron (2 Sam 3:2–5 = 1 Chr 3:1–3). As the daughter of Talmai, king of Geshur, her marriage represented a diplomatic tie between David and Geshur and thus a threat to Ishbaal (Saul's son), who claimed sovereignty over Geshur (2 Sam 2:9). See also ABSALOM; QUEEN.

6. Father of Hanan (1 Chr 11:43). Maacah's name appears in the epithet of his son, who is third in a list of sixteen of David's "mighty men" (1 Chr 11:41b–47). This list is appended to the longer one found in 1 Chr 11:26–41a (= 2 Sam 23:24–39) and is found only in 1 Chronicles.

7. Father of Shephatiah, leader of the Simeonites (1 Chr 27:16). Maacah's name appears in the epithet of his son, who is second in a list of twelve tribal leaders reported living during David's reign (vv 16–22).

8. Father of Achish, king of Gath (1 Kgs 2:39). Maacah's name occurs in the epithet of his son, from whom Shimei's runaway slaves sought asylum during the early reign of Solomon.

9. Favorite wife of Rehoboam, king of Judah (1 Kgs 11:21); and mother (?) of Abijam/Abijah and Asa, both kings of Judah (1 Kgs 15:2, 10, 13; 2 Chr 11:20; 15:16); this Maacah was also the daughter (?) of Abishalom/Absalom. She is one of three mothers of kings accorded the title *gĕbîrâ* in the OT (see also 2 Kgs 10:13; Jer 13:18; 29:2). Asa removed Maacah from her position as queen-mother because she supported the worship of Asherah (1 Kgs 15:13; 2 Chr 15:16).

Maacah's relationship to Abijam/h and Asa is problematic. How can Maacah be the mother of them both when Abijam/h is said to be Asa's father (1 Kgs 15:8 = 2 Chr 13:23 [—Eng 14:1])? Various suggestions attempt to resolve this tension. Either (a) the mothers of Abijam/h and Asa had the same name but were different women; (b) Abijam/h and Asa were brothers, not father and son; or (c) Maacah was Asa's *grand*mother, not his mother. Each of these solutions, however, is speculative and not without its own problems. Understanding Maacah's relationship to Abijam/h is further complicated by 2 Chr 15:2, which states that Micaiah, the daughter of Uriel of Gibeah, was Abijam/h's mother. This contradicts the parallel passage found in 1 Kgs 15:10 and the tradition preserved in 2 Chr 11:20, which identify Maacah as his mother. Either (a) the tradition preserved in 2 Chr 15:2 is correct, and the presence of the name

"Maacah" in 1 Kgs 15:10 and 2 Chr 11:20 is secondary; (b) the tradition in 1 Kgs 15:2 and 2 Chr 11:20 is correct and 2 Chr 15:2 represents an exegetical harmonization; or (c) there is no contradiction between the passages: "Micaiah" is simply a variant spelling of "Maacah." Moreover, if one reads "granddaughter" for "daughter," then the two epithets "daughter of Uriel" and "granddaughter of Abishalom" can be viewed as complementary, not contradictory (Uriel being understood as the husband of Tamar, Absalom's daughter).

If Maacah was the daughter/granddaughter of Abishalom/Absalom, the question still remains: Who was he? No place of origin is given for him in the regnal formulas. Was her father/grandfather the son of David, and was Maacah therefore of Davidic lineage? After all, (a) the only other Absalom mentioned in the OT besides Maacah's "father" is this son of David; (b) David's son would be well known and his place of origin unnecessary, and (c) Josephus records that Maacah was the daughter of Tamar and thus the granddaughter of Absalom, David's son (*Ant.* 8.9.1). However, while Absalom is not a common name in the OT, it does not necessarily follow that the two Absaloms are the same person. Moreover, the father's place of origin is missing for all but the last six queen-mothers. Does this mean that all of the other fathers were "well known"? Or does it simply indicate a gap in the writer's sources? Finally, while Josephus does identify the son of David as Maacah's grandfather, another early writer, Jerome *(Qu. Heb.),* maintains that they are two separate people. See also MICAIAH; QUEEN.

LINDA S. SCHEARING

MAACAH (PLACE) [Heb *maʿăkâ* (מַעֲכָה)]. Var. ARAM-MAACAH. MAACATHITE. A Syrian kingdom S of Mt. Hermon in the N Transjordan. Maacah was located E of the Jordan valley and N of the Yarmuk basin. Together with the kingdom of Geshur, Maacah formed the northern boundary of the (sometimes) Israelite territory of BASHAN, which belonged to the inheritance of the half-tribe of Manasseh in the upper Transjordan (Deut 3:14; Josh 13:11). The city of Abel Beth-Maacah (2 Sam 20:14; cf. *Abil-akka* in the annals of Tiglath-pileser III, KAT 265), where Sheba ben Bichri fled during his revolt against David, was probably located on Israel's northern border with Maacah.

When David began his historic expansion of Israelite power into the Transjordan, he was opposed by the Ammonites, whose capital lay opposite Jerusalem at the headwaters of the Jabbok. The Ammonites were joined in their opposition by several petty Syrian states (2 Sam 10:6–8), including Maacah, which probably had no difficulty in recognizing this threat. David's army, under the command of Joab, was trapped between the Syrians and Ammonites in open country. Joab, however, escaped disaster by dividing his forces into two wings, one under the command of Abishai, his brother, the other under himself, and attacking both sides simultaneously. When the Ammonites saw their Syrian allies driven back, they retreated into their stronghold, to which Joab then laid siege. According to 1 Chr 19:6–7, this battle took place before Medeba on the plateau N of the Wadi Mujib (the biblical Arnon) in the central Transjordan. The Ammonites are said to have "hired" the army of Maacah, along with other Syrian elements (in extremely exaggerated numbers) from as far away as Mesopotamia.

D. G. SCHLEY

MAADAI (PERSON) [Heb *maʿădday* (מַעֲדַי)]. A descendant of Bani and one of the returned exiles who was required by Ezra to divorce his foreign wife (Ezra 10:34; 1 Esdr 9:34). According to Noth, the name Maadai is a short form of *maʿadyâ,* whose meaning is unclear (*IPN,* 150). In the parallel text of 1 Esdr 9:34, the RSV lists Maadai among the descendants of Bani; however, the LXX reads *momdios,* and there is very limited correspondence between Ezra's list of Bani's descendants and that found in 1 Esdras. Maadai was a member of a family that returned from Babylon with Zerubbabel (Ezra 2:10; note that Binnui replaces Bani in Nehemiah's list [7:15]). For further discussion, see BEDEIAH.

JEFFREY A. FAGER

MAADIAH (PERSON) [Heb *maʿadyâ* (מַעַדְיָה)]. Var. MOADIAH. A priest who is listed in Neh 12:5 (MT) as having returned from exile to Jerusalem in the days of Zerubbabel. Later in the same chapter (v 17, MT), a certain Moadiah (Heb *môʿadyâ*) is listed as the father of Piltai, the head of a priestly family. Inasmuch as even a quick overview will confirm the close correspondence between the names found in these two lists (i.e., vv 1–7 and 12–21), it is virtually certain that "Maadiah" and "Moadiah" represent two variant spellings of the name of the same individual (see, e.g., Bowman *IB* 3: 785, 788, who prefers the former as textually better attested). For the absence of Maadiah/Moadiah in the major LXX mss (as well as those of a majority of the other priestly households), see AMOK.

Recently Williamson (*Ezra, Nehemiah* WBC, 358–61) has argued persuasively for the relative primacy of the list of priestly families found in vv 12–21, from which a later editor has transcribed the list found in vv 1–7. As Williamson points out, it is less likely that someone invented the names of the added generation in vv 12–21, names which are not paralleled elsewhere, than that the names of the family heads were merely transferred from this list to the one found in vv 1–7. This reconstruction would tend to support the primacy of the spelling "Moadiah" (v 17) over "Maadiah" (v 5), a conclusion which, however, may be called into question on text-critical grounds. In particular, the secondary omission of a name after Miniamin (v 17b, MT) has apparently led to further textual disruption in the Versions. Such disruption, for example, is reflected in the reading *en kairois* attested in Codex Sinaiticus (supplied by a later hand inasmuch as there was a major lacuna, as noted above, in the major Greek witnesses); this reading probably presupposes the Heb *lĕmôʿădêhā,* "at that time, in those days," for the MT *lĕmôʿadyâ,* "of/to Moadiah." These two variants thus represent two possible vocalizations of the same consonantal text (*lmwʿdyh*), with the former vocalization quite possibly the more original of the two (once a name dropped out after Miniamin, a scribe would not have expected two names in a row referring to the former generation). In any case, it is easier to explain an addition of the *waw* in v 17 (arising from prior textual corruption) than its deletion in v 5.

A third list of priests found in Neh 10:3–9—Eng10:2–8—also evidences quite a number of similarities with the two lists of priests already cited from Nehemiah 12 (again, see AMOK). It is noteworthy that in Neh 10:9—Eng v 8—we read "Maaziah" (Heb *maʿazyâ*), a relatively familiar priestly name, for the expected Maadiah/Moadiah (cf. Bowman *IB* 3: 785). Inasmuch as the list of priests in chap. 10 probably gathers its names from a variety of sources (Williamson *Ezra, Nehemiah* WBC, 362, cf. also pp. 325–31), not too much should be made of the apparent Maaziah/Maadiah correspondence, although such a correspondence does dovetail nicely with the other evidence favoring the spelling "Maadiah" (over "Moadiah") as the more accurate transcription of the priestly name found in Nehemiah 12.

WILLIAM H. BARNES

MAAI (PERSON) [Heb *māʿay* (מָעַי)]. A kinsman of Zechariah and a musician who performed at the dedication of the Jerusalem wall (Neh 12:36). At the ceremony, he was part of the group which paraded to the right behind Ezra. His name is omitted in the LXX.

NORA A. WILLIAMS

MAARATH (PLACE) [Heb *maʿărāt* (מַעֲרָת)]. A town situated in the north-central hill country of Judah (Josh 15:59), within the same district as Beth-Zur. This settlement, whose name perhaps means "barren place" (from *ʿrh,* "lay bare"), is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). It is perhaps the same place as Maroth (Mic 1:12). A very tentative identification (*IDB* 3: 196) places the ancient town at Khirbet Qufin, located approximately 11 km N of Hebron, just to the NE of modern Beit Ummar (M.R. 160114).

WADE R. KOTTER

MAASAI (PERSON) [Heb *maʿśay* (מַעְשַׂי)]. One of the priests who, according to 1 Chr 9:12, was among the first to return from Babylonian exile and take residency in Jerusalem. There are two major points of confusion in this text, however. First, the sequence of names in 9:10–12 is itself confusing. The MT as it stands lists six such priests: Jedaiah, Jehoiarib, Jachin, Azariah, Adaiah, and Maasai, with only the last three being attributed genealogical information. The absence of such information for the first three has often led scholars to assume that the text or tradition has suffered in transmission, and that some of those first named were originally part of such genealogical information. In fact, Neh 11:10–14 preserves the list as only five: Jedaiah, Jachin, Seraiah, Adaiah, and Amashsai. It is generally assumed that the text of 1 Chronicles 9 is, in some way, dependent upon that of Nehemiah 11.

Second, although the names in the two lists are sufficiently close to assure a common tradition, there is considerable confusion in the specific details. Maasai in 1 Chr 9:12 corresponds to the Amashsai of Neh 11:13. This confusion, due to metathesis of the *mem* and *ʿayin,* leads to two different root-derivations of the name. The name Maasai means "work of Yahweh" and is attested in both the shorter form, as here, as well as in the longer form Maasyah (u). The name Amashsai, however, is more difficult. It seems to be a conflation of two forms of the same name, Amashai and Amasai. Both names mean "Yahweh has borne."

The identification of Maasai in 1 Chr 9:12 with Amashai in Neh 11:13 is supported by the similarities in their respective genealogies. Both are traced back through Adiel/Azarel, Jahzerah/Ahzai, and Meshillemith/Meshillemoth to Immer who, according to 1 Chr 24:14, held the sixteenth priestly course in the Davidic temple.

RODNEY R. HUTTON

MAASEIAH (PERSON) [Heb *maʿăśēyâ* (מַעֲשֵׂיָה)*; maʿăśēyāhû* (מַעֲשֵׂיָהוּ)]. Var. BAALSAMUS; MOOSSIAS. A rather common Hebrew name attested both in the Bible and in a number of seals. In the Bible the name appears in the books of Jeremiah, Ezekiel, Nehemiah, and Chronicles, suggesting that it was especially common in the exilic period. Possible Hebrew variants of the name include Maasai (*maʿśay,* 1 Chr 9:12) and Baaseiah (*baʿăśēyâ,* 1 Chr 6:25—Eng6:40).

1. One of the levitical musicians listed in the Chronicler's account of David's preparations for moving the ark (1 Chr 15:18, 20). Maaseiah was a lyre *(nēbel)* player and a member of the "second order" of Levites in charge of the music.

2. One of the military commanders ("commander of a hundred") who made a covenant with Jehoiada the priest in the palace coup that toppled Athaliah and replaced her with Josiah (2 Chr 23:1). This Maaseiah is called the son of Adaiah.

3. The officer (*šôṭēr*) who, according to 2 Chr 26:11, helped to prepare the divisions of Uzziah's army in the Chronicler's extensive account of Uzziah's prosperity and military might. LXX^B has the name Amaziah (*amasaiou*) here instead of Maaseiah.

4. The son of King Ahaz of Judah who was assassinated by a certain Ephraimite named Zichri, according to 2 Chr 28:7. The Chronicler gives this notice in the context of the account of Pekah's slaughter of Ahaz's warriors, which is explained as punishment for Ahaz's sins.

5. The commander *(śar)* of Jerusalem during the reign of Josiah (2 Chr 34:8). Maaseiah was a member of the party sent by Josiah specifically to repair the temple in the Chronicler's account of the king's reform.

6. The father of the prophet Zedekiah (Jer 29:21) whom Jeremiah accused of false prophecy in the context of his attack on prophets in 29:15, 21–23. The designation "son of Maaseiah" is lacking in the LXXversion of the verse.

7. The father of Zephaniah the priest, according to Jer 21:1; 29:25; 37:3. Zephaniah was twice (21:1; 37:3) part of an envoy from King Zedekiah to Jeremiah inquiring about the safety of Jerusalem in view of the movements of the Babylonian and Egyptian armies. These visits afforded Jeremiah the opportunity to predict the fall of Jerusalem to Babylon. In 29:25 Zephaniah is the recipient of a letter from a certain Shemaiah, a prophet in Babylonian exile, upbraiding him for failing to control Jeremiah. This suggests

both that the position held by Zephaniah was important (cf. Jer 52:24) and that the temple precincts were the location of much of Jeremiah's prophetic activity.

8. A doorkeeper of the temple in Jeremiah's day. Maaseiah is mentioned in Jer 35:4 in the context of the example of the obedient Rechabites and may be the same Maaseiah, father of Zephaniah, treated in #7.

9. The father of Azariah, a leader of the delegation which approached Jeremiah on behalf of the people asking him to intercede before God for them, according to LXX Jer 49:1. The MT version of the verse (42:1) reads "Jezaniah son of Hoshaiah" (cf. 40:8) instead of "Azariah son of Maaseiah." The LXX reading is probably correct at least as far as the occurrence of the name "Azariah," since 43:2 (= LXX 50:2) refers to Azariah in the company of those who were present when Jeremiah finished his oracle to the delegation.

10. One of the men of the tribe of Judah listed among the postexilic residents of Jerusalem in Neh 11:5. Maaseiah is called a Shelanite (amending MT's "Shilonite," which is corrupt). The Shelanites were the branch of the tribe of Judah which claimed descent from the patriarch's son Shelah (Gen 46:12; Num 26:19–20). The parallel list in 1 Chr 9:5 has the name Asaiah *(ʿăśāyâ)* instead of Maaseiah.

11. An ancestor of the only Benjaminite, Sallu, listed in Neh 11:7 among the postexilic residents of Jerusalem. Maaseiah is lacking in the parallel list in 1 Chr 9:7–8. The Benjaminite origin of the list is suspect since the names in it do not occur in other lists of Benjaminites (Gen 46:21; Num 26:38–41; 1 Chr 7:6–12; 8:1–40).

12. A priest at the time of Ezra who is mentioned among those who had foreign wives in Ezra 10:18 (= 1 Esdr 9:19). He was from the family of Jeshua, the high priest.

13. The same list from Ezra 10 also includes another priest named Maaseiah who had a foreign wife (Ezra 10:21 = 1 Esdr 9:21). In Ezra 10:21 he is called a descendant of Harim, while in 1 Esdr 9:21 he is a descendant of Immer, Harim not being mentioned.

14. A third priest in the list of those with foreign wives in Ezra's day. He is called a descendant of Pashhur in Ezra 10:22 = 1 Esdr 9:22.

15. One of the laymen ("of Israel") in the list of those with foreign wives (Ezra 10:30). He is listed as a descendant of Pahath-moab. In the parallel list in 1 Esdr 9:31 the name Moossias (Gk *moossias*) son of Addi occurs instead of Maaseiah.

16. The father of a certain Azariah, named among those who helped to repair the wall of Jerusalem (Neh 3:23). The corresponding LXX^{B} text (2 Esdr 13:23) has Madasel *(madasēl)* instead of Maaseiah. The list itself has probably been added to from the Nehemiah Memoirs (Blenkinsopp *Ezra-Nehemiah* OTL, 231).

17. One of the "chiefs of the people" *(roʾšê hāʿām)* in Neh 10:26—Eng10:25—who affixed his seal to the covenant promulgated by Ezra. The list of those accepting the covenant is composite and widely agreed to be out of place. Indeed, the list precedes the covenant stipulations in vv 29–40—Eng vv 28–39—rather than following them as one would expect. Some of the entries in the list are tribal names rather than personal names (Williamson *Ezra, Nehemiah* WBC, 325–31). But this is not the case with Maaseiah. He may be the same individual discussed in #15 above or #18 below, since they were also laymen.

18. One of thirteen men who stood on either side of Ezra when he read the law to the people (Neh 8:4). These thirteen were apparently lay leaders who may have assisted somehow in the reading process. In the parallel to this verse (1 Esdr 9:43) the name Baalsamus (Gk *baalsamos*) is found in place of Maaseiah.

19. One of thirteen Levites mentioned in Neh 8:7 who assisted the people in understanding the law and who, according to 8:8, read the law clearly. Blenkinsopp (*Ezra-Nehemiah* OTL, 286–89) posits that vv 7–8 are part of a later strand of this account which incorporated the Levites within the episode, perhaps as a balance to the thirteen laymen mentioned in v 4 (see #18 above). The parallel to Neh 8:7 in 1 Esdr 9:48 has the name Maiannas (Gk *maiannas*) instead of Maaseiah (the RSV, however, reads Maaseiah).

20. One of seven priests with trumpets who participated with Nehemiah (Neh 12:41) in the dedication of the walls of Jerusalem. These seven priests are actually part of a chorus of sixteen, whose names are listed in 12:41–42. The names and activities of this chorus balance with those of an earlier chorus, listed in 12:32–36. The two choruses conducted simultaneous processions in the dedication ceremonies (see Blenkinsopp *Ezra-Nehemiah* OTL, 345). Both lists of names (vv 32–36 and vv 41–42) are probably

insertions into Nehemiah's Memoirs (cf. Williamson *Ezra, Nehemiah* WBC, 369–70). The references to Ezra in vv 32 and 36 are likely glosses on the list of names. Hence, the passage cannot be used to argue for the contemporaneity of Ezra and Nehemiah. The Maaseiah in v 41 could be identified with #12, 13, or 14 above.

21. Another priest mentioned among the participants in the dedication ceremonies recounted in Neh 12:42 (see no. 20). This priest could also be identified with one of the Maaseiahs described above (#12, 13, or 14).

STEVEN L. MCKENZIE

MAASMAS (PERSON) [Gk *Maasmas* (Μααsμας)]. One of the leaders in the exilic community (1 Esdr 8:43). The RSV rendering Maasmas is from Codex Alexandrinus and Codex Vaticanus; the name appears as *semeia* in the Lucianic text. Furthermore, while Maasmas is not named in the parallel list in Ezra (8:16), Shemaiah (LXX *samaia*) is found in its place.

When Ezra learns that none of the sons of priests or of the Levites is among those who assembled at the river of Theras to return to Jerusalem, he sends ten leaders, including Maasmas, to Iddo to obtain the required number of priests and Levites.

JIN HEE HAN

MAATH (PERSON) [Gk *Maath* (Μαaθ)]. The father of Naggai and son of Mattathias, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:26). D omits Maath, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. The name Maath falls within a list of seventeen ancestors of Jesus who are otherwise unknown in the biblical documents, including Matthew's genealogy (Fitzmyer *Luke I–IX* AB, 500), although Marshall (*Luke* NIGTC, 163) believes that Maath is equivalent to Heb *maḥat* (1 Chr 6:20—Eng6:35 [LXX has *meth* in Rahlf's edition]; 2 Chr 29:12; 31:13 [both with *maath* in Rahlf's edition]). Kuhn (1923: 210–11) claims that in the original form of the genealogy Maath was not a name but a transliteration of Heb *mē‹ēt,* "from," used as a sign of genealogical relation to link Naggia with Mattathias. He sees an analogous parallel with Menna (Luke 3:31), from Aramaic *minēh,* also meaning "from." Thus, according to Kuhn, the seemingly parallel lists of Luke 3:23–26 (Jesus to Mattathias) and Luke 3:29–31 (Joshua/Jesus to Mattatha) stem from the same original source, the first possibly preserved in a Hebrew context and the second in an Aramaic one. Kuhn's solution has not been accepted by commentators, although it is difficult to account for the significance of Maath's inclusion in the genealogy, since most theological explanations are improbable. For example, it has been suggested (e.g., Schürmann *Luke* HTKNT, 202–3) that Luke's genealogy consists of 11 times 7 names from Adam to Jesus, with the 12th period the messianic age. Thus Maath to Joseph would mark the 10th group, and Maath the initial name for the period. But this scheme is not clear from Luke's text (see Johnson 1969: 231–33).

STANLEY E. PORTER

MAAZ (PERSON) [Heb *ma‹aṣ* (מַעַץ)]. Eldest son of Ram, who in turn was the firstborn of Jerahmeel, the progenitor of an important clan of Judah. Maaz is noted once in the Chronicler's genealogies (1 Chr 2:27) and is a descendant from Jerahmeel's first wife. With his brothers, Jamin and Eker, this very brief genealogical record is concluded. The descendants of Atarah, another wife of Jerahmeel, are extensive.

Williamson (1979: 352) summarizes recent source criticism of the Chronicler's genealogies, concluding that 2:25–33 (of which Maaz is a part) and 42–50a form a related unit comprising an independent source used by the Chronicler and probably already containing the distinctive parallel opening and closing formulas. Elmslie (*Chronicles* CBC, 15) suggests that names such as Maaz may not reflect either specific individuals or places but rather preserve the idea that these formerly nomadic families now enjoyed a more settled life. More recent scholarship favors viewing all names in this genealogy as personal (Braun *1 Chronicles* WBC, 45).

The location of Maaz in a specific time period is difficult. Commentators maintaining the completeness of these genealogical records place Maaz somewhere near the middle of the period of the Egyptian sojourn; others, however, favoring the significance of the final line recorded (such as Maaz and his brothers), locate these men closer to the Chronicler's own day. Maaz is probably derived from the verb *mʿṣ* meaning "to be wrathful," and thus is often rendered "angry."

W. P. STEEGER

MAAZIAH (PERSON) [Heb *maʿazyāhû* (מַעַזְיָהוּ)]. The name of the last of the twenty-four priestly courses or divisions listed in 1 Chronicles 24 (v 18), meaning "God is a refuge" or "stronghold" (*IPN*, 250; *IDB* 3: 197). It appears again as the name of a priestly family that served as a signatory to the covenant of Ezra, in what may well be an earlier listing preserved in Nehemiah 10 (v 8). One scholar conjectures that the name has been replaced in Neh 12:5 and 17 by the names Maadiah and Modiah (Brockington *Ezra, Nehemiah and Esther* Century Bible, 179), but there is no solid evidence to confirm this suspicion.

FREDERICK W. SCHMIDT

MACCABEAN REVOLT. The name commonly given to the revolt of Jews in Judea against Seleucid domination in the years 166–160 B.C.E. It is named after the surname of its leader, JUDAS MACCABEUS. It is also called the Hasmonean revolt, after the name of the family to which Judas, his father, and his brothers belonged. The duration of the revolt is sometimes considered to extend to the year 142 B.C.E., when Judea became independent. Yet here I will adopt the more narrow definition (166–160 B.C.E.). For the subsequent period, see JONATHAN and SIMON (PERSON) #5.

A. Sources
B. Course of Events
C. Causes
D. Military Aspects of the Revolt
E. The Revolt in Historical Perspective

———

A. Sources

The sources for the revolt pose various problems of interpretation and reliability. The principal sources are the books 1 Maccabees and 2 Maccabees. The first covers a short period preceding Antiochus' persecution, the persecution itself, the revolt, and the activity of Judas' brothers, Jonathan and Simon (roughly 169–139 B.C.E.). The author was an admirer of the Hasmoneans, and the book reflects the situation at the time of John Hyrcanus I. It probably embodies firsthand data either of the author himself or from eyewitnesses. The author also had access to some important documents.

The book of 2 Maccabees covers about 15 years before the persecution, the persecution itself, and the revolt up to the last victory of Judas Maccabeus at Adasa (161 B.C.E.) with which the book concludes. It is of a very different literary genre than 1 Maccabees, being an *epitome* (abridgment) in Greek of a lost book written by Jason of Cyrene. It concentrates on the temple, on miracles and piety, and on the didactic lesson to be drawn from the events. Judas is the hero of the book, which concludes with his last victory, not with his defeat and death soon afterward (160 B.C.E.). Nevertheless, 2 Maccabees serves as an important check on the 1 Maccabees account and is the sole source for the period of the Hellenizing movement (about 185–166 B.C.E.); and for some important documents (esp. chap. 11).

To these two principal sources we should add the book of Daniel, which is a contemporaneous apocalyptic work, and as such helps us to gauge the religious and political mood of that period.

Among the additional sources of secondary importance are Josephus' *Ant.* and *War,* which basically follow 1 Maccabees with some differences of doubtful value, and with a very important added document—the correspondence of the Samaritans and Antiochus Epiphanes (*Ant.* 12 §§258–64). Also of

secondary importance are a propagandistic story preserved by Diodorus Siculus (books 34–35, 1.3–4), (probably) an apocalypse preserved in the *Book of Enoch*, and some Talmudic passages.

B. Course of Events

A concise summary of events leading to the Maccabean revolt must be given here in order to clarify its causes and the role of participants. About 200 B.C.E., after a century of Ptolemaic rule, Palestine fell into the hands of the Seleucids. Less than a decade later a most decisive event in the history of the Seleucid kingdom took place: Antiochus III (the Great) was defeated by Rome (battle of Magnesia, 190 B.C.E.). This defeat caused a considerable deterioration of both the Seleucids' international position and their internal affairs.

At the time of King Seleucus IV, son of Antiochus III, internal strife in Judea reached an unprecedented stage of violence. A coalition of nobles, which included members of the priestly tribe (*Mishmar*) of Bilga and of the house of Tobiah, strove to take away from the high priest Onias III some of his functions, or at least one of them because of its financial importance—the *Agoranomia* (supervision of the market). In the ensuing struggle not only was violence used, but the opponents of Onias III, headed by one Simon of the tribe of Bilga, called for the interference of the Seleucid government. Seleucus IV sent Heliodorus, his chief minister (*ho epi tōn pragmatōn*), to look into the finances of the temple and to confiscate whatever he might find necessary. For unknown reasons Heliodorus failed in his mission, but the internal strife continued and Onias felt compelled to go to Antioch to defend his position before the king.

Hardly had Onias arrived at Antioch, but Seleucus IV was murdered, and his brother, ANTIOCHUS IV, came to the throne (175 B.C.E.). Antiochus kept Onias in the capital and appointed in his stead his brother Jason (*Yoshua*) in return for a larger amount of money. Three years later Jason was replaced by Menelaus, a brother of Simon (the opponent of Onias III) of the priestly tribe of Bilga (172 B.C.E.).

In the course of these three years, two developments can be noticed. First was the usurpation of the high priesthood, which was transferred in contradiction to Jewish law from a high priest who was still alive and able to serve, to his brother and then to someone of a priestly line who had no right to the office. Second, a laxity toward Jewish law and practice is noticed under Jason and, even more, under Menelaus. This stronger Hellenization, or "Hellenistic reform" as it is called, stirred up opposition among the Jewish population. Violent confrontation even occurred between Menelaus' supporters, under his brother Lysimachus, and his opponents (2 Macc 4:29, 39–42). Already under Jason, Jerusalem was transformed into a Hellenistic city-state (2 Macc 4:9). It controlled the territory of Judea and was named after the king "Antioch in Jerusalem."

Antiochus' policy toward Ptolemaic Egypt also influenced the situation in Judea. Internal problems, combined with aggressive policy in the Alexandrian court, provoked Antiochus to invade Egypt, to try to settle affairs there according to his own interests, and later to crown himself king over Egypt. He went on two expeditions to Egypt and twice entered Jerusalem on his way back. On his second invasion to Egypt he was expelled by Roman order and took military measures against Jerusalem, which was occupied by enemies of Menelaus (who were probably anti-Seleucid).

Shortly afterward, Jerusalem was again taken by force, and a general persecution of the Jewish religion was ordered by the king. Cruel measures against Jewish Law were enforced in Judea. The study of the Law (Torah), observance of the Sabbath, and circumcision were forbidden. The daily sacrifice in the temple was canceled, and the altar was desecrated.

The Jewish population reacted in three ways to these measures: some reluctantly acquiesced; some preferred martyrdom rather than obey the king's orders; and some resorted to armed resistance. Among those who resorted to arms were Mattathias and his sons. When Mattathias killed the officer who came to his village, Modin, to force pagan rites on the inhabitants, a guerrilla warfare began (about 166 B.C.E.). Shortly afterward Mattathias died and the leadership of the rebels was given to his son Judas.

The Maccabean revolt is the armed resistance of this part of the Jewish nation, which was attached to its ancestral traditions and which fought against those who tried to impose the abandonment of the Torah and the adoption of pagan religion. Three main forces were involved in the resulting war: (1) the rebels under Mattathias and Judas, (2) the Seleucid military forces, and (3) the Hellenizers, i.e., Jews who supported

the policy of annulment of Jewish religion. The Hellenizers were composed of an important part of the nobility, which had for some decades already adopted Greek manners and practices, including philosophical and religious concepts.

We know very little about Mattathias' fighting. His supporters were based outside the inhabited area and used guerrilla tactics, mainly attacking various places by surprise and reinforcing Jewish practices, especially circumcision. His main target was the Hellenizers as he tried to reverse the effects of the decrees that had been enforced on the people.

When Judas succeeded his father Mattathias, the course of events was changed. The increasing activity of the rebels now required the intervention of the Seleucid forces. From local skirmishes the war turned into a full-scale campaign. The first known battle the Jewish rebels fought was against Apollonius, who was probably governor of Samaria. We do not know why the governor of Judea did not himself take the field against Judas when the latter's activity grew more threatening to the Seleucid authorities. Probably he was either preoccupied and his forces were dispersed over the country, or he was shut in Jerusalem, or he simply needed reinforcements, which were recruited from neighboring Samaria. Be that as it may, Judas defeated Apollonius, probably by surprise, and by attacking his person he might have demoralized his forces already at an early stage of the battle.

Apollonius' defeat brought into the battlefield another commander: Seron. His precise place in the Seleucid military forces in Coele-Syria and Phoenicia is not clear. It looks as if Judas' forces were considered by Seron to be easy prey. Seron's overconfidence gave Judas and his highly motivated troops the opportunity once again to use surprise, and so to choose favorable terrain (Beth-horon) for battle and thus to defeat the enemy.

These two consecutive victories made Judas a real threat to Seleucid rule, and consequently a considerable army was sent against him by order of the king (1 Macc 3:27). The expedition was organized by Lysias, guardian of the king's son, who was in charge of the W part of the Seleucid empire, because Antiochus himself had gone E in an effort to reestablish Seleucid authority in Persia. Lysias entrusted the expedition to Ptolemy the son of Dorymenes, governor of Coele-Syria and Phoenicia, who appointed Nicanor son of Patroclus and Gorgias in charge of the army (2 Macc 8:9). It seems that Gorgias was the acting commander (1 Macc 4:1, 28).

The following details about the Seleucid command of this expedition follow the account in 2 Maccabees, which is preferable for historical information about the Seleucid activities to 1 Maccabees, which is much richer and more dependable for the battle of Emmaus itself. It should be mentioned that this is the first battle treated in 2 Maccabees that ignores Mattathias' role in the earlier stages of the revolt as well as Judas' victories over Apollonius and Seron, though 2 Maccabees gives a vivid description of the guerrilla warfare under Judas' (not Mattathias') command at the inception of the revolt (2 Macc 5:1–7).

The battle itself is a most important one in the course of the revolt and serves as an example of Judas' generalship. The Seleucid army encamped in Emmaus at the W entrance to the Judean hill country. From Emmaus an elite corps was sent to chase Judas in the mountains. We can detect here a battle plan of considerable sophistication, based on conclusions drawn from the former defeats of Seleucid forces at the hands of Judas. First, Gorgias did not invade Judea from the N, as was done by Apollonius and Seron, but preferred the western, less dangerous entrances. Second, Gorgias did not immediately enter the mountainous region, but prepared a base at a near but safe strategic location (Emmaus; see *MBA*, p. 119) and from there tried to infiltrate Judea. Third, by these tactics Gorgias did not permit Judas to choose the battlefield or to set an ambush for the invading army. He took the initiative and thereby achieved an initial advantage over the guerrillas.

Against this attack Judas showed his military skill at its best and got the upper hand in the face of an able Seleucid commander. On obtaining information about Gorgias' column, which entered the mountains to chase him down, Judas pretended to flee in panic with his followers. But he took his force at night in a flanking movement toward the Syrian camp at Emmaus and surprised it at dawn, taking advantage of the sun shining at the back of his men and in the faces of the astonished Syrian soldiers. Defeating the

Seleucid garrison and burning down its camp, he halted his troops from plundering the spoils and put them into battle order to face the returning Seleucid column, which was frustrated by chasing him in vain all night.

These fatigued Syrian soldiers were not prepared for battle, and hence withdrew. Judas had won his most important victory. He was successful in repulsing not local second-rate troops under second-rate command, but a full-scale army led by a professional commander. He used a variety of means to overcome the enemy: efficient intelligence services, rapid mobility, motivation, discipline, and daring and imaginative leadership.

After Emmaus the Maccabean revolt became a major concern of the Seleucid government. Lysias felt obliged to take the field personally against the Jewish rebels (164 B.C.E.). He approached Judea from the S, through Idumea. Probably he considered this to be the safest way, since the S border passed near Jerusalem, where the garrison and the Hellenizers were hard-pressed by the rebels.

Getting to Jerusalem had also been the aim of the former Syrian expeditions, and it reflects the general military situation in the country. In the territory of Judea the rebels had the upper hand and were supported by the population. They concentrated their pressure now on the garrison at Jerusalem and on the Hellenizers, i.e., the citizen body of the *polis* Antiochus in Jerusalem, which was composed, more or less, of the Jewish aristocracy inclined toward Hellenism. The military expeditions mentioned above sought to relieve Antioch in Jerusalem from this pressure. They tried to pass across Judea to Jerusalem, but Judas was successful in stopping them either on their way (Apollonius and Seron) or at the entrance (Gorgias).

Lysias repeated this same effort, this time from the S. A battle took place at Beth-zur, and Lysias' army was repulsed by the rebels. The scarcity of information about this battle makes a worthwhile discussion about the tactics of the contenders impossible. What seems clear, however, is that the numbers assigned to Lysias' army, both in 1 Macc 4:28 (65,000) and in 2 Macc 11:2, 4 (more than 80,000) are not credible. The sizes of the Seleucid armies must have been less than this (1–2 Maccabees tend to give exaggerated numbers for the Seleucid armies so as to demonstrate the greatness of Judas' victories and of God's help to his people). It seems reasonable to assume that the opposing armies were more equal in military terms than our sources tend to admit. The Jewish potential was considerable and could reach about 20,000 fighters or more, whereas the Seleucid could not afford to send too many soldiers to Judea, considering the total size of the Seleucid army and its involvement at that time on the E front. At the early stages of the war they may have used mainly local troops and militia, and even later the regular army was numerically limited.

Lysias' failure to break through Judea and his consequent withdrawal opened the way for the rebels to regain the temple in Jerusalem (1 Macc 4:36–54). They took over the temple and its precincts, purified it, and renewed the worship. Their enemies were shut in the Akra citadel. One of the most repressive measures of the persecution was undone when the temple was rededicated, and a special holiday—Hanukkah—was declared to commemorate the event.

At this stage 1 Maccabees 5 introduces a series of battles outside Judea, in which Judas and his brother Simon went to rescue their Jewish brethren in Galilee and Transjordan, and also fought inimical neighbors. 2 Maccabees 12 puts these battles after the second expedition of Lysias, but this is the only expedition of Lysias mentioned in the narrative. It is probable that in both books the various battles have been grouped together thematically rather than chronologically.

Be that as it may, these battles show that the events in Judea had repercussions throughout Palestine. Conflicts of interests might have been acute between the Hellenistic *poleis* and the native population, including Jews. It is possible that the anti-Jewish policy of the Seleucid government also triggered ethnic conflicts between Jews and non-Jews. In any case, those events make it clear that the problems relevant to the persecution and to the Maccabean revolt were not confined to Judea alone, but to Palestine at large. In a way the battles of Judas and Simon in Galilee, Transjordan, Idumea, and the seacoast are precursors of the Hasmonean conquest in the decades to come.

The battles in Galilee were mainly against the *poleis* of Acco, Tyre, and Sidon, which attacked the Galilean Jews. In Transjordan they were against certain local commanders and various places where Jews were attacked. War also broke out in Joppa and Jabneh and on the Idumean boundary. We cannot enter into details here, but first it should be stressed that the Maccabees rescued Jews who were threatened, but did not occupy those territories. The most they did was to remove some of those people to Jerusalem for security. Second, those Maccabean forces under Judas and under Simon covered impressive distances on these expeditions, which indicates some degree of military proficiency. And third, we may wonder if those exploits would have been feasible had not the rebels enjoyed some sympathy among the local, native population, which had good reasons to hate the Hellenistic *poleis* and the Seleucid hegemony, and to support the rebellious Jews.

Without fixing too rigidly the chronology of these battles we come now to the second expedition of Lysias. This came about because of the pressure Judas continued to exert on the Akra after the rededication of the temple. The rededication of the temple was not the only achievement of the rebels. After Lysias' withdrawal, negotiations took place between the government and the Jews, and an annulment of the persecution was announced in the name of Antiochus IV (2 Macc 11:16–21, 27–33). Nevertheless, Judas and his supporters were not satisfied with these achievements. The Seleucid government had not recognized the rebels, had not removed Menelaus, and had not returned the temple to priests who were acceptable to the rebels.

Not satisfied with the bare annulment of the persecution and with being ignored by the government in favor of Menelaus, Judas (who had already taken the temple by force) now attacked the Akra. Under these circumstances Lysias and his young protégé (who, after the death of Antiochus IV in Persia at the end of 164, now became King Antiochus V) did not have much choice. They were obliged to come to the rescue of their own garrison and of the Hellenizers. A considerable army was assembled and Lysias, who took the king with him, led it to Judea. They again invaded Judea from the S and overcame the heroic Jewish opposition (1 Macc 6:31, 42–47). They took Beth-zur and at the battle of Bet-zachariah forced Judas to retreat. Then they came to Jerusalem and besieged Judas in the temple. It looked as if the war had been decided in favor of the Syrians.

But at this juncture Lysias was informed that a former general of Antiochus IV, Philip, had arrived from the E and claimed the regency (i.e., the guardianship of Antiochus V). He was forced to raise the siege and to rush back to Syria. So he came to an agreement with Judas and withdrew from Jerusalem. Some details of this agreement are known to us from another document, also preserved in 2 Macc 11:23–26. In this document Judas is not mentioned, but, in addition to the abolition of the persecution, which was already canceled by Antiochus IV, the temple was now given back to the Jews, an item which was missing from the former document of Antiochus IV. Of course, the temple had been taken and purified formerly by Judas, but this was a formal recognition of this fact.

This document was a decisive step by which Lysias tried to change the former policy of Antiochus IV, and he probably thought it feasible to return to the status quo ante in Judea. It seems that already on his first expedition Lysias was in favor of a more conciliatory policy toward the rebellious Jews. He was not the only Seleucid official who was against the policy of Antiochus IV toward the Jews and their religion (see Ptolemy Macron, in 2 Macc 10:12) and he was not perforce motivated by moral or ideological considerations. He might have thought pragmatically that support of the Hellenizers was unwise, since they proved themselves unable to keep peace and order and to provide support for the government, but were themselves in constant need of help. In other words, instead of being an asset they had become a burden. Lysias' attitude is clear in light of the fact that he executed Menelaus, who was "the cause of all the trouble" (2 Macc 13:4). The importance and the wide impact Lysias' decision had in the country is shown by the criticism of the citizens of Ptolemais and by the effort made by Lysias to explain his policy to them (2 Macc 12:25–26).

Had events gone otherwise, the revolt might have been ended at this stage. The conflict continued because the revolt changed the situation in Jewish society in Judea, as new social forces entered the arena, and because the feud between the Hellenized aristocracy and the rest of the people had not been settled

(and probably became more bitter because of the persecution). Nevertheless, it should be remembered that although the struggle continued, religious persecution was not renewed. The struggle from now on was mainly national, social, and political, either within Jewish society or against Seleucid rule.

Soon after the execution of Menelaus a change took place on the Seleucid throne. Demetrius I, the son of Seleucus IV, escaped from Rome and successfully replaced Antiochus V. He appointed Alcimus to the high priesthood. With this appointment, under circumstances which are not completely clear to us, Judas did not acquiesce. Nevertheless, it seems that part of his supporters, the Hasideans, were ready to come to terms with Alcimus. Yet, for reasons unknown Alcimus had them murdered, which only strengthened Judas' activity and reprisals (1 Macc 7:8–25).

This time the new king, Demetrius I, took prompt action. He sent Nicanor to strengthen the position of his nominee Alcimus. After some negotiations between Nicanor and Judas, which failed (and which had been in bad faith on Nicanor's side, according to 1 Macc 7:27–32), the armies of Nicanor and Judas met on the battlefield at Adasa. Judas got the upper hand, the Syrians were defeated, and Nicanor was killed at the beginning of the battle. It may be that Judas intentionally directed an attack at the person of the commander with the aim of demoralizing the whole army: this had also been done in the first battle against Apollonius. Another element in this battle was the spontaneous attacks on the retreating Syrian army by the peasants in the surrounding areas. The 13th of Adar, the date of this victory, was declared a holiday, called the "Day of Nicanor."

At this stage Judas also initiated diplomacy to achieve his aims, and so he sent a delegation to Rome. This act was formerly encouraged by Roman emissaries who passed along the levantine coast on their way from Egypt to Syria. A letter on this matter, from the year 164 B.C.E., is preserved in 2 Macc 11:34–38. In addition, Judas could expect a warm welcome in Rome, because the enthronement of Demetrius I was against Roman wishes, and Roman policy toward him was inimical. Indeed, Judas' emissaries were kindly received at Rome, and a treaty was agreed upon between the Romans and the Jews (1 Macc 8:23–32).

The Jewish delegation to Rome did not deter Demetrius from taking strong action against Judas. He might not have been aware of the Roman–Jewish negotiations, and it seems that Judas' delegates returned too late to prevent Demetrius' attack on Judea. In addition, it does not seem that Demetrius would have acquiesced to Judas' activity, and in view of his policy in general he would have ignored the Roman intervention in favor of Judas. Yet Judas had nothing to lose by an appeal to Rome, and he might have considered a treaty with Rome to be an asset to Jewish policy, which indeed it was. This act shows that Judas had at this stage, if not earlier, definite political aims. For him, as for the government, the war for religious rights was over, and he envisaged now some kind of political independence for Judea.

Whatever plans Judas might have entertained, he had to face the army under the command of Bacchides sent against him by Demetrius I. On his way to Judea, Bacchides attacked and conquered a Jewish village or fortress named Mesaloth at Arbel, about whose location there is no consensus because of textual difficulties. Judas awaited Bacchides at Elasa with a relatively small force of 3,000 men. On the approach of Bacchides many abandoned Judas' camp until he was left with only 800 men. In spite of the advice of his friends, Judas decided to give battle to Bacchides, but the result was that he himself fell on the battlefield and his army dispersed (160 B.C.E.).

What was the reason for this dwindling of Judas' forces? One explanation is that since the religious persecution was over, many of his supporters lost their motivation and were reluctant to continue a war for political independence under the leadership of Judas (cf. the desertion of the Hasideans to Alcimus). Others explain Judas' weakening by some accidental event, like the season of the year or agricultural pressures on the peasants, or alternatively because of fatigue from the long war and fear of Bacchides' army (1 Macc 9:6). Others raise doubt about the authenticity of the information given in 1 Macc 9:5–9 and explain it as apologetic: the author of 1 Maccabees was looking for an excuse for Judas, the victorious hero, who this time had failed.

Be that as it may, with the death of Judas the Maccabean revolt as a historical process came to an end, defined by the persecution at the beginning and the defeat of Judas at the end. Indeed the Maccabean

revolt activated a chain of events of a different nature, which went far beyond the battle of Elasa. It was focused on the Hasmonean dynasty, on national-territorial expansion, on mainly political, not military means, and on involvement in Seleucid affairs. Although some of these characteristics already existed in Judas' time, his death terminated the first stage of the process that led to an independent Jewish state. A new stage began some 8 years later with the rise to power of Jonathan, his brother.

C. Causes

What caused the Maccabean revolt? The answer is the religious persecution of Antiochus IV. But this answer touches only the surface of these events. First, one should inquire about the cause(s) of the persecution. Second, one must discover the various powers, groups, personalities, and ideas behind both the persecution and the revolt.

Antiochus' persecution poses a difficult problem for historians because of its uniqueness in antiquity. No real analogy can be brought forth, for religious persecution is contrary to the ideological, religious, social, and political code of the Hellenistic world and of the ANE and Roman civilizations as well. Under these circumstances scholars are looking for specific explanations for this phenomenon. Some postulate that the persecution was born in the mind of a crazy king, as supposedly confirmed by ancient sources. According to a more lenient judgment, Antiochus wished to unify his variegated empire under one religion or one culture, and on this issue he collided with the Jews. Some support for this view is derived from changes in Antiochus' coins and from some sentences in the book of Daniel (11:37). The common denominator of the various theories is that they explain very little, because they either have no answer to the question—why only the Jews were persecuted—or they do not fit with information from other quarters of Antiochus' realm, where various kinds of religion and worship were flourishing without interruption.

A breakthrough came with E. Bickerman's book *The God of the Maccabees* (1937). Bickerman transferred the initiative of the persecution from Antiochus to the Hellenizers under Menelaus. He explained their initiative on this matter as an effort to reform Jewish religion, and he explained the feasibility of such an idea by their background in Jewish culture, which supported such intolerant measures. Such measures cannot be adequately explained if one assumes they were initiated by Antiochus VI, who was raised in an atmosphere of religious pluralism, typical of Hellenistic culture.

V. Tcherikover (1961) refined Bickerman's suppositions. He repudiated Bickerman's idea of the Hellenizers as champions of "Reform Judaism" and as the initiators of the persecution (either they were Hellenized and tolerant, or Jewish and intolerant, as he put it). But he followed Bickerman in reading 2 Macc 4:9 as meaning that Jason bought a permit from the king to register inhabitants of Jerusalem as members of an organization called "Antioch in Jerusalem." On this Tcherikover agreed with Bickerman, with the improvement that this organization was a *polis* and not, as suggested by Bickerman, a *politeuma* (an ethnic organization, mainly for religious purposes, which could perform within a *polis*).

Tcherikover went on to define the persecution as a measure against Jewish resistance to the royal policy of supporting the Hellenizers. As he phrased it, "a revolt preceded the persecution," i.e., the persecution was decreed to crush a revolt, and the Maccabean revolt was not the only revolt in that period. It was preceded by at least the revolt against Lysimachus, Menelaus' brother (2 Macc 4:39–42). This he tried to show by a reconstruction of the course of events and their chronology.

But why was religious persecution used to crush a revolt? According to Tcherikover, it was because the opposition against the new "constitution" (the *polis* Antioch in Jerusalem and its Hellenized atmosphere) was led by the legal and spiritual leaders of the people, the Soferim (experts in the Law). To crush this opposition, the king thought he should eradicate the Law (Torah). By wiping out the Law and its guardians, the changes introduced into Judea would be accepted, so he thought.

No single isolated explanation seems satisfactory, and on some issues the various explanations are not contradictory. The sources support a comprehensive explanation, which may contain various causes and various components. It seems that the Hellenizers had a major part in the persecution, and Menelaus' group might have initiated or advocated its enactment. Antiochus' personality might also have

contributed, and he might have been acting also under the strains of a recent defeat in Egypt. The suggestion that his long stay as a hostage in Rome influenced his deed cannot be substantiated.

In any case, the persecution was not a sudden decision, but an extreme measure after a long confrontation in which various groups were involved. The Jewish nobility was for some decades split into various groups, centered around some families, or parts of families torn within themselves. Such were the Tobiads and the Oniads. Other families were more unified, like the house of Bilga on the Hellenizers' side, or the Hasmonean family on the opposing side. The struggle was for political power, but the parties were also divided along political, social, and religious lines. Pro-Seleucids opposed the pro-Ptolemies; aristocracy was opposed by the common people and by the spiritual leadership and probably even by some sectarian groups; the attitude toward Hellenism divided the nobility itself. What we see is a mosaic of parties and interests, with Seleucid government involvement in all of it.

When the decree of the persecution was promulgated, the mosaic remained, but a clearer division of powers resulted. On the one hand there was Menelaus, supported by the Seleucid government (which, as we have seen, was not unanimous on this policy, but the decision lay with the king). On the other hand there were those who revolted, led by Mattathias and after him by Judas Maccabeus. In addition there were various groups: mild Hellenizers, who did not support the persecution or Menelaus (Jason; Alcimus); anti-Hellenizers within the nobility (the house of Hakoz); martyrs (1 Macc 2:31–38); Hasideans; Soferim; and also common people (probably "the many," *rabîm,* Dan 11:33–34).

The persecution caused a process which was contrary to the expectations of both Menelaus and Antiochus. Instead of the opposition being crushed by this drastic act, the majority supported the rebels, who became more and more powerful. Traditional Judaism as it had developed since the return to Zion proved too strong for its adversaries. The major political aim of the Seleucid government—to create a dependable power in a strategic region—proved wrong. Instead, the Seleucid government remained obliged to invest military power, so dear to it, in the project. Its supporters proved to be the weaker contender. Antiochus, on Lysias' advice, tried too late to disentangle himself from the trap. The Hellenizers estranged themselves from the people to such a degree that they lost any chance of regaining the people's confidence, and the rebels' achievements made it impossible to reverse the trend. So it came about that although the revolt was crushed militarily, the process created by it within Jewish society and throughout the region went on. The eventual result was an independent Jewish state.

There is no proof that there was a meaningful ideological component either in Menelaus' or in Antiochus' politics. Yet Bickerman's idea of some kind of religious reform cherished by the Hellenizers was further developed by M. Hengel (1974) and others. They suggest that the Hellenizers had an ideology to reform Judaism and to supplant traditional Judaism with the reformed version. However, it seems that the sources do not provide the evidence to substantiate this suggestion. Ideology played a minor role, if at all, on the Hellenizers' side in triggering these events. We tend to see the events as a career-oriented bid for power by the Hellenized nobility, which failed because of the strong intrinsic influence of Judaism on the majority of the people, a fact which was underestimated by both Menelaus and Antiochus.

D. Military Aspects of the Revolt

The Maccabean revolt was crushed but the process it began did not stop. There yet remains the question of the military confrontation between Judas and his supporters and the Seleucid military forces. The rebels got the upper hand in the countryside at the initial stages of the revolt, and they were striving to isolate, attack, and conquer Jerusalem. The Hellenizers under Menelaus' leadership (or simply the citizens of Antioch in Jerusalem) and the local troops were forced to evacuate the Judean hillsides and to defend themselves in Jerusalem. Their main stronghold was the Akra, from which they commanded the Temple Mount and its surroundings.

The Seleucid government was called to help its supporters and its forces in Jerusalem. At the beginning this was done with troops from the neighboring regions (Samaria, Coele-Syria, and Phoenicia) and afterward with royal armies sent by the central government. Judas' success was in intercepting these armies on their way to Jerusalem. His military success and the difficulty of the Seleucid government in relieving their allies in Jerusalem were major considerations in the annulment of the persecution.

Under what conditions was Judas able to achieve this success? What was the power ratio between his force and the Seleucids? According to the sources, the Seleucid army was much stronger in number and in arms. Generally speaking, the confrontation is portrayed as between a David and a Goliath, and the few overcame the many with the help of God. Yet this picture has been criticized by scholars on various grounds: the Seleucid military command at that time could not spare such incredible armies for Judea, the Jewish military potential was greater than we may gather from the sources, and those sources are not impartial on this matter. These points are true, and the most recent presentation of this matter, by Bar-Kochva (1988), seems most reasonable. We may conclude then that the Seleucid army was numerically limited and never exceeded 20,000 foot-soldiers and 2,000 horsemen, that Judas could master at the peak of his influence equal or somewhat greater numbers, and that military experience and expertise were also available in the rebels' camp.

Another argument concerns the tactics of the Maccabean army. Was it guerrilla warfare or an ordinary Hellenistic one, with the use of the phalanx and subsidiary units? Lack of clear evidence makes it difficult to arrive at a safe conclusion, and it may be argued that both guerrilla warfare and phalanx tactics were used in different stages of the revolt, depending on the situation.

Nevertheless, Jewish achievements (though not by the few against the many) were considerable. They were the result of the warriors' high motivation and the excellent command of Judas Maccabeus, who showed many of the outstanding qualities of a great commander: leadership, bravery, personal example, familiarity with the country and its physical layout, tactical versatility, and strategic understanding.

So, although the Syrians got the upper hand, the liberation movement continued. The Hasmonean leadership was a direct result of Judas' achievements. Yet the liberation movement itself should also be seen in the context of the disintegration of the entire Seleucid empire, as concisely phrased by the great Roman historian Tacitus: "Later on, since the power of Macedon had waned, the Parthians were not yet come to their strength, and the Romans were far away, the Jews selected their own kings" (*Hist.* 5.8.3).

E. The Revolt in Historical Perspective

The results of the Maccabean revolt were decisive in various aspects. Historically it created a process by which the Palestinian Jews founded an autonomous national state (different from many contemporaneous dynastic states) which encompassed most of the country. Not less important universally is that the survival of Jewish monotheism was achieved through the revolt, which overcame the religious persecution. The consequences of these events go far beyond the borders of Judea.

Bibliography

The literature on the Maccabean revolt is immense, and only a concise selection of more recent literature can be listed here. In many of the following books fuller bibliographic lists may be found.

URIEL RAPPAPORT

MACCABEE. A nickname given to Judas the son of Mattathias, the first general in the Jewish revolt against the Seleucids. See MACCABEUS.

MACCABEES, BOOKS OF. This entry consists of three articles. The first covers the deuterocanonical books of 1 and 2 Maccabees, while the second and third cover the books of *3 Maccabees* and *4 Maccabees*, respectively.

FIRST AND SECOND MACCABEES

Two writings of the Christian apocrypha recounting the exploits of Judas Maccabeus, who forcefully opposed the efforts of Antiochus Epiphanes to suppress traditional worship and institutions in Jerusalem and Judea. "The Maccabee" has become an everlasting hero of world history thanks in part to the later works of Dante (*Divina Commedia, Paradiso* 18:40–42) and Handel (in his *oratorio* of 1747). Annually, during the festival of Hanukkah (Petuchowski 1984: 107–21, 137; see the bibliographies in *HJP²* 1: 163 n. 65; Fischer 1980: 91 n. 218), Jews in all countries commemorate the rededication of the Temple. It is noteworthy that the story of those events is recounted not so much in the rabbinical writings (Nodet 1986: 357–66) as in the apocrypha of the Christian tradition: the two books of Maccabees have not been preserved within the framework of the Hebrew Bible but within that of the Greek-language LXX, which the Christians adopted from the Jews of Egypt and Alexandria. Both 1 Maccabees and 2 Maccabees were regarded as more or less authoritative by the early Church (Abel and Starcky 1961: 8); St. Jerome, around A.D. 400, was the first who explicitly distinguished these *libri ecclesiastici* from the *libri canonici* of the Hebrew Bible. In 1534, Martin Luther relegated both books of Maccabees together with some other writings to the appendix of his translation of the Bible: *"the Apocrypha, that is, books which are not to be equated with Holy Scripture and yet which are useful and good to read."* In the Catholic Church both of these "apocryphal" works have been counted as "deutero-canonical" since the Council of Trent in 1546, whereas Protestants from the beginning (and the Russian Orthodox since the 19th century) have excluded them from their respective canons (Schunck, *1 Makkabaeerbuch* JSHRZ, 92–93; D. Kellermann 1987: 175). However, the present article emphasizes the historical issues without regard to the problems of canonicity.

———

A. The First Book of Maccabees

1. Contents and Language. In the manner of the genuinely biblical historical works such as Judges, Samuel, and Kings, the so-called First Book of Maccabees in 16 chapters treats Judea's struggle for

liberation from the Greco–Macedonian Seleucid kings. After a brief historical retrospect which looks back to Alexander the Great and the Diadochoi (1:1–10; Gafni 1984: 1), there subsequently follows, also by way of introduction, an account of Jason and Antiochus IV Epiphanes. It then deals with the "apostasy" in the country itself and with the "persecution," which culminated in the desecration of the temple in December of 167 B.C. (1:11–64). In the main section proper (2:1–16:22) we are told of the "breaking up" perpetrated by Mattathias, who came from the priestly family of Joarib and who dwelt in the countryside in Modein. We also hear of the deeds of his five sons: John, called Gaddi; Simon, called Thassi; Judas Maccabeus (the nickname may mean "the hammer-like"; see MACCABEUS); Eleazar Avaran; and Jonathan Apphus. The original title of the work may also have had something of this sense (Goldstein *1 Maccabees* 16–21; Fischer 1980: 55–56 n. 141; Schunck, *1 Makkabaeerbuch* JSHRZ, 289; *HJP²* 3/1: 182–83). Historically, the book deals with events in Palestine from 166 to 135 B.C. It ends with the murder of Simon, high priest and prince of the land, who was the last surviving son of Mattathias. The brief conclusion (16:23–24) refers to a Chronicle of John Hyrcanus I, Simon's son and successor, which, however, is no longer extant.

1 Maccabees was originally composed in Hebrew, as both Origen and Jerome attest (Abel and Starcky 1961: 7 and n. a, 15; Goldstein *1 Maccabees* AB, 14–16; Schunck, JSHRZ, 289; Dommershausen 1985: 6; *HJP²* 3/1: 181–82 and n. 3; Enermalm-Ogawa 1987: 11–12; survey of research in Neuhaus 1974a: 47–49). The only surviving text is a Greek version containing many Hebraisms and translation errors (Neuhaus 1974a: 46), as, for example, in 10:1: *"Alexander … the Epiphanes."* The Greek documents are retroversions, not the *verbatim* transmitted originals. The Old Latin version seems to have been based on an older, likewise Greek (and perhaps better) translation of the Hebrew original (Abel and Starcky 1961: 80; Momigliano 1975: 103; Goldstein *1 Maccabees* AB, 177–78; *2 Maccabees* AB, 126; Schunck, JSHRZ, 290). Already at the end of the 1st century A.D. Josephus utilized a partial (i.e., only extending to the burial of Jonathan in Modein [13:30]) Greek edition of the book (Fischer 1980: 110; Momigliano 1980: 561; Schunck, JSHRZ, 290–91; cf. Attridge 1984: 171, 214 and n. 51; *HJP²* 3/1: 183; otherwise Goldstein, *1 Maccabees* AB, 14 and n. 18, p. 56 and n. 8; cf. p. 176).

2. Structure. The structure of the work is chronological, with the provision that external events seem to have been first narrated when they became known or acknowledged in Jerusalem and Judea. It is only in the case of the report of the death of Antiochus IV that a distortion of the time-frame seems to have occurred, because the (probable) co-regency of his son Antiochus V is not considered there (Fischer 1980: 134–39; coins of Antiochus V, which bear what is probably Lysias' monogram, support the assumption of such a co-regency [Fischer 1986: 70]). Although 13:42 mentions its own chronology based on the regnal years of the high priest and prince of the land, the author of 1 Maccabees consistently adopts the dates of the Seleucid era, both thoroughly and reasonably according to the Babylonian–Jewish (not the Greco–Macedonian) reckoning (Fischer 1985b: 350–51; otherwise Neuhaus 1974b: 162–63; Goldstein, *1 Maccabees* AB, 21–25, 540–41, 544; *2 Maccabees* AB, 22–23, 32–33, 56–63, 71; *IJH*, 542; Bickerman 1979: 101–11; Schunck, JSHRZ, 291; Collins 1981: 150; Bringmann 1983: 15–28; Attridge 1984: 176 and n. 53; Will and Orrieux 1986: 160, 170 n. 5; cf. *HJP²* 1: 18–19; *HJP²* 3/1: 181).

The book itself recounts the acts of Mattathias and his five sons. It adheres to a markedly dynastic position and does not single out and relate the history of a class, a people, or a country as such. It appears to be homogeneous and well thought out, and is extremely stylized (Neuhaus 1974b: 171–75; otherwise Will and Orrieux 1986: 57). At the beginning of the work the poetic sections (Neuhaus 1974a; Enermalm-Ogawa 1987)—that is, the prayers (Flusser 1984: 572), speeches, addresses, laments, and songs of victory—serve to accentuate the course of the events. Later, as in Thucydides, it is the documents (Stern 1973: 184–89) which increasingly and by dynamically intensified turns interrupt the continuous narrative. To the extent that these documents derive from the 2d century B.C., they are presumably all authentic, even those pertaining to Sparta, and particularly the letters which, as such, also happen to represent only suggestions that were never in fact realized (e.g., 10:25–45; 15:2–9). Chap. 8 plays a key role in the middle of the book (Neuhaus 1974a: 113); there we find the introduction of the famous treaty (Momigliano 1980: 563) which Judas is said to have concluded with Rome, the (then) new and rising

world power in the West (Gruen 1984: 16 n. 14, 42–46, 51 n. 189, 125, 316, 338–39, 428 n. 168, 668, 748). Such an accord was in fact only realized later, and then through Simon, the brother of Judas.

In stressing the reciprocal intention to conclude such a treaty, the author of 1 Maccabees cleverly compensates for the death of Judas, and, by the same token, he clarifies the most important element in Hasmonean foreign policy: its continuing reliance upon substantial diplomatic relations with Rome (Fischer 1981: 141–43). It must remain uncertain whether the contemporary historian Eupolemus, whom Judas had sent as his own Greek-language envoy to Rome (8:17), should be regarded as the source of this treaty. Nevertheless, the report itself is serendipitous both for the study of the sources and for interdisciplinary collaboration. The extrabiblical parallels clearly reveal how skillfully and ingeniously—in contradistinction to any Greco–Roman author, who would only have paraphrased the contents of such documents—the author of 1 Maccabees varied his diverse *Vorlagen* and presented them to his native Judean readership, especially a treaty which was reciprocally promulgated by Judas and the Romans, but not ratified (Fischer 1980: 105–21, 191; 1981: 141–42, 148, 150). An additional feature of the author's compositional method, tendency, and understanding is therefore secured, one which supplements the literary-critical analyses of Neuhaus 1974a and Enermalm-Ogawa 1987 (cf. also Dimant 1988: 392–95, 399 and n. 83 [on 2:49–64], 407 [on 5:48]).

The poetic pieces in the book contain both free and literal quotations of, as well as "plays" on, all three parts of the later canon (the Torah has no primacy; indeed, the most space is devoted to the writing prophets: Neuhaus 1974a: 177; Goldstein, *2 Maccabees* AB, 30–31 is imprecise). The biblical texts in question were brought into relation to the author's own time as "fulfilled prophecies," and hence they were actualized, as, e.g., Ps 79:2–3 in 1 Macc 7:16–17 (Dimant 1988: 390–91). However, this procedure is likewise not exact in the modern sense of historical criteria. In agreement with various scholars (Neuhaus 1974b: 163–75; Bringmann 1983: 13 and n. 8; cf. Schaefer *IJH*, 542), one should not accept the conclusions of the earlier German source-criticism about 1 Maccabees (for references, see Attridge 1984: 176 and n. 52; *HJP²* 3/1: 181 n. 2; Enermalm-Ogawa 1987: 11 n. 3). Further speculations on this topic are presented by Goldstein, *1 Maccabees* AB, 37–103; *2 Maccabees* AB, 28–54. For example, on the basis of 9:22 one can deduce neither a written *Vorlage* nor a *Vita* of Judas; rather the contrary.

3. Date. There is more agreement among researchers as to the question of the date of the book, which apparently appeared toward the close of the 2d century B.C. in Palestine (Abel and Starcky 1961: 17; Bickerman 1979: 94; Fischer 1980: 56 n. 141; Nickelsburg 1981: 117; Attridge 1984: 171; *HJP²* 3/1: 181; Momigliano's date of "between 146 and 129 B.C.E." [1980: 564–66] is certainly too early, while Goldstein's date of the time of Alexander Janneus around 90 B.C. [*1 Maccabees* AB, 62–63, 72; *2 Maccabees* AB, 71–83, 121] is possibly somewhat too late). At present, a less uncertain *terminus ante quem* for the composition of 1 Maccabees is not possible, although the thoroughgoing use of the Seleucid era (in spite of 13:42 and 14:43; cf. 2 Macc 1:9!), the harmonious relationship to Rome, and the untroubled dynastic concord of the Hasmoneans all suggest the early 1st century B.C., at the latest. At this time the "thieving" Hasmonean state (as the Greco–Roman authors, presumably following Poseidonius of Apamea and the official Seleucid terms, denoted it) strongly realized its *de facto* independence far beyond the borders of Judea and Samaria (Fischer 1985a).

4. Theology and Tendency. The theology of the book is biblical and conservative (Abel and Starcky 1961: 13–14; thoroughly now Neuhaus 1974a: 227–40). The authority of the oral tradition has receded into the background, which, however, did not rule out the "right" interpretation—as, e.g., in the case of self-defense on the Sabbath (on this problem, which was not ultimately solved at the time, see Habicht, *2 Makkabaeerbuch* JSHRZ, 187; Oppenheimer 1976: 34–38; Fischer 1980: 58–59 and n. 141; Nodet 1986: 325 and n. 9; Will and Orrieux 1986: 60, 158 and n. 109; D. Kellermann 1987: 174, 178). God, in place of whose name either "heaven" or the personal pronoun was used, appears as Israel's efficacious helper and as the Lord of the Covenant (Schunck, JSHRZ, 293; Enermalm-Ogawa 1987: 52; D. Kellermann 1987: 173); however, He figures less in personal prayer or accompanied by heavenly helpers or miracles, but rather through the Law, in action and universal trust: it was He himself who had called the Hasmoneans to be Israel's leaders! Prophecy was considered either fulfilled or ended, at least until "a new and reliable

prophet should arise" (4:46; 9:27; 14:41; cf. Goldstein, *1 Maccabees* AB, 12–13). Any type of eschatology or ideology of martyrdom is absent (Neuhaus 1974a: 232; Goldstein, *1 Maccabees* AB, 12; U. Kellermann 1979: 88; Fischer 1980: 57 n. 142; Schunck, JSHRZ, 293; Will and Orrieux 1986: 58).

A thoroughgoing pro-Hasmonean (Habicht, *2 Makkabaeerbuch* JSHRZ, 188–89; Tcherikover, *WHJP* 1/6: 116; Schunck, JSHRZ, 292; Nickelsburg 1981: 114–17; Attridge 1984: 172–76; *HJP²* 3/1: 180–81), perhaps even Sadducean, tendency (most recently advocated by Fischer 1980: 56) interpenetrates the entire work, the unified structure of which has—in terms of speeches, concepts, and themes—been demonstrated by Neuhaus (1974b: 171–74). In spite of the "old-fashioned" colorization which manifests itself to some extent in the use of the Hebrew language and in the restoration of Israelite models (Rajak 1986: 141), the Maccabean revolt "according to the will of God," the attendant "liberation" of the Temple, the city, and the country, and finally the aggressive expansion so as to embrace the whole of Palestine and parts of Syria, all this legitimates the dominion of the Hasmoneans. Their rule was regarded as the fulfillment of prophecy and even as the re-establishment of the empires of David and Solomon (Fischer 1980: 182, following Neuhaus 1974a), although Jonathan and Simon had secured their power against the Judean establishment thanks in part to their position as Seleucid functionaries: they changed sides repeatedly and in this way "liberated their people from foreign rule" (Fischer 1985a). Since the Maccabees (or, as we read in 5:62, "those men, into whose hand the salvation of Israel was given") only derived from the low house of Joarib, there was neither a genuine biblical nor a priestly legitimation of the aspiring Hasmonean rule in reality but, in the Hellenistic sense, a very political and truly pragmatic foundation. This presupposition was, on the one hand, directed against the former high-priestly line of the Oniads, who were then resident in the Egyptian exile and in the Diaspora with the Ptolemaic kings. On the other hand, it was also opposed to the Pharisees, the apocalypticists, and the many sectarians in Judea itself (otherwise Efron 1987), who increasingly criticized the Hasmoneans because of their methods of rule and their susceptibility to Greek influence. Indeed, these groups disputed the legitimacy of the Maccabean line and the Hasmonean claim to the office of high priest; and these tensions reached a bloody culmination during the rule of Alexander Janneus (103–76 B.C.). However, the Sadducean conceptions of God, Law, and tradition in 1 Maccabees are not by themselves sufficient evidence to warrant the full ascription of the work to the Sadducees (cf. Bickerman 1979: 94; Efron 1987: 7–9, 14, 17).

In any case, such a Chronicle was not originally directed at foreigners or Greeks, but rather at the native Judean readership of ca. 100 B.C. These people may be characterized as intimately familiar with the writings of the fathers, conscious of the nation and its ideology, but at the same time practical (in a Hellenistic sense), that is, pragmatic and not eschatologically or apocalyptically oriented (although in general the last-mentioned viewpoint predominates in our extant tradition). The main military and political opponents (or scapegoats) were—as one would expect at the end of the 2d century B.C.—the Seleucid kings, rather than foreigners as such (like the Spartans and Romans). The inner-Judean opposition was either passed over in silence (like the "evil priest" Menelaus), or else they were indirectly dismissed, like the apocalypticists, who were relegated to their own sort of existence in the desert. The Hasmonean party proper identified itself with "the true Israel" (Neuhaus 1974a: 128; 1974b: 172), the identity and collective consciousness of which was accentuated by ahistoric terms (cf. Enermalm-Ogawa 1987: 50–51). Such characteristics suggest an author who was experienced in both politics and propaganda, perhaps a man who was schooled in Sadducean learning, who was in the immediate proximity of the Hasmonean princes and wrote, at their behest, as the "court chronicler" (on which position, see Neuhaus 1974a: 174–84, 215, 223–25).

On the basis of such presuppositions the figure of "the Maccabee" takes on, albeit *ex eventu,* the characteristics of a formidable individual, considered in a very Hellenistic sense, those of a *hērōs* or "savior" (*sōtēr*) on the Greek pattern. The effects of this figure survived his own lifetime and, like his father Mattathias, he bears the marks of the divine *ktistēs:* in spite of a superficial appearance of failure, Judas nevertheless established the rule of his house "according to the will of God," "in reality," decisively and permanently (Fischer 1980: 176–77; cf. Neuhaus 1974a: 115–17, 192–201; Will and Orrieux 1986: 57–58). Apart from the manifest Sadducean-Hasmonean elements, these sorts of disguised Hellenistic-

messianic features may have contributed to the rejection of the work by the Pharisees and by later Judaism (Abel and Starcky 1961: 12–13; Fischer 1980: 57 n. 142).

In war either for or against the Seleucid kings whom they once served, in conflict with their own people, and in the service of the Sanctuary (which Hyrcanus I probably plundered; Fischer 1983), the Hasmoneans appear to have been colorful and discordant. Who is surprised, then, when the author of the work includes a *lament* on the occasion of the consecration of the Temple in 164 B.C. (Neuhaus 1974a: 81–82, 110, 112) and not, as one might have expected of the "liberator of Zion," a song of praise (Fischer 1980: 72–73)?

B. The Second Book of Maccabees

1. Structure and Sources. Whereas the "Sadducean (?) Chronicle" of the Maccabees (1 Maccabees) appears to have been written at one sitting (even though it is composed of a variety of materials it intensifies until the violent death of the last son of the "founder of the dynasty"), 2 Maccabees gives the obvious impression of being a *mixtum compositum* with a sort of introduction, two letters (1:1–10 and 1:10–2:18) and a foreword by the epitomizer himself (2:19–32), with an excerpt from the (assuredly originally Greek-composed) history by Jason of Cyrene, which is not elsewhere attested (3:1–15:36), and with the epitomizer's own epilogue (15:37–39).

The somewhat verbose epitomizer (or abridger), who modestly remained anonymous, abbreviated the five books of Jason (whose existence we are not to doubt with Nodet 1986: 330–31 n. 15; cf. Doran 1981: 81–83) into a single book (2:19–32; see Doran 1981: 77–81). This redactor organized and partially expanded the contents, as was then current practice (Habicht, *2 Makkabaeerbuch* JSHRZ, 171; Fischer 1980: 89, 139; Attridge 1984: 178 and n. 61; misunderstood by Goldstein *1 Maccabees* AB, 28). In 4:17 and 5:17–20 the epitomizer seems to comment on his *Vorlage;* in 12:43–45 (possibly following then-contemporary Egyptian practice) he further imputes to Judas the belief in resurrection (see Oppenheimer 1976: 39–40; U. Kellermann 1979: 87–88; cf. Bringmann 1983: 55 n. 17). In 6:12–17 it is apparently not Jason who speaks to us, but the didactic abridger (Habicht, JSHRZ, 171, 230 n. 12a; Momigliano 1980: 574; Nickelsburg 1981: 119 and n. 58; cf. Doran 1981: 53–55; Attridge 1984: 180 and n. 64), as is also the case in 7:42 (U. Kellermann 1979: 54, following Bunge). The martyr deeds of the aged Eleazar and of the Mother and her seven sons (6:18–7:42) might well also have been adopted from a different narrative (Habicht, JSHRZ, 171, 173; Fischer 1980: 28 n. 7; Collins 1981: 260–61, 310; Enermalm-Ogawa 1987: 89; otherwise U. Kellermann 1979: 55–58; Doran 1981: 21–22, 35–36). Later in *4 Maccabees* (*HJP²* 3/1: 588–93) we find that this passage—which was of such central importance for the epitomizer (U. Kellermann 1979: 54) and which was laden with emotion—has been expanded and elevated to the crown of biblical martyrology (U. Kellermann 1979: 35–38, following Surkau and Holl, speaks of it as *"the primeval martyr narrative of Judaism and the early church"*). Bickerman's analysis of the sources pertaining to Heliodorus' visit to the Temple (3:23–40) is doubtful (Habicht, JSHRZ, 172–73; Doran 1981: 19–21; Fischer fc.). The swashbuckling source theories of Goldstein (*1 Maccabees* and *2 Maccabees* AB) have been repudiated by Doran 1981: 17–19; see also the criticisms of Collins 1986: 73, 76.

It remains unclear whether the epitomizer arranged the two introductory letters (1:1–2:18)—which were probably originally in Aramaic rather than in Hebrew (but see Habicht, JSHRZ, 170 and n. 15; Alexander 1984: 594; Enermalm-Ogawa 1987: 54, 56 and n. 2)—so as to preface the excerpt; Habicht (JSHRZ, 174–75) and Attridge (1984: 177–78) offer critical reviews of the research on this point. Although we must thank Habicht for a very penetrating source analysis of the entire book, his layer theory must remain hypothetical (Fischer 1980: 14–15). Earlier source theories have been surveyed by Schaefer (*IJH,* 543–44; *HJP²* 3/1: 531–34 is not useful on this issue).

In any case, the two letters form a sort of unity which distances itself formally, linguistically, and temporally from the rest of the book, the learned epitome (Fischer 1980: 86–89). Perhaps both letters derive from a Jewish archive in Alexandria (hardly in Leontopolis) or Judea (on which see Habicht, JSHRZ, 200 n. a). It appears that the first letter (1:1–10), from the year 124/3 B.C.—which is dated to the Seleucid era (on the Judeo-Babylonian reckoning)—is actually the second (!) injunction of the Judeans to

their compatriots in Egypt to celebrate "the (eight-day) festival in the month of Chislev according to (!) the manner of booths [Sukkoth]" (on which see Oppenheimer 1976: 41–42; Doran 1981: 4–5). Then follows (1:10–2:18) the earlier communication of "those in Jerusalem and those in Judea and the council and Judas" to Aristobulus (on this well-known sage, tutor of princes at the Ptolemaic court, and probably also political leader of the Jewish Diaspora then dwelling in Egypt, see Fischer 1980: 89–90 n. 216; Conzelmann 1981: 153–55; Borgen 1984: 274–79; Collins 1986: 175–78; *HJP²* 3/1: 579–87). Apparently, this letter to Aristobulus is actually a companion-piece giving the deeper motivation of the first letter; of course, such an appendix is undated, following the archival custom of the time. However, the first (!) adhortatory letter from 143/2 B.C.—which is only mentioned in 1:7–8 (Fischer 1980: 88 and n. 213)—has not been preserved.

2. Contents and Purpose. The contents of the actual, strongly moralizing epitome, which is not precisely datable (otherwise, e.g., U. Kellermann 1979: 13, 59; Doran 1981: 111–13; Attridge 1984: 177), partially intersects with the account in 1 Maccabees. The epitome explicates the prehistory of the revolt from around 180 B.C. under Seleucus IV Philopater, describing the internal Judean rivalries, as well as the conflicts surrounding the office of high priest (*archiereus*), and the struggles for the "leadership of the people" (*prostasia tou laou*) under Antiochus IV Epiphanes, Antiochus V Eupator, and Demetrius I Soter. Aspects of the Seleucid government proper (and hence of the supraordinate imperial history) receive more attention here than in the more local-oriented "Chronicle of the Maccabees." At least, the epitome passes over Mattathias, who may have suffered a mortal wound in battle with government soldiers (Fischer 1980: 59 and n. 153). Because of the statement in 15:37, which is false by historical criteria (cf. C.3 below), it is probable that the five books of Jason, like the epitome, ended with the victory over Nicanor in 160 B.C. (on which see Habicht, JSHRZ, 171–72, 280 n. 37a; otherwise Goldstein *1 Maccabees* AB, 27, 33; *2 Maccabees* AB, 5, 12, 505). The epitome—or its *Vorlage (n)*—and 1 Maccabees seem to be independent of one another (on which see Doran 1981: 13–17; somewhat differently Nodet 1986: 330 n. 15), as already the thoroughly contradictory chronologies show (e.g., in connection with the death of Antiochus IV either before or after the restoration of the Temple; Fischer 1980: 133–39; 1985b: 351).

Although the epitome and the introductory letters are distinct from one another both linguistically and in source critical terms, their connection is probable as an intelligible, logical, literary, and above all propagandistic intensification, the purpose of which was to enable Hanukkah finally to establish itself among the Judeans of the Egyptian Diaspora after about 40 years. Such a concern explains why the first adhortatory letter of 143/2 B.C. was dropped; it was certainly in Aramaic and therefore somewhat antiquated; moreover, it was unsuccessful, so that the Greek epitome took its place. The Greek epitome was a work which, besides the extant letter to Aristobulus, provided the further, thorough, "historico-didactic" features so convincing to the ears of the Alexandrian Judeans. This also agrees well with the whole book, namely with the adoption of the festival at the Nile, which is certainly not attested prior to 124 B.C. Apparently, this same cultic intention served to attach the Ptolemaic Diaspora to the Hasmonean homeland; it may even have been directed against the Oniads, who lived in Egypt and fostered their own sanctuary in Leontopolis (Nickelsburg 1981: 121; Attridge 1984: 183; skeptically Doran 1981: 11–12 and Collins 1986: 78–80, who, however, mistakenly holds that such an "attempt to subordinate the Diaspora to Jerusalem" would have had to be both cleverly and tactfully presented). In other words, neither in an ancient nor in a modern sense is 2 Maccabees as a whole a work of history (otherwise Vermes 1984: 37–38); instead, it is a sort of "Festal Scroll," an aretalogy and didactic narrative of the wonder-working power of God, which both Jews and heathens of the time equally valued highly (Momigliano 1975: 104–5; 1980: 577–78; Attridge 1984: 183 and n. 68; Doran's objections [1981: 105–7] may perhaps apply to the epitome, but not to the whole of the book).

This common purpose of establishing the annual festival of Hanukkah (as it is called today) unifies the different parts of the writing, as was already seen by Bunge in his *Diss. phil.*, published in 1971. Accordingly, taken as a whole, 2 Maccabees in its present form displays the characteristics of a Judaism that was schooled in up-to-date Greek rhetoric and literary style (on the linguistic character of the book, see Abel and Starcky 1961: 26; Goldstein, *2 Maccabees* AB, 20 and n. 54; Dommershausen 1985: 9; esp.

Doran 1981: 24–46; Enermalm-Ogawa 1987: 54–145). The ascription to Egypt seems certain (despite the hesitations of Vermes 1984: 30–31, 35–37; cf. Collins 1986: 11) because of the addresses of the two introductory letters, the origin of Jason in Cyrenaica, and the transmission of the writing within the framework of the LXX. The work probably became known there in the 1st century before or after the turn of our era (Habicht, JSHRZ, 169–70, 176; Fischer 1980: 14 n. 30; cf. Schaefer, *IJH*, 544; Dommershausen 1985: 9; Nickelsburg 1981: 121 thinks of an origin in Judea in the time of Alexander Janneus; cf. Will and Orrieux 1986: 62; Momigliano 1980: 571; [cf. 1975: 105] prefers the early date of 124 B.C.). Philo of Alexandria seems to have been familiar with the book (Habicht, JSHRZ, 177; *HJP²* 3/1: 534; otherwise Momigliano 1980: 577), as was the *Assumption of Moses* (U. Kellermann 1979: 94–95).

3. Title and Transmission. The title of the work is secondary or perhaps even tertiary; that is, it may have arisen in the course of the Christian use of the text. It was apparently the Christian tradition which united the "four" books of Maccabees and gave them their common designation which has lasted to the present (Habicht, JSHRZ, 169; Goldstein, *2 Maccabees* AB, 3–4 and n. 1). It was apparently also in this way that the original title of 1 Maccabees was lost, since it was only available to the Christians within the framework of the LXX. However, one ought not to exclude the possibility that already the Greek-speaking Jason had termed his book the "Maccabean History" (*Makkabaika*). Later on, the title was more or less correctly transferred to the three other writings. The history and textual criticism of the text of 2 Maccabees are discussed by Abel and Starcky 1961: 79–82; Habicht, JSHRZ, 191–94; Goldstein, *2 Maccabees* AB, 124–27; *HJP²* 3/1: 534–35.

4. Scholarly Issues. The two introductory letters present many problems. They were already composed in the 2d century B.C. No serious doubts as to the authenticity and unity of the first letter (1:1–10) have been raised since the fundamental investigation by Bickerman in 1933, although a few details remain controversial.

On the other hand, the second letter (1:10–2:18; bibliography in Fischer 1980: 87) is still generally considered to be a forgery (otherwise, e.g., Flusser 1984: 572 and n. 89). However, the allegedly historical argument against its authenticity (which derives ultimately from Holleaux) is unconvincing (Fischer 1980: 92–96): Antiochus III did in fact plunder the temple of Bel in Elam and was only subsequently (*tachy*) cut to pieces there in the sanctuary of Nanaia (1:13; cf. Dan 11:19!), where his son Antiochus IV was later to fail, dying shortly afterward in Tabai in Persia. Evidence is concealed in the Babylonian Talmud (*Šabb.* 21b) which expressly and independently confirms the date of the letter toward the end of 163 B.C. (cf. Fischer 1980: 90–92, 99–100, 216). Thus it appears that this document is really the sole authentic surviving record of Judas Maccabeus himself.

The contents may be paraphrased as follows: an introductory aretalogy of God simultaneously deprecates the "foreign king and rule" while "explaining" the "renewed Temple consecration" (on the varying designations for this festival see Fischer 1980: 90–91 and n. 218; Doran 1981: 4–5 and n. 9) by retrospect into the Israelite and pre-Hellenistic history. A second *Leitmotiv* emerges in the course of the letter: the "return of the Judeans" according to Isa 11:10, i.e., the ingathering of the Diaspora, as well as the "punishment of the oppressors of Israel." This *eschaton*, which is envisioned in the immediate future, is apocalyptically conceived on the basis of the "breakthrough of the kingship of God" which has so recently "revealed" itself in the "wonderful victory" over Antiochus IV and his son (1:11–17). In actual fact, Judas succeeded in bringing his threatened compatriots from Palestine back to the land of Israel. In staking his claim for complete freedom, the rebel formulated his own demand for leadership at the expense of the high priest, who had collaborated with the Greco–Macedonian kings. Ultimately, Judas' attitude was that of a statesman, politician, and military leader, and was not biblical and conservative but revolutionary and truly "Hellenistic" (Fischer 1980: 182–84).

Thus, the letter was intended to set in a new and deeper light the re-establishment of the "cult of the fathers" in which the Maccabee himself had participated together with Menelaus, the high priest and rightful representative of Judea, both under the authority of the "divine" king Antiochus V Eupator. The evidence for this is not only the date of the festival itself—that is, exactly three years to the very day after

the desecration of the Temple (Nodet 1986: 327), probably on the same day of the month as the birth of Antiochus IV Epiphanes, who was revered as a god by his son and successor (Fischer 1980: 72–73 and *Add.,* p. 218)—but also a group of five documents which have been authentically transmitted to us outside the introduction, namely in the epitome. However, their correct sequence remains controversial.

These documents should be placed in the following order: 11:27–33; 11:34–38; 9:19–27; 11:22–26; and 11:17–21 (Fischer 1980: 64–80). The three last-mentioned letters together make up a single recording procedure which is completed by the writing of the Roman envoys (11:34–38). The chronological order emerges from simple reversal of the sequence in which the documents were archived; the two letters "of King Antiochus to the Judeans" (9:19–27; 11:27–33) have been exchanged and thus they represent the only real error in the epitome. The five documents (in Judas' archive?) were not originally intended for publication, which is evident from the lack of the relative order of the notification. This is important for the genuine evaluation and secondary application of these witnesses, in particular as regards what they suggest and offer as contemporary and later tendencies.

The two letters 11:22–26 and 17–21 expressly attest to the re-establishment of the earlier cult in Jerusalem, and thereby to the actual state of Seleucid sovereignty over Judea at the end of 164 B.C. Because of the Maccabean successes, as well as other reasons, Antiochus V changed his course with respect to the policies of his recently deceased father, Antiochus IV. It is possible that the third document, 9:19–27, represents an attempt to motivate and, propagandistically, to legitimize, this change of policy in order to secure the allegiance of all Judeans for the new and not yet come-of-age sovereign. However, the authenticity of this "hand-record," which so impressively bears witness to the "madness" of the "deathly ill" but nevertheless fairly pleasant "Epimanes," remains doubtful (Fischer 1980: 74–79, 87, 96; Doran 1981: 62; Alexander 1984: 586, 595 and nn. 61–62). However, in terms of contents, this writing forms a close counterpart to the "Judean" letter to Aristobulus (1:10–2:18), although the languages, presuppositions, motivations, thoughts, senders, and recipients of both records are very different, and have first been brought together by modern historical criticism.

Thus the question as to the historical intention, evaluation, and interpretation of the events in Jerusalem in December of 164 B.C. presents itself. It appears that Judas returned and submitted, at least externally and formally, to Seleucid authority. The Temple was restored and Menelaus was its first priest. Shortly afterward, however, Judas rebelled once more, only to be defeated in the summer (or autumn) of 163 by Lysias and the king, who, because of further dangers, withdrew from Jerusalem. Menelaus was sacrificed, and the Oniads escaped to Egypt (Fischer 1980: 80–85). In this seemingly paradoxical situation, in which the defeated Judas asserted himself, the rebels interpreted the "wonderful salvation" in their own sense, even though they had in fact returned to the Seleucid authority. Indeed, they remained peaceful for all of two years. In their own writings, however, they hailed God as "the true king," proclaimed the "return of the dispersed," and thus asserted on their own level the national state of Israel. Likewise, they celebrated the anniversary of the consecration of the Temple no longer out of loyalty to the hated Seleucid king but as the "true wonder of the in-breaking Lordship of God." With respect to their compatriots in Egypt, the letter to Aristobulus (1:10–2:18) testifies to this permanently rebellious, current-political, apologetical, and ideologized view of things, to which was opposed the pragmatic-positivistic understanding of matters held by Greeks such as Polybius.

In the epitome (or already in Jason's narrative) the restoration of the Temple in 164 seems likewise to have been "judaized." The death of the "archfiend" Antiochus corresponds to the "renewed Temple dedication" (Doran 1981: 61–63); Menelaus and the (new) king are passed over in silence, whereas Judas and his merits are emphasized (9:1–10:9). The reality of the events may be presented in 10:7 (Enermalm-Ogawa 1987: 92–93); the secondary evaluation of them in 10:4. The First Book of Maccabees is more instructive when, on the same occasion—apparently because of the restoration of Seleucid sovereignty—it intones a lament (see above). The varying designations of Hanukkah, the heathen elements in Judas' celebration, the anniversary date itself, and the noticeable reticence of the rabbis (Abel and Starcky 1961: 12), indeed the entire tendency both to excuse Judas (2 Macc 11:15) and even to present him as "the true high priest" (Fischer 1980: 212, 218, *Add.,* p. 75 n. 185; Nodet 1986) find an obvious and perhaps

convincing explanation in this way. Rarely in the Hellenistic period do documents and literary accounts permit us direct insight into a then-current political controversy as well as into the contemporary Judean understanding of history.

It remains uncertain whether it was Jason, the epitomizer, or a later editor who first published these documents and/or organized them in their present sequence. In spite of Goldstein (*2 Maccabees* AB, 71, 81–83, 122 ["by 86 B.C.E."]), Attridge (1984: 177), and Collins (1981: 261–62; 1986: 72–73, 77 ["not long after the Maccabean revolt"]), it would be futile to speculate further over such questions as the place, time, person, activity, and character of this historian (?) in the manner of the earlier source criticism; in fact, we know nothing certain as to Jason of Cyrene (Abel and Starcky 1961: 26–27; Habicht, JSHRZ, 170, 173–74; Fischer 1980: 14 and n. 31; *HJP²* 3/1: 532).

As far as the epitome itself is concerned, the following organization may be discerned (Doran 1981: 93–94, 110; esp. Nickelsburg 1981: 118, here repeated):

1. Blessing: Jerusalem during the priesthood of Onias III (3:1–40);
2. Sin: Hellenization of Jerusalem under Jason and Menelaus (4:1–5:10);
3. Punishment: Reprisals of Antiochus IV (5:11–6:17);
4. Turning point: Deaths of the martyrs and prayers of the people (6:18–8:4);
5. Judgment and salvation: The victories of Judas (8:5–15:36).

This structure corresponds to the well-known Deuteronomistic scheme of sin and divine retribution (Nickelsburg 1981: 118–20; Rajak 1986: 141).

As far as the *Vorlage (n)* of the epitome is concerned, the following conclusion may perhaps be drawn: its depiction of the Seleucid administration and its *apparatus* is quite authentic and of historical value. This is occasionally confirmed by a primary epigraphic find (Habicht, JSHRZ, 178, 190). When Jason of Cyrene (writing from the point of view of the cosmopolitan Judean Diaspora) makes his judgments, his understanding of things is neither old-fashioned nor provincial (as is that in 1 Maccabees); rather, this Greek-speaking author is a valuable witness to the general literature, culture, and spirituality of Hellenistic times.

At least, the epitome is to be assigned to the "tragic" historiography of that period, as already Benedictus Niese emphasized in 1900 (Abel and Starcky 1961: 17; Goldstein, *1 Maccabees* AB, and 34 and n. 70, *2 Maccabees* AB, 20–21; Habicht, JSHRZ, 189–90; Bickerman 1979: 95–96; Enermalm-Ogawa 1987: 54; esp. Doran 1979: 107–10; 1981: 84–97; cf. *HJP²* 3/1: 533; the concept of "tragic historiography" is, however, just as problematic as are "Hellenism" and "ideology"; and yet it is well established today and is permissible from a scholarly point of view). Polybius, who represented the "pragmatic" direction in the 2d century B.C., concentrated on military and politics, that is, on the affairs of state (*ta pragmata*). In contradistinction, the "tragic" historiography attempted to captivate its readers with a style which was rhetorical and dramatizing, which cascaded its effects, and which offered appealing entertainment and sensitive participation. It was in this sense that the epitome sought to shock its audience both psychically and physically through exaggeration and the broad depiction of horrific scenes and immeasurable passions, but also through praise for the heroic deeds of individuals and the terrible demise of the "archfiend." However, such moralistic and dramatizing applications often do damage to the truth of historical insight: Habicht (JSHRZ, 191 and n. 129–30) recognized the tendentious distortion of the "enemies," be they of foreign origin or from the author's own people. The use of intellectual concepts instead of moral categories which could have been appropriately applied is peculiar (13:23; 14:5 + 8; 15:33; cf. Habicht, JSHRZ, 190 and n. 122, following Abel). Among features which belong to the repertoire of the "tragic" or melodramatic account are such things as divine self-manifestations (*epiphaneiai*: Doran 1979: 113–14; 1981: 98–104; Momigliano 1980: 575), angels, heavenly riders, and dream-visions (*oneira* and *theōriai*) as in 2:21; 3:24–40; 5:2–4; 10:29–30; 11:6 + 8; 12:22; 15:11–16 + 22–23. Indeed, anything that was overwhelming, wonderful, and which escaped rational perception (2:21; 7:18; 12:15; 15:21) was prolixly presented. The style and vocabulary correspond to those of the Hellenistic environment, including the fact that it was possible to employ the term "barbarians" against the Greeks and Macedonians themselves (2:21; 10:4; 13:9; cf. 4:47).

Expressions from the heathen religious sphere appear in 6:23 (*ḥadēs*) and 7:13–14 (*metallaxantos ton bion ap*' or *hyp'anthrōpōn*; Habicht, JSHRZ, 215 n. 7a, 235 n. 14a). At least linguistically, the terms *Hellēnismos* and *Ioudaismos* constituted no problem for Jason or the epitomizer, even though the author confused edifying didacticism with true rhetorical art. (On the conceptions of "Judaism" and "Hellenism," see Fischer 1980: viii and nn. b + c; Amir 1982; Gafni 1984: 1.1a; Bichler 1986: 12–19; Will and Orrieux 1986: 10–12.) Against this background, 1 Maccabees seems not merely to be more "Hebraic," but directly more sober, factual, political, and "pragmatic" (to use Polybius' term).

However, the epitome, or Jason, judaized the Greek and Hellenistic models (Doran 1981: 89–109; cf. Enermalm-Ogawa 1987: 118–19). The centerpiece is the Temple, its holiness, age, reputation, and place in the world. The "threat," "violation," "restoration," and "defense" of the Sanctuary are already sounded in the foreword of the epitome, 2:19–22 (Abel and Starcky 1961: 25; Habicht, JSHRZ, 186–87; now, thoroughly, Doran 1981: 47–76). Note, however, the remark in 5:19 *("the people were not chosen because of the place, but the place because of the people"),* which might seem to imply a sort of abstraction, i.e., a relation to the very biblical tradition and revelation which relativizes the visible cult, the (Greek!) language, and the "realistic reality" in the Hellenistic sense. We shall return to this point.

The epitome can hardly be called "Pharisaic" in a strict term (Habicht, JSHRZ, 189). It glorifies Judas and mentions Simon in such ways that we are unable to speak of a clearly pro- or anti-Hasmonean tendency; Goldstein (*1 Maccabees* AB, 33), Habicht (JSHRZ, 188), and Nickelsburg (1981: 121) are somewhat too reserved on this point (see also Collins 1986: 80; and Efron 1987: 19). Zion and the city, the land and the "Hebrews" remain as they are depicted: namely, as the sole, exclusive, and only rightful sites of the highest worship of God which all Judeans are obliged to accept. No claim for the right to an independent state, in the sense advocated by the Maccabees, is advanced (Habicht, JSHRZ, 188).

In actual fact, the problem of the Diaspora lay on another level. The question was not so much the politico-military or even the linguistic-cultural opposition; rather, it was defined by the religio-ideological competition between rigorous *Ioudaismos* (2:21; 8:1; 14:38; incorporated in the "Sanctuary," "city," "fatherland," "constitution," and especially in "the Law": 13:11 + 14; 15:17–8, etc.) and hedonistic-enlightened "Hellenism." Thus the more free and fashionable manners of the "foreigners"—Macedonians, Greeks, Egyptians, and Syrians—pursued a line that was *per definitionem* anti-Judaic. This conflict arose and persisted in the Diaspora; of course, it was less violent in the "Jewish" Judea of the Hasmoneans.

It is with sensibilities attuned to these nuances that we must understand the description in the epitome (or perhaps already in Jason's work) of the "time of persecution" in the homeland as the epoch of the most extreme "intermixture" (*epimixia*) according to 4:13; 14:3 + 38 (Fischer 1980: ix and n. d, 49 and n. 133; Habicht, JSHRZ, 271 n. 3b reads *amixia*). In this way the heathen cult in the Temple was the unheard summit of desecration (to Judean ears in the Diaspora!), in which it was possible for a genetic Greek (if there were any at all at this time!) to turn out to be a genuine "barbarian." Likewise, the "Hebrew," who was devoted to "the God of the fathers," was able to serve as a model of *hērōs* in the sense of the *ēthē kai pathē* of the Greek rhetorical and "affectionate" understanding. Such inversions are astonishing only to us. The Aristobulus letter (1:10–2:18) refers to the "victory" over the "sham-king" Antiochus and to the demand for an independent state; there is no question of any "persecution of the faithful" or "Hellenization," but only of "war" (2:14; Fischer 1980: 100). It is doubtful whether such a rivalry between "Judaism and Hellenism" in the Judean region itself during the Maccabean uprising is historically accurate (Fischer 1980: 174–88, 195; esp. 186–87; likewise, but for other reasons, Bringmann 1983: 12, 145–48; otherwise Habicht, JSHRZ, 185, who passes sentence *ex eventu*). Such considerations reinforce the ascription of the epitome (and of Jason?) to the Egyptian Diaspora, which was in fact persecuted (otherwise Doran 1981: 112–13; Rajak 1986: 132).

5. Theological Matters. In 2 Maccabees God is many-layered and many-sided, ambivalent and perhaps even discordant, as such self-contradictory (cf. Dommershausen 1985: 9–11; Enermalm-Ogawa 1987: 124–33, 138–41; the two introductory letters [1:1–2:18], which are more firmly anchored in Israelite tradition, deserve special study). He is the almighty God of Israel (8:15), the "Holy Lord of all Sanctification" (14:36) who concluded His Covenant with the fathers (8:15) and revealed Himself (3:24 +

30; 14:15; 15:34). Elsewhere, however, He is conceptually defined in good Hellenistic terms as "the Highest and Greatest" (3:31 + 36), although the superlatives do not simultaneously imply the existence or "real" power of other, lesser gods. God has need of nothing at all (14:35) and is Himself the One who created everything and man from nothing (7:11, 22–23, 28; 13:14; 14:46; on this *creatio ex nihilo* see Abel and Starcky 1961: 24–25; Habicht, JSHRZ, 187 and n. 101; U. Kellermann 1979: 73–77, with differentiations). He is the helper and comforter, but also the righteous judge who punishes stringently, not for revenge but for "improvement and for our warning," and who also permits the vicarious sacrifice of others. He allows Himself to be reconciled, and in spite of wrath and mutability He keeps faith with His Chosen People (Doran 1981: 53–55).

A theological foundation for the epitome (and the work of Jason?) is provided by the whole of the book of Isaiah and by Daniel 12 (U. Kellermann 1979: 81–85; Nickelsburg 1981: 121). The prophecies were believed to have been realized. Together with the Deuteronomistic understanding of the sin and the necessary (!) divine retribution (which was intensified by the collective responsibility), this conception led to an extreme tension and inversion: God's promise was held to realize itself even in the physical suffering of "the pious" (on this problem, see U. Kellermann 1979: 62, cf. 93). Such an assumption led to a specific martyrology, namely to the idea of the unusual hero who suffers in his innocence and dies; yet such a "child of heaven" is elevated by the righteous, compensating, and preserving God through a new creation and complete reversal of all things: to physical resurrection and eternal life (Abel and Starcky 1961: 18–21; Habicht, JSHRZ, 187, 234 n. 9c; U. Kellermann 1979 *passim*, esp. 40; Fischer 1980: 165–68, 170, cf. 28–29, 151–54; Doran 1981: 110; Nickelsburg 1981: 120–21 and n. 60–62; Will and Orrieux 1986: 60–61). This "theologization" of human existence (Will and Orrieux 1986: 59–61) is entirely foreign to 1 Maccabees with its positivistic understanding of the world.

The question here is not whether resurrection as a projection of extreme retribution was intended to compensate ideologically and psychologically for a horrible reality; patterns of ancient Egypt (the Osiris cult), and of the Greek heroes who incarnated themselves vividly in permanent reverence, may be the antecedents of such conceptions. In any event, 2 Maccabees makes manifest the memory of the individual personality: after the "last judgment," resurrection of everybody was either supposed to be positive for "bliss" or negative for "eternal damnation." Nor will it be possible here to touch on the deeper theological problems as to why God surrendered to the most extreme tortures precisely those who were his most faithful, or why (to our limited human understanding) God appears to have "needed" reconciliation with and in Himself (which, according to Christians, was then effected by Jesus of Nazareth). The impression of divine discord remains, as in the last instance "evil" does not act of its own accord but rather as a divine tool.

Prayer (Flusser 1984: 572–73), mediation through didactic stories, as well as special intermediaries, including the dreams of Jeremiah and Onias III, won increasing influence at this time (Abel and Starcky 1961: 22–24; Habicht, JSHRZ, 187 and n. 104; U. Kellermann 1979: 12, 86–87; Fischer 1980: 103 and n. 253; Doran 1981: 71–74). Thus, the immediate access to God was seen as questionable and at least problematical. On the other hand, alongside of the "Covenant" and "honesty to the Law" (Collins 1986: 77), fear of God and personal reliance became new fundamentals of the faith (6:30; 8:18 + 23; 10:28; 15:7). Spirituality and "fidelity to the Law" appeared to be more important than sacrifice, cult, and other externals (2:22; 3:1 + 15; 4:11 + 17; 6:1 + 5–6 + 21 + 28; 7:2 + 9 + 11 + 23–24 + 30 + 37; 8:21 + 36; 13:11 + 14; 15:9). Such an individual attitude expressed itself in public "confession" and with emphasis, as when the "evil heathen" converted to the true faith and acknowledged God's efficaciousness to the entire world (Heliodorus in 3:35–39; Nicanor in 8:36; Antiochus Epiphanes in 9:11–27; Lysias in 11:13). A dynamic was founded in this spirit which developed further in Christianity and revolutionized the ancient world.

C. Summary

1. Recapitulation of the *Quellenkritik.* With the exceptions of the biblical citations and Judas' proposed treaty with Rome from 161 or 160 B.C., the sources of 1 Maccabees which date to the end of the 2d century B.C. remain uncertain. As far as 2 Maccabees is concerned, the following development in

chronological sequence may be assumed (otherwise Nickelsburg 1981: 118). First was the alleged "Maccabean history" in Greek by Jason of Cyrene, now lost (which included a prehistory of the revolt, and which was written from the point of view of the Hellenistic imperial history). Later the epitome of this history was composed by a possibly Alexandrian Judean, with alterations and additions. It was strongly rhetorical, didactic, and emotionalizing; i.e., similar to the "pathetic" or "tragic" historiography according to the genuine Hellenistic tradition (as perhaps was already the case with Jason's work). The final stage was the entire book of 2 Maccabees, including the two introductory letters which were translated from Semitic-language originals. This final product was presented with the intention of introducing Hanukkah (or whatever it was then called) into the Judean Diaspora in Egypt. The *terminus post quem* of the final version of the book, as we now possess it, is the year 125 B.C.; at least it was apparently known to Philo of Alexandria in the beginning of our era.

2. Analysis of the Documents and Related Methodology. Without prejudice to the authenticity of Jewish-Hellenistic literature in general (e.g., Fischer 1980: 189–92; Alexander 1984: 585–88, 596; Schmidt 1986), the analysis of the documents which was introduced by Elias Bickerman proves to be a secure foundation for further study. Additionally, it is now possible to distinguish between suggestion and realization, primary and secondary publication, application, tendency, and audience(s). In this fashion it is permissible to reconstruct an original series of records (probably deriving from Judas' archive) within the epitome (see B.4 above) which was secondarily completed by the letter to Aristobulus (2 Macc 1:10–2:18). It is important to recognize the first recipients (cf. Vermes 1984: 33–39) in the late 60s of the 2d century B.C., as already the languages imply: Judas will have addressed himself to his compatriots in Egypt in Aramaic, while the Seleucid king must have written in Greek to his subjects (that is, to the local, more or less "Hellenistically" oriented elite of Judea!). There is no problem with the later target groups of the two books of Maccabees (which were then unified by the Christians according to their own points of view) around the end of the 2d and in the 1st centuries B.C.: namely, on the one hand, the native audience in Hasmonean Judea (1 Maccabees), and on the other, the "Hellenistic" Diaspora in Ptolemaic Egypt (2 Maccabees). Such a (partial) communicative reconstruction is a necessary presupposition of the true historical evaluation.

3. Structures of the Histories of Events. A history of events results from the unfolding of then-current political controversies and the peculiarities of the times. The outward quarrels in Judea which were conducted in "revolt" and with increasing "zeal" took place to attain freedom and self-determination, and were also concerned with the right of *asylia* (Fischer fc.), the office of high priest, and the "leadership of the people" (*JW* 1.31). However, already contemporaries recognized what may have been underlying reasons, namely the "battle for the Torah"—not only for its legitimacy as such (either in the pluralistic Diaspora or in confrontation with Antiochus IV in Judea), but also within the community itself as to the "right" understanding, the "authoritative" doctrine, and the practical embodiment in the context of a new time (on this, see Collins 1986: 12–15, 244–46; Will and Orrieux 1986: 60, 126–31, 134–36). The author of 1 Maccabees received the Israelite tradition immediately and as a matter of course; he passed it on straightforwardly in his own fashion and understood his time as "fulfilled prophecy" (Neuhaus 1974a: 180, 228–30). One aim of this writing was to establish strong identity in the Judean people (Enermalm-Ogawa 1987: 52–53). However, the more enlightened Diaspora, which was quite differently threatened both from within and from without, required argumentative and express commitment to the Law, a necessity which perhaps intensified the movement toward theology. In any case, the consequence of this development was the splintering of the biblical community into individuals and groups, reactionary or progressive, which ultimately combated one another, whether openly or covertly.

At the same time, the local process in Judea was intimately bound up with the events taking place on the broader field of the *Reichsgeschichte* (*grande histoire*, following Will and Orrieux). What the king needed was not so much a pious priest or financially sound Temple superintendent, but rather a capable vassal and military leader (Fischer 1985a). The struggle between the high priests, the Oniads, Jason, Menelaus, Alcimus, and Judas (and his brothers) was not merely a personal one; rather, it was a structural problem. The situation was complicated by the lasting claim that the Ptolemies, who had granted asylum to the

Oniads, staked to Palestine. At the same time, in Judea the "orthodox" and the apocalypticists were increasingly reluctant to follow the Hasmoneans (otherwise Efron 1987), who deliberately expanded their "royal" authority according to the Greco-Macedonian conceptions.

For further details concerning the course of events see, most recently, Rappaport 1984, Fischer 1985a; fc. The increasing differentiation within the country itself is noteworthy, as is the political, cultural, and ideological emancipation of the Judeans (the "pariahs," in Max Weber's phrase) who, however, were not always accepted by their neighbors (which in turn produced and intensified Hasmonean self-awareness).

In spite of their biblical presuppositions, both books of Maccabees demonstrate the appropriation of such Hellenistic elements as an increasingly apologetic tendency, a "rhetoricalization," and evaluation of the individual. However, we must acknowledge some breaks which are quite manifest in 2 Maccabees. There the Greek-formulated *Ioudaismos* is contrasted with a "barbaric" *Hellēnismos,* a supreme example of a perverted propaganda. In spite of the allusions to its biblical antecedents, 1 Maccabees has abandoned the fundamental theological-biblical structure in favor of a secular historiography in the Greek tradition (Will and Orrieux 1986: 57). The transformation expresses itself also in the interpretive patterns. Judas led the Diaspora (whose members had, according to tradition, been "punished because of their own apostasy") back to their "home," whereas his brothers and successors (Mendels 1987: 47–51) undertook the expansion and even the enforced Judaization of Palestine. Thus, the racial identity of the Israelite people was imperiled without troubling the "Hellenistic" ruler and his colorfully assembled army. Instead of religious-cultural "separateness," the Hasmoneans now fostered the political enmity toward the rival Seleucids (Neuhaus 1974b: 172; Fischer 1980: 56 n. 142), as well as the "foreign-friendliness" toward Sparta and Rome (Will and Orrieux 1986: 58). The transience or actual devaluation and relativization of all concepts, norms, and behaviors became visible and, in terms of mentality, they created an atmosphere of doubt, ambiguity, and instability.

The superficially static Judean understanding of the world and of history (Rajak 1986) was dynamically, thoroughly, and fundamentally transformed through the Hellenistic influences. The loss of identity expressed itself particularly in the field of religion, notably the aggravation of the conflict over the Torah, its use, and the validity of both "written" and (steadily multiplying) "oral" authorities, beginning with the 2d century B.C. (Will and Orrieux 1986: 225–26). The translations and commentaries are the signposts of this development. Relativization expressed itself in a positivistic sense, as at the death of Antiochus IV before or after the restoration of the Temple, but also in the understanding of reality as such, of the effect and interpretation of events. We have already seen the cases of Judas' treaty with the Romans, of Hanukkah, and of the very odd concept of *Hellēnismos;* to this we may add the question of the constitution of Judea (monarchy or rule by priestly aristocrats), a theme which is connected with the problems surrounding the legitimation of the Hasmoneans. In 1 Maccabees Judas' death, the actual end of the revolt, was aptly compensated for by the everlasting "first treaty" with Rome. Indeed, this was in its origins the political tendency of a single party, i.e., the Maccabeans (in 2 Maccabees the same compensation for the failure of Judas is supplied by the Day of Nicanor, that is, the annual "victory-day" of the whole community). A similar observation applies to the book of Daniel, where the deceased Maccabee was elevated to the status of an eternal *hērōs,* the "Son of Man" (Fischer 1980: 152–54). In all these examples, the loss of a "pragmatic" understanding of history, as expressed likewise in the letter to Aristobulus (2 Macc 1:10–2:18), is remarkable (Fischer 1980: 171–73). Thus, the route leading to the rabbinical conceptions of history becomes more evident.

4. Aspects of Historical Inferences. Both books of Maccabees reveal Judean authors actively discussing the "sufferings" which had been inflicted by the heathen. In the course of this process the biblical faith increasingly assumed the linguistic, conceptual, and even aggressive forms of the "persecutors." Both writings were not originally missionary (in a Christian sense) works addressed to foreigners, but to a properly Judean audience. They were less apologetic than propagandistic. 1 Maccabees conservatively asserts the Sadducean position of the ruling Hasmonean against the "ultra-orthodox" opposition in their own country. 2 Maccabees, taken as a whole, seeks to establish in the

Diaspora an annual festival along Greek lines; the work attempts this argumentatively and with psychological insight, while the epitome is especially didactic and rhetorical.

Both writings express the increasing degree of reflection upon the "self-apostasy" and the splitting of consciousness. In 2 Maccabees, it interpenetrates the whole of the epitome. Judas himself, however, was able to project the problem onto the Diaspora. In the letter to Aristobulus, if anywhere, it is only in 2:2–3 that we hear of such "apostasy." This corresponds to the genuine Maccabean ideology, which is probably present from 1 Macc 2:6 onward and in 2 Macc 8:1–4: the rebels regarded themselves as being persecuted, and thus as perfectly "righteous" (cf. Enermalm-Ogawa 1987: 51), also as far as the question of fighting on the Sabbath was concerned. In 124/3 B.C., the first introductory letter of 2 Maccabees mentions the *"apostasy of Jason (the high priest) and his followers"* (1:7). This corresponds to the contemporary view of the Hasmoneans as in 1 Maccabees, namely that the internal political opponents are to be excluded from the "true (and allegedly positive) Israel."

In contradistinction to such *Realpolitik*, the earlier book of Daniel had asserted the idea of "self-apostasy among the people." Daniel also retained God's righteous punishment, the confidence in Him and His grace, as well as the deeper theological aspect of the "persecution" against which were counterpoised the optimistic Hasmonean concepts of the "fulfilled prophecy" and of the "renewal of the empires of David and Solomon" (cf. Fischer 1980: 182, following Neuhaus; Will and Orrieux 1986: 58). In the epitome, however, the equivocal and "theologically" intensified view (Will and Orrieux 1986: 59–61), which has traumatically influenced Jewish history until the present time (cf. Bickerman 1979: xii–xiii), became triumphant. Thus, a decisive transformation of the Judean mentality took place in the late Hellenistic period, the "breaking up" of the Maccabeans flared up and in time reached the "zeal" of the Zealots in A.D. 70. It was no longer the pragmatic attitude of a Polybius or of 1 Maccabees; rather, the religious emphasis and intensification established themselves on a permanent basis. From the Maccabeans' militant "confession" of God, the Law, and the faith of the fathers, the path ran to the Holy Maccabees, and to the Mother with her seven sons (2 Maccabees 7; 4 Maccabees 8–17). For the first time in biblical religion, martyrdom had become a new type of divine worship (Conzelmann 1981: 16–18; further on this aspect and its historical consequences, see Abel and Starcky 1961: 30–34; U. Kellermann 1979: 12–13, 17–19, 94–142; cf. Efron 1987: 3, 54). Gradually, Jewish history took more and more the features of grief and pain.

The "Maccabees" were the first and only Saints to be reverenced by parts of both Judaism and Christianity up to the present time (Habicht, JSHRZ, 233 n. 7a; Fischer 1980: 28–29; Momigliano 1980: 575–77, 578 and n. 8). These champions were originally adored (in the Greek sense) at the site of their execution, at their grave in Antioch. In the course of history they developed into the prototypes of resistance to heathen and secular authority everywhere. Today the bones of these rebels, victims, heroes, or witnesses to Faith reside in Cologne, Germany. Their memorial day is August 1st.

5. Conclusions. 1 and 2 Maccabees testify to the diversity of the late-Hellenistic epoch in general and especially (in the sense of Baras *WHJP* 1/8: xxv–xxvii; Vermes 1984: 33–39) of the Judeans and the Diaspora in the age of the Second Temple. They emit echoes reminiscent of rifts in countries, sects, and individuals (otherwise Efron 1987: 20). We cannot claim that there was a "canonical unity" of the Judean nation and its Torah for the years of the protracted crisis (Tcherikover *WHJP* 1/6: 5–6). There were indeed Messianism and eschatology, as well as continual conflicts and doubts of oneself and the Law. Rather, we encounter different entities, languages, concepts, traditions, intentions, target-groups, varying and increasingly differentiated segments, and apologetically or polemically reacting identities and individuals. Both openly and in more covert form, intercultural connections become evident as, for example, when both the "Greek" Poseidonius from Syrian Apamea and the "Jewish" Pharisees, or the desert sectarians, characterized the active and "thieving" Hasmonean state as "degenerate" (Fischer 1985a).

This dynamic process of universalization and radicalization intensified the disintegration, the polarization and growth of ideology, of which, finally, the Hasmoneans were the victims, and which, in Judaism, the rabbis were the first to pick up. In 2 Maccabees the characteristics of syncretism or *epimixia*

(on the modern concept of syncretism see Will and Orrieux 1986: 147–48, 150) are openly displayed, whereas they are hidden in 1 Maccabees, even though man's own activity is much emphasized there (Neuhaus 1974a: 231–32, 240; Will and Orrieux 1986: 57–58). Resurrection and immortality in 2 Maccabees betray their proximity to Stoic philosophy; the belief in a life to come reminds us of the ancient Egyptians (U. Kellermann 1979: 28–29 n. d, e; 89–93; and cf. 46–53). The elevation of executed "champions" from among the "lower" echelons of the people is another characteristic of importance, as it prefigures the "King of the Jews" of the Christians. A feeling of inferiority (which simultaneously insisted on superiority), a sensitively concealed reaction to the perceived attractions of Hellenism, as well as the ruling Romans and the rise of the natives in the Ptolemaic Empire, the attendant dissemination of Egyptian religion throughout the world of Greek culture—amid such circumstances, contradictions, and changes, reality itself was stood on its head. Hanukkah turned out in the course of time to be, like Christmas, a heathen-biblical-Jewish-Christianizing festival (cf. Petuchowski 1984: 121; *"the same ceremony may express completely different ideologies"*). Historically it is hardly surprising that the Jews throughout the ages have always been celebrating the rededication of their Temple, which has long vanished, rather than the everlasting birthday of the "evil" King Antiochus, "the god manifest and bearing victory."

The rabbis have removed the two books of Maccabees from their writings; it was modern Zionism which rediscovered them for Jewish identity. The modern Maccabiade immortalizes precisely that Hellenism which Judas is supposed to have vanquished. The first Christians paid homage to the martyrdom and the most extreme witness of faith, the wonders and the visions, the angels and the Saints, the "Last Judgment," the " (physical) Resurrection," and other paradoxes (in the modern sense of the word), perhaps even to the innocent and vicarious sacrificial death of the righteous and suffering Son of Heaven for human atonement and reconciliation with God (on which see U. Kellermann 1979: 11–13). Both separately and together, the two books of Maccabees, and especially their prayers (Enermalm-Ogawa 1987: 142–45), have influenced the mentality of the Jews and Christians up to the present day. Out of the feeling of isolation, of being surrounded by enemies and persecuted until life and death hang in the balance, there arose an attitude which could not be counterbalanced by the claim of one's own superiority. Existential crisis and militant expansion were the psychological consequences for such a minority, and that irrespective of whether or not the threat was real or merely imagined.

Bickerman (1979: 92) recognized that the preservation of the faith in God was the best merit of the Maccabees. Behind the alternate powers of the world, their mutability as well as the deceptive meanings of writings in general, there is the nameless One who beams like Hanukkah from beyond History and Existence, self-contradictory and inconceivable to human sense: *Idem ipse fuit Deus triune puerorum, qui fuit Machabeorum. Illi de igne evaseruut, illi ignibus cruciati suut, utrique tamen in Deo sempiterno vicerunt* (St. Augustine).

THOMAS FISCHER
TRANS. FREDERICK CRYER

THIRD MACCABEES

The document we know as "Third Maccabees" is not very aptly named. Whereas the work does contain echoes of several themes in 2 Maccabees, the historical events reflected in it antedate the Maccabean period proper by some 50 years, and there is nowhere any reference to the epic Maccabean struggle for freedom. Probably the title was used because the author's account of God's miraculous deliverance of the Jews from the destruction threatened by a foreign tyrant and oppressor was reminiscent of the Maccabean revolt and heroic Jewish resistance to the intervention of the Syrian emperor, Antiochus IV Epiphanes, in Palestinian territory and in Jewish affairs: in consequence of which *3 Maccabees* was placed alongside 1 and 2 Maccabees in the manuscripts.

There is little doubt that *3 Maccabees* originated in Alexandria, Egypt. Its style and literary flavor strongly resemble such other Alexandrian writings as 2 Maccabees and the *Letter of Aristeas.* Also the story is set mainly in Alexandria, and one of the author's chief concerns is the status of Egyptian Jews. There are certain similarities between *3 Maccabees* and the type of "historical romance" that flourished in the Hellenistic period. But on the whole it is best to think of his narrative as "pathetic" or "tragic" history.

The writer seeks to play on his readers' emotions and to evoke their sympathy for his heroes and the cause they represent. He does so in the most flowery language, employing as many tricks of the rhetorician's trade as he can muster, adding purple passage to purple passage, and piling up epithet upon epithet.

The plot that unfolds in *3 Maccabees* is akin to that of the canonical book of Esther and the tales of divine aid for champions of the Jewish faith in Daniel 1–6. But it is unlikely that the author was directly influenced by any one canonical book. Instead, he draws freely on a variety of old biblical traditions, especially in the prayers offered by Simon and Eleazar in chaps. 2 and 6. His closest affinities, however, are with the Greek additions to Esther, which inserts a theological dimension the secular Hebrew Esther does not contain; in terminology, if not in thought, with the *Letter of Aristeas;* and in ideas, expression, and vocabulary with 2 Maccabees.

The first chapter of *3 Maccabees* begins abruptly and is somewhat disjointed throughout. Saved from a plot against his life, Ptolemy IV Philopator of Egypt proceeds forthwith to the defeat of Antiochus III the Great of Syria at the battle of Raphia (217 B.C.E.). In response to a courtesy visit from a delegation of Jewish elders, Ptolemy resolves to visit Jerusalem. The scene moves swiftly to the temple. Impressed by its magnificence, he insists, against the Law and despite all remonstrances and priestly prayers, on his right to enter. A mighty throng converges at once upon the temple: "The combined shouts of the crowd, ceaseless and vehement, caused an indescribable uproar. It seemed as if not only the people but the very walls and the whole pavement cried out, so much at that moment did they all prefer death to the profanation of the temple" (1:28–29). Simon the High Priest then offers a long prayer, rehearsing the mighty acts of God on behalf of his people Israel. God responds by imposing condign punishment upon Ptolemy, who suffers a seizure. The description of it is a good example of the bombastic language of *3 Maccabees:* "God scourged the one who was greatly exalted by his own insolence and effrontery, tossing him to and fro like a leaf on the wind until he fell impotent to the ground with his limbs paralyzed and unable to speak, completely overpowered by a righteous judgment" (2:21–22).

We next find Ptolemy back in Egypt, breathing vengeance against the Jews. He commands a census of all Jews in Alexandria in order that they might be reduced to slavery. Exemption is offered to those who agree to participate in the pagan mystery cult of Dionysus. Some do apostasize. But the great majority gallantly hold out for their ancestral faith. The angry Ptolemy then decrees that all Jews in his kingdom be transported in chains to Alexandria and there put to death. The account of their deportation (4:1–13) is a classic piece of "pathetic history" writing in the most florid style. Once arrived on the outskirts of the city, the vast multitude of Jews is herded into the racecourse (in this type of literature one does not ask how it could contain them). Ptolemy plans their destruction with Hermon, the captain of his five-hundred-strong elephant brigade. Three times Hermon, or finally Ptolemy himself, sets out on this nefarious exploit, and three times the scheme is thwarted by God's miraculous interference on behalf of the Jews (5:1–22, 23–25; 5:46–6:21). On the last occasion, by reason of the venerable Eleazar's prayer, by an amazing reversal, the elephants, previously intoxicated by doses of frankincense and wine, turn back on the king's own troops and trample them to death. In a fit of remorse Ptolemy undergoes a complete change of heart toward the Jews, orders their release and return home, and highly praises their God (6:22–29). The whole narrative of 5:1–6:29 is intended to illustrate both the power of prayer and the absolute sovereignty of the Jewish God.

At the close the Jews engage in joyous festival celebrations (6:30–41; 7:13–15, 17–18, 19–20), the first associated with their deliverance in Alexandria, the second with the assassination of three hundred of the apostate brethren, permission for which had been granted by Ptolemy (7:12); the third with their seven-day banquet at Ptolemais, their port of departure; and the fourth with their return home. The elaborate festival conclusion suggests that the story told in *3 Maccabees* may relate to the origination of the practice of an annual celebration among Egyptian Jews, possibly bearing some resemblance to the major feast of Purim.

Opinions differ regarding the extent to which *3 Maccabees* furnishes reliable historical information about the Jews in Egypt. The author does appear to have had access to some fairly trustworthy source for his report of the battle of Raphia (1:1–5), which accords with that of Polybius, and his portrayal of

Ptolemy IV is consistent with what is known of him from elsewhere (e.g., Plutarch, Strabo, Diodorus Siculus): his love of banquets, his dependence on his courtiers, his efforts to unite Jews and Greeks in the cult of his ancestor Dionysus, his use of elephants for military purposes, and the format of his official decrees. Perhaps more importantly, certain key passages, difficult to interpret though they are (2:28–30; 3:1–10; 4:14–15), seem to point to *3 Maccabees* as a fair source of knowledge for the legal rights and status of the Jews in Alexandria. But it is stretching credulity too far to argue that the whole narrative is an accurate factual report of what happened, even down to the details—the supposition, for instance, that the administering of frankincense and wine to the elephants was a spectacular ceremonial-ritual preparation for the annihilation of the Jews as anti-Dionysian "heretics." Such a detail is better construed as a mark of the storyteller's art: it makes more feasible the miracle of the beasts' turning back by divine intervention and trampling Ptolemy's own forces to death (5:1–2, 10, 45; 6:18–21). For further discussion, see JUDAISM (IN EGYPT).

The author's purpose is not to provide a straightforward diary of events. Rather, he employs the medium of romantic historical narration, in an inflated and hyperbolic style (e.g., 2:17–29; 4:1–21; 5:45–51; 6:16–29), with strong apologetic intent, to demonstrate the goodwill of the Jews as loyal subjects of the king, to defend the unique quality of their life and religion, and to uphold the sovereign majesty of the God whose people they are. He is a strict conservative, in whom there is little or no trace of the more innovative type of thinking we find in apocalyptic or Wisdom literature, or in those treatises which seek a fusion of Hellenistic philosophy and Judaism (e.g., *4 Maccabees*). His theology and faith are completely orthodox. He accepts without question that God supports and blesses the righteous and punishes the wicked. He has the deepest reverence for the temple (1:9–29). His rigorous devotion to the Law is implicit in his report of the slaying of more than three hundred renegade Jews (7:14–15), in accordance with the injunctions of Deut 13:6–18.

It is hardly possible to trace the composition of *3 Maccabees* to any specific crisis in the history of Egyptian Jews, e.g., the threat imposed on them when Egypt was made a Roman province in 24 B.C.E. and the civic status of the Jews was endangered by the new Roman administration; or the persecution of Alexandrian Jews during the reign of Caligula, when he attempted to set up his effigy in the temple in 40 C.E. The book, with its emphasis on God's kindly providence toward his people and on their festival joy at the marvelous deliverances he wrought for them, does not have the flavor of a crisis document. In terms of its actual content it could have been produced at almost any time from ca. 200 B.C.E. to 50 C.E. The discussion concerning dating has focused largely on *3 Maccabees* 2:27–30, which records the census or registry (*laographia*) of the Jews in Egypt required by Ptolemy, and his command that those registered be "branded by fire on their bodies with an ivy leaf, the emblem of Dionysus." If the aim of the census were the levying of a poll tax, that would seem to indicate the location of *3 Maccabees* within the Roman period (the Roman *laographia*). If on the contrary the purpose of the census were deeply religious and had to do with the persecution of the Jews who rejected the divinity of Dionysus, that would tend to strengthen the impression that *3 Maccabees* belonged to the Ptolemaic period. Since it is by no means impossible to infer from *3 Maccabees* 2:27–30 that Ptolemy's motivation was in fact religious rather than fiscal, the passage can scarcely be taken as firm evidence for a date in the Roman period.

The literary connections of *3 Maccabees* are rather more promising for dating. The author is familiar (6:6) with the Greek addition to Daniel usually dated 165 B.C.E., and so his work can hardly be earlier than the latter part of the 2d century B.C.E. Also he shares with the *Letter of Aristeas*, normally assigned to ca. 100 B.C.E., a mode of salutation that was in popular use around that time (earlier and later papyri reveal different formulas), namely, *chairein kai errosthai*, "greetings and good health." In light of the striking correspondences of language and vocabulary between *3 Maccabees* and the *Letter of Aristeas* as well as 2 Maccabees, generally set not earlier than the last quarter of the 2d century B.C.E., a plausible conjecture for the date of *3 Maccabees* would be the latter part of that century or the early part of the 1st century B.C.E.

If, however, we assume that the *laographia* (3 Macc. 2:28) does relate to Roman census procedures, and specifically to the poll tax imposed on Jews by Augustus in 24–23 B.C.E., then *3 Maccabees* would have

been written not too long afterward. Accordingly, on the ground that similarities are discernible between the Ptolemaic situation described in *3 Maccabees* and the circumstances of the Jews during the reign of Caligula (see above) in 38–41 C.E., when the Jerusalem temple was threatened and Alexandrian Jewry were suffering persecution, it is sometimes held that *3 Maccabees* belongs within that short period. But, as noted earlier, *3 Maccabees* is hardly a crisis document, and whether a writer of such fertile imagination and romantic tendency as *3 Maccabees* must have found the springboard to his Alexandrian–Ptolemaic novelette in so precise a moment of Roman imperial history remains open to question.

FOURTH MACCABEES

The document we know as *Fourth Maccabees* is not in any sense, unlike 1 Maccabees and to a lesser extent the more legendary 2 Maccabees, a historical or even quasi-historical record of the heroes, events, and circumstances of the Maccabean period. The name "Maccabees" is appropriate for *4 Maccabees* only insofar as its central theme is worked out at length in relation to the martyrdoms of the aged Jewish sage Eleazar and the mother and her seven sons. These martyrdoms belonged presumably to the early days of the Maccabean revolt, and stories about them were extensively developed in Jewish tradition (compare, e.g., *4 Maccabees* with 2 Maccabees). The author's own highly dramatic account of the last hours of each of the martyrs serves to confirm his thesis (in 1:1 he describes his essay as a "philosophical exposition") that "reason is absolute master of the passions" (1:7). Of the several titles given to *4 Maccabees* in the early centuries probably the most suitable is that of Eusebius and Jerome, "On the Supremacy of Reason."

Although a Syriac version of *4 Maccabees* appeared quite early, the text has come down to us principally in the great uncial manuscripts of the LXX, Sinaiticus and Vaticanus, and the later (possibly 9th century) Codex Venetus, which however lacks 5:11–12:1. The author of *4 Maccabees* undoubtedly wrote in Greek. He is sufficiently at home in the language to invent new and rather strange-sounding Greek words, like *allophyleō* "adopt the pagan way of life" or *misarētos* "enemy of virtue." His literary style clearly reveals the influence of the craft of the Greek rhetoricians. He is well versed in various aspects of Greek philosophy, or at least in Greek philosophical commonplaces. His chief aim is to show that the highest Greek virtues are subsumed under loyalty and devotion to the Law of Moses. The medium he employs is a somewhat repetitive series of theatrical descriptions of the horrendous tortures inflicted by their Syrian oppressors on Eleazar, the seven sons, and finally their mother, all of whom go down to the death clinging resolutely to their ancestral faith. In the speeches he places on the lips of his heroes in their very last moments, the author really expresses his own conviction that "devout reason" or "pious reason" alone enables men and women to control or suppress their natural feelings and desires. The phrase "pious or devout reason" (*eusebēs logismos*) occurs frequently in *4 Maccabees* (1:9, 13, 19, 30; 2:6, 24; 6:31; 7:16; 13:1; 16:1; 18:2) and is by no means easy to translate. It represents an odd admixture of Greek and Jewish elements, in which the faculty of human reason, so greatly valued in the Greco-Roman world, is identified with unflinching obedience to the Torah: "To the intellect God gave the Law, and if a man lives his life by the Law he shall reign over a kingdom that is temperate and just and good and brave" (2:23).

The date and place of origin of *4 Maccabees* are very difficult to determine. It is not necessary to posit a time of extreme crisis and threat for the Jews such as the reign of Caligula (37–41 C.E.) or the brief interval between the end of the Jewish War under the Trajan and the Hadrianic persecutions (117–18 C.E.). Whereas the major part of the work deals with the brave endurance unto death of the famous

Maccabean martyrs, it is in fact a philosophical discourse on how and why such amazing courage was possible, and as such it could have been written almost any time in the last century B.C.E. until the reign of Hadrian in the early 2d century C.E. The likeliest hypothesis arises from a suggestion of E. Bickermann (1976): against the evidence of 2 Macc 3:5 our author describes Apollonius as governor of "Syria, Phoenicia, and Cilicia." Most probably he was alluding to Roman administrative practice in his own time. There are one or two indications (e.g., Gal 1:21) that Syria-Cilicia did once constitute one province, and we find in the *Annals* of the Roman historian Tacitus two passages that point to 19–54 C.E. as the era in which that usage was in effect for Roman provincial administration. We may think of *4 Maccabees* as roughly contemporaneous with the mission and letters of the Apostle Paul.

Numerous echoes of the thought and exegetical methods of Philo have led commentators to locate *4 Maccabees*'s composition in Alexandria. But the grandiose so-called "Asianic" literary style which is a feature of *4 Maccabees* flourished also in Asia Minor and the coastlands of the northeastern Mediterranean, and Antioch in Syria is a feasible alternative to Alexandria. Nevertheless it is very doubtful whether *4 Maccabees* was composed as a speech of commemoration to be delivered at the tomb of the Maccabean martyrs. Certain direct references have been taken to support the view that it was, e.g., (1) the epitaph on their tomb set out in 17:8–10; (2) 1:10, "I might indeed eulogize for their virtues those men who at this season of the year died together with their mother for goodness' sake"; (3) 3:19, "But the season now summons us to expound the theme of the temperate reason"; and (4) 18:20, "Ah! bitter was the day and yet not bitter." But rhetorical devices of this sort were often enough used in purely literary compositions to provide for the readers a sense of urgency, immediacy, and direct participation. In any case, in view of Jewish susceptibilities about anything like a cult of the dead, an annual festival commemoration of the Maccabean martyrs at the scene of their death is very questionable indeed.

Recent scholarship has made it plain that it is inappropriate to draw too rigid a dividing line between the Judaism of the Diaspora and that of Palestine, because the latter throughout the last three centuries B.C.E. was also subject to the infiltration of Greek ideas and practices. Nevertheless, *4 Maccabees* is patently a product of the Diaspora. The author is acquainted with neo-Platonic, neo-Pythagorean, Stoic, and Philonic philosophical principles. Especially does he share with Philo and the writer of the Wisdom of Solomon a firm belief in the Greek doctrine of the immortality of the soul (9:22; 14:5–6; 16:13; 17:12; 18:23). In fact, he purposely omits from his primary source, 2 Maccabees, those passages which attest the resurrection of the body (7:9, 11, 14, 22–23). Despite his orientation to Greek philosophy, he remains in every respect absolutely faithful to the Law of Moses. The first of the martyrs, Eleazar, speaks for the author when, under the taunts of Antiochus that the refusal to eat swine's flesh is an altogether silly scruple, he responds, "I am not so sorry for my old age as to become responsible for breaking the Law of my fathers. I will not play you false, O Law my teacher. I will not forswear you, beloved self-control" (5:32–34). What is at stake, in short, is the Law's integrity in the eyes of the world.

Eleazar is also the first spokesman for another very important aspect of the thought of *4 Maccabees*—"Be merciful to your people and let our punishment be a satisfaction on their behalf. Make my blood their purification and take my life as a ransom for theirs." Later on, in his own narration, the author writes, "The tyrant was punished and our land purified, since they became, as it were, a ransom for the sin of our nation. Through the blood of these righteous ones and through the propitiation of their death the divine providence rescued Israel, which had been shamefully treated" (17:21–23). Words like "satisfaction," "blood," "purification," "ransom," and "propitiation" clearly recapitulate longstanding OT traditions, e.g., the levitical regulations for the Day of Atonement (Lev 16; 17:11; etc.) and the very different portrayal in Deutero-Isaiah (e.g., Isa 53:5, 10, 11) of the servant of Yahweh who, whether a single individual or a group, would by suffering and sacrifice redeem God's people Israel. The notion of vicarious sacrifice and the saving efficacy of the death of the martyred righteous, however, naturally became specially prominent in the period after the Maccabean wars. Central and decisive for early Christianity of course was the message of the atoning or redeeming death of Jesus (see, e.g., Mark 10:45; Matt 20:28; Heb 9:12; Rom 5; 1 Tim 2:6). But there is no need to posit a direct literary dependence on any NT document for a work such

as *4 Maccabees* or to suppose, as did A. Deissmann (1900), that Paul knew *4 Maccabees* as a contemporary bestseller.

There is no doubt at all that *4 Maccabees* did wield a direct influence on the development of Christian martyrology. A number of the great figures of the early church (e.g., Gregory Nazianzus, John Chrysostom, Ambrose, and Augustine) revered *4 Maccabees* as if it were a Christian text and "adopted" the Maccabean heroes as Christian protomartyrs. In later Jewish tradition, where the martyrs were a prototypical *kiddush hashem*, the stories told in *4 Maccabees* circulated in various forms, sometimes drawing on the account of Hannah in 1 Samuel 1–2 (see also 2:5). In a fateful moment of history when Luther nailed his theses to the door of the church at Wittenberg (1517), Erasmus made a Latin paraphrase of *4 Maccabees.*

The work stands as a unique memorial to an unknown loyalist Jew of the Diaspora, who was open to Greek philosophy and learning without for a moment compromising his Jewish faith, as well as to all who through the centuries have suffered and died for their religious convictions. See also *OTP* 2: 531–64; *EncJud* 11: 661–62.

HUGH ANDERSON

MACCABEUS [Gk *Makkabaios* (Μακκαβαιος)]. The nickname given to JUDAS, the third son of Mattathias the first leader (ca. 166–160 B.C.E.) of the Jewish forces in the war of independence from the Seleucids (1 Macc 2:4; cf. 2 Macc 5:27 and Joseph. *Ant.* 12.266). In the course of time Judas' nickname (in the plural "Maccabees") was extended to include all of the heroes of this period, as well as other descendants of Judas' family, who were also called the Hasmoneans (see HASMONEAN DYNASTY). It was also applied to various books, three of which are set in the period of the revolt against the Seleucids (1–2 Maccabees, *4 Maccabees*), and one of which only very loosely relates to the heroic aspects of belief in God (*3 Maccabees*). The name never appears in rabbinic literature, and in fact it was the Christian church that preserved these books and cherished the memory of those heroes and martyrs.

The use of nicknames for Judas and other members of the family of Mattathias was perhaps necessitated because their given names (John, Simon, Judas, Eleazar, Jonathan) were so widely used, particularly among priestly families. The derivation of the nickname Maccabeus (as well as the nicknames of his brothers) is unclear, and the difficulties in explaining them are almost insurmountable. Nevertheless, many suggestions have been made. One fundamental thing that is not clear, however, is whether these nicknames were given at birth or in childhood, or later in adulthood as a consequence of certain great deeds.

In Jewish tradition the name occurs in Josippon (16:56 [Flusser ed.]), where it is written *mkby.* This spelling persisted in Jewish books, and was even deciphered (by way of notakiron) as *mî kāmōkâ bā›ēlīm YHWH* ("Who is like thee among the gods, O Lord?"; cf. Exod 15:11). It has thus been suggested that the name derives from *kābâ,* meaning "to extinguish or quench." In that case the name might underscore Judas as one who sought to eliminate Greek influence on Jewish life.

But the spelling *mkby* is not authentic, and *mqby* is preferred. This leads to the most popular explanation, that "Maccabeus" derives from the word "hammer" (Heb *mqbt*). This is very often compared to "Martel" (Lat for "hammer"), the nickname of Carl, conqueror of the Saracens in 732 C.E. In this case the name would signify the military victories of Judas, who hit his enemies like a hammer hitting a nail

(see *HJP²*, 30). However, if the name was given to Judas prior to the revolt against the Seleucids, and if indeed it was related to *mqbt*, "hammer," it could attest to some idiosyncratic physical anomaly, such as a head or skull that resembled a hammer (*ISBE* 3: 196). But whatever the correct derivation of "Maccabeus," Judas' exploits have always remained more important than his nickname.

PAUL L. REDDITT

MACEDONIA (PLACE) [Gk *Makedonia* (Μακεδονια)]. MACEDONIANS. The land of the Makedones, a territory in the Balkan Peninsula, bordered on the W by Illyria, on the E by Thrace, and on the S by Thessaly. Its mountainous terrain is cut by the rivers Axios (modern Vardar) and Strymon (modern Struma), which flow into the Aegean from the N. It is covered today by northern Greece, southern Yugoslavia, and the southwestern corner of Bulgaria. The population was ethnically and linguistically mixed: the Macedonian language contained Thraco-Phrygian, Illyrian, and Greek elements.

A. The Macedonian Kingdom

From ca. 1000 B.C. Macedonia was ruled by a monarchy and subordinate local princes. In the 7th century B.C. the Argead dynasty, with its capital at Aegae, was established by Perdiccas I and remained in power for three centuries, until the time of Alexander the Great.

During the Persian invasions of Europe from 514 to 479 B.C. the Macedonian kings collaborated with the invaders and so preserved their relative independence (Hdt. 5.17–18). Even so, Alexander I of Macedonia gave covert aid to the Greek city-states attacked by Xerxes in 480 B.C. (Hdt. 5.173; 9.45). Alexander extended his territory E to the Strymon, while on the W he annexed some areas on his Illyrian border. It was probably he who organized the citizen corps of foot guards (*pezetairoi*) who formed the backbone of the national army.

Alexander and his successors patronized Greek art and letters. The Macedonian royal house had already begun to be hellenized: at the beginning of the 5th century B.C. Alexander, while still crown prince, was allowed to compete in the foot race at the Olympian games (which were open to Greeks only), because he established his claim to be of Argive stock (Hdt. 5.22; 8.137). By the 4th century B.C. Macedonia was for most practical purposes part of the Greek world.

Philip II of Macedonia (359–336 B.C.) combined diplomatic with military skill. He enlarged his kingdom to the W and E at the expense of Illyria and Thrace; he subdued the independent Greek cities on the Aegean coast of Macedonia; he annexed Thessaly (353 B.C.) and intervened in central Greece, and at last, by defeating the forces of Athens and Thebes at Chaeronea in Boeotia in 338 B.C., he made himself master of the whole Greek mainland. Having thus united Macedonia and the Greek city-states, he planned to make war on Persia but was assassinated before he could begin to take action. His son and successor, Alexander III (the Great), made his united Greco-Macedonian inheritance the base for his conquest of W Asia and Egypt. It is with Alexander's penetration into Asia that the Macedonians make their first appearance in the biblical record.

Alexander figures repeatedly, although not by name, in the visions of the book of Daniel. His empire is the worldwide "kingdom of bronze" in Nebuchadnezzar's dream (Dan 2:39) and is represented probably by the leopard in Daniel's vision of judgment (Dan 7:6). He himself is the he-goat from the west in Dan

8:5–8 (or, more precisely, the "conspicuous horn" between the he-goat's eyes) and the "mighty king" of Dan 11:3. He is mentioned by name in the condensed summary of his career in 1 Macc 1:1–7; in the same book an incidental reference is made to a great treasure that he deposited in a temple of Elymais (1 Macc 6:2). In the Greek Esther (16:10) Haman is called a "Macedonian" (Heb *Agagite*).

With the division of Alexander's empire after his death (323 B.C.) Macedonia became a separate kingdom once more (under Cassander, one of Alexander's generals, and his successors); the city-states of Greece remained subject to it.

B. Wars with Rome

Macedonia clashed with the Romans when Philip V (221–179 B.C.) made a treaty with their enemy Hannibal during the Second Punic War (Polyb. 7.9). The First Macedonian War, as it is called by Roman historians, was inconclusive (214–207 B.C.). But when the Romans' hands were freed by their defeat of Hannibal (202 B.C.), they created an early opportunity of renewing war against Philip. The Second Macedonian War (200–197 B.C.) ended with Philip's defeat at Cynoscephalae (Polyb. 18.22–28). Philip's rule was thenceforth confined to Macedonia. Flamininus, the Roman commander, proclaimed the liberation of the city-states of Greece, over which Rome now established a protectorate (Plut. *Flam.* 10).

A generation later Philip's son and successor Perseus excited Rome's suspicions by his conduct; these suspicions were fomented by Eumenes II of Pergamum, Rome's ally. The Third Macedonian War (171–168 B.C.), which broke out in consequence, ended with Rome's victory at Pydna (Polyb. 31.29). The royal dynasty of Macedonia was abolished; the kingdom was divided into four republics (Livy 45.29.5–9). But in 149 B.C. one Andriscus, who claimed to be a son of Perseus, reunited Macedonia under his rule for a short time (Diod. Sic. 32.9b, 15). He was put down the following year, and the Romans annexed Macedonia as a province (Flor. *Epit.* 1.32.3).

The four republics lost their political significance but continued to be recognized as geographical divisions, numbered one to four: thus, according to the most probable reading of Acts 16:12, Philippi is called "a city of the first division (Gk *meris*) of Macedonia" (Haenchen 1971: 494; Conzelmann *Acts of the Apostles* Hermeneia, 130). Philippi was in no sense "the leading city of the district of Macedonia" (RSV); Thessalonica was the chief city and seat of government of the province of Macedonia, and Amphipolis was the chief city of the first district, to which Philippi belonged.

C. The Province of Macedonia

To strengthen their control of Macedonia, the Romans built a great military road, the Egnatian Way, across it from the Adriatic Sea to the Aegean.

The province of Macedonia became a base for the extension of Roman power into W Asia, on whose peoples the Roman overthrow of the Macedonian kingdom had made a deep impression (1 Macc 8:5). Some of the crucial battles of Roman history in the 1st century B.C. were fought on Macedonian soil. The brief engagement between Pompey and Julius Caesar at Dyrrhachium (at the western terminus of the Egnatian Way) early in 48 B.C. was followed by Caesar's victory over Pompey at Pharsalus later in the same year. (Pharsalus was in Thessaly, but Thessaly formed part of the province of Macedonia.) Six years later Antony and Octavian (the future Emperor Augustus) defeated Brutus and Cassius (Caesar's assassins) at the battle of Philippi (October 21, 42 B.C.).

Octavian (now Emperor Augustus) made Macedonia a senatorial province in 27 B.C. In A.D. 15 Macedonia and the senatorial province of Achaia to the south were combined by Tiberius, at their own request, with the imperial province of Moesia (north of Macedonia) to form one large imperial province (Tac. *Ann.* 1.76.4; 1.80.1). In A.D. 44, under Claudius, this united province was divided back into its component parts, and Macedonia became once more a senatorial province, governed by a proconsul (Dio Cass. 60.24; cf. Papazoglu *ANRW* 2/7/1: 302–69). But, by contrast with what happened in Cyprus (Acts 13:7, 12) and Achaia (Acts 18:12–17), no apostolic encounter is recorded with the proconsul of Macedonia.

D. The Churches of Macedonia

1. Their Foundation. Three of the NT epistles are addressed to Macedonian churches—two to the Thessalonians and one to the Philippians. In other parts of Paul's correspondence there are references to

the churches of Macedonia (2 Cor 8:1–5; 11:9; Rom 15:26), in which the generosity of those churches is warmly commended.

Macedonia was evangelized quite early in the apostolic age: Paul, with some of his companions, first brought the gospel there. It has been inferred from Phil 4:15 ("in the beginning of the gospel, when I left Macedonia") that Paul evangelized Macedonia at a rather early stage in his apostolic career—in the early forties, according to M. J. Suggs (1960). But when Paul, writing to the Philippian Christians, says "in the beginning of the gospel," his meaning may be not "when I first preached the gospel" but "when you first heard the gospel."

The narrative of Acts suggests a date around A.D. 50 for the bringing of the gospel to Macedonia. Paul and two fellow travelers (Silas/Silvanus and Timothy) were on their westward way through Asia Minor in the direction of Ephesus when they were diverted by a divine monition and found themselves on the Aegean coast at Alexandria Troas in the northwestern part of the peninsula. There Paul dreamed that "a man of Macedonia" begged him to cross the sea to Macedonia and help the people there. "Immediately," says the narrator (who apparently joined the party at this point), "we sought to go on into Macedonia" (Acts 16:8–10). They therefore took ship for Neapolis (modern Kavalla), the eastern terminus of the Egnatian Way, and went inland to Philippi. A small group of disciples was formed there, but trouble broke out with the citizens and magistrates, and Paul, Silas, and Timothy had to take their departure. They went farther west along the Egnatian Way to Thessalonica, stopping briefly at Amphipolis and Apollonia. At Thessalonica they spent several weeks and planted a church, but when their presence provoked a riot and compromised them in the eyes of the city authorities, they had to leave hastily and stealthily. Paul had probably planned to push on farther west along the Egnatian Way, but had to turn off the main road and make for Beroea in Thessaly, 40 miles W-SW from Thessalonica. His opponents from Thessalonica followed him there and stirred up fresh trouble, which forced his Beroean friends to smuggle him out of the city and escort him to Athens, out of harm's way.

Paul was greatly disheartened by his first visit to Macedonia. He believed he had gone there under divine guidance, but had been virtually thrown out of one Macedonian city after another after being exposed to abuse and menace. His converts in those cities were bound to suffer because of their association with such subversive characters as he and his companions were made out to be. No wonder that when, shortly afterward, he arrived in Corinth it was, as he said, "in weakness and in much fear and trembling" (1 Cor 2:3). But the situation in Macedonia proved to be much more encouraging than he could have dared to hope: the newly planted churches in Philippi and Thessalonica gave him great cause for joy.

2. Their Progress. The churches of Macedonia, small as they were and powerless in worldly terms, showed that they were able to survive and grow in spite of their founder's abrupt departure. They not only maintained their faith against the pressure of opponents and well-meaning friends, but increased in strength by the boldness and persuasiveness of their witness. Even if an element of rhetorical hyperbole can be detected in the statement that, only a few weeks after the missionaries bade farewell to their Thessalonian converts, not only had the word of the Lord sounded forth from them in Macedonia and Achaia, but their faith was a matter of common report everywhere (1 Thess 1:8), it was a real state of affairs that was amplified thus.

In this activity the Christian women of Macedonia played an equal part with the men. The sources refer to the gospel ministry of Lydia, Euodia, and Syntyche (Acts 15:14–15; Phil 4:2–3), to the "leading women" who became foundation members of the church of Thessalonica, "not a few," says Luke (Acts 17:4), and to the "Greek women of high standing" who became believers at Beroea (Acts 17:12).

This prominence of women was in line with traditional Macedonian custom. The women of Macedonia enjoyed a degree of independence unknown in Greece proper. In the ruling circles women "played a large part in affairs, received envoys and obtained concessions for them from their husbands, built temples, founded cities, engaged mercenaries, commanded armies, held fortresses, and acted on occasion as regents or even co-rulers" (Tarn and Griffith 1961: 98–99; cf. Thomas 1972). The precedent they set was followed by freeborn women in lower social ranks.

3. Their Involvement in Paul's Further Ministry. Paul's converts in Macedonia were marked by quite outstanding generosity. They showed this in some degree by their personal gifts to him. The church of Philippi sent him a gift shortly after he left Philippi for Thessalonica, and did the same on later occasions (Phil 4:16). His needs in Corinth were supplied in part "by the brethren who came from Macedonia" (2 Cor 11:9). But in general Paul did not encourage his converts to make personal gifts to himself; he did encourage them to contribute to a cause which lay very close to his heart.

Paul did not visit Macedonia again for some five years after he left the newly planted churches there. After leaving them he spent eighteen months in Corinth, and from there he crossed the Aegean and embarked on his three-year Ephesian ministry. During his time in Ephesus he began to organize his relief fund for the Jerusalem church among his converts both west and east of the Aegean. He urged them to contribute as generously as possible to this good cause. When he sent two of his associates, Timothy and Erastus, from Ephesus to Macedonia (Acts 19:22), one of their commissions was no doubt to acquaint the Macedonian churches with his plans for this relief fund.

The Macedonian churches responded wholeheartedly to Paul's appeal. He later used their response as an incentive to the church of Corinth; he affirms, indeed, that they overstretched their resources, "for in a severe test of affliction, their abundance of joy and their extreme poverty have overflowed in a wealth of liberality on their part. For they gave according to their means, as I can testify, and beyond their means, of their own free will, begging us earnestly for the favor of taking part in the relief of the saints," i.e., the Jerusalem Christians (2 Cor 8:1–4).

At the end of his stay in Ephesus Paul visited the Macedonian churches (1 Cor 16:5; 2 Cor 1:16; 2:13; 7:5; Acts 20:1–3); it was from Philippi that he set out on his last journey to Jerusalem, accompanied by representatives of churches that contributed to the relief fund. Among these Sopater of Beroea and Aristarchus and Secundus of Thessalonica are named (Acts 20:4). But between his arrival in Macedonia and his departure for Judea he probably spent more time in the former province than appears on the surface: it was almost certainly at this stage that he extended his area of apostolic service "as far round as Illyricum" (Rom 15:19). To reach Illyricum he presumably journeyed to the western terminus of the Egnatian Way and went north from there by the coastal road or by sea.

When the relief fund had been completed and the proceeds taken to Jerusalem, the Philippian Christians felt that they could once again express their concern for Paul by contributing to his personal needs. When his visit to Jerusalem ended in disaster and he was sent to Rome in pursuance of his appeal to Caesar, they sent him a gift, which he acknowledges in Phil 4:10–19. His acknowledgment shows both his deep gratitude for their loving care and the embarrassment which his independent spirit felt in accepting money from even such dear friends as these.

4. In the Postapostolic Age. The Macedonian churches do not play a prominent part in the surviving records of the period immediately succeeding the apostolic age, but what evidence there is bears witness to their fidelity to the apostolic teaching and example. Those of them which were situated on the Egnatian Way had repeated opportunities to provide hospitality and help of other kinds to fellow Christians traveling east and west.

A good example of such an opportunity is seen in the experience of Ignatius, bishop of Antioch, who was taken from Syria to Rome under armed guard about A.D. 115 to be exposed to wild beasts in the amphitheater. He and his guards traveled by road through Asia Minor to Troas, where they took ship for Neapolis and then followed the Egnatian Way to the Adriatic. They came first to Philippi, as Paul and his companions had done sixty-five years before.

We have no details about Ignatius' stopover in Philippi, but the Philippian Christians evidently did what they could for him and showed their interest in him after his departure by writing to Polycarp, bishop of Smyrna, to ask him for copies of any of Ignatius' letters that might be available to him. Polycarp's reply has survived. He expresses his joy that they "have followed the example of true love and have helped on their way, as opportunity offered, those who were bound in chains" (Ignatius is primarily in his mind). Then he adds, "I rejoice that your firmly rooted faith, renowned since early days, endures to the present

time and produces fruit for our Lord Jesus Christ" (Polyc. *Ep.* 1.1, 2). Paul could have desired no better fruit from the tree which he and his associates planted.

F. F. BRUCE

MACHAERUS (M.R. 209108). A site in Jordan that was fortified by several rulers and which is thought to have been the site of the beheading of John the Baptist.

A. Topography

The fortress of Machaerus is situated in Jordan between the Wadi Zerqa Maʿin to the N and the Arnon to the S, at a place where the high Moabite plateau begins to descend toward the depression of the Dead Sea. The rocky prominence with steep sides rises to an elevation of 700 m above sea level and is protected by deep ravines except on the SE and NW sides, where the mountain stretches out to form two saddles. Beyond the ravines, the terrain rises on three sides, with the exception of the W flank, to an average altitude of 720 m. There are no springs in the vicinity, and the vegetation is scarce or totally absent.

B. Identification

The mountain upon which the fortress was constructed is today known as Mishnaqa, from the Arabic verb *shanaqa,* which means "to hang." The ancient name, Machairous (Gk *Maxairous*), probably derives from *machaira* ("dagger" or "sword"), pronounced Makaveros by the Byzantines, and which is preserved in the small Arab village of Mekawer, a mile to the E of Mishnaqa. The identification of Mishnaqa with the ancient Machaerus, proposed by the German explorer U. Setzen in 1807, is accepted by everyone and has been confirmed by excavations.

C. Historical References

Pliny the Elder did not hesitate to classify Machaerus as "the most important Jewish stone fortress immediately after Jerusalem" (*HN* 5.15.72). According to Josephus, two successive fortresses were built at Machaerus. The first was constructed by Alexander Janneus (*JW* 7.171), probably about 90 B.C., and was destroyed by Gabinius in 57 B.C. The second was built by Herod the Great (*JW* 7.172) probably in 30 B.C. and surrendered to Lucinius Basso in A.D. 72 (*JW* 7.209). After the death of Herod the Great, Machaerus, in the S confines of Perea, was assigned to the tetrarch Herod Antipas (4 B.C.–A.D. 39), who imprisoned and killed John the Baptist there (Joseph. *Ant.* 18.116). At the death of Herod Agrippa (A.D. 44), the fortress passed into the direct control of the Romans and remained thus until 66, the outbreak of the first Jewish war. The rebels besieged by Lucinius Basso in 72 surrendered, delivering the stronghold to the Romans. Josephus, after an ample description of the strategic position of the mountain (*JW* 7.163–70), then described the Herodian fortress (*JW* 7.172–76).

D. Archaeological Investigation

Machaerus was extensively excavated in the years 1978–81 under the direction of P. Virgilio Corbo. E. J. Vardaman had made several soundings in 1968, while A. Strobel in 1974 published a study on the military camps and the encircling wall that the Romans had built for the siege of the fortress.

E. Results of Excavations

The four seasons of excavation from 1978 to 1981 have provided an almost complete plan of the Hasmonean-Herodian fortifications and a plan of the lower city.

The archaeological remains do not go beyond the chronological limits (90 B.C.–A.D. 72) suggested by the literary sources: the mountain was not occupied before the Hasmoneans and was no longer occupied after A.D. 72. The Hasmonean fortress was burned by Gabinius, but was not razed. Conversely, the royal Herodian fortress was systematically dismantled by the Romans who, in addition, threw down the hill a

good part of the materials used for construction. A different fate was reserved for the lower city, which was subjected to Roman assault and burned.

Access to the royal fortress was across a viaduct whose foundation is preserved for 150 m along the SE saddle. The viaduct ended in the middle of the mountain near the No. 6 tower and also served as an aqueduct to carry rainwater to a series of huge cisterns hewn into the rock on the NE side of the mount. Between tower No. 6 halfway up the mount, and tower No. 1, at the summit, was the ascent path, protected to the S by defensive wall C and circumscribed to the N by the dwellings of the lower city.

The royal fortress covers an area of about 4,000 m^2 and is subdivided by a central corridor into two blocks. The E block consists of a paved central court bordered on the S by the thermal spring and on the N by a series of storerooms. The W block is constituted of a majestic peristyle, to the S of which rises the triclinium.

Of particular interest to the biblical scholar is the triclinium, which covers an area of 237.50 m^2 (25 by 9.50) and is formed by two adjacent but independent rooms, one for men and the other for women. The report of Josephus (*Ant.* 18.116–19) that John the Baptist was killed at Machaerus seems very reliable and is not easily explained as a Christian interpolation (cf. Mark 6:21–29).

STANISLAO LOFFREDA

MACHBANNAI (PERSON) [Heb *makbannay* (מַכְבַּנַּי)]. One of the warriors from the tribe of Gad who joined David at his wilderness stronghold (1 Chr 12:14—Eng12:13). The Gadites were from a Transjordan tribe to the N; by including them among those supporting David during the period of his fleeing from Saul, the Chronicler is demonstrating the extent of the support David enjoyed before he became king. Machbannai became one of David's commanders.

RAYMOND B. DILLARD

MACHBENAH (PLACE) [Heb *makbēnâ* (מַכְבֵּנָה)]. A name which appears in a genealogical list of Judah (1 Chr 2:49). Machbenah is generally taken to be a place name, and several identifications of its referent have been offered by scholars. According to Aharoni (*LBHG*, 227), Machbenah was a settlement of the sons of Caleb in the Judean hills south of Beth-Zur and Hebron. Some suggest that Machbenah should be linked with Cabbon (Josh 15:40) because of their apparent common root *kbn* (see, for example, *BDB*, 460). Others identify Machbenah with Meconah (Neh 11:28; see *IDB*, 3: 218). Simons (*GTTOT*, 155, 389) associated Machbenah, Meconah, and Madmannah (Josh 15:31).

DAVID SALTER WILLIAMS

MACHI (PERSON) [Heb *mākî* (מָכִי)]. A man from the tribe of Gad, known only through association with his son Geuel (Num 13:15). Geuel was one of the twelve tribal representatives who left Kadesh to spy out the land of Canaan.

TERRY L. BRENSINGER

MACHIR (PERSON) [Heb *mākîr* (מָכִיר)]. 1. The eldest of Manasseh's sons, whose name came to designate a large segment of the patriarch's tribe. Since his name derives from the Hebrew root *mkr*, it has been proposed that his name meant "bought," perhaps marking him as an orphan or waif (Hicks *IDB* 3: 218; *IPN*, 232).

According to Gen 50:23, Machir and his sons were born while his grandfather Joseph was still alive. Moreover, the text reports that Joseph adopted Machir's sons as his own (Richter 1979). Since Judg 5:14, however, mentions Machir as one of the tribes of Israel, alongside Benjamin and Ephraim, some scholars have concluded that Machir was not Manasseh's son and that Gen 50:23b must be regarded as an etiological addition, probably based on Gen 48:13–20 (Westermann 1986: 208). Genealogical material in Num 26:29; 27:1; and 36:1, however, reflects the same tradition of Machir's ancestry that is found in Genesis: Machir was the son of Manasseh but the father of Gilead. While the first text is a military census that includes Machir in the Manassite section (26:29–34), the second (27:1–11) and third (36:1–12), also genealogical texts, are concerned primarily with the matter of Zelophehad's daughters and whether they should receive an allotment of land.

Machir is also mentioned in texts that treat Israel's settlement in Palestine (Num 32:39–40; Deut 3:15; and Josh 13:31; 17:1, 3). The verses in Numbers report that the descendants of Machir captured the land of Gilead and that Moses assigned the territory to them. Since the report is so general and is phrased in such a stereotypical fashion, it has often been regarded as a later insertion and without basis in any of the narrator's sources (Noth *Numbers* OTL, 240). Deuteronomy 3:15 makes similar claims for Machir; consequently, a number of scholars (e.g., Mayes *Deuteronomy* NCBC, 146) have concluded that it too is secondary, probably based on Numbers 32 and intended to correct Deut 3:12–13, which it contradicts. Joshua 13:31 assigns half of Gilead and part of Bashan to Machir, a report that is echoed in Josh 17:1–3. The latter passage, though, proceeds to explain that in addition to the territory given to Gilead, ten shares of land were allotted to other Manassite families—five to the clans of Hepher's brothers and five to the daughters of Zelophehad, son of Hepher (vv 1–6). The six families, called "sons of Manasseh," that are named are Abiezer, Helek, Asriel, Shechem, Hepher, and Shemida. It seems likely, therefore, that the writer believed that Manasseh had seven sons, the first of whom was Machir and the seventh Shemida.

Finally, two texts in 1 Chronicles mention Machir. In the first, it is noted that the daughter of Machir married Hezron of Judah and bore him a son, Segub (2:21–23). In the second passage, the Manassite genealogy of 1 Chr 7:14–19, there are a number of inconsistencies and confusing statements (Rudolf *Chronikbücher* HAT, 69–71; Braun *1 Chronicles* WBC, 110–11). The designation of Machir as son of Manasseh and father of Gilead is repeated, however, and additional bits of information are supplied: Machir's mother was Manasseh's Aramean concubine, and Machir's wife, Maacah, bore him Peresh (and possibly Sheresh).

2. The son of Ammiel, who lived at Lo-debar (2 Sam 9:4–5; 17:27). Machir may well have been a Manassite or Machirite, whose family had inherited land in Gilead with others in the clan of Machir. Although the precise location of Lo-debar is uncertain, it should probably be sought near the Jabbok and not far from Mahanaim. Aharoni and Rainey have proposed Umm ed-Dabar (M.R. 207219) as the most likely site (*LBHG*, 439).

Machir showed his loyalty to Saul by giving refuge in his home at Lo-debar to his crippled grandson, Meribaal/Mephibosheth, the son of Jonathan. This occurred after Saul and Jonathan were killed by the Philistines in battle at Mount Gilboa. After David consolidated his power over Judah and Israel, he sought a way to show kindness to one of Saul's descendants for the sake of his friend Jonathan. Therefore, when he learned of Meribaal's presence at Lo-debar, he sent for him and provided him a place at court in Jerusalem (2 Sam 9:4–5).

Later, when David and his forces fled before the rebel army of Absalom, Machir joined others near Mahanaim to supply provisions for them (2 Sam 17:27). Therefore, it appears that David's kindness to the son of Jonathan won the loyalty of Machir. Langlamet (1976: 355), though, has suggested that the story in vv 27–29 is secondary and was added to prepare for the note in 2 Sam 19:32.

A number of scholars, however, have proposed other reconstructions for the history of Machir and his family. Zobel (1965: 112–15), for example, has argued that the tribe of Machir was unrelated to Manasseh and Ephraim and first dwelled near Dothan in W Palestine, where it grew to become a powerful entity alongside the surrounding Canaanite city-states. This is supported by three factors: (1) 1 Chr 7:14 claims that Machir's mother was an Aramean, which points to the tribe's non-Israelite origins; (2) Judg 5:14 suggests that Machir lay between Ephraim and Zebulun, near the battlefield on which Barak and Sisera's forces fought; and (3) Machir's entry into Palestine is mentioned in none of the biblical reports about Israel's settlement in the land. Moreover, Machir's name, which meant "sold," may be taken, along with the remark in Josh 17:1 that the family included many fighters, to indicate that the tribe sold its military services to the Canaanites, probably during the Amarna age. Pressure from Manasseh eventually forced Machir to become an unwilling dependent of Manasseh and to leave W Palestine for Transjordan. Machir's subservient status came to be reflected in the texts that traced the origin of the tribe to Manasseh, and since the descendants of Machir dwelled in Gilead, the patriarch Machir was called the father of Gilead.

Although he followed Zobel's historical reconstruction in several respects, de Vaux (*EHI*, 586–87, 651–52) diverged by arguing that initially Manasseh was a clan within Machir. It was only when the latter emigrated to Transjordan that Manasseh expanded to fill the void that was left. Later, Manasseh's name was extended to include Machir in Transjordan, and the biblical genealogies generally reflect this later state of affairs.

These reconstructions have not gone unchallenged, though. Mittmann (1970: 63–71, 213–16), for example, has far more confidence in the antiquity and historical accuracy of Num 26:29–30, which presents Machir as the son of Manasseh and father of Gilead. Furthermore, he argues that pressure from Canaanites, rather than Manassites, was more likely to have caused Machir to emigrate to Transjordan. In addition, Mittmann disputes Zobel's suggestion that Machir was a "mixed" tribe that included a strong non-Israelite element. Seebass (1982), in turn, has criticized Mittmann, arguing that Num 26:29–30 is derived from Num 36:1, 11, and so cannot be trusted as an ancient and reliable piece of tradition.

Finally, Lemaire (1981) has proposed that "Machir" was initially a geographic name that referred to a region in Transjordan on the plain that opens onto the Jabbok, near Deir ʿAlla. He denies that Judg 5:14 indicates that Machir was settled in W Palestine, since he finds no consistent pattern to the listing of the tribes in Judges 5. The population of this area was probably related to the Canaanites around Shechem and Beth-shan, and perhaps to the Arameans or Ammonites of the surrounding area as well. Therefore, there was no migration of Machir from W Palestine into Transjordan, but as 2 Sam 9:4–5 and 17:27 indicate, the tribe had lived in S Gilead long before Israelite tribes settled in the land.

Therefore, while scholars agree that, by the time of David, Machir was a tribal group in Transjordan, probably near the Jabbok, there is considerable disagreement about the tribe's ethnic composition and initial place of settlement in Palestine.

M. PATRICK GRAHAM

MACHNADEBAI (PERSON) [Heb *maknadĕbay* (מַכְנַדְבַי)]. A descendant of Binnui and one of the returned exiles whom Ezra required to divorce his foreign wife (Ezra 10:40; 1 Esdr 9:34). According to Noth, this name is actually a corruption of Heb *mibbĕnê,* "from the sons of" (*IPN*, 249). If that is true, the

phrase would introduce the next family from which offenders come. However, Shashai is not named as the head of a family in the lists in either Ezra 2 or Nehemiah 7. This is further indicated by the parallel text of 1 Esdr 9:34, where the phrase "of the sons of Ezora" replaces the name Machnadebai, perhaps preserving a name dropped from Ezra 10:40. Other scholars have argued that Zaccai (see Ezra 2:9) would be a better orthographic fit than Ezora (see Williamson, *Ezra, Nehemiah* WBC, 144). In 1 Esdr 9:34, the RSV also has Machnadebai, despite the LXX *Mamnitanaimos* eight names prior to Shashai, apparently in an attempt to harmonize the two lists. If we assume that Machnadebai is an individual, however, he was a member of a family who returned from Babylon with Zerubbabel (Neh 7:15; note that Bani replaces Binnui in Ezra's list [2:10]). See also BEDEIAH.

JEFFREY A. FAGER

MACHPELAH (PLACE) [Heb *makpēlâ* (מַכְפֵּלָה)]. A field with a cave purchased by Abraham as the burial site for family members (Gen 23). References to the site identify it as "the cave of Machpelah" (Gen 23:9) and "the field of Machpelah" (Gen 23:17). Originally purchased for the burial of Sarah (Gen 23), other family members were buried there, including Abraham (Gen 25:9), Isaac (Gen 39:29; 49:31), Rebekah, Leah, and Jacob (Gen 49:31; 50:13). Stephen's sermon implies that Jacob was buried at Shechem "in the tomb that Abraham had bought" (Acts 7:16); however, the OT identifies Shechem as the location at which Joseph was buried (Josh 24:32). Machpelah is located in Hebron, el-Khalil, and is labeled Haram el-Khalil, the Enclosure of Abraham. The OT simply locates it "east of Mamre" (Gen 23:19; 25:9).

A. The Purchase of Machpelah

The purchase of the cave of Machpelah and the transactions involved on the occasion of Sarah's death are the focal points of Genesis 23. The story relates how Abraham, "a stranger and a sojourner" (v 4), one who owned no property or family burial plot, went to the local Hittite inhabitants and landowners and negotiated the purchase of the field and the cave from Ephron the Hittite (see Van Seters 1975: 98–100).

Modern research has shed new light on ancient legal practices regarding the purchase of land; however, scholars disagree on the precise legal formula or custom that provides the background for the transaction in Genesis 23. M. Lehmann (1953) has suggested that the negotiations reflect land-purchase customs of the Hittite legal system. He based his conclusions on features of the account that seemed to parallel Hittite law. Abraham's attempt to buy property from the Hittites for a burial site was met with a counter offer to use but not buy the land (Gen 23:5–6). Abraham, then more specific, announced that he wanted to purchase the cave of Machpelah at the end of the field owned by Ephron (vv 7–9). Ephron, however, was not interested in selling a part of the property, the cave alone, but would sell the field and the cave together (v 11). Abraham then offered to buy the entire field (vv 12–13). Ephron announced a specific price (vv 14–15). Abraham agreed to the offer, and payment was made (v 16). According to this view, the major parallel between Hittite law and Genesis 23 is seen in Ephron's attempt to sell the entire plot. According to Hittite custom, the landowner who leased out or sold only a part of the property continued to be responsible for the feudal obligations of the plot. Therefore, Ephron attempted to sell the entire field in order to rid himself of these legal obligations.

Proposals other than Lehmann's have been set forth. More recently Gene Tucker proposed (1966) that while Genesis 23 reflects characteristics of ANE land transactions in general, the most prominent model for the account is found in the so-called "dialogue documents" of the Neo-Babylonian era. Here attention is called to the format of the formula, some features of which appear also in Genesis 23, such as the dialogue between buyer and seller, the payment formula, a statement about the transfer, and the presence of witnesses.

Raymond Westbrook (1971) suggests that after a review of ancient legal documents concerning the sale of property, the "double-transfer" model seems most plausible. This custom existed during the last half of the 2d millennium B.C.E. The double-transfer method includes two transfers: the first, the transfer of the land between the two parties involved, the second, a type of transfer in which the king made a gift of the land to the new property owner.

In addition to Genesis 23, the OT contains the accounts of other land purchases. Jacob bought land in Shechem from the sons of Hamor in order to build an altar (Gen 33:18–20), and David bought a threshing floor from Araunah on which to build an altar (2 Sam 24:18–25; 1 Chr 21:18–27). A comparison of the accounts shows certain similarities. At least the former is comparable in the local response to the buyer—"a prince among us" (23:6) and "will not their cattle, their property, and all their beasts be ours?" (34:23)—both of which suggest economic interests being enhanced by these new neighbors (this insight courtesy of Victor Matthews).

B. The History of Machpelah

Interest in the patriarchal burial site, Machpelah, has a lengthy history, which began during biblical times and continued throughout the postbiblical era to the present time. This interest is illustrated in the many accounts or traditions regarding pilgrimages to the site and descriptions or investigations of the site, many of which are reviewed by V. R. Gold (*IDB* 2: 218–20). These accounts demonstrate how the site has been reverenced by Jews, Christians, and Muslims. The major features of this history began with information from the *Testament of the Twelve Patriarchs* (20:6), which names Joseph among those buried at the site. A monumental building project during the Herodian period, probably the work of Herod the Great, included the construction of a large enclosure wall around the area and the erection of monuments or cenotaphs in honor of the patriarchal figures. A basilica-type church was built at the site inside the enclosure wall during the 5th or 6th century C.E. Arculf, who visited the site in 670, wrote not only about the monuments of the patriarchal figures but also mentioned the presence of a monument built for Adam. As control of the site went through a series of changes—Muslim, Crusader, Muslim—so the church was converted into a mosque, reconverted into a church, and again back to a mosque. During June 1119, the chambers below the surface of the site were investigated by removing stones from the floor of the church, and the bones of the patriarchs were reportedly found. (Gold *IDB* 4: 218–20).

C. Machpelah and Archaeological Research

The study of the site by L. H. Vincent and E. J. H. Mackey in the early 1920s helped stimulate interest in its architectural features and opened the way for debate concerning Herodian building techniques in the construction of the enclosure wall. Information from excavations at other sites has helped provide a better understanding of these features. This is demonstrated in recent articles by David Jacobson (1981) and Nancy Miller (1985). Miller refers not only to the ancient traditions associated with the site, but also to the excavations of Benjamin Mazar near the temple-enclosure wall in Jerusalem as well as the investigation of the chambers below the surface at Machpelah at Moshe Dayan. The excavations led by Mazar (1971) near the temple wall have provided new information that the Herodian masonry techniques used to construct the wall are similar to those used in the construction of the enclosure wall at Machpelah (Jacobson 1981: 73; Miller 1985: 30–32). Jacobson provides additional information for this conclusion by comparing the dimensions and noting the similarities of the enclosures at Jerusalem, Hebron, and Damascus (1981: 78–80).

The subterranean chambers where the remains of the patriarchal figures were supposedly entombed have received only limited investigation in recent times. In 1917 a British officer, Colonel R. Meinertzhagen, entered a subsurface chamber by means of a hidden entrance perhaps from the Crusader period. The date of the contents of the chamber is still debatable. The most recent investigation of the chambers came shortly after the Six-Day War of 1967 under the direction of Moshe Dayan (1978; 1976; cf. Miller 1985). The exploration of the subterranean area conducted one night was not done by Dayan himself, but rather by a 12-year-old girl who was lowered by rope through the small hole, 12 in. in diameter, in the floor of the mosque. The young girl, Michal, equipped with a torch, a camera, pencil and paper, and an instrument by which to secure measurements, took notes, photographs, and made sketches of what she found below. The area explored included a room, a long corridor, and a stairway. The room directly beneath the hole through which the girl was lowered was approximately 9.25 by 9.5 ft. At approximately 4.5 ft. from the floor, the four walls of the room arched inward toward the octagonal ceiling. The only contents of the room were three tombstones along one wall; the middle one, tallest of the three, bore an Arabic inscription from the Koran about Allah. Whether the tombstones covered entrances

to other chambers has not been determined. An opening in one of the walls of the room connected the room to a corridor 57 ft. in length. The corridor, approximately 2 ft. wide and 3.5 ft. high, had walls made of ashlar stones and a ceiling of stone slabs. The corridor ended at a stairway with 16 steps leading upward. The upper end of the stairway was closed off by the stones that formed the floor of the enclosure. The room, the corridor, and the stairway were supposedly the same as some of the chambers investigated in 1119. Other than the tombstones or slabs in the square room and the inscription on the center slab, no other artifacts were found. While the account from 1119 reported the discovery of the bones of the patriarchs, no bones were found in the Dayan exploration (Miller 1985: 42–43).

LAMOINE F. DEVRIES

MACRON (PERSON) [Gk *Makrōn* (Μακρων)]. Var. PTOLEMY MACRON. In 2 Macc 10:12–13 the Seleucid official who "took the lead in showing justice to the Jews … and tried to settle matters peaceably." According to this account, the failure of his policy in some way is the explanation for the appointment of Lysias as "first-ranking" governor (cf. Goldstein *II Maccabees* 387, who argues that there was a governor named Protarchus). This failure, coupled with mistrust because of his previous appointment as governor of Cyprus under Ptolemy VI Philometor (180–145 B.C.E.) and subsequent defection to Antiochus IV Epiphanes (175–164 B.C.E.) when he took over that island, led to his suicide by poison. There are a number of chronological problems arising from this account.

While the appointment by Antiochus V Eupator (164–162 B.C.E.) is his first mention in 2 Maccabees (10:11), Lysias plays a major role in the events of the reign of Antiochus IV Epiphanes (beginning with 3:32–35) in 1 Maccabees, the work usually considered to have a more reliable chronology of events. It is much more likely that 2 Macc 10:11 is actually referring to an enhancement of Lysias' role after the death of Antiochus IV Epiphanes, during whose eastern campaign he had been left in charge of the W portion of the kingdom as well as guardian for the child who would become Antiochus V Eupator.

Even though the period for the activity of Ptolemy Macron in Judea would seem in general to coincide with that of Ptolemy the son of Dorymenes (1 Macc 3:38–41; 2 Macc 4:45–46; 8:8–9), the efforts by the latter "to wipe out the whole race of Judea" is a very different response to matters concerning the Jews and precludes any identification between the two (cf. Abel 1949: 409–10). Chronological considerations based on inscriptional evidence also argue against that case (Goldstein, 388).

The inscriptional evidence, while somewhat ambiguous because of the many people who bore the name Ptolemy, points to Ptolemy Macron's presence in Cyprus until 168 B.C.E., when Antiochus IV Epiphanes took it over from Ptolemy VI Philometor (Levy 1950; Mitford 1957). Polybius mentions his prudent and cautious financial dealings as uncharacteristic of Egyptian governors (27.13). Macron was brought to Judea by Antiochus IV Epiphanes as governor. While it remains hypothetical, there seems to be merit to the argument that it was Ptolemy's policies which permitted the Jews to rededicate the temple in 164 B.C.E. If so, it was probably those same policies which made him unpopular with the king's friends.

While appealing, it is quite conjectural to hypothesize any connection between the policies of Ptolemy Macron and the letters in 2 Macc 11:16–21 and 27–38 (Bartlett 1973: 297).

MADABA (PLACE). See MEDEBA (PLACE).

MADAI (PERSON) [Heb *māday* (מָדַי)]. The Table of Nations (Gen 10:2) and the parallel genealogy in 1 Chr 1:5 identify Madai as one of the seven sons of Japheth, who himself is a son of Noah. Descendants of Japheth are non-Semitic, Indo-European peoples situated mainly to the north of Israel. People called Madai appear in Akkadian texts from the time of Shalmaneser III (the mid-9th century B.C.). From these, and the texts of the people themselves, the area of occupation of the Madai or Medes is known to be Persia, or present-day Iran, immediately south of the Caspian Sea. Although their geographical origin is unknown, there they gained strength until they became a threat even to the powerful Babylonian empire (Isa 13:17; 21:2; Dan 5:28). The latter was finally brought to its end when Cyrus, king of the Persians, first conquered the Medes and then used his combined forces to defeat Babylon.

MADA›IN SALIH. See ḤEGRA.

MADMANNAH (PLACE) [Heb *madmannâ* (מַדְמַנָּה)]. A village in the Negeb plains at the S end of the administrative districts of Judah (Josh 15:21). The founding of the place is attributed to Shaaph, a son of Maacah, the concubine of Caleb, and Jahdai, another son of Caleb (1 Chr 2:42–49). Therefore, Madmannah is in the "Negeb of Caleb" where David operated as an outlaw (1 Sam 30:14). It has been located in the vicinity of Khirbet Umm ed-Demineh, a place that apparently preserves the biblical name although the age of the remains at this ruin (primarily Roman-Byzantine) and its location in the Hebron hills, rather than on the Negeb plain, make it an unlikely choice. More probable is nearby Khirbet Tatrit (M.R. 143084), at a lower elevation and where Iron Age and later remains have been found. Some scholars believe Madmannah to be the same as Beth-markeboth because of its comparable position in the town lists in Josh 19:5 and 1 Chr 2:49. A similar problem surrounds the name Sansannah. However, the parallelism in these lists may be more apparent than real and may actually reflect differing usage. The lists, consequently, may refer to different places and may not necessarily be scribal errors. The name Madmannah is easily confused with a similar-sounding place, MADMENAH, mentioned in Isa 10:31. It has been suggested that *madmannâ* means "dung place," which perhaps more euphemistically may mean a village surrounded by agriculturally enriched, or manured, land.
HAROLD BRODSKY

MADMEN (PLACE) [Heb *madmēn* (מַדְמֵן)]. A town mentioned in Jeremiah's oracle against Moab (Jer 48:2). While sometimes thought to be identical with Dibon, it is more probably located at Khirbet Dimneh (M.R. 217077), approximately 2.5 miles NW of Rabbah (*IDB* 3: 220), which is along the King's Highway in central Moab (*LBHG,* 56, 439). Madmen means "dung hill," and Aharoni suggests that it is typical of place names derived from agricultural features (*LBHG,* 109). In Isa 25:10, "dung hill" (*madmēn*) is used as part of a simile indicating the destruction of Moab, though any connection between Isaiah 25 and Jeremiah 48 is uncertain (Carroll *Jeremiah* OTL, 779).

The oracles against Moab in Jeremiah 48 have long been noted for their length and prolific use of place names (cf. Carroll *Jeremiah* OTL, 781). Why the Jeremiah tradition has included reference to so many place names in chapter 48, including the otherwise obscure Madmen, can only be the subject of conjecture. Carroll (p. 779) proposes a word-play in Jer 48:2 between *mdmn* and *dmn* ("be silent"); this

could suggest that the inclusion of this particular Moabite town in Jer 48:2 was in part determined by literary factors.
JOHN M. BRACKE

MADMENAH (PLACE) [Heb *madmēnâ* (מַדְמֵנָה)]. One of the places N of Jerusalem named by the prophet Isaiah in his vision of the Assyrian march against Jerusalem (Isa 10:31). Mentioned after Anathoth (2.5 miles NE of Jerusalem) and before Nob (1.5 miles N–NE of Jerusalem), Madmenah was close to the N limits of Jerusalem. It is sometimes identified with Shufat (M.R. 172135), about 2.5 miles N of the Old City of Jerusalem, but this is not certain. The name means "dung heap."
GARY A. HERION

MADNESS. See DEMONS; SICKNESS AND DISEASE.

MADON (PLACE) [Heb *mādōn* (מָדֹן)]. An important Canaanite city-state in the north, ruled by Jobab (Josh 11:1). Joining the alliance organized by Jabin, king of Hazor, it suffered defeat at the hands of the Israelites (Josh 12:19). The LXX does not mention Madon in any of its lists. It refers to Maron instead, in Josh 11:1. Where the MT has "the waters of Merom," the LXX reads "the waters of Maron." The list of the defeated kings in Joshua 12 makes no reference to either Madon or Maron. Judges 5:19 states that the battle of Deborah was fought by the waters of Megiddo. Obviously, the traditions are much confused about the names of these places. The place name *mdn* found in a list of Tuthmosis III is not thought to be a reference to the Madon of Josh 11:1. Its usual identification with the modern Khirbet Madin, purely based on the similarity of the names, cannot be supported by any other data. Because it is not mentioned anywhere else, this important city-state is likely to be identical with Merom, a place close to the waters of Merom, which is also mentioned in both Egyptian and Assyrian sources. The Deuteronomistic History mentions Merom because it was a powerful city-state and assigns it the function of illustrating how even such a mighty city was given into the hands of obedient Israelites.
PAUL BENJAMIN

MAGADAN (PLACE) [Gk *Magadan* (Μαγαδαν)]. After feeding the 4,000, Jesus navigated the Sea of Galilee and entered the region of Magadan (Matt 15:39). In the Markan parallel (8:10), Dalmanutha appears in the place of Magadan. Variant readings plague both of these texts; the uncertainty of the original text probably stems from the uncertainty of the location of both sites. Codex Koridethi (9th century) has changed both passages to read "Magdala," but the late date of the manuscript evidence and lack of corroborating support renders this reading doubtful. The reading "Magadan" is found in several late Markan manuscripts, but this reading, for the same reasons, also must be rejected. The motivation for the Markan change is almost certainly harmonistic. Some scholars have suggested Megiddo in place of Magadan, but this site is more than 20 miles from the Sea of Galilee and is therefore to be rejected, especially since no land travel is mentioned in the text. See Lohmeyer (1967) for discussion of proposed conjectural emendations of the text, but none of these suggestions is very convincing.

A few scholars have suggested that Magadan is to be located on the E shore of the Sea of Galilee, while others have placed it on the W shore. Neither context in Matthew or Mark is decisive. Matthew states that Jesus left the regions of Tyre and Sidon (cf. 15:29 with 15:21), but to which side of the Sea of Galilee did he go, east or west? Mark 7:31 records that Jesus left Tyre and Sidon headed N and then traveled S and E to the Decapolis on the SE side of the lake. The crossing, therefore, was apparently E to W. Mark 8:1, however, is punctuated with, "In those days," which perhaps means that 8:1–10 does not immediately follow 7:31–37. On balance, the W side of the lake is the probable site of Magadan because the language of Matt 15:29–31 suggests a Gentile province (15:31, "they praised the God of Israel," the "seven" baskets of leftover pieces, not the Jewish "twelve") and a remote place (15:33), which better fits the Gentile Decapolis on the E side of the Sea of Galilee, rather than the Jewish Galilee of the W side. Without evidence some scholars also identify Magadan as the hometown or birthplace of Mary

Magdalene. Other writers also suggest that Magadan is to be identified with the modern Mejdel (M.R. 140105).

MAGBISH (PERSON) [Heb *magbîš* (מַגְבִּישׁ)]. "Ancestor" of 156 people who returned from exile in the days of Zerubbabel (Ezra 2:30; LXX *Magebōs*). However, like so many other names in the Ezra 2 list, Magbish is more likely the name of a village; since the time of Abel (*GP* 2: 373) it has usually been identified with Khirbet el-Makhbiyeh (M.R. 145116), a site which has yielded Persian-period remains. Because Magbish is listed just before Elam in the Ezra 2 list, Simons (*GTTOT,* 380) prefers a slightly more southerly identification with Khirbet Qanan Mugheimis, 2 km W of Beit Alam (M.R. 145109).

There are also problems with the text. In the parallel Heb text of Neh 7:33, Magbish does not occur (although one LXX ms of this verse does refer to the "156 sons of *magebōs"*). Another parallel text, 1 Esdr 5:21, refers to the "156 sons of *Niphis,*" which the RSV renders as "Magbish" to harmonize with Ezra 2:30.

GARY A. HERION

MAGDALA (M.R. 198247) [Aram *magdālā* (מַגְדָּלָא)]. MAGDALENE. Presumably the town of origin of Mary Magdalene (*Magdaléné,* Luke 8:2) generally identified with Migdal Nûnnaya of the Talmud ("Tower of Fish," *b. Pesaḥ.* 46b), which lies approximately one mile N of Tiberias. Magdala (meaning "tower") is usually identified with the city with the Greek name of Taricheae or Tarecheae in Josephus (*JW* 2.21.8; 3.9.7–3.10.5). Magdala-Taricheae would mean "Tower of [salted] fish." The difficulty in identifying Magdala with Taricheae is that Josephus seems to think Taricheae was 30 stadia from Tiberias, or 3.6 Roman miles (*Life* 32 §157), and Pliny places Taricheae S of Tiberias (*HN* 5.15). But as Pliny knows less detail about Palestine than Josephus, identification of Magdala with Taricheae seems relatively secure. Some scholars believe that Migdal Seb›aiya (Tower of Dyers) of the Jerusalem Talmud is the same place (*y. Ta‹an.* 69a).

The Greek name of this town gives it away as an important fishing center and fish export center in the Roman period. Many Roman fishing towns were named Taricheae. Strabo knows of Taricheae in Palestine and its salted-fish industry (16.2.45). Josephus noted that E Lower Galilee was divided into two toparchies, Tiberias and Taricheae (*JW* 2.13.2 §252). In this case Magdala-Taricheae was the administrative center of an area that extended eight miles W to the toparchy of Sepphoris and 10 miles N to the S boundary of Upper Galilee about 5 miles N of Capernaum. Magdala-Taricheae was important enough to have its own stadium (*JW* 2.21.3 §599). Its aqueduct extended to Ain el-Mudawwara 2.8 miles to the NW. After the founding of Tiberias in A.D. 20, Magdala-Taricheae lost its position as head of the toparchy in favor of Tiberias.

Magdala-Taricheae did not play any role in the ministry of Jesus. We know of no disciples other than Mary from this locality.

By A.D. 54, at the accession of Nero, Magdala-Taricheae and Tiberias passed to Herod Agrippa II, son of Agrippa I (*Ant.* 20.8.4 §159). Josephus claimed to have fortified Magdala-Taricheae in A.D. 66, though Vespasian took the city in the next year. Taricheae was the location of the only sea battle between the Romans and the Jewish rebels. It was a disaster for the Jews. Apparently the Jewish inhabitants of Taricheae did not believe they would ever regain the town, for they fled to Tiberias after this debacle. Vespasian ordered the slaughter of 12,000 refugees from Taricheae in the stadium of Tiberias, while 6,000 were sent to build Nero's canal at Corinth and 30,400 were sold as slaves (*JW* 3.10.10 §539–40). At the close of the First Revolt in 73, Taricheae seems to have been absorbed by Tiberias. Later, at the death of Herod Agrippa II, Taricheae passed directly to the new province of Palestine, ruled by a governor of senatorial rank who resided in Caesarea.

Magdala or Taricheae was not a place of pilgrimage from the 4th to the early 6th century. However, before A.D. 518, it was visited by a certain Theodosius, who added a note that "my Lady Mary was born" at Magdala, which city he knows only by that name (*Topography* 138). The nun Hugeburc recorded Willibald's visit to Magdala in A.D. 724 in a single sentence: "From there (Tiberias) they went along the sea and approached the village of Magdala" (*Life* 96.1).

Excavations at Magdala were conducted from 1971 through 1973. These excavations revealed a small building that is surely a small, undecorated synagogue, about 26.8 by 23.8 feet. It was provided with interior columnation around three sides and a set of five benches against the N wall. "Heart-shaped" or double columns stood at the corners of the lines of columnation. The excavators believe that the building was converted to a fish pond after A.D. 70, or after the First Revolt. This would suggest that the Jewish population that originally used it was gone. This small building with thick walls stood at the SE corner of two well-paved streets. The street passing in front of the synagogue is a bit more than 13 feet broad. Across the street to the W stood the base of a masonry and mortar tower about 29 × 32.5 feet with walls 7 feet thick. This tower still stands 21 feet high, but it is interpreted by the excavator as a water tower, not as a fish tower. On the S side of the Franciscan property of Magdala and extending outside the property lie the ruins of a monastery of the 5th and 6th centuries. It was furnished with fine mosaics in geometric designs.

JAMES F. STRANGE

MAGDALENE. See MARY (PERSON); MAGDALA (PLACE).

MAGDIEL (PERSON) [Heb *magdîʿēl* (מַגְדִּיאֵל)]. One of the Edomite "chiefs" (Heb *ʿallûpîm*) mentioned in Gen 36:40–43, an appendix which most likely ought to be attributed to the Priestly source. The name also occurs in the 1 Chr 1:51b–54 list, an abridged form of the Gen 36:40–43 appendix. This theophoric name means "God's/El's gift" (cf. Sabaean *ʿlmjd, mjdlt*; Safaitic *mjdʿl;* Arabic *mǧed;* etc.). It is referred to by Eusebius (*Onomast.* 124.22–23) as the name of a site in the Gebalene. Thus, this Edomite "chief" may actually be a place name, analogous with Elah, Iram (?), Mibzar, and Pinon.

MAGGOT. See ZOOLOGY.

MAGI [Gk *Magos* (Μαγος)]. See INFANCY NARRATIVES IN THE NT GOSPELS.

MAGIC. This entry consists of two articles, one survey of magical practices in the ANE, and another summarizing the references to magic in the OT.

ANCIENT NEAR EAST

In its broadest sense, "magic" is a form of communication involving the supernatural world in which an attempt is made to affect the course of present and/or future events by means of ritual actions (especially ones which involve the symbolic imitation of what the practitioner wants to happen), and/or by means of formulaic recitations which describe the desired outcome and/or invoke gods, demons, or the spirits believed to be resident in natural substances. For purposes of analysis, it is useful to make a distinction between problem-oriented rituals on the one hand and priestly activities such as the maintenance of the daily cult and the celebration of regularly scheduled festivals on the other, especially since this distinction corresponds to a native ANE division of labor among specialists in the supernatural (Engelhard 1970: 219–21). Since it is usual to classify priestly activities as "religion," "magic" is here confined to the problem-oriented rituals. It should be kept in mind, however, that these two types of activity were part of the same belief system and that there was none of the hostility between them to be seen in later times between "magic" and "religion." Exorcists and priests received the same education, served the same gods, and regarded each other as legitimate practitioners. The same can be said of the distinction between exorcists and physicians, both of whom practiced medicine in some sense of the word and who might even cooperate in dealing with complicated cases (Ritter 1965). See also DEMONS.

The magic of the pre-Hellenistic Near East, like the magic of peoples everywhere, utilized the procedures of apotropaion or exorcism (frightening a spirit away before or after it took up residence in a

human being), propitiation (buying off a spirit), and transfer (giving an evil to someone or something else). What is striking about this tradition is the variety and the ingenuity of magical rites and formulaic recitations employed in it. Not only are there literally thousands of recipes for amulets, salves, and nostrums, but there is much manufacturing of figurines, which range in complexity from simple lumps of clay to elaborate representations of half-human monsters carrying real miniature weapons, with the details picked out in appropriately colored paint (Wiggerman 1986; cf. Borghouts 1978: no. 123). Egypt also generated a plethora of curious drawings on papyrus (Borghouts 1978: no. 40, for example). There was, moreover, a great variety of ways to transfer evil (*RLA* 7: 245–46, 248–49). Of particular interest to biblical scholars is the extensive use of "scapegoats," which might indeed be goats, but also figurines, pigs, mice, and even people (Lambert 1957–58; Kümmel 1967; *RLA* 7: 246–48). Especially emphasized in Hittite magic, but by no means absent from ancient Mesopotamia and Egypt, is the invocation of analogies to achieve desired ends (Ünal 1988: 74–85; *RLA* 7: 244–45).

A. Mesopotamia

For Mesopotamians, there was a clear distinction between black, or maliciously antisocial, magic (Akk *kišpū*) performed by a sorcerer/sorceress (Akk *kaššāpu/kaššāptu*) and white, or defensive, magic performed by legitimate practitioners, most notably the exorcist (Akk *āšipu/mašmāšu*). Sorcery was punishable by death (MAL A 47). White magic, conversely, was the gift of the gods (especially Asalluḫi and Marduk) to mankind (Reiner 1958: V–VI: 175; VII, VIII: 88–90) and could legitimately be used either to make sorcery turn against its human practitioner (Meier 1937; Lambert 1957–58) or to calm the gods themselves when they became angry by magically removing the moral or cultic offenses which had caused their anger (Reiner 1958) and/or by getting rid of the resulting illness and bad fortune (Ebeling 1915: 96–103; Farber 1977: 24–100). Magic was also an essential concomitant of the foundation of temples and other buildings (Ellis 1968; *ANET*, 339–42; Farber 1987: 241–44) or the consecration of a priest (Borger 1973) or the preparation of temple drums (*ANET*, 334–38; Farber 1987: 234–36). Apart from this, the Mesopotamians used magic to assist in childbirth (Lambert 1969; Cohen 1976: 133–40; Römer 1987: 204–7; Farber 1987: 274–77), to get cranky babies to go to sleep (Farber 1989), and to keep at bay such evils as plague (Reiner 1960), fever (Lambert 1970), toothache (*ANET*, 100–01; Farber 1987: 271), sties (Farber 1987: 272–73), the effects of dog bite (Römer 1987: 210–11; Farber 1987: 256), impotence (Biggs 1967), ghosts (Bottéro 1983: 174–96; Scurlock 1988), demons (Myhrman 1902; Lackenbacher 1971; Farber 1977; Geller 1985; Wiggerman 1986; Borger 1987), evil eye (Ebeling 1949: 203–11), slander (Gurney 1960), nightmares (Oppenheim 1956), and bad omens (Ebeling 1954–56; Laessøe 1955; Lambert 1957–58; Caplice 1965–71; 1973; 1974b). A further use of magic was to add extra deterrents to oath breaking and to give force to curses (*ANET*, 532–33, 538–41). More productive uses of magic were procedures designed to give success in war (Elat 1982; Römer 1987: 169–71; *RLA* 7: 224), in opening canals (von Weiher 1983: no. 5), in business enterprises such as taverns (Caplice 1974b: 23–24), or to force the return of runaway slaves (Ebeling 1954). Of less obvious social value were spells which could be used to win legal cases or to prevent other people from being angry with the practitioner (Ebeling 1931a: 16–44; 1949: 186–203; Whiting 1985; Römer 1987: 202–4; von Weiher 1983: nos. 23–24). Equally ambiguous was the category of love magic, which included such classic devices of love inducement as giving a woman an apple to eat and burying a figurine where she would have to walk over it (Biggs 1967: 71–78). In Mesopotamia, spirits of the dead (and of death) were contacted for purposes of necromancy by rubbing salves on the necromancer's face or by employing skulls or figurines as temporary houses for the spirit which was being summoned up (Finkel 1983–84; von Weiher 1983: no. 20). See also *RLA* 6: 439–46.

B. Hittite Anatolia

Hittite magic was very similar to Mesopotamian magic. Again, there was a careful differentiation between black magic (Hit *alwanzatar*) performed by a sorcerer (*alwanzinaš*) and white magic performed by legitimate practitioners, with the former strictly against the law (HL 44b, 111, 163, 170). An unusual feature of Hittite magic (as compared to Mesopotamian) is the prominence of "old women" among the legitimate practitioners and the lack of clear division of labor between diviners and exorcists (Engelhard

1970: 5–56). Also unusual is that the Hittite rituals usually give the name, profession, and/or homeland of the author of a magical ritual. Authors include not only "old women" and exorcist diviners, but priests, doctors, and ladies of the court (*RLA* 7: 242), whether Hittite or drawn from outlying territories such as Kizzuwatna (Cilicia), Mukiš (Tell Atchana in Syria), and Arzawa (Ephesus). As in Mesopotamia, white magic was a divine gift (*RLA* 7: 238) and could legitimately be used to placate angry gods; among the Hittites, this usually took the form of evocation rituals in which the divinity was lured from the place to which he had withdrawn back to Hatti where he could be pacified (Engelhard 1970: 105–13; Haas and Wilhelm 1974). Magic was also required at the foundation of temples and other buildings (Engelhard 1970: 86–95; Kellerman 1980). Apart from this, the Hittites also used magic to assist in childbirth (Sommer and Ehelolf 1924; Beckman 1983) or burial (Otten 1958), to avoid various evils including sorcery (Engelhard 1970: 61–71; Jakob-Rost 1972; Kühne 1973; Haas and Thiel 1978; Hutter 1988), impurity (Goetze 1938; Otten 1961; *ANET,* 346, 348–49; Engelhard 1970: 71–78; Hoffner 1973; Lebrun 1979), impotence (Hoffner 1987; Engelhard 1970: 78–86), quarreling (Jakob-Rost 1953; *ANET,* 350–51), slander (Szabó 1971), and illness (Kronasser 1961; Souček 1963; Kümmel 1967; *ANET,* 347; Kümmel 1987: 285–88, 289–92), and to keep ghosts (CHD 3/2: 176–79), demons (Carruba 1966), and bad omens (Kronasser 1962; Kümmel 1967) at a safe distance. A further use of magic was to make sure that those swearing oaths took these oaths seriously (Engelhard 1970: 95–105; Oettinger 1976). Success in warfare could be ensured, inter alia, by a special evocation ritual in which the enemy gods were lured away from their worshipers (*ANET,* 354–55; Haas and Wilhelm 1974) or anointing the troops, horses, and military matériel with a protective mixture (Laroche 1971: 162, nos. 8–14) or even by hexing the enemy's leader while protecting one's own (KUB VII 61). Even when unsuccessful in the field, morale could be restored by marching the defeated army between fires, thorn bushes, and halved animals and human prisoners (Kümmel 1967: 151). The Hittites, like the Mesopotamians, attempted to call up the spirits of the dead, although the details of the procedure are unfortunately lost to us (Laroche 1971: 154–55).

C. Egypt

In many ways, Egyptian magic was similar to Mesopotamian and Hittite magic. Here, too, gods were magicians (Borghouts 1978: no. 84), and the basic function of much of the magic was medical (Borghouts 1978: nos. 46–52, 55–58, 64, 71–81) and antidemonic (nos. 22–27, 33, 53–54, 65, 67–69), including remedies for such things as plague (nos. 13–18, 20–21), nightmares (nos. 6–7), headaches (nos. 37–45), bleeding (nos. 30–32), burns (nos. 34–36), swallowing a fly or getting a fishbone stuck in the throat (nos. 19, 28–29), difficult childbirth (nos. 60–63; cf. Lexa 1925: 27–33), hungry babies (Borghouts 1978: no. 70), and bothersome birds, reptiles, or wild animals (*ANET,* 326; Borghouts 1978, nos. 82–146; Sternberg-el-Hotabi et al. 1988: 358–80). There are also many examples of magic to be used on domestic or foreign enemies (Sethe 1926; *ANET,* 326–29; Borghouts 1978: nos. 5, 8–12, 59, 66) or to give success in love, legal cases, and the like (Borghouts 1978: nos. 1–4). However, there is one striking difference between this tradition and that of the Mesopotamians and Hittites, and that is that the Egyptians made no distinction in terminology between good magic and sorcery (both were referred to as *heka*). They tended also to treat their gods in a manner which Mesopotamians and Hittites usually reserved for demons—that is, by leveling blood-curdling threats at them at the first sign of insubordination (Borghouts 1978: no. 9, for example). Another unusual feature of Egyptian magic is the category of spells designed to get the soul safely to the underworld and to help it successfully to pass the native version of the Last Judgment (Faulkner 1969; 1973–78; Allen 1974; Sternberg-el-Hotabi et al. 1988: 405–31). Necromancy using corpses or scrying cups is attested in Hellenistic Egypt and may go back to earlier periods; moreover, it seems likely that letters to the dead (Gardiner and Sethe 1928) could have been used for this purpose. See also *LÄ*1: 67–69, 864–70; 3: 1137–51.

D. Ugaritic, Aramaic, and Phoenician Texts

Relatively few magical texts have survived from these areas, and those which have come down to us are typically fragmentary and open to more than one interpretation. However, what we seem to have are texts designed to accompany marriage, childbirth, and burials (de Moor 1987: 141–45; Dietrich and Loretz 1988: 329–33) or to ward off ghosts and demons (de Moor 1987: 183–86; Dietrich and Loretz 1988: 333–

39; Butterweck 1988), bad dreams (de Moor 1987: 181–82), infertility (Dietrich and Loretz 1988: 339–42), drunkenness (Dietrich and Loretz 1988: 342–45), and snakebite (Dietrich and Loretz 1988: 345–50). There is also one spell which could have been used to thwart a human adversary (Delsman 1988).

OLD TESTAMENT

Interpretations of the nature, role, and content of magic and magical practices in the OT have varied greatly. Discussion has revolved around several issues: interpretation and translation of Hebrew terms referring to magical practices; evaluations of the significance of the different attestations of magic in the OT; and analysis of the relationship between magic and religion. Even the term "magic" (and that to which it refers) has proved very difficult to define. Recognizing the limitations and difficulties of any definition, the term "magic" will be used here to refer to methods associated with the gaining of suprahuman knowledge and power or with influencing suprahuman powers. Magic is often discussed in connection with divination (discerning the future). There is considerable overlap between magic and divination in both practice and use of terms.

2. Comparative Near Eastern Studies
3. Distinctive Nature of Israelite Religion

———

A. Specialized Terminology

Terms referring to magic and magical practices are found throughout the OT in a wide range of materials. However, specialized and technical vocabulary appears primarily in the legal materials (Deut 18:10–11; Lev 19:26, 31; 20:1–6, 27; Exod 22:18—Eng22:17; see also 2 Kgs 21:6 = 2 Chr 33:6).

1. Deut 18:10–11. Interpreters generally agree that Deut 18:10–11 provides the most basic and inclusive list of magic terminology in the OT. However, understandings of these terms frequently differ since it is difficult to determine the precise practices to which the terms refer (e.g., the OT often sees divinatory practices as a subcategory of magic, and interpreters often appeal to different etymologies to explain the same Hebrew term). Further, translations frequently project back into biblical times practices seen as "magical" at the time of the translation.

a. *ma‹ăbîr bĕnô ŭbittô bā›ēš* ("one who makes his son or his daughter pass through the fire"). Interpreters debate the meaning of this phrase and its relationship to the other terms in Deut 18:10–11. This phrase has been taken to refer both to child sacrifice and to a type of "oracle ordeal." As a reference to child sacrifice, it is often interpreted as "propitiatory" and so divorced from the other magical/divinatory practices in the text. As a reference to a type of oracle ordeal, it is more frequently associated with either divination or magic.

b. *qōsēm qĕsāmîm* ("diviner, augurer"). Translations tend to equate *qsm* with divination. Commentaries, however, tend to view *qsm* as a more general term referring to the whole complex of magical and divinatory practices in ancient Israel. Arguments for understanding *qsm* as a very general term are based (1) on the Deuteronomistic tendency to list a general term first in a series with subsequent terms providing clarification and nuance, (2) on comparative etymology, and (3) on uses of *qsm* elsewhere in the OT (cf. Num 23:23; 1 Sam 15:23; 2 Kgs 17:17; Mic 3:6).

c. *mĕ‹ônēn* ("soothsayer, observer of times, one who looks for omens, sorcerer, enchanter"). The term *mĕ‹ônēn* is the first in the series of seemingly specialized terms for various types of magical and divinatory practices. The diversity in translation of this term reflects lack of scholarly consensus regarding the practice(s) to which it refers and its primary focus (magic or divination). Interpretations have relied strongly on etymological comparisons, variously equating *mĕ‹ônēn* with divinatory practices such as observation of clouds, the "evil eye," "eyeing" or observing "the times," the humming sound associated with diviners, as well as with magic practices such as conjuring up spirits.

d. *mĕnaḥēš* ("augur, diviner, enchanter"). The precise meaning and focus of *mĕnaḥēš* are also difficult to determine because interpreters associate it with two different roots—*nḥš* and *lḥš*. Those emphasizing

the connection with *nḥš* see it as a denominative from *nāḥāš* (snake) and associate it with some form of divination related to snakes. Those emphasizing the connection with *lḥš* tend to associate it more with magic—particularly with the use of charms and "enchantments" (cf. Isa 3:3; 3:20; 26:16; Jer 8:17; Eccl 10:11).

e. *mĕkaššēp* ("sorcerer"). There is general agreement regarding the meaning of the term *kešep,* usually translated "sorcery." However, there has been a tendency on the part of some interpreters and translations to use the negative and antisocial term "sorcery" for references to female practitioners of *kešep,* while employing the more neutral term "magic" for references to male practitioners. The unequal distinction between female and male practitioners seems present in the OT itself. The commandment in Exod 22:18—Eng22:17 requires the community to put the *mĕkaššēpāh* (female) to death. However, in texts referring to the *mĕkaššēp* (male) either no precise penalty is given (Deut 18:10) or the judgment and punishment are left to God (Jer 27:9; Mal 3:5).

f. *ḥōbēr ḥāber* ("charmer, one who casts spells, one who uses charms"). Interpreters generally agree that the root *ḥbr* is related to the use of charms and spells. This connection arises from the widely recognized association of the root *ḥbr* with the idea of "uniting, joining, weaving." Many interpreters relate this concept to the practice of tying or wrapping magical knots or threads around people or objects, understood either to bind the gods to do one's will or to bind (disable) the object or person to be affected. Another interpretation relates the term to the idea that words are woven together in the spell itself. An alternative derivation of the term *ḥōbēr,* however, relates it to the Akk term *ḥabarum*—to be noisy, to make an indistinguishable clamor. Here, the *ḥōbēr* is seen as a "mutterer" (one who makes indistinguishable noises).

g. *šō‹ēl ›ôb weyiddĕ‹ōnî* (literally, "an inquirer of an *›ôb* or a *yiddĕ‹ōnî";* "a medium or a wizard, one who traffics with ghosts and spirits, one who consults ghosts or spirits"). *›ôb* and *yiddĕ‹ōnî* are two of three terms in Deut 18:11 seemingly related to the practice of necromancy (divination by inquiring of the dead).

Interpreters are uncertain about the precise understanding of the term *›ôb* in the OT. This uncertainty arises from the variety of contexts in which the term appears, leading to its proposed connection with a wide range of different concepts—spirit, ancestral spirit, the person controlled by a spirit, a bag of skin, the pit from which spirits are called up, a ghost, a demon. Most interpreters simply admit the ambiguity of the term and acknowledge that it refers to several different but related objects—a ritual pit used by a necromancer, a spirit called up by a necromancer, and/or the necromancer himself or herself (cf. 1 Samuel 28).

The *yiddĕ‹ōnî* is closely associated in the OT with the *›ôb.* While the term *›ôb* appears independently, the term *yiddĕ‹ōnî* does not, raising the question of their relationship. Some interpreters see the two terms as a hendiadys (expressing a single idea by connecting two nouns with "and"), others (and most translations) see it as referring to separate people (e.g., medium and wizard). The difficulties in defining the term *yiddĕ‹ōnî* are similar to the difficulties with *›ôb.* Most interpreters recognize the root *yd‹* in *yiddĕ‹ōnî;* it is unclear, however, whether the "one who knows" is the entity being consulted or the practitioner doing the consulting. The frequent translation of *yiddĕ‹ōnî* as "familiar spirit" may be correct, but the close and problematic association of this term with medieval views of witchcraft should be kept in mind.

h. *dōrēš el-hammētîm* ("necromancer, one who calls up the dead"). This is the third term connected to necromancy in Deut 18:11. Interpreters generally agree that this is a straightforward reference to the practice of necromancy. However, the precise method by which this was done and its precise relationship to the *›ôb* and *yiddĕ‹ōnî* is unclear.

2. Other Terms. In addition to the terms above, a number of other terms referring to magical practices appear in the OT.

a. *ḥăkam ḥărāšîm* ("skillful magician, magician, sorcerer"). This term occurs only in Isa 3:3. It is part of a list in Isa 3:2–3 listing the leaders in Jerusalem and Judah whom God will destroy. It is particularly

notable that these verses classify three categories of diviners and magicians (*yônēn, ḥăkam ḥărāšîm*, and *nĕbôn lāḥaš*) as leaders in Judah along with the more traditional soldier, judge, prophet, and elder.

b. Terms Associated with Astrology. The OT uses three terms to refer to astrologers: *hōbĕrēw šāmayim,* "one who gazes at the heavens" (Isa 47:13); *hahōzîm bakkôkabîm*, "one who gazes at the stars" (Isa 47:13); and *gāzĕrîn,* "astrologer" (Dan 2:27; 4:7; 5:7, 11). The Aram term *gāzĕrîn* is used in the OT in connection with Chaldean "magicians" and "enchanters." It is related to the root *gzr*, "to determine or decree." Astrologers, then, read the signs in the heavens in order to determine and make known that which has been decreed.

c. Terms Associated with "Foreign" Magicians. The terms *ḥarṭōm,* "magician" and *ʾaššāp* (Aram *ʾāšap*), "enchanter" are associated particularly with foreign magicians. The term *ḥarṭōm* (Heb and Aram) is used to refer to the magicians of both Egypt (Gen 41:8, 24; Exod 7:11, 22; 8:3, 14, 15—Eng8:7, 18, 19; 9:11) and Chaldea (Dan 1:20; 2:2, 10, 27; 4:7, 9; 5:11). The term *ʾaššāp*/*ʾāšap* appears paired with *ḥarṭōm* in almost every instance (Dan 1:20; 2:2, 10, 27; 4:7; 5:7, 11; alone in 5:15). OT evaluation of these foreign magicians seems to be mixed. In contests with Israel's God or God's representative they are always defeated; however, they are also frequently labeled *ḥākām,* "wise."

B. Place of Magic in the OT

The range of technical vocabulary, OT evidence for the knowledge and practice of a wide variety of magical and divinatory practices, and differing evaluations of magic in the OT itself leave interpreters divided regarding the general place of magic and magical practices in ancient Israel and the OT. Disagreement centers on two interrelated questions. First, should the OT prohibitions and negative evaluations of magic be viewed as the fundamental position of the OT, or should they be seen as simply reflecting the views of particular times or biblical writers? Second, does magic represent "primitive," foreign, or perverted influences on "true" Yahwism or does it represent an indigenous coterminous, or alternative form of Yahwism itself?

The OT prohibits the practice of magic or presents it negatively in a number of places (Deut 18:19–11; Lev 19:26, 31; 20:1–6, 27; Exod 22:17—Eng22:18; 1 Samuel 28; Isa 8:19; 57:3; Ezek 22:28; Mal 3:5). However, neutral or positive references to a wide range of magical and divinatory practices—dreams, clairvoyance, hydromancy, belomancy, magic staffs, decisions by lots, juridical ordeals, blessings and curses, apotropaic measures, and so forth—are also scattered throughout the OT. The presence of both understandings in the OT raises the question of the relationship between positive and negative evaluations. Interpreters who take the prohibitive and negative statements as the primary response to magic in the OT and ancient Israel tend to devalue and ignore positive statements or view them as "violations" of the "normative" prohibitions referred to in other texts. Conversely, interpreters who see the prohibitive and negative statements as limited responses to magic at particular times or by particular interpreters (e.g., the Deuteronomistic tradition or individual prophets) tend to deemphasize the primary or normative role of the prohibitions in the OT overall.

Responses to the primacy of the prohibitions of magic in the OT are closely related to understandings of the religious history of ancient Israel. Those interpretations which maintain the primacy of the prohibition of magic also tend to emphasize magic as "primitive," or foreign, or as perverted Yahwism. In these cases, references to magic tend to be taken as evidence of early (pre-Yahwistic) practices, foreign impositions, or "survivals" of earlier practices into later times. On the other hand, interpretations which restrict the interest in prohibiting magic to particular time periods or interpreters are more willing to argue for magic as an indigenous and integral part of Israelite religion, or at least for differing evaluations of it in ancient Israel and the OT. Many of these interpretations include an acceptable role within the OT not only for particular magical practices, but also for a "magical world-view" in ancient Israel. Defining magic broadly and positively, these scholars see a "magical" underpinning for a variety of "religious" figures (prophets, "men of God," priests, kings) and "religious" practices (especially those associated with war, law, occupations, life events, illness, and death, and mourning).

C. Relation of Magic and Religion

Many of the differences referred to above arise from longstanding debates regarding the relationship between magic and religion. Many early understandings of magic in the OT were influenced by skepticism regarding the "reality" of "pagan" (irreligious) magic. Medieval interpretations were also strongly influenced by preconceptions regarding the sharp distinction between magic and religion. "Religion" was associated with the Church, "magic" and "witchcraft" with the devil.

Particularly influential for contemporary views of the relationship are three areas of study which became prominent in the late 1800s and early 1900s: early social sciences, comparative Near East studies, and apologetic interests regarding the distinctive nature of Israelite religious thought and practice.

1. Social Sciences. Aspects of several models proposed by the social sciences for the relationship between magic and religion still influence many discussions of magic in the OT.

a. Evolutionary. The evolutionary model understands magic as the first and most primitive stage in an increasingly sophisticated three-stage process (magic–religion–science). Interpretations of magic in the OT following an evolutionary model tend to view references to magic beliefs and practices as evidence of "primitive," "prereligious" elements (often associated with Canaanite influence) in ancient Israelite belief and practice. When such elements are present in a text, they represent evidence of either this primitive stage or later "survivals" of it.

b. Animistic. A variation of the evolutionary model is one which focuses more particularly on the developmental stages of religion and argues for the progress of religion from animism through polytheism to monotheism. The animistic model proposes that the earliest stages of religion reveal a strong belief in the presence and power of "spirits" and other supernatural forces in the world. Magic as an important part of this system is a method to control these spirits and supernatural forces. This understanding of magic as an instrument of control has affected many studies of magic in the OT; its most common use has been to argue for the distinction between practices concerned with *control,* "magic," and practices concerned with *worship,* "religion."

c. Psychological. Understandings of magic as a psychological "coping mechanism" are closely related to the view of magic as a method of control. Psychological theories emphasize the role of magic in enabling individuals to achieve control of their lives and world either by overcoming psychological fears or by creating additional confidence in practices already undertaken. Such theories have had variable influence on studies of magic in the OT. They have led some interpreters to treat magic sympathetically as an understandable practice in adverse circumstances; they have led others to interpret it as evidence for lack of trust in God.

d. Prelogical/Prescientific. Several scholars have argued for a distinction between earlier "prelogical" and "prescientific" worldviews and modern logical and scientific ones. According to these scholars, prelogical societies view the world "mystically"; that is, they explain events in supernatural rather than natural terms. Magic is a part of this prelogical and prescientific worldview in that it accepts the reality of supernatural forces and the efficacy of techniques to influence them, and it does not see the "modern" distinction between the material and the spiritual. This view often supports apologetics for magic in the OT. Further, it is often seen as a way to understand Israelite views of illness and oppression (particularly as they are reflected in the psalms), practices which have magical undertones such as ordeals, blessings and curses, and the workings of the cult.

e. Sociological. Early sociological theories of magic strongly emphasized the contrast between the social roles of religion and those of magic. In these theories, religion is understood as a group practice important for legitimating and sustaining the community as a whole. Magic, by contrast, is seen as individualistic and often antisocial, being frequently used to advance individual as opposed to community well-being. This dichotomy between religion as a social expression and magic as an individual expression can be seen in the work of many OT scholars.

f. Synthetic. Finally, later theories have synthesized various aspects of the theories above. An important trend in this synthesis has been the decreasing tendency to distinguish sharply between magic and religion. Instead, more recent models either emphasize the close interrelationship between magic and religion or see them as operating on a continuum.

2. Comparative Near Eastern Studies. Comparative material was used in developing the theories of the relationship between magic and religion outlined above. In addition, discussion of the nature, role, and content of specific details of magic in the OT has drawn heavily on ANE materials. As noted above, many terms and practices have been explained by parallels to Akkadian, Assyrian, Babylonian, Hittite, and Canaanite materials. Also, parallels to Arab, especially bedouin, terms, beliefs, and practices have been drawn, particularly in the early 1900s.

3. Distinctive Nature of Israelite Religion. Extensive use of comparative models and content, coupled with early tendencies to distinguish sharply between magic and religion, led to many studies arguing for the distinctive (unique) character of Israelite religion. This tendency had significant consequences for understandings of the role and significance of magic in ancient Israel and the OT, for it divorced magic and magical practices from the mainstream of Israelite religion and OT theology by being seen as "primitive," foreign, or "nonreligious." However, as noted above, not all interpreters accepted this view. At present, scholars remain divided.

In conclusion, the most recent work on magic in the OT is giving increased acknowledgment not only to the diversity of scholars' interpretations of magic in the OT, but also to the diversity of practices and positions represented in the OT itself. For further discussion see *EncJud* 6: 111–16; 11: 703–7; *IDB* 1: 856–58; 3: 223–25; *EncRel* 9: 82–89.

MAGISTRATE. See CITY AUTHORITIES.

MAGOG (PERSON) [Heb *māgôg* (מָגוֹג)]. In the Table of Nations (Gen 10:2) and the parallel genealogy in 1 Chr 1:5, Magog is one of the six grandsons of Noah through his son Japheth. Others of this line are associated with Asia Minor (Javan, Tubal, Meshech), so a location for Magog also in this area is logical. It can also be supported by the reference in Ezek 38:1–6, where Gog, a king from Magog, is allied with Beth-togarmah, among others, which is described as coming "from the far north" (38:6). Not all of the listed allies are to the N of Israel, however, so the evidence is not compelling. Ezek 39:6 foretells judgment on Gog, which will include fire falling on Magog as well as upon "the island dwellers." The latter two passages portray these peoples as warriors from a distant land who will descend upon Israel in a cataclysmic battle. This eschatological motif is picked up in the NT, where Rev 20:8 pictures distant Gog and Magog allied with Satan in a final attempt to overthrow the people of God at the end of the age.

Scholars suggest several different locations for Magog. Skinner (*Genesis* ICC, 197) assumed the identity of Magog and *Gagā (ya),* which is mentioned in one of the Amarna letters from the mid-2d millennium B.C. (see *YGC,* 14 n. 40). They are identified there in a general way as people from the N. A more popular identification is that Gog is a Hebrew calque on the name of the Lydian king Gyges (ca. 680–ca. 648 B.C.E.; Akk *gugu*), and Magog is a derivation from Akk *mā (t) gugu* "land of Gyges." If this identification is correct, the etymological background of the term had been lost by the time of Ezekiel. He uses the Hebrew word for "land" alongside Magog, a redundancy if the word's etymological background were still well known. Another possible derivation involves the use of the Hebrew prefix *ma-* indicating "place of" (GKC, 236e). Therefore, Magog would be "Gog's place" (Wenham *Genesis 1–15* WBC, 217).

Josephus (*Ant.* 1.123) understood Magog to refer to the Scythians (Yamauchi 1982: 22; see 63–85), while the *Tg. Neof.* interpreted the name as *grmnyh* (*Germania*). This is possibly Germanica of Commagene in E Asia Minor. Jerome understood Magog to be the Goths (McNamara 1972: 194–95). The lack of any more specific geographical information makes any identification of Magog extremely uncertain.

MAGPIASH (PERSON) [Heb *magpîʿāš* (מַגְפִּיעָשׁ)]. A leader of the people in a signatory to the covenant established by Ezra (Neh 10:20). The meaning of the name is obscure, and at least one scholar has suggested that the place name Magbish (Ezra 2:30) has been mistaken for a personal name (Brockington *Ezra, Nehemiah and Esther* Century Bible, 180 and 181). It is more likely, however, that a family has assumed the name of the village in which they resided (Meyer 1896: 156; Williamson *Ezra, Nehemiah* WBC, 324).

MAGUS, SIMON. See SIMON (PERSON) #13.

MAHALAB (PLACE) [Heb *mēhebel* (מֵהֶבֶל)]. The RSV form of the name of a town listed before Achzib in connection with the tribal territory of Asher (Josh 19:29). The actual wording of the text is *mēhebel ʾakzîbâ*. In the AV the opening *mem* is regarded as a prefix ("from"), and MT *mhbl* is translated "from the coast" (to Achzib). Cooke (*Joshua* CBSC, 181) translates "by the region of" (Achzib). Most scholars, however, regard the *mem* as part of the word, and MT *mhbl* ("Mehebel") as a place name. The LXX^{B} of Josh 19:29 reads "from Leb and Achzib," which suggests that MT *mhbl* actually represents a metathesis of an original *mhlb.* This would then be supported by the data from Judg 1:31, which lists an "Ahlab" before Achzib (and a "Helbah" after it) as a town that Asher did not dispossess. Many scholars believe that all of these forms are corruptions of the same place name, "Mahalab," and that this should be identified with the Mahallibu mentioned in Sennacherib's third campaign (*ANET,* 287). This town would then be associated with Khirbet el-Mahalib on the banks of the Litani River, 6 km NE of Tyre. See also AHLAB.

Naʾaman (1986: 57–60), however, who connects the Joshua town list to David's conquests, suggests that Khirbet el-Mahalib was almost certainly in the territory of Tyre and therefore could not have been captured by David. Therefore, he places the town mentioned in the Bible (MT *mhbl*, Helbah, Ahlab) farther S, tenatively at Ras al-Abyad. Kallai (*HGB,* 220–23) regards Ahlab and Helbah as two different places and does not connect the towns listed in Joshua with David's conquest. However, he believes that the list in Joshua appears in geographical order, so he also places MT *mhbl* (Josh 19:29) S of Tyre and identifies it with the Helbah of Judg 1:31 (but without locating it at a specific site). He identifies the Ahlab of Judg 1:31 with Mahallibu (Khirbet el-Mahalib).

The list of towns in Joshua that starts with MT *mhbl* (RSV Mahalab) is, however, almost certainly an addition to the text having a common origin with the Judges 1 list. The geographical order then does not necessarily coincide with that of the preceding section. The similarity of the place names "Mehebel," Ahlab, and Helbah to Mahallibu/Mahalib should be regarded as the deciding factor identifying RSV Mahalab (Mehebel)—as well as Ahlab and Helbah—with Khirbet el-Mahalib. The historical conclusion then must be that David indeed controlled this northern region and that the territory of Tyre was at the time very small.

RAFAEL FRANKEL

MAHALALEL (PERSON) [Heb *mahălalʾēl* (מַהֲלַלְאֵל)]. Var. MAHALALEEL. 1. Son of Kenan, born when Kenan was 70 years old (Gen 5:12–17; cf. Luke 3:37). At 65 years of age, Mahalalel sired Jared, and lived a total of 895 years. Comparisons with the genealogy of Cain in Genesis 4 have related this name with that of Mehujael (Wilson *GHBW,* 161–62). The initial *mem* and the final *ʾalep* and *lamed*

are three consonants (half of the possible six) which the names share. The name Mahalalel is based upon two roots: *hll*, "to praise"; and *ʾl*, "god." The *mem* preformative on the *hll* may suggest an original participial form ("praising God") or a nominal form ("praise of God"). As with the *ʾl* root, names with the *hll* root appear throughout the OT period: in addition to the listing of Mahalalel in Nehemiah (see below), the name Jahallelel occurs twice (1 Chr 4:16; and 2 Chr 29:12; cf. Noth *IPN*, 205), and Hillel once (Judg 12:13, 15).

2. Judahite ancestor of Athaiah, of the clan of Perez (Neh 11:4).

RICHARD S. HESS

MAHALATH (PERSON) [Heb *māḥălat* (מָחֲלַת)]. 1. Wife of Esau, daughter of Ishmael, sister of Nebaioth (Gen 28:9). Mahalath's name occurs in the P narrative of Jacob's departure (Gen 27:46–28:9). In response to Rebekah's complaints about Esau's Hittite wives (27:46), Isaac instructs Jacob to take a wife from the daughters of Laban (28:2). Seeing the command and blessing given Jacob (28:1–5), Esau realizes his father's displeasure (Gen 28:6–8) and marries Mahalath of the house of Ishmael (Gen 28:9). Thus, while Jacob departs to seek a wife from his mother's relative (Laban), Esau takes a wife from his father's house (Ishmael). While Gen 28:9 identifies Esau's Ishmaelite wife as Mahalath, the Edomite genealogy in Genesis 36 refers to her as Basemath. Moreover, 36:2 identifies Basemath as Ishmael's daughter, the sister of Nebaioth (cf. 28:9 for a similar description of Mahalath). This tradition, however, conflicts with Gen 26:34, which identifies Basemath as the daughter of Elon the Hittite. See also BASEMATH.

2. Wife of Rehoboam, king of Judah (2 Chr 11:18). Mahalath was the daughter of Jerimoth, an unknown son of David, and of Abihail, the daughter of Eliab, Jesse's eldest son. Her marriage to Rehoboam, her second cousin, is witness to a period of intermarriage within the Davidic house. Josephus attests to Mahalath's status by referring to her as Rehoboam's "kinswoman" (*Ant.* 8.10.1). One of eighteen wives of Rehoboam (2 Chr 11:21), Mahalath bore him three sons: Jeush, Shemariah, and Zaham (2 Chr 11:19).

LINDA S. SCHEARING

MAHANAIM (PLACE) [Heb *mahănayim* (מַחֲנַיִם)]. A city located in Gilead, along the Jabbok River, in the territory traditionally associated with half-Manasseh. The name appears to be a dual form (meaning "two camps" or "camp"), although the *-ayim* ending has alternatively been explained as an old locative ending (Mazar 1954: 230). Two popular etymologies are given for the site in Genesis 32. According to vv 2–3—Eng32:1–2—it was where Jacob and his family encountered a troop of angels, while vv 8–11 (—Eng 32:7–10) explain that it was where Jacob divided his family and flocks into two companies to avert total annihilation in case Esau attacked him. According to vv 23–31 (—Eng 32:22–30), the site lay at a ford of the Jabbok, across stream from Penuel.

Mahanaim became the administrative seat of Gilead during Saul's reign and continued to serve in that capacity under Eshbaal (2 Sam 2:9). It was the site of Eshbaal's hasty coronation by Abner and the remaining Saulide troops who had regrouped there following Saul's defeat and death at Mt. Gilboa. See ABNER; ESHBAAL. David's use of the site as his temporary base of operations during Absalom's revolt (2 Sam 17:24–19:8) suggests its continued role as the administrative center of Gilead. Under Solomon, it served as the capital of District VII (1 Kgs 4:14). The city's characterization as a levitical city probably stems from its early role as an administrative center (Josh 21:36—Eng21:38; 1 Chr 6:65—Eng6:80).

Except for a possible allusion to the site in Cant 6:13, the latest reference to Mahanaim occurs in an Egyptian inscription on the S entrance to the temple of Amon at Karnak. It is included among the names of the cities that Pharaoh Shishak destroyed during his campaign in Palestine in the fifth year of the reigns of Rehoboam and Jeroboam. It is entry no. 22, and is written Ma-han-ma.

According to Josh 13:30, the city marked the S boundary of the territory of half-Manasseh in Gilead. A location on the N bank of the Jabbok is thereby indicated, which would be consistent with Solomon's appointment of Ahinadab ben Iddo, a Manassite, as head official in the city (1 Kgs 4:14; 1 Chr 27:21).

The contradictory claim in Josh 13:26b that Mahanaim marked the S boundary of Gad appears to reflect the Gadites' later expansion into traditional Manassite territory. This situation is confirmed by the brief note in the Gadite genealogy in 1 Chr 5:16–17 that they occupied Gilead, Bashan and its towns, and all of the pasture land of Sharon during the reign of Jotham, king of Judah.

The site of Mahanaim can confidently be identified with Telul ed-Dhahab el-Garbi (M.R. 214177; Dalman 1913: 71–72; Noth, *Josua* HAT 1938, 55; Simons 1947: 37; Mazar 1957: 61; *LBHG*, 439), ruling out earlier proposed identifications with Khirbet Mahne (Oliphant 1881: 142–43); Tell Heggag (de Vaux 1941: 31); Tell er-Mrameh (Ubach, *EncBibBarc* 4: 1185–87); Tell er Reheil (Negenman 1969: 64); and Khirbet Suleiket (Merrill 1881: 437). Telul ed-Dhahab is located on the N side of the Zerqa, in an extension of land that projects S to form the W side of a sharp, *S*-shaped bend in the river. It has a smaller companion site, Telul ed-Dhahab es-Sharqia, located on the S bank of the river, which forms the E side of the *S*-curve. The latter is a strong candidate for PENUEL.

Mahanaim is built upon a natural outcropping of sandstone that lies at a natural ford of the river, which controls access to the adjoining iron-rich Ajlun region. Surface survey at the site has yielded extensive Iron I pottery, as well as Iron II ware, both of the periods required by the available biblical evidence. In addition, remains from the EB, Hellenistic, Roman, and Byzantine periods have been found. Bits of iron slag cover the upper terraces. A concentrated deposit, including slag, cinder, treated ore, and a furnace bottom, was discovered at the top of the E scarp, just SE of the main gate (Gordon and Villiers 1983: 283–84). No excavations have been completed at the tell to date. The site's strategic location as a gateway to the iron resources of the adjacent Ajlun probably led to its establishment as the administrative seat for Gilead in the early monarchy.

DIANA V. EDELMAN

MAHANEH-DAN (PLACE) [Heb *maḥănēh-dān* (מַחֲנֵה־דָן)]. An area adjacent to Kiriath-jearim where 600 Danites camped during their migration N to LAISH (Judg 18:12); also, the place between Zorah and Eshtaol where the spirit of the Lord first began to stir Samson (Judg 13:25).

Scholars of the 19th century puzzled over how to reconcile Mahaneh-dan's location near Kiriath-jearim (Deir el-ʿAzar, M.R. 159135) with the location between Zorah and Eshtaol indicated by Judg 13:25. Groves (*SDB* 2: 1758) attempted a solution by identifying Eshtaol with Qasṭal (M.R. 164134), but this was rejected on the grounds that it required Eshtaol be located well within the territory of Judah (Porter 1866: 31).

By the end of the 19th century, most scholars posited the existence of two locations named Mahaneh-dan—one at Kiriath-jearim (Judg 18:12) as the camp occupied by the emigrating Danites, and the other (Judg 13:25) as a war camp from the days of the initial Danite campaigns in the Shephelah (Welch *HDB* 3: 214; cf. Porter 1866: 31). Alt (*KlSchr* 1: 126–75) modified this view by suggesting that the biblical references to Mahaneh-dan reflected a seasonal migration of the Danites in the days when they lived as nomads. According to Alt, the tribe wintered between Zorah and Eshtaol and in the summer moved to grazing areas near Kiriath-jearim. One wonders, however, if such an extensive migration would have

taken place between areas as close to each other as Zorah-Eshtaol and Kiriath-jearim, or whether a Danite grazing camp would have been tolerated in the vicinity of a settled area like Kiriath-jearim.

Based on 1 Chr 2:52–54 and a presumed connection between the Manahathites/Menuhoth (*hammānaḥtî/hammĕnūḥôt*) and Kiriath-jearim and the Zorites (*haṣṣārʿî*), S. A. Cook (*EncBib* 3: 2904; 1907: 88) suggested that both references to Mahaneh-dan be emended to *mānaḥat-dān.* Though lately endorsed by Gray (*Joshua, Judges, Ruth* NCBC, 1967, 347, 368–69), Cook's suggestion may be faulted on the grounds that it requires that the etymology and context of Judg 18:12 be jettisoned in favor of an emendation for which there is no textual evidence. Other efforts toward a textual solution have explained the appearance of Mahaneh-dan in 13:25 as a gloss prompted by the existence in this passage and in 18:12 of the place names Zorah and Eshtaol (Burney 1918: 353; Simons *GTTOT,* 301).

There seems little reason to doubt the authenticity of Mahaneh-dan as it appears in Judg 18:12. Indeed, the name "camp of Dan" itself is more natural for a place in Judah than for a site in Danite territory (Moore *Judges* ICC, 326). Greater uncertainty, however, surrounds the use of Mahaneh-dan in Judg 13:25. A number of proposals may account for its appearance in this text. It is possible that there were two "camps of Dan." Alternatively, in this verse Mahaneh-dan may be a gloss brought on by the appearance here and in 18:12 of the names Zorah and Eshtaol. Error in transmission is also a possibility; perhaps Samson began his career as a judge not at the "camp of Dan" but at the "judge's camp" (*hammaḥănēh-dayyān*). Finally, Mahaneh-dan may be present in Judg 13:25 for literary or theological reasons. Perhaps the editor of Judges intended to contrast Samson's call to struggle at Mahaneh-dan with the 600 Danites' abandonment of that struggle at a place of the same name. Whichever explanation is accepted, any conclusion on Mahaneh-dan's occurrence in this passage must remain a matter of speculation.

BRIAN P. IRWIN

MAHARAI (PERSON) [Heb *mahray* (מַהְרַי)]. **1.** One of David's champions, a select class of warriors directly attached to the king for special assignments, named in the parallel lists of 2 Sam 23:8–39 (v 28) and 1 Chr 11:10–47 (v 30). Although of high repute, he is distinguished from the more elite warriors (vv 8–23 and 11–25) listed before his grouping. In both texts he, as well as the champion Heleb/Heled (2 Sam 23:29; 1 Chr 11:30), is said to be "of Netophah," a town in the hill country of Judah SW of Bethlehem (1 Chr 2:54; Ezra 2:21–22; Neh 7:26).

The same Maharai appears to be mentioned in a list of commanders found in 1 Chr 27:1–15 (v 13), since this list mentions eleven other mighty men found in 1 Chr 11:10–47. However, here Maharai of Netophah is further identified as "of the Zerahites," that is, one of the descendants in the lineage of Zerah, one of the twins born to Judah by Tamar (Gen 38:24–30; Num 26:20; Josh 7:17). These commanders were each in charge of a monthly course of 24,000 men, or possibly 24 "units," rather than "thousands" (Myers *Chronicles* AB, 183, 53, 98) in the armed service of the king, Maharai being in charge of the tenth month. This list of commanders and their functions is possibly a construct of its composer, since (a) no such monthly, conscripted, civilian army is mentioned elsewhere during David's reign; (b) the large number of 288,000 men, if the term is understood correctly, is improbable; and (c) one of the commanders, Asahel (v 7), was dead before David had rule over all Israel (Williamson *Chronicles* NCBC, 174–75). However, the author/redactor's thesis, that David made preparations for the proper ongoing cultic and national life of Israel, as illustrated throughout chaps. 23–27, draws on the fact that David took a census (vv 23–24; chap. 21) which could have been utilized for designing a monthly plan of conscription, a plan which would have been analogous to Solomon's monthly courses for his provision (1 Kgs 4:7–19).

RODNEY K. DUKE

MAHATH (PERSON) [Heb *maḥat* (מַחַת)]. A Levite, the son of Amasai, and one of those who consecrated himself and went in to cleanse the house of the Lord according to King Hezekiah's command (2 Chr 29:12; cf. 31:13). At 1 Chr 6:5—Eng6:20—Mahath appears in some versions (e.g., RSV, JB), although Jahath or Jehath is read in most versions (e.g., *BHS,* NEB, NIV, NKJV, NASB) and is probably the better reading. The two men, Mahath and Jahath, do not appear to be the same person, although they are distinctly related. Jahath of 1 Chr 6:20 is said to be a descendant of Gershom, the son of Libni, and whose son was Zimmah, while Mahath of 2 Chr 29:12 is said to be a descendant of Kohath, with both Gershom and Kohath being sons of Levi. The most detailed list of participants in the cleansing ritual is provided in 2 Chr 29:12, but a Mahath is also included in a different list of participants in 31:13. Several explanations are possible, although each is not equally probable: Mahath could be the only individual included in both lists, since the numbers appointed to the task were large and only representatively recorded; the two are different men who shared the same name, possibly appointed to different tasks, with Mahath of 29:12 a temple cleaner and Mahath of 31:13 an overseer of the now purified temple; and the second list in 31:13 is merely a stylistically characteristic list of names included by the Chronicler to emphasize the solemnity of the surrounding events (Coggins *1 and 2 Chronicles* CBC, 278), regardless of the status of Mahath in 29:12. Nevertheless, these are the only references to Mahath in the Bible, and nothing more is known of this individual or these individuals.
STANLEY E. PORTER

MAHAVITE, THE [Heb *hammaḥăwîm* (הַמַּחֲוִים)]. A gentilic modifying Eliel, who is listed among David's "mighty men" (1 Chr 11:46). See ELIEL #4. This listing of David's military forces, beginning in 1 Chr 11:10, evidences the accumulating support that David received prior to his ascent of the throne. Several scholars have suggested emending the gentilic "the Mahavite" to read "the Mahanite," i.e., from Mahanaim (e.g., Williamson *1 and 2 Chronicles* NCBC, 104). This emendation would be consistent with the Transjordanian nature of the list in 1 Chr 11:42–47; this section is an expansion of 1 Chr 11:26–41, a list also found in 2 Sam 23:24–39. Several scholars, noting the expansion, suggest that 1 Chr 11:42–47 does not belong to the original list of David's supporters. Noth (*NCH,* 54–55), for example, considered the expansion a postexilic fiction of several families who wished to trace their lineage to the supporters of David. However, Myers (*1 Chronicles* AB, 90–91), points out that the Transjordanian nature of the expansion weighs against Noth's argument, suggesting that the list was available to the Chronicler and was added here to further enhance David's coterie of followers. Likewise, Ackroyd (*1 and 2 Chronicles, Ezra, Nehemiah* TBC, 54) sees the list as added by the Chronicler in order to emphasize names from Transjordan, because the main list was composed of names mostly from Judah and the hill country W of Jerusalem.
SIEGFRIED S. JOHNSON

MAHAZIOTH (PERSON) [Heb *maḥăzî·ôt* (מַחֲזִיאוֹת)]. One of the fourteen sons of Heman who were appointed to prophesy with musical instruments under the direction of their father and the king (1 Chr 25:4). Mahazioth received the twenty-third lot cast to determine duties (1 Chr 25:30). Scholars have long suggested that the final nine names in 1 Chr 25:4 can be read as a liturgical prayer. For instance, Mahazioth can be treated as a nominal form of the root *ḥzh* and translated as "oracles, visions, clear signs." It would form part of the final line of the liturgical prayer as it is reconstructed by scholars. For a reconstruction and translation of the prayer, a summary of interpretive possibilities, and bibliography, see ELIATHAH.
J. CLINTON MCCANN, JR.

MAHER-SHALAL-HASH-BAZ (PERSON) [Heb *mahēr-šālāl-ḥāš-baz* (מַהֵר־שָׁלָל־חָשׁ־בַּז)].

Symbolic name given by Isaiah in Isa 8:1–4 to his newly born son. The name means "speedy spoil, hasty plunder" and is part of his strategy to discourage Judah (under King Ahaz) from submitting to Assyria as the price of safety. The occasion is the invasion of Judah by Syria and Israel (the so-called Syro-Ephraimite War, 735–732 B.C.E.). Isaiah had already assured Ahaz, who was apparently tempted to turn to Assyria for help (as in fact he did—cf. 2 Kgs 16:7–9), that the threat would quickly evaporate (Isa 7:3–9), and this prophetic act was intended to underline that message. The sequence described in 8:1–4 included writing out the name before witnesses, having relations with "the prophetess" (presumably Isaiah's wife), naming the child, and explaining the significance, namely, the demise of Syria and Israel within a limited time, i.e., the two or three years from the conception of a child to the speaking of its simplest words. By this Isaiah tells Ahaz (and the people—see v 6) that to seek help from Assyria is unnecessary because the present threat from Syria and Israel would quickly come to naught. (On Isaiah's use of symbolic names, see also 7:3, 14; 8:18; 9:5.)

JOSEPH JENSEN

MAHLAH (PERSON) [Heb *maḥlâ* (מַחְלָה)]. Two persons in the Hebrew Bible bear this name.

1. The first of Zelophehad's five daughters (Num 26:33; 27:1; 36:11; Josh 17:3). Although the etymology of the name is not certain, it has been suggested that it meant "the weak one" (Newman *IDB* 3: 227). Mahlah always occupies the first position in the listing of the five daughters of Zelophehad. The other four are Noah, Hoglah, Milcah, and Tirzah. In Num 36:11, the positions of Noah and Tirzah are exchanged.

Mahlah first appears in Num 26:28–34, the Manassite section of a military census. The focus of the passage is on the offspring of Hepher, whose son, Zelophehad, had five daughters. The next chapter reports that Mahlah and her sisters approached Moses and asked that an allotment of land be given to them (27:1–11), because Zelophehad had died in the wilderness and left no son to receive his inheritance of land and pass on his name (vv 1–4). When Moses brought the request before God, their wish was granted and a general decree issued that the same treatment should be shown to any daughter of Israel in similar circumstances (vv 5–11). Therefore, Mahlah and her sisters are remembered for the legal precedent that was established by their suit. Snaith (1966) has suggested that the story had no basis in fact but was composed in order to account for the presence of Manasseh in W Palestine, and other scholars are equally unsure of its historical accuracy (Butler *Joshua* WBC, 187).

Finally, the reader learns (Num 36:10–12) that an additional law was issued because of the situation that surrounded Zelophehad's daughters. Manassite tribal leaders were afraid that Mahlah and her sisters would marry men of another tribe and take their inheritance with them. This would have reduced Manasseh's territorial holdings (Num 36:1–4). Therefore, Moses commanded the daughters of Zelophehad to marry men within their tribe, and this decree was made law for any Israelite woman in similar circumstances (vv 5–9). Therefore, Mahlah and her sisters married their cousins from the tribe of Manasseh, so that their inheritance would remain within the tribe (vv 10–12). Fishbane (1985: 104–5) notes that vv 6–9 produce a legal fiction by subverting the decision in Numbers 27. Without the latter ruling, Zelophehad's property would have gone to the children of his brothers. With the ruling in Num 36:6–9, which requires Zelophehad's daughters to marry their paternal cousins, the result is the same.

Joshua 17:1–13 deals with the tribal allotment of Manasseh and continues the story of the inheritance of Zelophehad's daughters. The passage notes that Mahlah and her sisters petitioned Eleazar the priest, Joshua, and other tribal leaders to grant them the inheritance, as God had commanded Moses. The leaders complied with their request (vv 3–4). Therefore, in addition to the allotment that was given to Gilead (v 1), ten shares of land were given to other Manassite families—five to the clans of Hepher's brothers and five to the daughters of Zelophehad the son of Hepher (vv 2–6). Consequently, it appears that the families of Mahlah and her sisters assumed considerable significance within the tribe of Manasseh. See also MACHIR.

It has been proposed by Lemaire (1972: 13–15), who drew on earlier studies by Albright (1931) and Cross (1961), that biblical texts and the Samaria ostraca indicate that "Hepher" was the name of a geographical territory, rather than the name of a village. The names of the towns within it are given in the Bible as the names of the daughters of Zelophehad. Tirzah was its capital, and Mahlah, which Lemaire (1972: 16–17) identifies with the modern Abel Meholah, was another of its villages. Furthermore, Lemaire (1972: 18–20) suggests that the biblical report that the daughters of Zelophehad married their Manassite cousins does not in fact describe marriages of five Israelite women. On the contrary, the narratives reflect the establishment at Shechem (Joshua 24) of a tribal alliance between the non-Israelite villages in the "land of Hepher" and the Israelite clans of Manasseh. Although the details of Lemaire's reconstruction are open to serious question, it is clear from the Samaria ostraca that villages in Manassite lands of W Palestine bore some of the same names as the biblical "daughters of Zelophehad."

2. A Manassite, whose mother was Hammolecheth and whose brothers were Ishhod and Abiezer (1 Chr 7:18). It is unclear whether the name should be construed as a feminine form, since it occurs elsewhere as the name for one of Zelophehad's daughters (Num 26:33), or as a masculine form. Although Syriac mss omit Mahlah from the genealogy entirely, most interpreters do not regard this as sufficient reason to strike the name from the text of 1 Chr 7:18. It is puzzling that the name of Mahlah's mother is given, but her father is not identified. This is irregular, since the genealogies usually trace the lineage through fathers. Moreover, the relationship of Hammolecheth (and so Mahlah) to the rest of the tribe of Manasseh is uncertain. It appears most probable that she was the sister of Gilead (vv 17–18), although this is by no means sure. In this case, Mahlah's grandfather and great-grandfather would have been Gilead and Machir, respectively.

M. PATRICK GRAHAM

MAHLI (PERSON) [Heb *maḥlî* (מַחְלִי)]. A personal name whose suggested sources of derivation include Ar *miḥalun,* "cunning, cleverness" (*IPN*, 24), Heb *ḥlh,* "be weak, sick" (*HDB* 3: 214; KB, 513), Aram *ḥl*ˀ (or maybe *ḥly*), "sweet, pleasant," and SW Ar *ḥlw,* "gift, spice" (both noted but not advocated by Loewenstamm *EncMiqr* 4: 800). Brockington (*Ezra, Nehemiah and Esther* Century Bible, 101) believes the meaning to be unknown. Not more than two individuals in the Hebrew Bible bear this name, and some have suggested, as genealogies are harmonized, that one person is represented in two different ways (*EncBib* 3: 2905; Cody 1969: 57 n. 65).

1. A Levite whose grandfather was Levi, whose father was Merari, and whose brother was Mushi. He is first mentioned (Exod 6:19, LXX = *Mooli*) in a genealogical text (vv 13–20) whose purpose seems to be to disclose the division between the sons of Aaron, i.e., the Aaronite priesthood, and the remaining Levite families (Galil 1985: 489). Cody (1969: 161 n. 40) believes that this personal name, along with three others (Libni, Hebron, and Mushi), derives from a levitical clan (*mišpāḥāh*) mentioned in Num 26:58 (see 3:33)—*hammaḥli,* "the Mahlites." Mahli is designated the head of a family (*mišpāḥāh*) (Num 3:20) in a levitical census (vv 14–39) wherein the "family of Mahlites" (v 33) are among the sons of Merari whose duties included care of the tabernacle's frames, bars, pillars, bases, and accessories (vv 36–37). These Mahlites are also listed, as mentioned above, in Num 26:58 (but not in the LXX) in the levitical section (vv 57–62) of a second census. Mahli is included by the Chronicler (1 Chr 6:4—Eng6:19) in a genealogical listing of the sons of Levi (vv 1–5—Eng 16–30) where he is the first mentioned of Merari's two sons. In this list his family is traced for six generations (vv 14–15—Eng 29–30) through his son

Libni; however, in the divisional organization of the Levites in 1 Chr 23:6–24, the sons of Mahli (v 21) are registered as Eleazar (who died without sons) and Kish (whose sons married Eleazar's daughters). In a later additional list of Levites (1 Chr 24:20–31)—Myers (*1 Chronicles* AB, 166) believes it to be a later addition to 1 Chr 23:6–24, Elmslie (*IB* 3: 425) sees it as a "very late" addition with no clear relation to 1 Chronicles 23, Braun (*1 Chronicles* WBC, 239) believes it was intended to supplement and update (241) the family list of Levites in 1 Chr 23:7–23—Mahli is mentioned as one of two sons of Merari (v 26) and as the father of Eleazar (who had no sons) and Ithamar (v 28). Concerning the insertion of vv 26b–27 and the person of Jaaziah opinions vary: Rothstein (*1 Chronikbuch* KAT, 440) believes that Jaaziah represents a later generation whose name is similar to that of Mahli's great-grandson Uzzah (1 Chr 6:14—Eng6:29); Braun (*1 Chronicles* WBC, 240) admits to the possibility that he was an otherwise unknown son of Merari and therefore brother of Mahli; Curtis (*Chronicles* ICC, 274) believes him to represent, not a son of Merari, but the head of a family claiming such descent. Mahli is also mentioned as the head of the family to which the "man of discretion," who was brought to Ezra from Casiphia, belonged (Ezra 8:18; MT = "and Sherebiah"). 1 Esdras 8:46—Eng8:47 identifies that man as *Asebēbias* (Sherebiah). In these last two texts Mahli is described as "the son of Levi" without mention of Merari. Möhlenbrink (1934: 209) discounts an attempt to understand this description that views Mahli as being conceived as Levi's son by referring to the wide range of meanings embraced by the Hebrew word for "son."

2. A Levite whose father was Mushi, son of Merari, and therefore was a nephew of the Mahli described above. He appears (1 Chr 6:32—Eng6:47) in a list of levitical musicians (vv 16–32—Eng 31–47), schematically built around Levi's three sons (Myers *1 Chronicles* AB, 46), whose office as temple musicians resulted from Davidic appointment (v 16—Eng v 31). Elsewhere he is listed as having two brothers (1 Chr 23:23; 24:30).

RODNEY H. SHEARER

MAHLON (PERSON) [Heb *maḥlôn* (מַחְלוֹן)]. Son of Elimelech and Naomi who married Ruth the Moabitess (Ruth 1:2, 5; 4:9). Mahlon and his brother Chilion left their home in Bethlehem and resided in Moab, where they married Moabite women. Mahlon is remembered as the deceased husband of Ruth, whose estate became the subject of Boaz's legal transaction at the city gate (4:5, 9–10). There is a legal problem with the transaction, however: in the narrative, Obed, the son of Ruth and Boaz, is the heir of all that belongs to Mahlon (4:10), but in the genealogy he is the son of Boaz (4:17b, 18–22). The Targum explains that the sons died as a result of their marriage to foreign women on polluted soil, but the narration does not condemn their marriage and is silent about the reason and circumstances of their deaths.

Since the Ruth story has commonly been taken as folklore, the names of the brothers have been assumed to be contrived in keeping with the story's genre. This suspicion is helped by the rhyming names of Mahlon and Chilion, which hint at an artificial construction. Midrashic authorities by an etymological interpretation attached significance to their names because of their untimely deaths. Mahlon meant "blotted out" (*mḥh*) and Chilion "perished" (*klh*). However, the etymologies of Mahlon and Chilion are uncertain. The root *mḥl,* except for some personal names, is not attested in the Hebrew Bible. Influenced by the parallel etymology of "Chilion," many (*IPN* 10) relate "Mahlon" to *mḥh* ("to be sick, ill"). Others have argued that the names are not necessarily fictitious since Elimelech and Chilion, for instance, are known from LB onomastica.

It is questionable whether parents would name their children "sickly" and "puny." But it may be that the characters are real and have been assigned these names as a result of their role in the story. A similar practice of ancient storytelling occurs in the book of Judges, where Cushan-risathaim is defeated by Israel

(Judg 3:8–10); the name literally means "Cushan, double wickedness" and was probably a contemptuous title given to him by the Israelites.

KENNETH A. MATHEWS

MAHOL (PERSON) [Heb *maḥôl* (מָחוֹל)]. The father of Heman, Calcol, and Darda, who are mentioned in 1 Kgs 5:11—Eng4:31. Solomon's wisdom is presented as superior to the wisdom of the sons of Mahol. The proper name "Mahol" occurs only in this passage. Neither his nationality nor the reputation for wisdom to which this verse alludes is provided in the OT. On the contrary, in the parallel passage in 1 Chr 2:6, *Zerah* is given as the father of Heman, Calcol, *Dara,* and others. Zerah's identification as the grandson of Judah (by Tamar, his daughter-in-law) ties the history of these sages to Israel. On the other hand, *bĕnê qedem* (1 Kgs 5:11—Eng4:30) is the expected designation for easterners as opposed to Israelites.

Albright interpreted *maḥôl* as a technical designation rather than a proper name (*ARI,* 210). According to this reading the text would be rendered "sons of the dance" or "members of the musicians' guild." The verb *ḥûl* upon which the noun *maḥôl* is based literally means "to turn, dance." Mowinckel built upon Albright's thesis by suggesting a close relation between wisdom teachers and poetic prophecy in the temple. This association, according to Mowinckel, led to their identification as Levites with the term *maḥôl* (1962: 96–97). De Vaux claimed that the first choir was perhaps non-Israelite, that is, the original "choristers" were the eastern sons of *maḥôl* (see *AncIsr*). John Gray makes the broader claim that mention of the "sons of *maḥôl"* implies a Canaanite origin of psalms usage (*Kings* OTL, 147). The cultic origins of the term *maḥôl* are not as clear as such claims may lead the reader to believe.

DONALD K. BERRY

MAHSEIAH (PERSON) [Heb *maḥsēyâ* (מַחְסֵיָה)]. The father of Neriah and the grandfather of Jeremiah's scribe, Baruch (Jer 32:12; Bar 1:1). He is also identified as the father of Neriah and the grandfather of Seraiah, a quartermaster who accompanied Zedekiah to Babylon in 594 B.C.E. (Jer 51:59). That both Baruch and Seraiah are described as sons of Neriah and grandsons of Mahseiah suggests that they were brothers. In Jer 51:59–64, however, Jeremiah instructs Seraiah to read a scroll regarding God's judgment against Babylon in much the same way Baruch had read Jeremiah's scroll regarding Judah (Jeremiah 36). So, while it is possible that Baruch and Seraiah were in fact brothers, the sons of Neriah and the grandsons of Mahseiah, the common lineage could also reflect an effort to connect the common function of these two in the Jeremiah tradition. Mahseiah is mentioned only in connection with Baruch and Seraiah. The name "Mahseiah" (Gk *Maasaias*) means "Yahweh is a refuge."

JOHN M. BRACKE

MAIL, COAT OF. See WEAPONS AND IMPLEMENTS OF WARFARE.

MAKAZ (PLACE) [Heb *māqaṣ* (מָקַץ)]. A city listed in Solomon's second administrative district, administered by Ben-geber. The other towns listed there (cf. also Josh 19:4–46) suggest that this district was in the Shephelah, probably between Nahal Ayyalon and Nahal Sorek. The LXX Machemas/Machmas suggests an original *mḥṣ,* and thus some would identify Makaz with Khirbet el-Mukheizin, about 4 miles S of Ekron. It has also been identified with a site (M.R. 144137) between Gezer and Timna (*RAB,* map on p. 85).

GARY A. HERION

MAKED (PLACE) [Gk *Maked* (Μακεδ)]. One of the five cities in Gilead in which Jews were being held captive by the gentile citizens (1 Macc 5:26). The city is perhaps the same as *m-q-t,* mentioned by

Thutmose III in his list of Canaanite towns. The location of the site is open to question. Abel (1923: 518–19) and Aharoni and Avi-Yonah (*MBA,* map no. 189) identify it with Tell el-Jemid (M.R. 232237), while Grollenberg (1956: 156) and Simons (*GTTOT,* 425) identify it with Tell Miqdad. In either case the sequence of events recorded in 1 Macc 5:26–36 demands a location E of the Sea of Galilee, likely between Chaspho and Bosor, the cities defeated before and after it.

The early successes of the Maccabaean Revolt, including retaking the temple in 164 B.C., generated gentile reprisals. Many Jews in Gilead fled to a stronghold at the city of Dathema, from which they sent word to Judas for help. En route to rescue the refugees, Judas learned from a band of Nabateans that other Jews were under attack in Bozrah, Bosor-in-Alema, Chaspho, Maked, and Carnaim, as well as other cities (1 Macc 5:24–27). Judas defeated the gentiles in Bozrah, Dathema, and Chaspho before delivering the Jews in Maked.

PAUL L. REDDITT

MAKHELOTH (PLACE) [Heb *maqhelōt* (מַקְהֵלֹת)]. The tenth encampment of the Israelites after leaving the wilderness of Sinai, as listed in Num 33:25–26, where it is placed between Haradah and Tahath. Many scholars suggest that Kehelathah in Num 33:22–23 is a duplicate for Makheloth in Num 33:25–26 since LXX preserves very similar names for both: Makellath in 33:22–23 and Makeloth in 33:25–26 (*GTTOT,* 256). Both names also have similar meanings, "assembly" or the like. If the equation is accepted, a possible location is Kuntillet ʿAjrud, also called Kuntillet Qraye (*GP,* 214; M.R. 094956). For a discussion of the location of any of the places associated with the journey of the Israelites from Egypt through Sinai see DOPHKAH.

JEFFREY R. ZORN

MAKKEDAH (PLACE) [*maqqēdâ*]. Amorite royal city in the Shephelah, or lowlands, of S Canaan, which after its conquest by Joshua (Josh 12:16) was incorporated into the tribal territory of Judah within the same district as Lachish (Josh 15:41). Following the defeat of the anti-Gibeonite coalition (Josh 15:10), the five Amorite kings who headed this coalition escaped to a cave near Makkedah, where they were caught and executed (Josh 10:16–27). Contrary to the attempt by Noth (1937) to discount these verses as merely an etiological story accounting for the heap of stones in front of Makkedah cave, this account most likely stems from historical events, the memory of which has been transformed and overlaid by editors whose primary interest appears to have been to demonstrate the overwhelming importance of Yahweh's role in the conquest of Canaan (Boling and Wright *Joshua* AB, 286–87). Following the account of the events at the cave, a description of the capture of the city of Makkedah, the execution of its king, and the utter destruction of its inhabitants (Josh 11:28) begins an independent unit consisting of a series of formulaic statements recounting the total conquest of S Canaan. Although some details are difficult to reconcile with events described earlier in the chapter, overall this unit makes considerable sense in both geographical and historical terms (Boling and Wright *Joshua* AB, 294–95). Presumably it was included because the editor wished to emphasize the totality of the conquest as well as the miraculous defeat of the anti-Gibeonite coalition. Despite considerable effort, no satisfactory candidate for the site of ancient Makkedah has been identified. All that we can say for certain is that the biblical passages support a location somewhere in the central or N Shephelah, in the vicinity of Azekah (Josh 15:10) and Lachish (Josh 15:41). Attempts to locate Makkedah farther to the S and E (Noth 1937) ignore these geographical hints and depend too heavily on the speculations of Eusebius (Wright 1946: 110).

B. Historical Background
C. Literary Considerations
D. Text and Language
E. Date
F. Message and Theological Significance
G. Canonicity

———

A. Author

The name Malachi occurs in the OT only in the superscription of 1:1. In light of the introductory formula in Zech 9:1 and 12:1, "an oracle of the word of the Lord," Mal 1:1 may be an editorial preface marking the last of a series of three anonymous oracles appended to Zechariah 1–8. Further, some argue this name "Malachi" is an editor's title borrowed from the phraseology of 3:1, ultimately permitting its detachment from Zechariah and the completion of the sacred number of Twelve Prophets (see G below).

As a proper name Malachi may be translated "my messenger" or "my angel" (cf. Zech 1:9, 11), though context militates against the latter. Several commentators have espoused the view that Malachi is indeed a proper name (e.g., Childs, Kaiser, and Rudolph). Still others suggest that the name is a shortened form of Malachiah, meaning "Yah (weh) is my messenger" or "Yah (weh) is an angel." While highly irregular, this is not impossible given the unusual revelatory ministry of the angel of the Lord in the OT (cf. Judg 13:18; 1 Chr 21:18; Zech 1:11; 3:5; 12:8).

Despite the lack of attestation elsewhere, Malachi is similar to other OT names ending in *i*, such as Beeri ("my well," Gen 26:34; Hos 1:1), Ethni ("my gift," 1 Chr 6:41), Abi ("my father," 2 Kgs 18:2; 2 Chr 29:1), Uri ("my fire" or "my light," Exod 31:2; 1 Kgs 4:19), and Zichri ("my remembrance" (?), Exod 6:21; 1 Chr 8:19, 23, 27). Neither should this single occurrence of Malachi count as evidence against its use as a proper noun since both Jonah and Habakkuk are unique among the names of the Hebrew prophets.

The LXX understands Malachi as an appellative or official title when it translates "by the hand of his messenger." Here the first-person pronoun "my" has been changed to a third-person pronoun "his," despite the total lack of supporting textual evidence. This alteration made by the translators only serves to underscore the originality of the MT. By contrast, Jewish tradition remembered Malachi along with Haggai and Zechariah as men of the great synagogue. The Targum of Jonathan, Jerome, and Rashi (1040–1105) identified "my messenger" in 1:1 as a title for Ezra the scribe, the stance adopted by Calvin. Pseudo-Epiphanius, Dorotheus, Hesychius, and other church fathers accepted 4th century C.E. Jewish tradition collected in the *Lives of the Prophets* stating that Malachi was a Levite from the village of Sopha or Sophira of Zebulun. This tradition also claims that he was honored by the people for his piety and meekness and was given the name Malachi because he was "fair to look upon." Yet modern scholars usually dismiss these fanciful stories as valueless because of their late dates. While not ruling out the possibility of anonymity, it seems reasonable to conclude, whether for the sake of convenience or for the sake of logic, that the prophet's name or title was Malachi. This conclusion is strengthened by the absence of compelling evidence to the contrary.

Little else is known about the prophet Malachi. Like Obadiah, the superscription to his oracles traces no genealogical heritage. Malachi's prophecies do betray a strong interest in the temple, priesthood, and the sacrificial system (cf. 1:6–13; 2:1–4, 8–9; 3:3–4, 6–11). Yet he speaks as one observing that system from the outside (cf. 1:6; 2:2). He possessed a knowledge of both the Deuteronomic (1:8; cf. Deut 15:21) and

Priestly (3:10; cf. Num 18:21) legal traditions. Malachi was clearly a man of considerable personal piety, grasping the import of God's holiness and the seriousness of personal sin before God (cf. 2:17–3:4; 3:6–7; 3:13–4:1). His staunch convictions against idolatry (2:10–12), easy divorce (2:13–16), and social injustice (3:5) bespeak a man of commitment and integrity, a throwback to the days of the preexilic prophets. Malachi was also a man of some courage, as seen in his bold upbraiding of the influential priestly class and the social elite (cf. 1:1–14; 2:1–4; 3:2–4).

Finally, Malachi demonstrates an important continuity with the covenantal message of earlier Hebrew prophets. He understood the priority of the internal attitude and motive over the external form (1:9–13; 2:2–3; 3:16–18; cf. Amos 5:12–15, 21–24; Mic 6:6–8). He also understood the blessing and curse of God to be rooted in personal and corporate obedience or disobedience to the stipulations of the divine covenant (3:16–4:3). He recognized that the demands of covenant included a righteous ethic, a code of behavior consistent with the nature of God, the covenant maker (3:5–7; cf. Isa 1:15–20).

B. Historical Background

The oracles of Malachi reflect conditions associated with the period of pre-Ezran decline (ca. 515–458 B.C., i.e., from the completion of the Second Temple to the ministry of Ezra in Jerusalem, assuming the traditional date for Ezra's journey to Jerusalem to be correct). While the Second Temple had been completed at the prompting of Haggai and Zechariah (Hag 1:1–6; Ezra 5:1–2; cf. Ezra 3:10–13; 6:13–15), the apathy and disillusionment within the restoration community, which permitted the temple precinct to lie in ruins for nearly twenty years, continued to permeate the group. The prophetic vision of a renewed Davidic state under Zerubbabel never materialized (Hag 2:20–23). The material prosperity predicted by Haggai (2:6–9) never came to pass, and the streaming migration of former Jewish captives foreseen by Zechariah (8:1–8) never occurred. Zerubbabel was likely deposed by order of Darius, who was attempting to control the upheaval in his newly acquired empire by ousting those in Persia and outlying provinces who were deemed political liabilities. The completion of the Second Temple ushered in no messianic age (Mal 3:6–12; cf. Zech 8:9–23). The ideal of Ezekiel's temple state quickly faded amid the stark reality of Persian domination and the problems of mere survival in a city surrounded by hostile foreigners. Zechariah's call to a deeper spiritual life went unheeded, and was even mocked by God's apparent failure to restore covenantal blessings (8:4–13; cf. 10:1–2; Mal 3:13–15). If the records of Ezra and Nehemiah are any indication, then the messianic oracles of Second Zechariah and Malachi had little impact on postexilic morale (cf. Ezra 9:1–4; Neh 5:1–8; 11:1–3). Given the testimony of scanty written documents to the contrary, even the prophetic voice soon ceased to be a factor in the Jewish restoration community (cf. Mal 4:5). Jerusalem, probably under a Persian governor, remained part of a small, struggling, and insignificant satrapy in the vast Persian empire—a social and political backwater. The Persians themselves were engaged in a titanic contest for control of the west against the Greeks.

It is against this background that Malachi prophesies in Jerusalem. The ongoing petty hostilities with the Samaritans and burdensome vassal status to Persia notwithstanding, the prophet's message focused on the quality of religious and social life with the restoration community. Skepticism and doubt characterized popular response to Yahweh as God (1:2). The priesthood was bored with formal religions (1:13) and showed only contempt and indifference to ceremonial and moral purity (1:6–12). The general populace had followed the lead of the priests (2:8–9). The people were cheating God out of his tithe (3:6–12) and the proper sacrifices sanctioned by covenant law (1:14). Even obedience to the stipulations of divine covenant was deemed useless because God was not acting in accordance with his nature (2:17; 3:13–15). This breakdown of functional Yahwism precipitated intermarriage with foreign women (2:10–12), attendant idolatry (2:11), scandalous divorce (2:13–16), as well as sorcery, adultery, perjury, and social injustice (3:5). The very elements of nature had compounded the misery and bleakness of the community with drought, blighted crops, and locust plagues (3:10–11). In the final analysis, it was a most dismal and sordid scenario to which Malachi came as God's spokesman.

C. Literary Considerations

The genre of Malachi remains a debated question. Past and present German scholarship (e.g., Rudolph) usually considers the oracles a type of poetry, while English scholars generally have regarded Malachi as

prose (e.g., Torrey). This second view is corroborated by an analysis of the postexilic prophets utilizing the "prose-particle" counting method of Andersen and Freedman (*Hosea* AB, 57–66), in which the total occurrences of the Hebrew particles *ʾēt* and *ʾăšer* and the definite article *he* are apportioned to the total number of words per chapter of a given text (since in general these particles have long been recognized as typical elements of Hebrew prose and as atypical elements of Hebrew poetry). The frequency of these particles is high in prose (on a percentage basis 15 percent or more of all words), while the frequency of these particles in poetry is much lower (5 percent or less of all words). Analyzed from this perspective, Haggai, Zechariah 1–8, and Malachi demonstrate prose-particle frequencies very near to or above 15 percent, while Zechariah 9–14 exhibits almost equal ratios, having a prose-particle frequency of less than 1 percent in chap. 9. In a similar study, Hoftijzer (1965) traced the use of the particle *ʾēt* through most of the OT. Based upon his analysis of *ʾet syntagmemes* (i.e., the particle *ʾēt* and the word or group of words following it), Hoftijzer (1965: 76–77) concluded that Haggai, Zechariah 1–8, and Malachi, at least in respect to their density of *ʾet* syntagmemes, were comparable to narrative material. He also concluded that Deutero-Zechariah was akin to Hebrew narrative, with the exception of chap. 9, where the *ʾet* syntagmeme density agreed with that in poetic material. Given this statistical evidence it seems safe to infer that Haggai, Zechariah 1–8, and Malachi are representative of Hebrew prose, while Zechariah 9–14 appears to be a mixture of prose and poetry. Following Andersen and Freedman (*Hosea* AB, 57–66, 313), the Hebrew of the postexilic prophets may be designated "oracular prose," so it may be distinguished as a genre somewhat different from the historical narratives (except for Haggai, which is "pure" prose).

Malachi's prophecy is simple, direct, and forceful. Indeed, 47 of the 55 verses in the book are first-person addresses to Israel, presenting a vivid encounter between God and his people. Unlike the "message formula" followed by "oracle" predominant in the earlier prophets, Malachi punctuates his message with a series of six questions and answers (1:2–5; 1:6–2:9; 2:10–16; 2:17–3:5; 3:7–8; 3:13–14). This catechetical or disputational format is characterized by the statement of a truth, hypothetical audience rebuttal in the form of a question, followed by the prophet's answer to the rebuttal through the restatement of his initial premise and the presentation of supporting evidence. This disputational form of prophetic speech occurs elsewhere in the OT (e.g., Isa 40:27–28; Jer 2:23–25, 29–32; 29:24–32; Ezek 12:21–28; Mic 2:6–11), but in Malachi it constitutes the focal point of the book's literary structure. Fischer (1972) has observed important connections between the form of Malachi's oracles and the content of his message, while acknowledging his mastery of the catechetical or disputational literary format. This dialectical development of the prophet's arguments becomes the precursor of the expositional method in the latter rabbinic schools.

It is possible that the terse sentences and point-blank style of Malachi attest to the original orality of the prophecies and probably indicate a minimal amount of editorial tampering with the text. This may help account for the scholarly consensus about the essential unity or integrity of the book. Other than the superscription of 1:1 (see G below), only three passages are consistently cited by the book's critics as additions by a later author or editor (1:11–14; 2:11b–13a; 4:4–6 [—MT 3:22–24]; see F below).

D. Text and Language

The Hebrew text of Malachi is quite well preserved. The two recent works of Kruse-Blinkenberg (1966, 1967) remain useful sources for the textual criticism of Malachi. He catalogs 111 divergences between the Peshitta and the MT and 96 variations between the LXX and the MT. However, the vast majority of these textual differences are inconsequential.

The LXX is a fairly literal translation of the MT and on occasion proves helpful in restoring words or phrases that may have dropped out of the MT text during the transmission process. For example, in 1:6 the LXX adds *phobēthēśetai,* "a servant 'fears' his master"; in 2:3 some LXX mss and the Vulgate read Heb *hazzĕrōʿa,* "arm, forearm," for the MT *hazzeraʿ,* "seed"; in 3:2 add *bāʾ,* " 'he comes' like a refiner's fire"; in 3:5 add Heb *mišpaṭ,* "those who turn aside 'judgment' for the stranger"; and in 3:19 read the LXX *kai phléxei auÙtoús,* "burning like an oven, 'and it will consume them'." Yet the elliptical nature of Malachi's oracular prose necessitates the use of considerable caution in the reconstruction of the MT on the basis of the LXX's readings.

The Vulgate is also valuable for the textual criticism of Malachi because where it deviates from the LXX it retains readings that are even more closely related to the Hebrew. The published Qumran materials make no significant contribution to the Hebrew text of Malachi.

The text of Malachi contains a handful of expressions posing translation difficulties. For example, the JB, NEB, and commentators read the LXX *eʾis dómata* ("dwelling places of" or "pastures") for Heb *leṯannôṯ* ("jackals," 1:3); *nîḇô* ("its fruit," 1:12; cf. Isa 57:19) is awkward; the active participles *ʿēr weʿōneh* (literally "awake and answering," 2:12) prompt a variety of interpretations (e.g., the Vulgate reads "the master and the scholar," the NEB translates "nomads" or "settlers" based on Arabic, and the RSV emends *ʿēḏ* "witness" for *ʿēr*); while the translation variations of 2:15 found in the Versions and commentaries mark this as the single most obscure verse in the book.

Lexical analysis of Malachi reveals a predilection for vocabulary outside that of the other postexilic writings. Malachi shares only 8 percent of its vocabulary with Haggai and Zechariah, while demonstrating a pronounced affinity for exilic and preexilic terminology (e.g., *ʾalmānāh, ʾărubbāh, ʾārār, beḵî, baʿal, beṣaʿ, gāʿar, ḥāmal, ḥinnām, kābas, môrāʾ, marpēʾ, segullāh, ʿānap̄, ʿāšaq,* etc.). In addition, Malachi shows a marked preference for poetic vocabulary usually restricted to the OT books of Job, select Psalms, Proverbs, and Lamentations (e.g., *ʾayyēh, ʾanāqāh, bāḡaḏ, bāḥan, dimʿāh, zēd, zāqaq, ṭerep̄, lāhaṭ, nāʾap̄,* etc.). Finally, careful observation of the prophet's language shows that Malachi exhibits greater similarity to the vocabulary of Jeremiah and Ezekiel than any other OT corpora (cf. Hill 1983).

E. Date

Traditionally the date of Malachi's oracles has been related to fixed postexilic historical events, and hence to absolute chronological boundaries. These limits include a *terminus a quo* of 516/15 B.C. (the completion of the Second Temple) and a *terminus ad quem* of ca. 180 B.C. (i.e., the reference to the "Twelve Prophets" in Ben Sira 49:10). In addition, all previous investigations have focused on the thematic similarities, ritual practices, lexical parallels, and contiguous descriptions of the religious, social, and political conditions within the Jewish restoration community as recorded in the postexilic prophets and Ezra and Nehemiah. For example, Malachi attacks the very same abuses as do Ezra and Nehemiah (disrespect for the temple service, 1:7, 13; careless priests, 1:6–8; the cessation of tithes and offerings, 2:17 and 3:7–10; and intermarriage with foreigners, 2:10–16). Yet Malachi makes no appeal to the injunctions implemented by Ezra and Nehemiah to correct such abuses. Malachi prefers D over P in respect to religious and ceremonial law (since he makes no distinction between priests and Levites, cf. Deut 18:1 and Lev 1:5; Mal 1:4 mentions only the male sacrificial animal, and Mal 3:8–10 combines the heave offering with the tithe), suggesting a pre-Ezra date. In Malachi, Ezra, and Nehemiah the focus of attention is the deplorable state of affairs in Jerusalem (e.g., the degenerate priesthood, Mal 2:1–9 and Neh 13:1–30; intermarriage with idolatrous women, Mal 2:1–9; Ezra 9:1–2; Neh 1:1–3; rampant divorce, Mal 2:13–16; cf. Ezra 9–10; laxity in the payment of sacral dues, Mal 3:8; Neh 10:32–39; 13:10; and the oppression of the poor, Mal 3:5 and Neh 5:1–5).

Based on the strength of this sometimes conflicting and often ambiguous evidence, the overwhelming majority of biblical scholars past and present view Malachi as a contemporary of Ezra and Nehemiah and date his ministry to the mid or latter half of the 5th century B.C. (cf. Verhoef *Haggai and Malachi* NICOT, 156–60).

Recognizing the acute limitations of dating Malachi's oracles on the germane internal data, this study presupposes the validity of recent linguistic research in the typological categorization of biblical Hebrew. Rather than relating the book of Malachi to postexilic social conditions, religious practices, and historical events which assume an absolute chronology, this typological method, developed by Polzin (1976) relates Malachi to postexilic literature and therefore to a literary and relative chronological scale. The purely linguistic analysis employed by this approach to Malachi has the advantage of being far more objective than previous research, due to the statistical nature of the investigation. The systematic application of Polzin's nineteen grammatical and syntactic categories to the Hebrew text yields a typological continuum of biblical Hebrew demonstrating the relative chronological relationships of the selected corpora (for

details see Hill 1983). A partial typological continuum and a summary of the typological analysis of the postexilic prophets is included in Fig. MAL.01 (A.1–13 and B.1–6 are the nineteen diagnostic categories).

Malachi shows remarkable typological affinity to Haggai, Zechariah 1–8 and 9–14, Joel and Jonah, as well as the P^g corpus. By contrast, Malachi demonstrates no typological affinity with Ezra, Nehemiah, Esther, or Chronicles and only minimal correspondence to the P^s corpus. Despite the probable changes taking place in the language spoken in Jerusalem and environs because of the immediate mixing with the language of the indigenous population, the written language of the postexilic prophets maintains a high degree of typological continuity with the written language of the exilic period. One can surmise that the prophets themselves were recently returned exiles, perhaps numbered among those who came to Jerusalem with Zerubbabel and Joshua (Ezra 2:1–2); hence the continuity with exilic language.

Based on the evidence from this typological analysis of the postexilic prophets, Malachi (and Zechariah 9–14) dates to the period of pre-Ezran decline (515–458 B.C.). Even though the temple had been rebuilt and the sacrificial system restored, the vision of Ezekiel's temple state quickly faded amid the stark reality of Persian domination and the problems of mere survival in a city surrounded by foreigners (cf. Hanson 1975: 280–86). Malachi's striking typological correspondence to Haggai and Zechariah 1–8 indicates that it was probably composed during the earliest years of the period of pre-Ezran decline.

It is likely that exilic Hebrew was largely preserved (at least as the written language) in the official and religious circles of the restoration community by the first-generation returnees from Babylon. This would account for the linguistic similarities of the postexilic prophets to one another and to the P^g corpus examined by Polzin. Those original returnees probably influenced the restoration community for a maximum of fifty or sixty years; a *terminus ad quem* of ca. 475 B.C. for Malachi (and Zechariah 9–14) may be suggested. After 475 B.C. written works would and do reflect the language changes absorbed by the second-generation writers of the postexilic community (e.g., the P^s corpus).

The conclusions of von Bulmerincq (1921: 42–49), who dated the major portions of Malachi's oracle to ca. 480 B.C., and the conclusions of D. N. Freedman (IDBSup, 130–36), who places the composition of the postexilic prophets and their incorporation into the OT canon at ca. 500 B.C., prove to be consonant with this analysis (cf. Welch 1935: 113–25).

F. Message and Theological Significance

The book of Malachi consists of the superscription (1:1), six disputational oracles (1:2–5; 1:6–9; 2:10–16; 2:17–3:5; 3:6–12; and 3:13–4:3) and two appendixes (4:4 [3:22]; 4:5–6 [3:23–24]). The predominant theme of the prophecy is Israel's covenantal relationship with Yahweh and its attendant ramifications. In fact, the prophet specifically mentions the covenant of Levi (2:1–9). The covenant of the fathers, and the covenant of marriage (2:10–16), and the messenger of the covenant (3:1; cf. McKenzie and Wallace [1983] for a discussion of these covenantal themes). Other references containing identifiable covenantal terminology include God's love for and election of Israel (1:2–5), the use of the words *bgd* (cf. Ps 78:57; Jer 3:21) and *šmr* (cf. Deut 4:23; 8:11) in 2:10–16, and the blessings and curses formula in 3:6–12. For this reason some understand Malachi himself to be the "messenger of the covenant" (e.g., McKenzie and Wallace 1983: 553).

The covenantal themes of Malachi are so thoroughly integrated and logically presented within the prophet's discourse that any attempts at rearranging the material in the text prove most unconvincing (e.g., McKenzie and Wallace 1983: 562–63, who argue that 3:13–15 is out of place, and though its "style and perspective" match that of 3:1–12, they ultimately have no clue where it does belong). This unity of covenantal theme and the general context of the prophecy also precludes the deletion of the so-called nonoriginal passages in 1:11–14 and 2:11b–13a, despite the difficulties in translating and interpreting those verses. The issue is not one of "particularism versus universalism," but instead the nature of Malachi's audience, the "wicked" and the "faithful" in restoration Jerusalem. Too, the repetition of covenant violations and the development of arguments from the general to the specific is a consistent pattern in the book (cf. Mason *Haggai, Zechariah, Malachi* CBC, 144–45; Smith *Micah—Malachi* WBC, 321–25).

Malachi's initial oracle is a restatement of Yahweh's love for Jacob (1:2–5). Amid growing skepticism because the "Zion visions" of Second Isaiah, Haggai, and Zechariah never materialized, the prophet sought to assure the Jewish community that God still maintained covenant love for them (cf. Hosea 11). By recalling the patriarchal covenants Malachi reminds the people that an important part of the message of God's covenant love for Israel was the conditional nature of its consequent blessings (Gen 29:13–17; 35:1–4; Deut 28:1ff.).

Here Fischer (1972: 318–19) rightly observes that Malachi had to correct wrong thinking about the covenantal relationship with Yahweh. The vassal can place no demands on the suzerain. Loving God was not a cause for divine blessing but a condition, for God himself remains the only cause. This reminder of Israel's election by the sovereign Lord as a people for his possession also served to underscore the seriousness of the present situation (Deut 8:11–18; cf. Rom 9:13). The prophet reinforces his argument by pointing to the recent events in Edom (perhaps an invasion of Edom by Nabatean Arabs?), which served as a grim warning of impending divine judgment for those who despised the tokens of covenant like Esau (Gen 25:34; cf. Jer 49:7–22).

Further, as covenant maker Yahweh was Israel's father (Deut 32:6–12), and he was deserving of conduct appropriate to the bond (Exod 20:12; Deut 30:1–10). As Covenant maker Yahweh was also a covenant keeper (Exod 34:6–7; Ps 111:9), unchanging and faithful to his word (3:6; Deut 7:6–11). Malachi's five remaining disputations contrast Israel's faithlessness with Yahweh's faithfulness through the recitation of specific violations of the covenant's stipulations.

According to Fischer (1972: 317) the literary form of Malachi outlines the essence of the book. The prophet has shifted the locus of his message from the curse or blessing declarations to the introductory statements in which a question is proposed to Yahweh and he answers. Using this perspective in his analysis, Fischer summarizes the teaching of the disputations as follows: (1) Yahweh loves Jacob, (2) he is Israel's father and desires honest worship, (3) he is the father of all Israelites and expects true faithfulness, (4) God wants honesty, not words, because he is just, (5) God is faithful to his word and wants genuine worship, (6) a repetition of God's desire for honesty.

The second disputation (1:6–2:9) consists of two sections (1:6–14 and 2:1–9). Both censure the levitical priesthood, the first for their insolence in discharging the duties associated with the cultus, and the second for the double standard in their teaching and their lack of moral leadership (cf. Num 20:12; Deut 18:1–8; 33:8–11). The apathetic priests were permitting impure sacrifices in the temple in violation of the Covenant Code (Lev 22:20–22; Deut 15:21; 17:1). Malachi preferred the cessation of temple ritual to their religious indifference and even suggests that the gentiles are offering more appropriate worship to God (1:10–11). No doubt the priests are indicted first because their transgression of the holy covenant and disdain for the sacred office has polluted the worship of the people (2:8–9). According to the curse formula in predictable fashion, the priesthood will experience the same contempt and abasement they have shown to Yahweh (1:6; 2:9).

Lest the priests become scapegoats, the prophet rebukes the laity in the third oracle for their faithlessness to Yahweh (2:10–16). Even as the Levites had corrupted the covenant of Levi (2:4, 8), the people of Judah had transgressed the covenant of the fathers by marrying foreign women and divorcing their Jewish wives (2:10–11, 14). Marriage is a sacred covenant, blessed by God and honorable among godly people (Gen 2:24; Ezek 16:8; Hos 2:19). For Malachi the connections between covenant keeping with Yahweh and covenant keeping with a mate are obvious based on the familial nature of covenant elsewhere in the OT (cf. Jer 2:1–3; 31:32; Ezek 16:6ff.; Hos 2:1–19; 11:1–4). Here he not only condemns divorce generally among God's people, but also their remarriage to foreign women because of the consequent contamination of pure religion (cf. Num 25:1–9; 1 Kgs 11:1–4). God hates divorce (2:16), and these flagrant violations of Covenant law will not go unpunished (2:11; cf. Exod 19:5–6; Deut 7:3–4).

The fourth oracle (2:17–3:5) is a prophecy concerning the messenger of the covenant who prepares the day of God's visitation by judging Judah's sin and purifying their worship through the cleansing of the priesthood (3:1–4; cf. Zeph 1:14–18). The faithlessness of the Jews extends even to false speech about Yahweh, as they accused him of rewarding evil and being unjust (2:17; cf. Job 21:7–16; Mic 6:1–3; Hab

1:2–4, 13). This attitude toward God naturally spawned a variety of social and moral abuses in the restoration community (3:5). Ironically, the failure to authenticate the words of the covenant relationship with behavior of like kind had led to Judah's exile into Babylonia a century prior (Deut 11:22; 12:1; 30:1–4; cf. Isa 1:12–17; Jer 7:1–7; Hos 4:1–10; Amos 2:6–8; Mic 3:1–4).

Contrary to the popular perception, Malachi contends in the fifth oracle that Yahweh has been just and ever consistent with his own nature (3:6–7). The very fact that God has not consumed postexilic Jerusalem for covenant transgressions is testimony to his faithfulness and compassion (Pss 86:15; 111:4; Mic 7:18–20; Nah 1:1–3). The emphasis in this next-to-last disputation (3:6–12) is repentance, not tithing (3:7). The tithe was an important component of Israelite religion (cf. Lev 27:30; Num 18:26–28; Deut 12:18; 14:28–29), but given the list of covenantal offenses already cited by Malachi he can hardly be implying the mere reinstitution of the tithe would initiate divinely bestowed prosperity. The stinginess of the people was but a sign of their spiritual bankruptcy. By calling for the "full" tithe the prophet invites genuine repentance, a return to Yahweh with the whole heart (3:10; cf. Isa 29:13; Joel 2:12–13, 18–19). Only this kind of honest personal worship will open the windows of heaven, to the point that Malachi dares the people to exhaust the bounty of God's covenantal blessing (3:10–12; cf. Deut 15:5–6, 10).

The seeming triumph of wickedness over righteousness and God's apparent slackness in judging sin are the issues in the final pericope of Malachi (3:13–4:3). Here prophet outlines the specific charges of injustice the impudent complainers—not the "devout" as usually understood (since Heb *lûn,* commonly translated "murmuring," actually connotes open rebellion, cf. Exod 15:24; 16:2; Num 14:2; 16:11) in Jerusalem have lodged against Yahweh (3:13–15). They contend that it is futile to serve God because they have turned no profit (literally, the "cut" or percentage due them) from the observation of the commandments, fasting, and repentance. No advantage was gained from personal piety from their perspective; in fact evildoers were the ones who escaped the test of God. Continuing the distinction between the wicked and the righteous in his audience introduced at the outset of his prophecy, Malachi then contrasts the words of the believing God-fearers (3:16–17). Unlike the mercenary approach of their compatriots, they have responded to God with genuine reverence and worship. The disputation concludes with the prophet's answer to the alleged inequity of Yahweh's treatment of the restoration community (3:18–4:3). The coming day of the Lord will vindicate his justice, when the wicked are separated from the righteous by the fire of divine judgment (3:18). The righteous will escape the destructive wrath of God by virtue of their special covenantal relationship (*sĕgullâ*) with him and will experience the blessings of messianic restoration (4:2; cf. Num 6:22–27; Ps 107:20; Isa 63:1–6; Mic 2:13).

The closing verses of the book (4:4–6 [—MT 3:22–24]) are generally acknowledged to be editorial additions. The questions and answers are over, and the disputations have ceased. There is little to suggest that these verses are directly related to the previous section. Yet they represent more than the legalistic correctives of a disenchanted scribe since they do serve as guidelines for the righteousness central to the prophet's message. The Deuteronomic connections of 4:4 are numerous and well documented (e.g., Mitchell, Smith, and Bewer *Haggai, Zechariah, Malachi, and Jonah* ICC, 81; Mason *Haggai, Zechariah, Malachi* CBC, 159–60), and the verse may be an attempt to summarize the message of Malachi by reminding the people that they still stand under the tradition of Moses. The verse may also represent the work of the compiler of The Book of the Twelve, who sought to unite the Law and the Prophets as equally authoritative units of Scripture. Elijah functions as a prophetic archetype in 4:5–6, and the reference to him identifies the messenger of the covenant in 3:1. According to Childs (1979: 495–96), the effect of the second appendix is to balance the memory of the past with the anticipation of the future. While the verses seem an unduly harsh ending to Malachi and the Twelve, one must remember that the basic purpose of the prophetic ministry was to prepare the people of Yahweh for his day of visitation so that they might enter the rest of his salvation and escape the wrath of his judgment (cf. Isa 12:1–6; 33:2–6; Zeph 3:14–20; Zech 8:14–19).

The postexilic date for the book, the diminished stature of the restoration community in Jerusalem, and the dialectical nature of the prophet's oracles should not prompt an underestimation of Malachi's theological significance. Although the literary grandeur of Isaiah and the profound personal intensity of

Jeremiah are lacking, these comparisons are questionable anyway since each prophet had to fulfill his specific commission in his own historical context. It remains more important to analyze how the prophet performed his task, examine his message within the scope of the broader prophetic movement, and seek to make appropriate contemporary application. In this respect Malachi proves a most fruitful and powerful study, and in many instances the prophecy is a throwback to the classical prophets of the postexilic era.

Foremost is Malachi's knowledge of and identification with the covenantal tradition of his prophetic heritage (3:1). Hence the book rests squarely in the midst of OT covenantal theology and in large measure embodies the essence of later NT thought. See COVENANT. For example, he recognized Yahweh as the maker and keeper of the covenant with Israel (1:2, cf. Exod 6:2–7; Jer 31:31–34; Heb 8:6–13) and acknowledged their "son" status as a consequence of this covenantal relationship (1:6; Hos 1:10; cf. Rom 8:14). Like his predecessors he understood the conditional nature of the covenantal relationship and the importance of the community's obligation to remain faithful and obedient to the stipulations of the divine treaty (3:16–4:3; cf. Ezek 16:59–63; 1 John 4:20–5:3), the seriousness of a breach of the covenant (2:1–8; cf. Isa 24:5; Jer 34:17–20; Heb 6:4–8), evincing a thorough acquaintance with the Deuteronomic blessing and curse formula (Deut 28:1ff.; cf. 1 Cor 11:27–32, i.e., the curse associated with abuse of the covenant-renewal meal of the NT), and the possibility for repentance and restoration (3:6–7; cf. Hos 14:1–9; Luke 3:1–14). The prophet was also keenly aware of the concept of individual and corporate responsibility within the covenant community (2:7–9, 13–16; cf. 2 Kgs 17:22, 34–39; 24:3–4; 1 Cor 5:1–8), and the attendant ethical duties those resident in that community had to one another and to the socially underprivileged (3:5; cf. Isa 1:16–17; Jas 1:26–27).

Malachi substantially affirms OT teaching about the nature and character of God. While God is father because of the covenantal relationship with Israel as sons and because he seeks a vital and intimate bond with them (1:6; 2:5–7; 3:17), he is also master and king (1:6, 14). Here the prophet is careful to present a balanced picture of Israel's Yahweh, lest the extremes of overfamiliarity or transcendent indifference distort the community's perception of their Lord. Unlike most other OT prophets, Malachi has little to say about the nations, yet it is clear that he acknowledges God's sovereignty in human history (1:3–5). Closely bound to this idea is Yahweh's love for and election of Israel as a special people (1:2; 3:17; cf. Deut 7:6–11). This choice on God's part and the subsequent covenantal bond serve as the platform for the prophet's entire discourse (cf. Rom 9:4–5). Since Yahweh is so linked to Israel he is faithful and unchanging (3:6), a covenant keeper extending mercy to his own, yet just (2:17), punishing those who trespass the covenant's stipulations (3:5, 18; 4:3). As God of the covenant he tests the faithful in order to purify them (3:1–4), and as the giver of good gifts he is not reluctant to bless and reward the obedience of his children (3:10–12).

Those who contend that Malachi only appreciates the cultic and legalistic aspects of Israelite religion have failed to consider fully his instruction on the nature of personal faith. It is clear from the prophet's handling of the objection that it is vain to serve God (3:14), that he espoused no merit system. Those who are spared divine judgment earned no special favor, they simply "feared the Lord and honored his name" (3:16). The prophet's insistence on true repentance for the renewal of genuine worship (3:2–4), honesty in giving (3:8–12), and personal piety (3:5–7) is an indication of an internal, not an external, religion. Naturally the recognition of Yahweh's holiness and righteousness led to the conviction that true service included rendering both liturgical and moral obedience to God (1:6–10; cf. Matt 23:23; Jas 1:27). Here Malachi penetrates the heart of OT faith when he appeals for a personal "walk" with the living God (2:6; cf. Deut 30:15–20; Mic 6:8).

Malachi's conception of the priesthood as the repository of the knowledge of God for the people (2:5–7) may be a result of his association with levitical circles, given the similarity of his oracles to the so-called "levitical sermons" of Haggai and the Chronicler (so Mason *Haggai, Zechariah, and Malachi* CBC, 137). The crucial role of the priesthood as righteous guideposts for the community is consistent with both OT and NT teaching regarding the responsibility of those in leadership positions (Num 20:12; 1 Sam 15:22–23; Isa 1:23–26; Jer 5:5; cf. Luke 12:48; Acts 6:3; Rom 13:4; 1 Tim 3:1–3; Jas 3:1).

The prophet's lofty doctrine of the institution of marriage as companionship with the wife of one's youth (2:14) and the shared responsibility of child rearing (2:15) is reminiscent of OT wisdom teaching (Prov 5:18; 10:1; 15:20; 31:26), while his censure of easy divorce anticipates the rigid instruction of Jesus and Paul in contrast to the Deuteronomist (2:16; cf. Matt 19:1–11; Mark 10:1–10; 1 Cor 7:1–16 versus Deut 24:1–4).

Malachi's eschatology shows no concern for a future temple; rather, he is interested in the reform of abuses in the cult here and now. While the prophet maintains a clear distinction between the fate of the wicked and the righteous in the community, he has little to say about the judgment of the nations or anything approaching universalism in the sense of the nations participating in the salvation of the Jews, as in Zechariah 9–14 (12:1–9; 14:1–3, 9–21). Malachi does not use the expression "day of Yahweh," but his understanding of that coming day (3:19) largely conforms to conventional OT patterns, with attention given to the judgment of Israel's sin for Covenant violations (3:5), and the preservation of a righteous remnant (3:3–4, 16–17). Malachi's picture of final judgment has a focus different from that of Zechariah, yet the two do emphasize the refining or purification of the faithful by fire (3:2; 4:1; cf. Zech 12:6; 13:9; cf. 2 Pet 3:10–12), and both recognize that God's ultimate purpose in judgment remains repentance (3:7; Zech 10:9–12; cf. Ezek 18:23, 30–32). Of special interest here is the striking contrast between the threatened "ban" or "curse" (Heb *ḥerem*) at the end of Malachi (4:6) and the repeal of the ban in Zech 14:11.

Malachi does make original contributions to Hebrew eschatology with the introduction of the "book of remembrance" in which are recorded the names of the righteous. The concept is probably the result of Persian influence on postexilic Judaism (cf. Esth 6:1; Dan 7:10; 12:1) and points to continued development in the Hebrew belief in afterlife. This book of remembrance may have inspired the notion of the "book of life" used to separate the wicked from the righteous at the final judgment in the Apocalypse (Rev 20:11–15). The unique OT expression "the sun of righteousness" in 3:20 (MT 4:2) is reminiscent of the winged solar disc representing the sun god in Mesopotamian and Egyptian iconography and is likely another indication of Zoroastrian influence on the Hebrew understanding of the fiery consummation (cf. Smith *Micah—Malachi* WBC, 339–40).

Finally, Malachi's obscure reference to the "forerunner" who prepares the way for the arrival of Yahweh (3:1) has proved difficult to interpret. Commentators are divided in their opinion over the identification of the messenger and his relationship to the "messenger of the covenant" mentioned later in the verse. It is unclear whether this "messenger" is a prophet, an angel, or a manifestation of God himself (cf. 1:1; see A above). The second appendix (4:5–6) connects the messenger with Elijah reincarnate. Elijah's role as a herald proclaiming the appointed time of Yahweh's fury and the inauguration of the messianic age was an important part of later Jewish tradition regarding the prophet (Sir 48:10–11; cf. Matt 17:3, 10; 27:47, 49; John 1:21; see Verheof *Haggai and Malachi* NICOT, 345–46). Jesus of Nazareth certainly understood the prophecy as prefiguring the ministry of John the Baptist (Matt 11:7–15), and the early church held the oracle to be fully realized in the relationship of John's mission with the initiation of the messianic kingdom of heaven by Jesus Christ (Mark 1:2–8; Luke 1:16–17; cf. Matt 11:1–6).

G. Canonicity

Malachi is the last of the short books constituting the collection of the Twelve Prophets. This collection follows the major prophets in the Hebrew canon; the grouping was known as early as Ben Sira (49:12), and it was also familiar to Josephus (*AgAp* 1.8.3). The canonicity of the Twelve was never questioned, as rabbinic tradition held that the men of the Great Synagogue edited the corpus (*B. Bat.* 15a). Some LXX editions placed the Twelve before the major prophets and departed from the Hebrew sequence of placing Hosea first (whether for its length or for chronological considerations is unclear, cf. *B. Bat.* 14b).

Biblical scholarship has long assumed that the oracles contained in Zechariah 9–11, 12–14 and Malachi 1–4 (MT 1–3) are related, largely because of the use of Heb *maśśāʾ* in the superscriptions. In addition, these oracles have been considered to be anonymous documents. It is argued that these anonymous oracles were appended to Zechariah to round out the Twelve in order to complete the sacred number. Here Radday and Pollatschek (1980) concluded, based on computer-aided linguistic analysis of the postexilic

prophets, that the editor of the Twelve Prophets had a collection of materials remaining from the compilation of Hosea to Zechariah 8. They suggest that this small library consisted of a few short but distinct manuscripts, which were attached to Zechariah 1–8 following the size principle. The two longer ones coalesced with Zechariah 1–8 to become chaps. 9–11 and 12–14. Two shorter pieces (Malachi 1–2 and 3) were then added to Zechariah with the superscription "by the hand of Malachi" inserted for the purpose of presenting a collection of prophetic books corresponding to the number of Israelite tribes. This clever editor turned a word found three times in the last chapters, *mal*ʾ*āḵî,* into a name of a formerly unknown prophet.

Childs (1979), however, cogently counters that the superscriptions in Zech 9:1; 12:1 and Mal 1:1 demonstrate only superficial similarities. He notes that *maśśā*ʾ is used in its absolute form in Mal 1:1 as a distinct superscription. In addition, Mal 1:1 reads ʾ*el* ("to") rather than ʿ*al* ("upon") and includes *bĕyad* ("by the hand of"). For Childs these and other expressions demonstrate both the integrity and the consistency of the title of Malachi with like features of postexilic literature. This leads him to conclude that these oracles had a history independent of one another. Thus, "the present independent status of Malachi did not arise from an arbitrary decision which separated it from the book of Zechariah. Rather its separate status is deeply rooted in the book's own tradition" (Childs 1979: 492).

ANDREW E. HILL

MALCAM (PERSON) [Heb *malkām* (מַלְכָּם)]. One of the sons of Shaharaim, a Benjaminite, by his wife Hodesh, appearing in 1 Chr 8:9 in an extended Benjaminite genealogy. The name appears elsewhere in the MT as that of an idol (Zeph 1:5, Molech), but the word also appears as the noun plus pronominal suffix (Amos 1:15) to be translated "their king" (Odelain and Séguineau 1981: 250; *ISBE*[1] 3:1971). Coggins (*Chronicles* CBC, 54) has acknowledged the scarcity of material concerning the Benjaminite names in vv 6–27. It is known, however, that Malcam was born to Hodesh and Shaharaim in Moab. This reference points to a relation between Israel and Moab that goes back to a time earlier than that reflected in 1 Chronicles 8. Ruth 1 and 1 Sam 22:3, 4 show the presence of Israelites in Moab; but it is apparent that this kind of sojourn would more likely have occurred before Moab regained its independence from Israel. Myers (*1 Chronicles* AB, 60) states that while Moab was under Israel's control, the Benjaminite association could have been accurate. Braun (*1 Chronicles* WBC, 128) states that most and probably all of the genealogies in this section have roots in the remote past but that their presence in 1 Chronicles reflects a great interest in the tribe of Benjamin during the exilic period and beyond. Malcam, like his brothers, is called a *ro*ʾ*šē*ʾ *ābôt,* "head of a family." This designation has clear organizational implications in social, political, and military arenas (Harmon 1983: 150).

MALCHIAH (PERSON) [Heb *malkîyāhû* (מַלְכִּיָּהוּ)]. See MALCHIJAH.

MALCHIEL (PERSON) [Heb *malkî·ēl* (מַלְכִּיאֵל)]. MALCHIELITES. The second son of Beriah and grandson of Asher (Gen 46:17; 1 Chr 7:31). Asher was the second son of Jacob and Zilpah (Gen 30:12–13), the maid whom Laban gave to his daughter Leah (Gen 29:29). Malchiel was one of the sixteen persons among the sons and grandsons of Zilpah mentioned in the genealogy of Jacob who went with him to Egypt.

Malchiel was the leader of the clan of the Malchielites, one of the clans of Asher (Num 26:45). He is included among the men of Asher who were "heads of fathers' houses, approved, mighty warriors, chief of the princes" (1 Chr 7:40). He was the father of Birzaith (1 Chr 7:31). In the Hebrew text the name of Malchiel's son appears as Birzavith, but the Qere and the Ketib have a corrupt spelling of the name.

The name Milkil (Malchiel) appears in the correspondence of Amarna. In the letters of ʿAbdu-Heba, the ruler of the city of Jerusalem, to the court of Egypt, Milkil appears as one of his most troublesome enemies. Jastrow (1892: 120) has identified the Asherites Malchiel (Milkil) and Heber with some of the groups that were included among the Habiru mentioned in the Amarna Letters.

CLAUDE F. MARIOTTINI

MALCHIJAH (PERSON) [Heb *malkîyāhû* (מַלְכִּיָּהוּ), *malkîyâ* (מַלְכִּיָּה)]. Var. MALCHIAH; MELCHIAS. Name of 13 persons in Hebrew Bible and Apocrypha.

1. A Gershonite Levite. According to the genealogy of 1 Chronicles 6, Malchijah is an ancestor of Asaph, the founder of a guild of temple musicians (v 25—Eng v 40).

2. Descendant of Aaron and head of a priestly family. When David divided the priests into twenty-four divisions (1 Chr 24:1–19), the fifth lot fell to Malchijah (v 9). In 1 Chr 9:12 and Neh 11:12, the genealogy of Adaiah, a priest in postexilic Jerusalem, is traced to Malchijah the father of Pashhur.

3. A Judean bearing the title "son of the king" (Heb *ben hammelek*) during the reign of Zedekiah (Jer 38:6). It is probable that this title (which occurs both in the OT and on a number of seals and bullae) refers to members of the royal family. It is apparent that some of these men held important administrative positions. According to Jer 38:6, the prophet Jeremiah was imprisoned in the cistern of Malchiah (Heb *malkîyāhû*). His duties, like those of Joash (1 Kgs 22:26; 2 Chr 18:25) and Jerahmeel (Jer 36:26), appear to have included the maintenance of state security. Possibly the same as #4 below.

4. Father of Pashhur (to be distinguished from the Pashhur mentioned in #2 above), a royal official during the reign of Zedekiah (Jer 21:1; 38:1). Possibly to be identified with #3 above.

5. Layman descended from Parosh. One of those required by Ezra to divorce their foreign wives (Ezra 10:25a; 1 Esdr 9:26).

6. In the Hebrew text, the name Malchijah occurs again in Ezra 10:25b. This reading is followed in a number of English translations of the Bible (e.g., JB, NEB, NAB). Both the LXX and 1 Esdr 9:26, however, support the reading "Hashabiah" (RSV).

7. Layman descended from Harim. One of those required by Ezra to put away their foreign wives (Ezra 10:31). Although it is possible that he is the same as #8 below, this is by no means certain (cf. Neh 7:35, 42). He is, however, probably to be identified with Melchias son of Annan, listed in 1 Esdr 9:32. This conclusion is supported by the order in which the families are listed in Ezra 10:25–44 and 1 Esdr 9:26–36 and by the fact that Malchijah (Gk Melchias) is the third name to appear in both Ezra 10:31 and 1 Esdr 9:32.

8. Son of Harim. One of those who repaired a section of the wall of Jerusalem in the time of Nehemiah (Neh 3:11). Possibly the same as #7 above.

9. Son of Rechab and ruler of Beth-haccherem. He was responsible for rebuilding the Dung Gate under the supervision of Nehemiah (Neh 3:14). It is unlikely that he was a member of the Rechabite community—Jonadab, the founder of this community, was another son of Rechab (cf. 2 Kgs 10:15, 23; Jer 35:1–19).

10. One of the goldsmiths who assisted Nehemiah in the rebuilding of the wall of Jerusalem (Neh 3:31).

11. A priest who participated in the dedication of the rebuilt walls of Jerusalem in the time of Nehemiah (Neh 12:42).

12. One of those who stood on either side of Ezra during the reading of the Law at a public assembly (Neh 8:4; cf. 1 Esdr 9:44). Although it is possible that these men were priests (the participation of the same number of Levites is mentioned in Neh 8:7 [cf. 1 Esdr 9:48]), the fact that this is not stated explicitly suggests that they were probably laymen.

13. One of the priests signatory to a legal document of reform associated with Ezra or Nehemiah (Neh 10:4—Eng10:5). Although the term "covenant" is not used in Neh 10:1–40—Eng9:38–10:39, the account probably relates to a covenant-making ceremony (cf. v 30—Eng v 29) that addressed itself to various concerns of the postexilic community. It would appear that the priests (unlike the Levites) are listed by their family names, and not as individuals. This Malchijah may thus be the same as #2 above.

JOHN M. BERRIDGE

MALCHIRAM (PERSON) [Heb *malkîrām* (מַלְכִּירָם)]. The second son of Jeconiah/Jehoiachin (1 Chr 3:18). The name means "my king is exalted."

RUSSELL FULLER

MALCHISHUA (PERSON) [Heb *malkî-šûaʿ* (מַלְכִּי־שׁוּעַ)]. The third-born son and fifth-born child of Saul son of Kish and his wife Ahinoam daughter of Ahimaaz (1 Sam 14:49; 1 Chr 8:33; 9:39). Nothing is known of his life except that he died alongside his father and two brothers, Jonathan and Abinadab, at the battle of Gilboa, where Saul unsuccessfully attempted to conquer the city-state of Beth-shan (1 Sam 31:2; 1 Chr 10:2). He apparently was at least 20 years of age (the legal age for military service: Num 16:2, 4) when he was killed. The biblical account does not indicate that he was survived by any children, which probably means that he was unmarried.

The name Malchishua means "the (divine) King is noble," or "the (divine) King is opulence" (BDB, 447); by a different etymology it could mean "help of the (divine) King" (Gray 1896: 146–47; see *IPN*, 154 and the discussion in *TPNAH*, pp. 114–15).

DIANA V. EDELMAN

MALCHUS (PERSON) [Gk *Malchos* (Μαλχος)]. 1. See CLEODEMUS MALCHUS.

2. Malchus was a slave or servant of the high priest (probably Caiaphas—cf. John 18:13); Peter cut off his right ear when Jesus was arrested in Gethsemane (John 18:10). Only the gospel of John records Malchus' name. All four Gospels state that Malchus was the servant of the high priest, which distinguishes him from the officers sent by the chief priests and Pharisees to arrest Jesus (cf. John 18:18). Nabatean and Palmyrene inscriptions bearing the name Malchus indicate that it was a common Arab name and that Malchus may have been an Arab slave. A relative of Malchus was also a servant of the high priest and, while Peter was standing outside Jesus' trial, identified him as having been with Jesus (John 18:26). Peter may have struck Malchus because he was acting as the representative of the high

priest in the arrest. The servants of the high priest were known to perform the underhanded dealings of the high priest (Joseph. *Ant.* 20.181, 206). Cutting off the right ear may have been Peter's impetuous response to the arrest of his friend (cf. John 13:37) or a calculated insult against the high priest through his servant. The latter is indicated by the indemnity laws of the time, which considered the right organs of the body to be more valuable. Only Luke 22:51 reports that Jesus healed the ear.

JOANN FORD WATSON

MALHATA, TEL (M.R. 152069). A town in the Negeb with remains from the Chalcolithic through the Early Arab periods.

A. The Site and Its Excavations

Tel Malhata (formerly Tell el-Milh) is a 1.5-acre mound located in the Negeb. It is situated at the confluence of the Malhata and the Beer-sheba rivers and is abundantly supplied with water by numerous wells. Extensive ruins from the Roman-Byzantine Period lie S of it in the plain and a smaller, lower mound, "Small Tel Malhata," is located N of it on the other bank of the river. The major mound was excavated by M. Kochavi in 1967 and 1971. The Roman-Byzantine site was excavated by M. Gichon, and the small mound was excavated by R. Amiran in 1979. Further salvage excavations were conducted at the Roman-Byzantine site in 1981.

Settlement began at Malhata in the Chalcolithic period and lasted until the Early Arab period. Occupational gaps occurred in the EB III—MB I, LB, Iron Age I, and Persian periods. All periods of occupation were attested on the major mound, but the small mound was inhabited in the early periods only and the Roman-Byzantine site only in the late.

Chalcolithic remains of the Beer-sheba culture and EB I–II layers were exposed in the lowest strata of the small mound. Finds of Egyptian imported ware (including three *serekhs,* i.e., conventions for inscribing the names of the earliest Pharaohs), lumps of bitumen from the Dead Sea, as well as various installations connected with crafts and small industries were found in the EB strata. The EB settlement was apparently an unwalled trading post on the Arad-to-Egypt commerce road.

The initial occupation of the major mound began in the MB II. Three MB II strata were distinguished, and date to the 17th–16th centuries B.C. The town was about one acre and was confined to the E part of the mound. It was surrounded by a massive earthen rampart, crowned with a wall 1 m wide. The rampart's outer surface was plastered and laid on a 30-degree incline to form a glacis.

An MB II occupation was detected also on the small mound. It was interpreted as remains of an unwalled suburb, where herds were kept and people could find shelter in the shadow of the fortified town. Malhata was the easternmost fortified town in a chain of sites forming the S border of Canaan in the MB Age. It was destroyed by fire and deserted in the mid-16th century B.C.

After about 500 years, settlement at the site resumed, but only on the major mound. In mid-10th century B.C., a new fortified city was erected on the mound. On the W side of the preexisting mound an earthen platform was built, enlarging the town's area by 50 percent. The slopes were stabilized by a cobblestone covering, forming a stepped glacis. A public building with thick plastered walls existed on the SW near the city wall. The first Iron Age city was destroyed at the end of the 10th century B.C., followed by a short-lived unwalled settlement.

The last phase of Iron Age Malhata was a densely built-up city, surrounded by a new wall which was reinforced with a new stone glacis. A tower projecting 8 m was preserved to a height of 10 m. The public house of the earlier phase was replaced with a series of storeroom houses, built and rebuilt on the same plan. The last Iron Age stratum was destroyed by an intense fire in the 6th century B.C. Among the many finds from this stratum were large amounts of Edomite pottery, an Aramaic ostracon, inscribed Hebrew stone-weights, and an imported archaic E Greek oeonoche. Iron Age Malhata was the most prominent town in the Negeb in the 10th century B.C., and it continued to be a major town in the region until the end of the kingdom of Judah.

The site was resettled in the Hellenistic period, as evidenced by surface finds from the Roman-Byzantine site. A large Late Roman cemetery and several buildings from the Byzantine period were excavated. The fort crowning the E spur of the major mound was still in use in the Early Arab period. Roman-Byzantine Malhata is thought to have been a garrison fort on the S borders of the Roman Empire, with a colony of *Limitanti* nearby.

B. The Problem of Identification

The identification of Malatha/Moleatha, a Roman-Byzantine fort, with Tel Malhata is generally accepted. The name of the earlier, biblical town, however, still eludes us. Many place names, taken mainly from the list of the inheritance of Simeon, have been suggested. Robinson (1856: 201–2), followed by Guerin (1869: 184–88) and others, proposed Moladah (Josh 15:26), relying on the resemblance between the Latin and the Hebrew names. Mazar (1965) and Garstang were impressed by the Bronze Age remains and identified it with Hormah (Num 14:45; Deut 1:44), where the Israelites were first involved in battle with a Canaanite city. Aharoni (*LBHG*, 201), from the same point of view, concluded that Malhata was Canaanite Arad. The absence of any LB remains on the site refutes the last two suggestions. Kochavi (*EAEHL* 3: 771) has suggested Baalath-Beer (Josh 19:8), while Naʾaman (1980) proposed Telaim, where King Saul summoned his army against the Amalekites (1 Sam 15:4).

MOSHE KOCHAVI

MALLOTHI (PERSON) [Heb *mallôtî* (מַלּוֹתִי)]. One of the fourteen sons of Heman who were appointed to prophesy with musical instruments under the direction of their father and the king (1 Chr 25:4). Malloti received the nineteenth lot cast to determine duties (1 Chr 25:26). Scholars have long suggested that the final nine names in 1 Chr 25:4 can be read as a liturgical prayer. For instance, Malloti can be read as the first-person sing. *Piʿel* perf. form of the verb *mālal* "I said." It would form part of the fourth line of the liturgical prayer as reconstructed by scholars. For a reconstruction and translation of the prayer, a summary of interpretative possibilities, and bibliography, see ELIATHAH.

J. CLINTON MCCANN, JR.

MALLOW. See FLORA, BIBLICAL.

MALLUCH (PERSON) [Heb *mallûk* (מַלּוּךְ)]. **1.** An ancestor of Ethan, who was a Levite and a singer in Solomon's Temple (1 Chr 6:44). Appearing in a schematic list that has the three sons of Levi as its focus, Malluch is described as a member of the Merari line (Möhlenbrink 1934: 202–3; Myers *Ezra-Nehemiah* AB, 46). The references to both Ethan and Malluch are at the center of debates over the list's nature and redaction, which has a parallel in 1 Chr 6:29–30 (Braun *1 Chronicles* WBC, 93–94).

2. One of twenty-two priests (Brockington *Ezra, Nehemiah and Esther* Century Bible, 197–98), or families of priests (Myers *Ezra-Nehemiah* AB, 196), who returned to Jerusalem with Zerubbabel (Neh 12:2).

3. The son of Bani or, if the text has been corrupted, perhaps Binnui (*bnwy*), or Bigvai (*bgwy*) (Ezra 10:29; cf. Williamson *Ezra, Nehemiah* WBC, 144). Malluch was one of the laity required by Ezra to abandon his foreign wife. The presence of his name in this list, which is absent from the parallel in Ezra 2, raises questions both about the nature of the documents that lie behind the lists, and about the way in which the writer has adapted those documents to suit his purposes (cf. Myers *Ezra-Nehemiah* AB, 87–88 and Williamson *Ezra, Nehemiah* WBC, 157–58).

4. A son of Harim and one of the laity required by Ezra to abandon his foreign wife (Ezra 10:32).

5. A priest and signatory to the covenant established by Ezra (Neh 10:4).

6. A leader of the people and a signatory to the covenant established by Ezra (Neh 10:27). At least one scholar conjectures that he may also be the Malluch of Ezra 10:32, mentioned in #4 above (*IDB* 3: 233).

MALLUCHI (PERSON) [Heb *mallûkî* (מַלּוּכִי), Ketib; *mĕlîkû* (מְלִיכוּ), Qere]. Var. MALLUCH. A priestly family mentioned only in Neh 12:14 as one of some 20 such families serving in the days of Joiakim (vv 12–21). Previously in the same chapter (v 2), a certain Malluch (Heb *mallûk*) is listed as having returned from exile to Jerusalem in the days of Zerubbabel. Inasmuch as even a cursory overview will confirm the close correspondence between the names found in these two lists (i.e., vv 1–7 and 12–21), it is quite certain that the "Malluchi" of v 14 and the "Malluch" of v 2 represent two variant spellings of the same individual's (or family's) name. For arguments supporting the relative primacy of the list of priestly families in vv 12–21 over the corresponding list that precedes it in vv 1–7, see AMOK.

In regard to the variant spellings Malluch/Malluchi, most commentators prefer the former as the more likely original (note the LXX which reads *malouch* in both verses). Bowman (*IB* 3: 788, following Rudolph) points out that the final *yod* of Malluchi in v 14 probably represents a dittograph of the *yod* in the following name, Jonathan (Heb *yônātān*). This, in turn, as Williamson (*Ezra, Nehemiah* WBC, 357 n. 14a) notes, presumably led to the Qere variant *mĕlîkû* (representing *waw*/*yod* confusion?). Further support for the primacy of the spelling "Malluch" is probably to be found in the analogous list of priests in Neh 10:3–9—Eng vv 2–8—where such a spelling is attested in v 5—Eng v 4. For a brief discussion of the origin and nature of this list, see MAADIAH.

WILLIAM H. BARNES

MALLUS (PLACE) [Gk *Mallōs* (Μαλλως)]. A Cilician city located on the Pyramus river E of Tarsus on the S coast of Asia Minor. 2 Macc 4:30 recounts that the cities of Tarsus and Mallus were given by the Seleucid king Antiochus IV Epiphanes as a present to his concubine Antiochis. The transfer of the cities to Antiochis occasioned a revolt by the populace, which required Antiochus' personal attention. Mallus was under Ptolemaic rule from ca. 246 to 197 B.C.E., at which time it came under Seleucid control (Mørkholm 1966: 117 n. 6). That Antiochus should have given the city to his mistress as a source of income was not uncommon in antiquity. Thucydides (1.138.5) records that Themistocles was given the income of three cities by his king. Herodotus (2.98) points out an example of an Egyptian king who assigned a city to provide shoes for his mistress. Herodotus indicates that this was a common practice in Egypt under Persian domination. Cicero (*Verr.* 2.3.33) notes that this custom was common in Persia and Syria to provide for the needs of royal wives. There is no extant witness to this rebellion beyond 2 Maccabees and no evidence that would indicate why Mallus was so important that Antiochus IV should personally attend to the civic disturbance. Numismatic evidence indicates that Tarsus was an Antiochene city as late as 166 B.C.E. (Mørkholm 1966: 60 n. 32). Antiochene cities enjoyed a measure of self-government along with considerable prestige (Tcherikover 1977: 443–44 n. 12). It is apparent from 2 Maccabees that Tarsus, an Antiochene city, and its neighbor, Mallus, objected to being transferred from the authority of Antichus to his mistress and to bear a possibly increased financial burden. The rebellion of Antiochene Tarsus and Mallus could have embarrassed the king, prompting Antiochus to deal with the two cities personally. A successful revolt by these two cities on the edge of the Seleucid empire could also have threatened the security of the state (Abel 1949: 340).

MALTA (PLACE) [Gk *Melitē* (Μελιτη)]. An island in the Mediterranean, about 60 mi. S of Cape Passero, Sicily and 220 mi. N of Tripoli, Libya; with 95 sq. mi., it is the largest of the five islands making up the modern country of Malta. Archaeological evidence exists for its occupation from about 3800 B.C., first by cave-dwelling farmers who produced a material culture similar to that found in Sicily and, later, elaborate tombs, temples, and a unique underground burial chamber, the Hypogeum, as it is called (2400–2000 B.C.). This was replaced by a culture of a southern Italian style. A Phoenician trading colony was established on the island before or during the 8th century B.C. The name of the island comes from a Semitic word (*meliṭa*) meaning "refuge," indicating a safe harbor. Diodorus (5.12.2–3; 1st cent B.C.), who himself came from nearby Sicily, says that the place was chosen as a stopping-off place to trade with the west (Spain).

The island came under control of Carthage, another Phoenician colony, in the 6th century B.C., when their homeland was taken by the Assyrians. In 218 B.C., the island came under Roman rule as part of the province of Sicily. Under the reorganization of the empire by Augustus, Malta was put under its own procurator. Although initially a prosperous island, it declined significantly as a result of frequent raids by pirates and the civil wars of the 1st century B.C. It had recovered by the mid-1st century A.D. and was (along with the neighboring island of Gozo [Gaulos]) granted municipal status (Lat *municipium*) in the early 2d century. Its citizens were granted Roman citizenship under Emperor Justinian (518–65). Even under Roman rule, however, the Maltese continued to maintain aspects of their Punic/Phoenician culture and language. In 870 Malta was taken by the Abbasid caliphs, but in 1090 it came under the control of a series of Christian crusader groups, culminating in the domination of the city by the Knights of St. John, who successfully defended the island against the Turkish forces of Suleiman I (1565). Its unique language in the present day is a mixture of N African Arabic and Silician Italian, and its culture reflects the rich diversity of its history.

Paul and his associates were shipwrecked here in the late autumn of A.D. 59 (Acts 27:27–28:11), having been driven helplessly for two weeks by the E–NE wind called "Euraquilo" ("Northeaster," NIV; Acts 27:14; its name is a Gk-Lat hybrid, Gk *euros* "east wind" + Lat *aquilo* "north wind"; today it would be called the *gregale*). The traditional site of the shipwreck is St. Paul's Bay, some 8 mi. NW of the modern capital of Valletta. In spite of recent attempts to suggest a location for the wreck on the island of Mijet or Melitene off the coast of Dalmatia (Acworth 1973, on the basis of the grammar of the narrative of Acts, historical data, and the name; Meinardus 1974, 1976, 1979, on the basis of ecclesiastical and local traditions), this is most likely the correct location (so Ramsay 1920; Finegan 1981; Kettenbach 1986; Bruce *Acts,* NICNT ^{2}1988; Hemer 1975; 1989; the latter has definitively answered the objections of Acworth), since it fits almost perfectly with the description given in Acts.

The local inhabitants are called "barbarians" (Gk *barbaroi*) by the author of Acts (28:2, 4), which indicates only that they did not speak Greek or Latin (hence the RSV's translation as "natives" and the NIV's "islanders"). Since their language was a Semitic tongue, Paul was probably able to converse with them by means of Aramaic. The leading local official, one Publius by name, is designated "first man" or "chief" (28:7, Gk *prōtos*), a title that is attested in inscriptions (*CIG* 14.60; *CIL* 10.7495). With reference to Paul's brush with the "viper" (Gk *echidna*; 28:3–4), it is worth noting that while there are no vipers or poisonous snakes on Malta today there is the *Coronella austriaca,* which resembles the viper. The native people's reaction to the snake's attaching itself to Paul—"No doubt this man is a murderer; for though he escaped from the sea, Justice [Gk *dikē*] has not allowed him to live" (28:4, NIV)—may refer to a hellenization of a Punic deity.

Some contemporary scholars have suggested that the travel narrative of Acts 27 and 28 is fictitious, patterned on the ancient novel. If that is so, it has been constructed with great skill, for it is, in fact, "one of our chief sources for ancient Greek language about seafaring" (Johnson 1987: 151) and is meticulously accurate in regard to its historical and geographical setting. As a result, few who are intimately familiar with the archaeological and historical data are inclined to doubt its essential historicity.

Among the more notable archaeological excavations of significance for the study of early Christianity are the remains of a large Roman villa at San Pawl Milqi, which has been identified with the home of Publius in which Paul and his associates would have been received; and a Punic sanctuary that fell into disuse toward the end of the 1st century and later was converted into a Christian church (Claridge 1976).

MAMDAI (PERSON) [Gk *Mamdai* (Μαμδαι)]. An Israelite layperson and descendant of Bani who was forced to give up his foreign wife during Ezra's reform (1 Esdr 9:34).

MAMMON [Gk *mamōnas* (μαμωνας)]. Mammon (= Heb *mmwn,* Aram *mmwnʾ* "wealth," "property") occurs in Matt 6:24 = Luke 16:13, "you cannot serve God and mammon" and in Luke 16:9, 11 in the phrase "unrighteous mammon." It is the normal word for "money," "wealth," in Mishnaic Hebrew, and is also attested in that sense several times in documents from Qumran (1QS 6:2; 1Q27 1,2,5 [probably], and CD 14:20), although the more usual word for "wealth" in Qumran literature is *hōn.* "Mammon" is not inherently evil, as may be seen from *m. Ber.* 9:5, commenting on Deut 6:5 (from the *Shema*): "[thou shalt love the LORD thy God …] with all thy strength" [that is], "with all thy wealth (mammon)." Its use then is broadly parallel to that of Qumran *hōn,* which often refers to the money or wealth which the prospective member is required to bring into the community when he joins it. In all gospel examples it occurs in words ascribed to Jesus. Here we may note: (a) Matt 6:24 and Luke 16:13c are verbally identical (not always the case in "Q" material); (b) Luke 16:1–13, apart from v 13, which acts as a call line for the whole passage, is material peculiar to Luke; yet within that material, in v 9, two well-known Semiticisms occur, namely, *ek* "from," meaning "by means of," and the "adjectival genitive": "[Make friends for yourselves] by means of the mammon of unrighteousness (= "unrighteous mammon," as given idiomatically in 16:11). All of this supports the view that Semitic material is to be found in the tradition preserved here by Luke. Because the Greek form of the word is *mamōnas,* it is on balance more probable that it reflects the Aram *mmwnʾ* (pronounced "mammona") than the corresponding Hebrew.

MAX WILCOX

MAMPSIS (M.R. 156048). A town established during the second wave of Nabatean settlement in the Negeb. It was originally founded as a station on a secondary road leading W from Petra and the Arabah. The site was completely rebuilt in the 2d century C.E. and became important with the establishment of Trajan's Via Nova, when it became the seat of a Roman garrison. The city was destroyed in one of the early pre-Islamic raids into the Negeb. The local economy was based on trade during the middle Nabatean period, on horse breeding in the late Nabatean period, and to some extent on agriculture in the Byzantine period.

A. Identification

Kurnub is ca. 40 km SE of Beer-sheba, at the junction of the N–S road extending from Jerusalem to Hebron to Aila, and the E–W road from Gaza to Beer-sheba to Aila. From the reference by Eusebius

(*Onomast.* 8.8), and its position on the Medaba map, R. Hartman (1913) identified Kurnub as Mampsis, and this identification is now generally recognized.

B. History

Mampsis is mentioned first by Ptolemy (*Geog.* 5.16.10) in the form of "Maps," and, together with Elusa, is listed among the cities of Idumea W of the Jordan. Eusebius stated that "Mapsis" (emended by Jerome to Mampsis) was one day's march from Thamara, on the road from Hebron to Aila. In the 6th century, it was mentioned in the tax edict of Beer-sheba, and by Hierocles, who lists it among the cities of *Palaestina Tertia.* On the Medaba map, Mampsis is represented by an arched city gate with two towers, behind which rises a gabled building, apparently the cathedral. It was mentioned twice in a mid-6th century papyrus at Nessana.

C. History of Research

U. J. Seetzen marked "Karnupp" on his map in 1807 (Krause and Fleischer 1859: 403), describing the site as a fortress at the foot of a low hill with vineyards and gardens around it. Robinson (1841: 616, 622) in 1838 was satisfied to investigate it with binoculars from a nearby hill, mentioning churches or public buildings of another kind. The first plan of Mampsis was drawn by A. Musil in 1901 (1907: 25–28), who was the first to note a city wall with towers. He also identified two churches. His plan is invaluable, since the E part of the town has been destroyed by the construction of a British police station in that area during the 1930s. C. L. Woolley and T. E. Lawrence (1914–15: 121–28) drew another plan of the town, concentrating on the towers and the water system. They described the city wall as a mere fence to protect against incursion by the bedouin. The last and most detailed survey of Mampsis, until the recent excavations, was by P. L. O. Guy and G. E. Kirk in 1937 (Kirk 1938). They drew a more detailed plan of the town, and N of the city gate they discovered two large buildings covered by sand (Building VIII and apparently a fort), which had previously been undetected. They also located a "Hellenistic" cemetery about 1 km N of the town. In 1965–67 and 1970–72, large-scale excavations were conducted at Mampsis under the direction of A. Negev.

D. Excavations

1. Middle Nabatean period. The earliest ceramic, numismatic, and architectural remains are from the middle Nabatean period (ca. 25 B.C.E.–50/70 C.E.), when Mampsis was defended by a fort (Building XX) located on the high SE part of the site. A large portion of this building was covered by the British police station. It was rectangular with thick walls, inside of which was a courtyard surrounded by small rooms. The town also had strategically placed towers, one of which was 10 × 10 m and protected the descent into the wadi Nahal Mamshit to the spring. Near the N city wall was another large building (XIX) with a courtyard. A row of long storerooms flanked the courtyard on the SE side, and smaller rooms were on the NW side. The cemetery has also yielded ceramic and numismatic finds of the middle Nabatean period.

2. Late Nabatean period. Whether there was a break in occupation between the middle and late Nabatean periods at Mampsis is unclear, but the later period is represented by a different plan. A city wall, which underwent two phases of construction, encloses an area of ca. 10 acres. Four gates provide access to the town—two large gates and two postern gates. A natural gully forms the longest street, descending from the S northward, and separates the town into two unequal parts. The houses on the E are generally closely clustered with narrow streets; the W side of the town has generally wide streets.

Building I (ca. 35 × 20 m) in the W part of the town has been identified as a palace and is constructed to be essentially a self-contained fortress. It has a small entrance into a vestibule, which is protected by a guardroom. The entry provides access into an oblong courtyard (ca. 19 × 6 m), part of which was roofed. In the lower floor are an audience room along with an archive, servants' quarters, a "refrigerator" room, storerooms, and a niche, which appears to have been designed to cool water. The N end of the ground floor also has a residential section consisting of a bedroom, washroom, and two living rooms, which are separated from the rest of the floor through a vestibule.

To the SW of the palace stands Building II, which includes three elements—a tower (ca. 10 × 10 m), a courtyard, and buildings surrounding the courtyard. In the tower were three rooms in addition to the stairwell providing access to the upper stories. An unusual feature associated with this building was a

series of steps which ascend to nothing—apparently a sort of loading dock to facilitate the loading and unloading of camels and donkeys.

Farther S (near the SW corner of the site) is Building XI (ca. 27 × 35 m), which appears to have been the house of a horse breeder. The N wing of the house had the living quarters, and in the SE corner were stables in which was a central area flanked by two aisles. Fodder was apparently stored in the central area, and the horses were tethered in the aisles. This house had a niche for cooling water, similar to that of Building I. There is evidence of a house shrine with a niche in the W wall to accommodate an image, and on the flat roof apparently libations were offered and incense was burned.

The E section of the town had what appears to have been a market area with several rows of rooms opening directly onto the street. Nearby was a large building (Building XII; ca. 40 × 40 m), with a vestibule giving access to a courtyard. A guardroom and "office" open into the vestibule. This building is decorated with Nabatean capitals and multicolored mosaics. One of its rooms may have been a vault with very thick walls; a hoard of some 10,500 Roman dinars and tetradrachmas was found in this area. An inner court is decorated with frescoes depicting mythological scenes, as well as floral and abstract designs. There are also quarters for the servants, workshops, a stable, and a lavatory with a flushing system.

To the N of Building XII was a roofed public reservoir (18 × 10 × 3 m). The reservoir had a settling tank which emptied into the rest of the reservoir. A conduit channeled water from the reservoir to a nearby Roman-Nabatean bath. The bath had a dressing room with stone benches along the walls. There were the traditional three baths—the cold bath (*frigidarium*), the tepid bath (*tepidarium*), and the hot bath (*cauldarium*).

Water was gathered by means of a series of dams built in the wadi to the S. The capacity was in excess of 10,000 m^3.

3. The Byzantine period. Several minor changes took place in the Byzantine period, although the changes were primarily on buildings from the Nabatean period—these consisted of different door placements and changes in building functions (e.g., Building XI with some modification became an apartment). The major changes were the construction of two churches.

The East Church (ca. 55 by 25 m) was built over the remains of a middle Nabatean fortress and several rooms of the marketplace. A symbolic burial of a piece of bone—apparently a martyr's bone—was discovered in the SE corner of the S room of the church. The church was decorated with mosaics of simple geometric designs and colored crosses.

The West Church (the Church of Nilus) is in the SW section of the town, next to the W wall. It was decorated with representations of birds and baskets of fruit against geometric backgrounds. A dedicatory inscription attributes the construction of the building to one named Nilus. The construction of the church is dated to the ca. 350–400 C.E.

4. Arab period. The only indications of an Arab presence at Mampsis are inscriptions engraved on the stones of the apse in the East Church. These contain verses from the Koran and various invocations. No coins or ceramics have been found from this period.

5. The Cemeteries. Three cemeteries have been found at Mampsis. A cemetery used by the Romans was located ca. 200 m NE of the site. Ten burials were excavated and consisted of monuments, either small stepped pyramids or heaps of boulders, over flat rocks covered with ash and incinerated bones. Two inscribed tombstones were found—one of a centurion who served in the Legio II Traiana Fortis and Legio III Cyrenaica, and another of a knight of Cohors I Augusta Thracum.

The Nabatean cemetery, 800–1,000 m N of town, consisted of pits 1–4 m deep in which the body was placed, either in a wooden coffin or directly on the soil. The body was then covered with several stones and then buried and the site marked with aboveground monuments.

AVRAHAM NEGEV

MAMRE (PERSON/PLACE) [Heb *mamrē*› (מַמְרֵא)]. The name "Mamre" appears in several different contexts, all in the book of Genesis and all related to the patriarch Abram/Abraham. In only one passage (Gen 14:24) does the Bible unquestionably depict the name as belonging to a person, an Amorite who was one of Abram's allies in the battle against Chedorlaomer's coalition (on the problematic 14:13, see below). In a number of other passages the name is clearly portrayed as belonging to a place W of the cave of Machpelah, which Abraham bought from Ephron the Hittite (23:17; 25:9; 49:30; 50:13), a place identified with (a district of?) Hebron/Kiriath-arba (23:19; 35:27; cf. 23:2); see also HEBRON (PLACE); KIRIATH-ARBA; MACHPELAH. Two passages, in recounting the migrations of Abram/Abraham, note that the patriarch pitched his tent by "the oaks of Mamre" (Heb *›ēlōnê mamrē›;* 13:18; 18:1), while a third passage (14:13) seems awkwardly to combine this toponymic reference to "the oaks of Mamre" with the personal name "Mamre the Amorite, 'brother' of Eshcol and of Aner." Thus, in two passages (14:13, 24) Mamre appears (along with Aner, Eshcol, and Abram) as one of four allies (covenant-partners) who joined forces on a specific occasion.

The nature of "Mamre" as a place name and as a personal name is inextricably tied to this reputed alliance, which seems closely linked to the place Hebron/Kiriath-arba. As his point of departure for treating the name "Mamre," Lipiński (1974: 48–51) turned to late, midrashic explications of the names Kiriath-arba and Hebron. There the former is understood as meaning "the City of Four [Quarters]," while the latter is understood as "Confederation" (cf. Heb *ḥeber*). Thus, for Lipiński, the four allies in Genesis 14 are actually literary personifications of the four clans of the area (and their respective sanctuaries), whose union gave rise to the municipality called Kiriath-arba or Hebron.

Lipiński reconstructed these four municipal clans/quarters/sanctuaries as follows. One, he suggested, was the Sanctuary of Eshcol (sacred to El and then Baal), site of the firstfruits of the vine (Heb *›eškôl,* "cluster [of grapes]") and the Dale of Eshcol. The second, associated with Aner, he believed to be a sanctuary of the goddess Anat, originally called **bêt ‹anāt rūm,* "temple of the Anat of the Above," the shortened form being **‹anāt rūm* (indeed, *Anatram* is the goddess venerated by a Sidonian in Delos; Lipiński 1974: 53 and n. 2). Lipiński believed that vestiges of this shortened form are still retained not only in the Samaritan Pentateuch, which renders the name Aner as *‹nrm,* but also in 1QapGen, in the metathesized form *‹rnm.* But the MT tradition has intentionally deformed the sanctuary's name even further, reducing it simply to *‹āner.* For Lipiński, the third clan/quarter/sanctuary was the Cave of Machpelah, associated with the Hebrew patriarchs and matriarchs. The fourth (situated to the W of Machpelah) was associated with *›elōnê mamrē›*, "the oaks of Mamre." Many scholars, following the LXX and Syr, have long assumed that the original Heb text did not include the plural, but rather read simply *›ēlōn* or *›ēl-ōn,* "place of (the) god (Mamre)." Thus, Gen 14:13 (*whw› škn *b› ln mmr› h›mry*) can easily be translated "he (i.e., Abram) was dwelling at the Amorite sanctuary of Mamre," and Mamre can be regarded as originally a divine name or epithet, "the (fatted) calf" (*mamrē›* being a toponymic form, **ma-mrī›*, derived from S Canaanite *mĕrī›* "fatted calf"; N Canaanite uses *‹egel*). In Genesis 14, the author has personified the four districts of Hebron as four persons.

But within this same type of scheme, other linguistic explanations for the various sanctuaries are possible. For example, Eshcol could be translated "Place of Testiculus," derived from Heb *ʾešek* with a toponymic suffix (*–vowel* + "*l*"). Aner could readily be derived from Hitite *ani-ur* "ritual," an appropriate name for a sanctuary and its activities (the initial *ʿayin* phonetically effectuated by some form of Hess' Law; see Arbeitman 1981: 1011–15). The name *mamrēʾ,* however, is likely a Hebrew representation of Hittite *miu-mar,* "friendship, peaceful relations, alliance" (Arbeitman 1981: 959–1002; note also the traditional associations of "Hittites" with the Hebron area, Genesis 23). Thus, Hit *miu-mar* is semantically identical to Hebron (Heb *ḥebr-ôn,* "place of the ally/confederate" (although the linguistic matters here may be further complicated by O'Connor's recognition of a Hurrian toponymic suffix *-mar*/*-mur,* such as in Tadmor and Palmyra [1988: 238 passim]). Again, the author of Genesis 14 later personified the name; but the original tradition behind 14:13 was that " (Abram) was dwelling at the Amorite sanctuary of Alliance."

MANAEN (PERSON) [Gk *Manaēn* (Μαναην)]. Mentioned in Acts 13:1 as one of the prophets and teachers in the church at Antioch who were present at the commissioning of Paul and Barnabas for missionary work. Manaen is called a *syntrophos* of Herod the Tetrarch, that is, Herod Antipas (4 B.C.E.–37 C.E.). *Syntrophos* means "nourished" or "brought up together with," "foster-brother," "companion (from one's youth), intimate friend" (BAGD, 793). The exact relation of Manaen to Antipas is not exactly known. It has been interpreted as "foster-brother," a boy of the same age as a royal prince who was brought up with him at court and retained the title in adulthood. It has been less restrictively interpreted as "courtier" or "intimate friend" (MM 615). In any case it was a very special relationship of honor. Manaen may have been Luke's source of information about Herod Antipas and his dynasty, information that is not found in the other Gospels. Manaen may have been related to an earlier Manaen, an Essene, who was a friend of Herod the Great, father of Herod Antipas, and predicted his ascension to the throne (Joseph. *Ant.* 15.373–79).

MANAHATH (PERSON) [Heb *mānaḥat* (מָנַחַת)]. A son of Shobal and grandson of "Seir, the Horite" (Gen 36:23; 1 Chr 1:40). This genealogy and its literary context suggest that Manahath was an Edomite tribe or clan of the 7th century B.C. See HORITES; SHOBAL. It is possible that elements of this Edomite clan at one time inhabited the Negeb. See MANAHATHITES.

The form of the name is difficult to explain. The vowel pattern of **mānaḥt* excludes a connection with Aram *nḥt* ("to descend") or with Heb *minḥâ* ("gift," also Phoen, Aram, and perhaps Ug). Possibly, **Mānaḥt* can be regarded as a "feminine" formation belonging to (Heb) *mānôaḥ,* "rest, resting place," which is also the name of Samson's father (1 Sam 13:2, etc.), further attested on a 7th-century B.C. Judean seal (Herr 1978: 130, no. 110). Because *Mānôaḥ* is derived from **Manāḥ, *Manāḥt* would lead to **Manaḥt,* hence *Mānaḥat* (the reduction of long vowels in double-closed syllables is a common Semitic feature).

ERNST AXEL KNAUF

MANAHATH (PLACE) [Heb *mānaḥat* (מָנַחַת)]. A place to which Benjaminite families from Geba, of the clan of Ehud, were "exiled" (1 Chr 8:6). Because it was a fellow Benjaminite, Gera (1 Chr 8:3), who "exiled" them (1 Chr 8:7, reading *hglm* as a verbal form, not as a PN "Heglam" [so RSV]), this "exile" may be understood within the context of Benjaminite colonization of the mountains of Gilead before the monarchy. Because the Benjaminite clan of Ehud (whose "father," incidentally, was Gera, Judg 3:15) settled in the vicinity of the modern town of ʿAjlûn (Knauf fc.), Manahath should be sought in its environs; the place can be identified with Maḥnah (< **Maḥnat*, an easy corruption of **Manaḥt*), 7 km N of ʿAjlûn (M.R. 221193). The area was occupied in the early Iron Age (Khirbet el-Hêdamûs at ʿAin Maḥnah, Mittmann 1970: 68f.).

Manahath, meaning "resting place," is a genuine toponym that need not be connected with the Seirite clan or the tribe of Manahath, which belongs to an area where Benjaminites are never known to have settled. See MANAHATH (PERSON).

The place Manahath has previously been identified with the fortress *Manḫatu* (EA 292: 30; Moran 1987: 521), constructed in the Amarna period to defend the territory of Gezer against "the hostility from the mountains" (Schmitt 1980: 91–92). On both philological and historical grounds, however, this identification is not tenable (Niemann 1985: 156–58). Furthermore, Amarna-Akkadian *Manḫatu* may represent a Canaanite **man*ʿ*at* ("Defense," a name that would suit a fortress well). (For ‹ḫ› representing Canaanite ʿ*ayin* in Amarna-Akkadian, cf., e.g., *Ḫenianabi* EA 256: 26, which is an ʿ*Ain* ʿ*Anab* "Spring of Grapes.") Not incidentally, there is a Sitt Manâʿ and a Khirbet Mannâʿ in the region where *Manḫatu* must be located (Schmitt 1980: 91).

MANAHATHITES [Heb *mānaḥtî* (מָנַחְתִּי)]. A clan of the Calebites (1 Chr 2:54), half of which was derived from SHOBAL and was called MENUHOTH (1 Chr 2:52). The other half of this clan, said to inhabit ZORAH, is also accounted among the sons of Shobal in 1 Chr 2:53, but among the descendants of Salma in 1 Chr 2:54.

It is impossible not to identify the Manahathites, sons of Shobal here in 1 Chronicles 2, with the Edomite (Horite) tribe or clan of Manahath, son of Shobal, mentioned in Gen 36:23; 1 Chr 1:40. See MANAHATH (PERSON). There are two historical situations that might have accommodated the appearance of an Edomite clan among the Calebites (i.e., the inhabitants of the Negeb): the premonarchic and the postexilic periods. In the premonarchic period, numerous tribes and/or clans lived on both sides of Wadi ʿArabah who later joined either Judah, or Edom, or both. See LOTAN. Because the ranked tribal system attested by Genesis 36 is, however, unlikely to have emerged in the LB or early Iron Age, a postexilic date for 1 Chr 2:52–54 is preferable. In this case, the presence of Shobalites at Kiriath-jearim (1 Chr 2:52) and Manahathites at Zora and Eshtaol (1 Chr 2:53–54) attests Idumean penetration into Judea proper, which is not unlikely given the fact that Judeans also settled, or Judean landlords also owned, territory within Idumea (cf. Neh 11:25–30). Judean presence within Idumea is evidenced by the Arad and Beer-sheba ostraca (de Geus 1980: 73; Ephʿal 1982: 200 n. 679).

A different view was advanced by W. Rudolph (*Chronicles* HAT, 27). He also dates 1 Chr 2:18–19, 50–55 to the postexilic period, but he assumed that Calebites left the Negeb under Idumean pressure and settled further N within Judea. There are, however, no indisputable references to the Calebites after the

reign of David. After the Exile, the attribution of Idumean clans to the southern, albeit extinct and legendary, tribe of Caleb may have served to legitimize their abode in Judea.

MANASSEH (PERSON) [Heb *měnaššeh* (מְנַשֶּׁה)]. Var. MANASSEAS. 1. Son of Joseph, son of Jacob and, as such, the eponymous ancestor of one of the Israelite tribes. See MANASSEH (PLACE).

2. See MANASSEH, KING OF JUDAH.

3. Identified as a son of both Pahath-moab and Hashum, Manasseh is listed among the Israelites who dismissed the foreign wives with whom they were living in defiance of the law (Ezra 10:30, 33). In the parallel passage in 1 Esdr 9:31, he is called Manasseas (Gk *Manassēas*).

4. Identified as a son of both Hashum and Addi, this Manasseh is also listed among the Israelites who dismissed the foreign wives with whom they were living in defiance of the Law (1 Esdr 9:33).

5. The husband of Judith, Manasseh is described as having died from a sunstroke while overseeing a barley harvest (Jdt 8:2–3). A fictional character, the description of Manasseh's death may have been inspired by the story of the Shunamite woman's son (cf. 2 Kgs 4:18ff.; Enslin 1972: 110), but the similarities between the two stories are superficial at best (Craven 1983: 85 n. 41).

FREDERICK W. SCHMIDT

MANASSEH (PLACE) [Heb *měnaššeh* (מְנַשֶּׁה)]. MANASSITE. Name of Israelite tribe in the hills of central Palestine; during the early monarchy it extended to include the inhabitants of central Transjordan (half-tribe of Manasseh).

A. Manasseh, Son of Joseph, Son of Jacob

The eponym of the tribe of Manasseh was the eldest son of Joseph and Asenath, the daughter of Potiphera the priest of On (Gen 46:20). *Měnaššeh* is a regular Hebrew personal name of a common type. It is a participle of the root *nšh* "he who makes forget," namely, the death of a prior child (cf. a popular name like Menahem). There is no doubt that this name was originally a personal name. It was probably the name of the ancestor of a clan, unlike such names as Judah or Ephraim, which originally had a geographical meaning.

B. The Place of Manasseh in the System of Twelve Tribes

There is not one system of twelve tribes in the OT, but two (see GAD). System A is mainly a list of patronyms and includes the tribes of Levi and Joseph. The second system, B, is geographical. It omits Levi, the priestly tribe without a territory, while Joseph is split up into Ephraim and Manasseh. Although it is repeatedly stated that Manasseh was Joseph's eldest son, the order is often reversed: Ephraim, then Manasseh. In some instances the biblical text as it now stands still shows "scars" indicating that in a former stage the text had the original order—Manasseh, then Ephraim—as is the case with Joshua 16 and 17 (de Geus 1976: 79–80). Indeed, it was apparently so well known that Manasseh was traditionally the eldest son/tribe that an explanation was needed to clarify the later situation, with Ephraim as the dominant tribe in the center of the country (Gen 48:13–14).

Two recent views with regard to the tribe of Manasseh are important. Until two decades ago it was generally assumed that the name "house of Joseph" was older than the separate tribes Ephraim and Manasseh. While expanding in the central hills after the period of settlement, Joseph split up into two separate tribes. Therefore system A was considered older than system B. Many historians, however, now accept the opinion that it was the other way around. The expression "house of Joseph" appears only at the

beginning of the divided monarchy and denotes the core of the kingdom of Israel. In most cases "house of Joseph" has a polemic sound against "Judah" (de Geus 1976: 70–96; Lemche 1985: 284).

The second modern development is that Machir is no longer thought to be just another smaller splinter group of Joseph, but instead the name of an older tribal group. Neither was Machir simply an older name for Manasseh, as was often said in view of Judg 5:14. Machir was probably a small Israelite tribe that dwelled around Dothan during the LB Age and that later moved to Transjordan (de Geus 1976: 72). Only the rise of the Israelite state resolved the conflicts about land and power between the different Manassite clans and with the neighboring tribes.

C. Settlement

The process of sedentarization and reurbanization that is commonly known as the "settlement of the Israelite tribes" started at the beginning of the 12th century B.C.E. Archaeologically speaking this is the Iron Age I. It is significant that Finkelstein found that 70 percent of all Iron I sites in Palestine are located N of the modern town of Ramallah and S of the Jezreel valley. This is the territory of the tribes of Ephraim and Manasseh (*AIS*, 65–91, 352–56). In absolute numbers, 120 sites were located in Ephraim and 100 in Manasseh, by contrast to, for instance, only 12 for Judah. After a study of all of the newer material that has been published on early Iron Age sites in Transjordan, Finkelstein (*AIS*, 114–17) comes to the conclusion that a parallel process of sedentarization occurred there, rather than a migration with subsequent settlement from the W, as was assumed by Mittmann.

There is a remarkable difference between the settlement in Ephraim and that in Manasseh. The new Iron I sites in Ephraim are found far from the sparse LB towns. But in the land of Manasseh the Israelites settled among a population that had been sedentary for a long time. The tribal territory does not have the steep and forested slopes of Mount Ephraim. It consists of broad valleys and gentle slopes. The soils are fertile and easy to work. In the territory of Manasseh there were no less than 22 LB Age towns (cf. Ephraim, 5; Judah, 5). Some of these LB Age cities certainly continued well into the Iron Age and the Israelite period. A good example of this is the town of Shechem. The Bible also is very clear about the continuing Canaanite presence in the land of Manasseh (Judg 1:27; *AIS*, 90–91).

The oldest Iron Age I settlements of the country are found in the territory of Manasseh. Here the land was suitable for pastoralists who also raised some grain crops. These pastoralists had roamed around in the area already for some centuries (de Geus 1976: 164–71). What started in Manasseh—and probably parallel to it also in Transjordan—spread out from this nucleus: first to the S and the N, later also to the W.

D. History

Apart from the fertility of the land, four factors determined the history of the tribe of Manasseh: (1) the presence of so many Canaanite towns inside its territory; (2) the competition with the brother-tribe Ephraim; (3) the fact that all three successive capitals of the kingdom of Israel were situated inside its boundaries; and (4) the fact that the easiest passage to Transjordan and to the King's Highway is through the Wadi Far῾ah and along the Wadi Zerqa (Jabbok River).

Although the earliest Israelite population of Manasseh was rural, the tribal territory remained under the dominance of a number of towns in its heartland that only gradually became Israelite. Shechem, for instance, was already of importance to the oldest Israelites in the Bronze Age, but in the period of the Judges it still had a predominantly non-Israelite population (Judges 9). Like Tirzah and Hepher, Shechem was ultimately included in the tribal genealogy (Num 26:28–34; Josh 17:2–3). Other former Canaanite towns like Ibleam, Dothan, Beth-shan, Taanach, and Megiddo were more peripheral. Gradually all of these towns became Israelite. The example of Tappuah shows how slowly this development went. Tappuah, on the southern border of Manasseh, was a LB Canaanite town. Its surrounding lands became Manassite, but the town itself was Ephraimite. That is to say, the ruling family changed into an Ephraimite one at a time that the Ephraimites were already powerful enough to cause this change.

The OT shows several examples of an ancient rivalry against the rising tribe of Ephraim. The changed order, placing the elder brother behind the younger, has already been mentioned. Judges 6–8 tell us the story of Gideon's war against the Midianites. Gideon was a Manassite hero and judge. His allies, besides

Manasseh, were Asher, Zebulun, Naphtali, and in a passive way the Israelite areas in Transjordan. The Ephraimites were purposely left out (Judg 8:1). The conflict between Gilead and Ephraim that is known as the *šibbōlet* incident (Judg 12:1–6) became very famous. This story also testifies to a linguistic distinction between the Gileadites from Transjordan and the Ephraimites. In the time of the monarchy this competition ended in favor of the Ephraimites. Not only was Joshua an Ephraimite, but also Jeroboam, the first king of the northern kingdom. In 1 Kgs 4:8 Solomon's first district is simply called the "mountain of Ephraim," although it is clear that Manasseh is meant.

The capitals Shechem, Tirzah, and Samaria are all situated inside Manasseh. During the dynasty of the Omrides Jezreel served as their private residency. Officially Jezreel belonged to Issachar. If Omri belonged to the same clan as Baasha, he was also an Issacharite. Geographically Jezreel belongs to Manasseh, so it is possible that the tribe of Issachar was a splinter group of Manasseh. This tribe is now missing in stories where it could hardly be missed, as in Judges 6–8, where the later territory of Issachar was the scene of the conflict. In 2 Sam 2:8–9 Jezreel stands for both Issachar and (West) Manasseh. In addition there are several Manassite enclaves inside Issachar, all former Canaanite towns (Josh 17:11; Judg 1:27).

It is evident that the last redactions of the traditions about the Israelite tribes in Transjordan were made when there was no longer an important Israelite population or military presence there. One feels in the texts the uncertainty of exactly how the situation had been (Wüst 1975: 59). It is clear that "half-tribe of Manasseh" is an artificial construction. The older traditions peak of Gilead and Machir. Both received a place in the Manassite genealogy of Numbers 26. In later traditions all Cisjordanian clans were regarded as the legal sons of Manasseh's first wife but the Transjordanian clans as sons of his Aramean concubine. It seems that all of these territories were lost after Tiglath-pileser III (but see GAD; perhaps Jerusalem kept in contact with former Israelite groups in Transjordan, which remained known in Judah as "Gad").

One should bear in mind that in the time of the early monarchy Transjordan was of great strategic importance. Transjordanian Israelites played a key role in many stories about Saul and his son Ish-bosheth. David also fell back on Gilead when his throne was threatened.

E. Territory

The territory of Manasseh, W of the Jordan River, consisted first of all of the northern part of the central Palestinian hills. The Jordan River was apparently the eastern border. The northern border should have been the valley of Jezreel. But as we have seen, here we find a number of Manassite enclaves in what became the territory of Issachar. The southern border seems to have been Wadi Qanah. Joshua 17 tells us that the western border was the sea. In reality it took a long time before Manassite/Israelite influence extended into the coastal plain. This remained at first firmly in the hands of Canaanites and Philistines. A Manassite town on the coast was Dor, while in the plain was situated "the land of Hepher" (if its identification with el-Ifshar is correct). Only at one place do we find a detailed border description: in the area of Tappuah. This city on the northern side of Wadi Qanah was Ephraimite. The text as it stands now, however, shows many "scars." The remark about Tappuah is undoubtedly a remnant of an older, more detailed border description. And it proves that such border descriptions did indeed exist and were old. Very probably they had once had an official function (de Geus 1976: 74–77). We do not have a town list of the tribe of Manasseh.

On the other hand, seven of the clans known from the genealogy of Numbers 26 appear as geographical districts in the Samaria ostraca. These ostraca date from the beginning of the 8th century B.C.E. They prove that these clan names at that time still functioned as names of districts. The seven are Shemida, Abiezer, Helek, Asriel, Shechem, Hoglah, and Noah. They are all situated around Samaria in central Manasseh.

Israelite settlement in Transjordan had two centers: a southern one and a northern one. The borders of the latter are roughly: to the N, the Yarmuk River; to the W, the Jordan River; to the S, the Jabbok River. It is as yet impossible to give a detailed description of the eastern border, which flanked the kingdom of Ammon. The list of Solomonic districts includes two districts in the half-tribe of Manasseh. A northern one on the plain of Irbid, S of the Yarmuk River, had its center at Ramoth-gilead (Tell er-Ramit). The

other one was in the hills of the ʿAjlûn, its center being Mahanaim. This city is commonly identified with Tell Hajjaj, which should mean that the center of this district was situated in an enclave S of the Jabbok River. A very recent proposal is the identification of Mahanaim with Tell ed-Dhahab el-Gharbi, just N of the river.

C. H. J. DE GEUS

MANASSEH, KING OF JUDAH. Manasseh, son of Hezekiah, was king of Judah ca. 687–642 B.C.E. According to 2 Kgs 21:1 and 2 Chr 33:1, Manasseh came to the throne at the age of 12 and ruled for 55 years. His mother was Hephzibah. A 55-year reign is difficult to reconcile with the chronologies of preceding and following kings and is perhaps exaggerated. Given Manasseh's youth at his accession, however, and especially in view of Hezekiah's illness, a ten-year coregency at the end of his father's reign is sometimes proposed as a way of reconciling the conflicting information (see, however, the new chronology proposed by Hayes and Hooker [1988: 71–83]).

A. Sources

The primary account of Manasseh's reign is given by the Deuteronomist in 2 Kgs 21:1–18, who claims that Manasseh's apostasy led Judah to ruin. The Chronicler follows suit and presents much the same picture for the earlier part of Manasseh's reign (2 Chr 33:1–10). But he adds in 2 Chr 33:11–17 an account of an invasion of Judah by Assyrian forces, of the capture of Manasseh and his removal to Babylon (*sic*!), of Manasseh's repentance and return to Jerusalem, and of building and military activity in Judah, as well as of a religious reform to restore the worship of Yahweh. Not even a hint of these matters is given in the Deuteronomist's account, however, and scholars are divided on whether the Chronicler's added material is based on historical information.

Neither the Deuteronomist nor the Chronicler discusses Manasseh's reign in relation to the events of the time, so scholars are left with the problematic task of setting Manasseh's activities in a larger context. It is clear that Manasseh ruled when Assyrian power was unmatched in the Near East, but to what extent Manasseh's religious, building, and military activities can be correlated with Judah's situation under Assyria is a matter of conjecture.

The annals of Esarhaddon mention Manasseh among a group of twenty-two western kings who were compelled "under terrible difficulties" to transport building material to Nineveh for a project of the Assyrian king (*ANET,* 291). Manasseh is also named in an almost identical list in Ashurbanipal's account of rulers (only the "C"edition of the annals gives the full list of names) who presented gifts to him and then helped him conquer Egypt in 668/667 B.C.E. (*ANET,* 294). The striking similarity between Esarhaddon's vassal treaties (Wiseman 1958) and language in Deuteronomy, especially chap. 28, has led some scholars to conclude that the curses in that chapter were adapted from the maledictions in the treaties (Frankena 1965; Weinfeld 1965). Frankena has speculated that Manasseh, after swearing allegiance to the Assyrian king (in his view Manasseh was probably compelled to take a loyalty oath to support the succession of the crown prince Ashurbanipal), brought a copy of the vassal treaty back to Jerusalem, where it influenced the formulation of Deuteronomy (1965: 150). However one views the significance of the vassal treaties for the study of Manasseh, the Assyrian annals always refer to the Judean king as a loyal vassal.

B. Assessments of Manasseh

The Deuteronomist who gives us the account of Manasseh's reign in 2 Kgs 21:1–18 seeks to present the Judean king as a religious apostate. At the beginning of the account, the Deuteronomist states that Manasseh "did what was evil in the sight of Yahweh" (v 2), following the "abominable" practices (*tôʿăbōt*) of the nations who had lived in the land before the Israelites (v 3; cf. v 11). There follows a catalog of Manasseh's "sins," including the following: he rebuilt the shrines (*bāmôt*) that Hezekiah had destroyed; he set up altars for Baal and made a sacred pole, as Ahab had done; he worshipped all the host of heaven and built altars (for them?) in the temple; he built altars for all the host of heaven in the two courts of the temple; he caused his son to pass through the fire (child sacrifice?); he practiced soothsaying and divination, and consulted ghosts and spirits; he placed the image of Asherah in the temple; and he shed much innocent blood in Jerusalem. In sum, Manasseh committed great wickedness and in the process led Judah to sin.

Scholars have tended to accept uncritically the Deuteronomist's extremely negative evaluation of Manasseh, faulting the king for a "decline of traditional, national religion" (Greenberg, *WHJP* 4/2: 118), which brought with it "contempt for Yahweh's law and new incidents of violence and injustice" (*BHI,* 313). Kaufmann referred to Manasseh's reign as "the heyday of Judean idolatry" (*KRI,* 141). The tendency has been to see Manasseh as a bad king because the Deuteronomist presented him in that light.

Increasingly, however, the artificiality and tendentiousness of the Deuteronomist's account is recognized, and reassessments are appearing. Ahlström, for example, avers that "Manasseh cannot be called an 'apostate' " and insists that he must be considered a traditionalist who "came into conflict with those groups still advocating the religious ideas and the radical, utopian innovations of his 'unorthodox' father" (1982: 80). Such claims, obviously, proceed from a view of the religion of Judah radically different from the standard treatments.

In addition, the study of comparative materials has demonstrated that the pattern of alternating bad and good reigns before and after Manasseh—Ahaz (bad); Hezekiah (good); Manasseh and Amon (bad); Josiah (good)—follows a literary convention in ANE historiography which renders the neatness of the schema rather suspect from a strictly historical point of view (Evans 1983: 121–25). The Deuteronomist's contrasting depiction of Manasseh and Hezekiah, for example, is greatly overdrawn. Political and social conditions during the final years of Hezekiah's reign, following Judah's capitulation to Assyria in 701 B.C.E., continued into the period of Manasseh (Evans 1980: 166–67; cf., however, Soggin 1984: 238) and left the king with little room to maneuver. Nelson's study of Manasseh's "severely limited" options, at least before the 650s, leads to the conclusion, "There is no reason to condemn Manasseh for doing what he had to do" (1983: 181).

C. Manasseh and Assyria

The kingdom Manasseh inherited from Hezekiah was a small vassal state within the Assyrian imperial system. Assyrian records claim that when Sennacherib conquered Judah in 701 B.C.E. the territory beyond the immediate environs of Jerusalem was put under the control of Assyria's loyal Philistine kings in

Ashdod, Ekron, and Gaza. Sometime during Manasseh's reign the territory was returned to Judah, presumably under conditions favorable to the Assyrians.

It has been commonplace to attribute many of Manasseh's religious practices to the powerful influence of the Assyrians over Judah in the early part of the 7th century. Hayes, for example, regards the biblical references to the worship of astral deities ("the host of heaven") during this time as an indication that "the imposition and encouragement of Assyrian religion was probably used as an important feature of Assyrian control" (*HAIJ*, 372). This view goes back to Oestreicher (1923) and has been adopted by many scholars who interpret the changing patterns of Judean religion from Ahaz to Josiah in close relationship to Judah's political stances vis-à-vis Assyria. Since the assumption was that Assyria imposed the worship of Assyrian gods on subject peoples, it followed that the non-Yahwistic religious practices during the reigns of Ahaz and Manasseh were due to the religious impositions of their imperial masters. The same line of reasoning led scholars to interpret the Yahwistic reforms of Hezekiah and Josiah as essentially political in nature, the goal being to assert political independence by eliminating Assyrian religious practices, which their predecessors had been obliged to institute.

On the basis of a thorough examination of the Assyrian evidence, McKay (1973) and Cogan (1974) have concluded that the Assyrians did not impose on vassal states the obligation to worship Assyrian gods (but see now Spieckermann 1982: 307–72). Vassal states, as distinct from provincial territories, were spared Assyrian interference in religious affairs, even though tribute payments and loyalty oaths were required to demonstrate allegiance to the Assyrian overlord. Furthermore, McKay and Cogan have shown that the non-Yahwistic religious practices in Judah during Assyrian domination display the characteristics of "popular Palestinian paganism" (McKay 1973: 67); they were "outgrowths of local traditions, popularly rooted" rather than coerced importations from Assyria (Cogan 1974: 86). This is not to claim, however, that there was no "Assyrianization" of Judah's religion. Both McKay (1973: 67–73) and Cogan (1974: 88–96) acknowledge a process of acculturation under the Assyrians which resulted in the popular resurgence and/or royal sponsorship of foreign cults under Ahaz and Manasseh (Cogan 1974: 88–96).

Beyond Manasseh's efforts to demonstrate his loyalty to Assyria, it is reasonable to assume that his religious policies were designed to win support within Judah by restoring the cultic practices which Hezekiah had taken away from the people. The connection between Hezekiah's reform and the subsequent national humiliation by the Assyrians would not have been lost on discerning Judeans. They would have welcomed Manasseh's reversal of Hezekiah's policies—policies which had cost Judah dearly in land and treasure. But others would have viewed matters differently. The Yahwistic priests in Jerusalem undoubtedly would have opposed Manasseh because of his sponsorship of non-Yahwistic practices. The levitical priests who served the local shrines may have opposed him also, for the same reason (Nielsen 1967: 105–6).

The circumstances prompting Hezekiah's reform, followed by Manasseh's reversal of the reform and then Josiah's restoration of many of the same reform measures, probably reflects a domestic conflict within Judah between rival social groups (Nielsen 1967: 104–6; Oded, *IJH*, 453–54). In 2 Kgs 21:16 it is mentioned that Manasseh shed much "innocent blood" in Jerusalem. Is this a reference to political murders? Some have suggested that it is, and in particular that it alludes to Manasseh's violent suppression of the prophets, whose voices were silent during his long reign. The legend of the martyrdom of Isaiah has inspired this view. Others maintain, however, that the absence of prophecy during Manasseh's reign was "in part because there were no major crises nor any real options in foreign policy for the prophets to preach about" (Nelson 1983: 181; cf. Nielsen 1967: 104–5).

D. 2 Chr 33:11–17

Scholars are sharply divided on whether the information supplied by the Chronicler in 2 Chr 33:11–17 is historically reliable. This account claims that Manasseh was taken as a bound captive to Babylon by the Assyrian forces, that he repented of his sins while there, and that he returned to Jerusalem and instituted a Yahwistic religious reform. (The apocryphal Prayer of Manasseh is a late attempt to construct the prayer of repentance to which 2 Chr 33:12–13 alludes. See MANASSEH, PRAYER OF.) The point at issue is which parts of the account, if any, can be given credence.

On the one hand, some claim that the crafting of the account was theologically motivated and is lacking in historical credibility. It has been referred to as an "edifying story" created by the biblical narrator to answer the perplexing question of why Yahweh would have allowed this most wicked king of all to rule longer than any other Davidic king (Soggin 1984: 239; cf. Myers *2 Chronicles* 199). Ackroyd has stated that the Chronicler's portrayal of Manasseh was designed to speak theologically to the Judean exiles—"just as such a wicked king was taken captive, repented, and was restored, so the same was to happen to Judah" (Ackroyd, *1–2 Chronicles* TB, 198). Furthermore, the skepticism about Manasseh's repentance and reform has seemed justified in light of the reform measures undertaken by Josiah. Bright, for example, has dismissed the likelihood of a reform by Manasseh with the observation, "it is clear from II Kings, ch. 23, that the abuses for which he was responsible continued till Josiah removed them" (*BHI,* 313 n. 7; cf. *HAIJ,* 376).

On the other hand, the Chronicler's special material on Manasseh does not make major claims for the king's reforms. His actions were limited to the removal of a few objects from the temple, a few altars from within the city, the restoration of the altar of Yahweh in the temple, and the use of the restored altar for sacrificial functions. Thus the reform centered on the temple and little, if any, of it extended beyond Jerusalem. The Chronicler does claim that Manasseh commanded Judah to serve Yahweh, but it is unlikely that the king's command resulted in significant changes in the religious practices outside Jerusalem, despite the Chronicler's claim that the people thereafter sacrificed only to Yahweh.

Ahlström believes that the Chronicler's report "cannot be a complete invention," and he seeks to establish a plausible connection between Manasseh's cultic reorganization, on the one hand, and the king's building activities and changes in the defense system (2 Chr 33:14), on the other (1982: 76–81). According to Ahlström, such a connection can be found when one recognizes "the complex idea of religion as a national, territorial phenomenon" (1982: 77). He maintains that the restoration of the territory which had earlier been given by Sennacherib to loyal Philistine rulers called for the extension of Manasseh's administration "in order to re-incorporate these cities territorially and religiously into the kingdom of Judah" (1982: 78).

The Chronicler claims that Manasseh built an outer wall for Jerusalem and placed military commanders in the fortified cities of Judah (2 Chr 33:14) as indications of the king's loyalty to Assyria. According to some, Manasseh was allowed to strengthen his kingdom in order that Judah could serve as an effective buffer between Assyria and Egypt (Nielsen 1967: 104; cf. Nelson 1983: 181). The possibility that fortifications at Tell el-Ḥesi and Arad were also parts of Manasseh's defense system against Egypt has been hinted at by Ahlström (1982: 79).

Still another view is that Manasseh's building and military activities may be seen as a rebellion against Assyria, a possibility which would explain Manasseh's capture by Assyrian commanders and removal to Babylon (2 Chr 33:11). The most likely occasion for Manasseh's revolt, according to most scholars, would have been the civil war led by Shamash-shum-ukin against Ashurbanipal (*BHI,* 311, 341; Ehrlich 1965; Oded, *IJH,* 455–56; Reviv, *WHJP* 4/1: 200–201). Though centered in Babylon, the uprising stirred revolts elsewhere, and Manasseh could have been among those involved. If such a revolt occurred, however, it is difficult to fathom why the Deuteronomist would have suppressed this information, especially since Manasseh's capture could have been interpreted as divine punishment in a manner consistent with the Deuteronomist's ideology (Nielsen 1967: 104).

Another possible context for a revolt by Manasseh has been suggested on the basis of a fragmentary inscription of Esarhaddon. The text reports reprisals against Phoenician and Philistine cities which had apparently joined an anti-Assyrian conspiracy with the Egyptian king Tarqu (Tarhaqa). The inscription refers to twenty-two western kings who were subdued during Esarhaddon's campaign to Egypt (671 B.C.E.), but unfortunately the tablet is broken where the names of the rebellious rulers were probably listed. Manasseh may have joined this rebellion (Cogan 1974: 69).

E. Manasseh and the Fall of Judah

2 Kings blames Judah's fall on the sins of Manasseh (2 Kgs 21:11–15; 23:26–27; 24:3–4)—the hand in these passages is that of an exilic redactor—and in this fashion imitates the depiction of Jeroboam ben

Nebat as the wicked ruler whose sins led the N kingdom of Israel to ruin. This portrayal of Manasseh as an *Unheilsherrscher* (interestingly, the Chronicler does not attribute the fall of Judah to Manasseh's sins) is a characteristic of the Deuteronomistic literature, which in this and other respects follows patterns in ANE historiography (Evans 1983).

F. Manasseh in Rabbinic Literature

The generally negative depiction of Manasseh reappears in rabbinic literature. Manasseh's idolatry, especially, is the subject of comment. The rabbis included Manasseh among those who have no share in the world to come, although Rabbi Judah disagreed because of the king's repentance (*m. Sanh.* 10:2). Rabbi Ashi, in a dream, learned of Manasseh's erudition and asked him why such a wise person worshipped idols. Manasseh responded, "Had you lived at my time, you would have caught hold of the hem of my garment and sped after me" (*b. Sanh.* 102b).

CARL D. EVANS

MANASSEH, PRAYER OF. This pseudepigraphal prayer, which is an individual lament of personal sin, is preserved primarily in Greek and Syriac. Many distinguished scholars consider that Greek is the original language; others conclude that it was composed in a Semitic language (see fuller discussion in *OTP* 2: 625–27). The prayer is too short and the history of transmission of both the Greek and Syriac texts is still too unclear to provide a firm conclusion regarding the original language.

Its penitential qualities, introspective and elevated perception of human need, as well as the denigration of Jewish prayer during the time of Jesus of Nazareth caused it to be labeled "Christian." Fabricius (1722: 1.1101) and Nestle (1899: 3: 18) claimed that it was written by a Christian. Migne (1856: 850) attributed the Greek text to the Christian author of the Apostolic Constitutions and tended to disparage the Prayer.

Now, thanks to a refined understanding of early Judaism and early Christianity, to an improved and more self-critical methodology, and to the discovery of numerous early Jewish hymns and prayers, it is certain that the Prayer of Manasseh was composed by a Jew, perhaps in or near Jerusalem, sometime before the destruction of the temple in 70 C.E. The author attempts to supply the prayer attributed by 2 Chronicles 33 to Manasseh (687–642 B.C.E.), the son of Hezekiah, supposedly the wickedest king of Judah.

For the Day of Atonement (Yom Kippur) the high priest would confess his own sins, as well as the sins of his family and the nation Israel. Confession of guilt and need for forgiveness were at the heart of early Judaism. As the Jewish expert Sandmel stated, the Prayer of Manasseh would "have fitted admirably" into the synagogue service for the Day of Atonement. For Goodspeed (1939: 56), the "simplicity, deep feeling,

and power" of the Prayer of Manasseh "give it genuine religious worth, and remind us of the genuine religious feeling that welled up in Jewish hearts." Affirming that it is a Jewish prayer, B. M. Metzger (1957: 122) calls the Prayer of Manasseh "the little classic of penitential devotion," which "breathes throughout a deep and genuine religious feeling."

Two main themes run through the Prayer of Manasseh: God's infinite mercy and grace, and the conviction that contrition and repentance are effective. Similar to the canonical prayer of the penitent sinner, Psalm 51 (which the author undoubtedly had memorized), and parallel to *Joseph and Aseneth* (which he probably influenced), are these penetrating insights (translated from the Syriac):

> And now behold I am bending the knees of my heart before you;
> and I am beseeching your kindness.
> I have sinned, O Lord, I have sinned;
> and certainly I know my sins.
> I make supplication before you;
> forgive me, O Lord, forgive me!

JAMES H. CHARLESWORTH

MANDAEISM. The term "Mandaeism" is not an original self-designation of the religious community of the so-called "Mandaeans" (*mandayî*), which persists today in several settlements in S Iraq (Basra, Bagdad, Amārah, Naṣirīya, Sūq esh-Shuyukh) and in Iranian Khuzistān (Ahwāz, Disful, Shūshtār). It is thought that they now consist of ca. 15,000 members; the majority lives in Iraq (ca. 13,000). For centuries their main business seems to have been silver- and ironsmithing, boatbuilding and bridge construction. What they do not have in common with the surrounding people is their religious tradition and literature, which is written in a unique Semitic (east Aramaic) dialect and script (both are called by modern scholars "Mandaic").

A. Self-appellations

According to the Mandaean sources the earliest self-denominations are: "elect of righteousness" (*bhirē zidga*) and "guardians" or "possessors" (*naṣuraiyī*), i.e., of secret rites and knowledge. The word "Mandaeans" itself (*mandayī*) refers back to an ancient term for "knowledge," Gnosis (manda) and therefore means "Gnostics," but today it denotes the "laity" in distinction to "priests" (*tarmidī,* actually "disciples") and "initiates" (*naṣoraiyī*). Portuguese Catholic missionaries of the 17th century called them "disciples of John the Baptist," and they were known in European literature until the 19th century under this name or as "John-Christians" (actually, they only considered John the Baptist to be one of their prophets or "priests"). The Muslims gave them the name "Sabians" (in modern dialect: *Ṣubba*), known from the Quran and early Arabic literature; the designation enabled them to belong to the "people of the book" who are tolerated by Islam. Probably the original meaning of this word is "baptists, baptizers" (from the Aram root *ṣĕba,* "to immerse, baptize, wash").

B. Literature

It is noteworthy that the literature of this small community is quite extensive and diverse. It consists of ritual books (liturgies, prayers, hymns) and commentaries, theological-mythological tractates, illustrated scrolls, legends, and magical texts. Since we do not know the names and dates of the authors, redactors, or compilers, it is very difficult to give exact information about the origin and age of the literature. Very often the nature of the writings creates a problem for interpretation because early and late material is interwoven. Surely the collection of many writings into "books" had already started before the invasion of Islam into the Mandaean settlements in Mesopotamia. Apart from these, other texts have been transmitted in the earlier form of scrolls ("divans") rather than books, and they are illustrated in a peculiar artistic style. The oldest Mandaean magical texts (bowls and lead tablets) can be dated to the 4th and 5th centuries A.D.

Modern research in the scribal transmission of the texts, and comparisons of the special terminology, style, and phrases with non-Mandaean (Gnostic and Manichaean) literature have shown that the existence of the liturgical and poetic writings must be postulated already in the 3d century A.D. The script of texts was probably developed in the 2d century or earlier in order to preserve the more ancient religious tradition, which originated in Palestine and Syria and was brought orally to Mesopotamia.

The more important Mandaean works are the following: The "Treasure" (*Ginzā*) or "Great Book" (*sidra rabbā*) is the most complete collection of writings; it consists of two parts, the larger "Right Ginza" and the smaller "Left Ginza." The "Right Ginza" is a collection of eighteen tractates with predominantly cosmological (mythological), theological, and didactic content, while the "Left Ginza" deals only with the ascent of the soul to the realm of light; therefore it is also called "Book of Souls."

The "Book of John" (*draša dyahya*) of the "Books of the Kings" (i.e., Angels, *drašê d malkê*) is also a collection of mixed content. The main parts report on the "sermons" of John the Baptist, the "discourses" of Šum (Shem), the appearance of Anoš (Enosh) in Jerusalem, and the story of the conversion of Miryai (Mary the Mother of Jesus).

The liturgical hymns, prayers, and ritual instructions are collected in the "Canonical Prayerbook," in Mandaic called *Qolastā* ("praise" or generally "collection" of hymns). The first two books of the prayerbook contain the liturgy for the baptism and the mass for the dead; both are still used today by the modern Mandaean priests.

A series of other ritual texts or scrolls have been published only in recent times, e.g., the wedding ritual, a ritual for the ordination ("crowning") of priests, a ritual for the purification of a polluted priest. Similar texts are still unpublished. A large collection of writings only for priestly use is the so-called "1012 Questions" (*Alf Trisar Šuialê*).

Some of the scrolls are illlustrated, like the interesting "Diwan Abathur," which deals with the ascent of the soul through the heavenly purgatories, or the "Diwan of the Rivers," which gives an impression of the traditional world view of the Mandaeans. The only historical information is given by the (fragmentary) "Diwan of the great Revelation," called *Haran Gawaita.* Two scrolls contain speculative interpretations of rituals for the ascending soul ("Great First World," "Small First World"). The "Book of the Signs of the Zodiac" (*Sfar malwašê*) serves the priest for horoscopes and for giving names to the Mandaeans.

C. Doctrine

A real problem for research in Mandaeism is understanding the origin, growth, and development of Mandaean traditions. No scholarly consensus has yet been reached in regard to source analysis and redaction. Such analyses would undoubtedly enable scholars to isolate early traditions and thus to trace their development throughout the extensive and diverse Mandaean literature. Here only a brief summary of the main lines of Mandaean thought can be presented. The cosmology is marked by a strict (gnostic) dualism between a "world of light" (*alma dnhura*) and a "world of darkness" (*alma dhšuka*). The world of light is ruled by a sublime being who bears different names: "Life" (*haiyê*), "Great Life," "Lord of Greatness" (*mara drabuta*), "Great Spirit" (*mana rabba*), "King of Light" (*malka dnhura*). He is surrounded by a countless number of beings of light (*uthrê* or *malkê*), living in "dwellings" (*škinata*) or "worlds" (*almê*), performing cultic acts and praising the "Life." The world of light came into being from the "First Life" by way of descending emanations or creations, which are called "Second," "Third," and

"Fourth" Life; they also bear personal names, such as Yošamin, Abāthur, and Ptahil. The last one is the later demiurge.

The "World of Darkness" is governed by the "Lord of Darkness" and arose from the "dark waters" (chaos). The main powers of the World of Darkness are a giant monster or dragon with the name "Ur" (probably a polemic transformation of Heb *ʾôr,* "light") and the evil (female) "spirit" (Ruha). Their offspring are demonic beings (*dēvs*) and "angels" (*malakê*). To them belong also the "Seven" (*šuba*) or the planets (*šibiahê*), and the "Twelve" (*trisar*) signs of the Zodiac.

The conflict between light and darkness, life and death, good and evil leads to the creation of the world (*tibil*) by the demiurge Ptahil with the help of the dark powers. In this process the body of the first man, Adam, is created by the same beings, but his "animating essence" is derived from the World of Light. This "substance of light" in Adam is called "inner (hidden) Adam" (*adam kasya, adakas*), and it represents the "soul" (*nišimta*) or "spirit" (*mana*) in humans, which has to be saved or rescued from the dark, evil body (= world) by heavenly beings of light. The salvation of these "souls" is the main concern of the Mandaean religion. One of its central creeds is the belief in several "messengers," "helpers," or "redeemers" sent by the "Life" in order to inform the pious of their "call" and to save their souls. The dominant figure of these "envoys of light" is the "knowledge of Life" (*Manda d Haiyê*), who is also called "Son of Life" (*Barhaiyê*) or "counterpart of Life" (*Dmuthaiyê*). Beside him stand the three heavenly Adamites, Hibil (Abel), Šitil (Seth), and Anoš (Enosh). Actually the Mandaeans know no "historical" redeemers but only "mythological" ones appearing throughout the ages of the history of the world as a repetition of the first revelation to Adam. Only after the confrontation with early Christianity did they develop the story that one of their messengers (Anoš or *Manda d Haiyê)* appeared in Jerusalem as an antagonist of Jesus Christ in order to expose him as a liar. In this connection John the Baptist played the role of a true Mandaean "disciple" or "priest" (*tarmida*). Whether reliable information about the early history of the Mandaeans in relation to the movement of the followers of John the Baptist can be derived from these tales is a problem that remains unsolved. For the Mandaeans John is not the founder of their religion but only one of their prominent representatives.

D. The Rituals

The center of the Mandaean religion is the cult. For centuries the traditional cultic locations (*mandi*) have been the principal points of the local communities. They consist—probably we have to say consisted—of a small hut (*maškna, bit manda, bimanda*) made of mud; in front of it lies the pool or "Jordan" (*yardna*) with "flowing water" (the sanctuaries are always situated next to rivers or channels). Elsewhere the rituals were performed on the banks of the rivers or creeks close to the residences of the community. Since the mid-1970s the Mandaeans have changed the tradition of their cultic areas in order to avoid polluted streams and rivers. Modern cultic structures (as in Baghdad and Basra) are built of bricks, and the ritual font is connected with the public water system.

The most important and oldest ceremonies are the "baptism" (*maṣbūtā*) and the "ascent of the soul" (*masiqta*). The baptism or "immersion" is performed every "Sunday" (the first day of the week, *habšabba*) in "flowing water" (*yardna*). It consists of two main parts: the first one is the actual baptismal rite including a threefold immersion (the participants dressed in the sacral white garments), a threefold "signing" of the forehead with water, a threefold gulp of water, the "crowning" with a small myrtle wreath (*klila*), and the laying on of hands by the priest. The second part takes place on the banks of the stream and consists of the anointing with oil (*sesam*), the communion of bread (*pihta*) and water (*mambuha*), and the "sealing" of the neophyte against evil spirits. Both parts are concluded by the ritual handclasp or *kušta* ("truth"). The purpose and meaning of the baptism is not only a "purification" of sins and trespasses but also a special kind of communion (*laufa*) with the world of light, because it is believed that all "Jordans" or "living waters" originate in the upper world of "Life." There is no doubt that the basic constituent features of the water ceremonies are derived from baptismal practices (lustrations) or early Judaism in the pre-Christian period. Apart from this "full baptism" ritual, there exist two lesser water rites.

The other chief ceremony is a kind of mass for the dead, or rather "for the soul" of the dead, called "ascent" (*masiqta*). It is performed at the death of a Mandaean and supports the "rise" of his soul to the world of Light and Life. It consists of lustrations with "flowing water" (*yardna*), anointing with oil, and crowning with a myrtle wreath. The main ceremony starts three days after death, when the soul is released from the body and beings its forty-five-day "ascent" through the heavenly Purgatories (*maṭarata*) until it reaches the "home of Life." Recitations from the "Left Ginza" and ceremonial meals serve the ascending soul (including its symbolic nourishment, rebirth, and creation of a spiritual body). The roots of these ceremonies and the idea of "meals in memory of the dead" probably go back to Iranian-Zoroastrian soil, but they are shaped by the gnostic background of the Mandaean religion.

The Mandaeans have many more rituals, such as the ordination of priests and bishops (*ganzibrê*), the end-of-the-year ceremony (Parwanaiya or Panǧa), the cleansing of the cult hut or temple, the marriage ceremony (which includes the baptism), and several kinds of funeral and commemorative meals (*lofani, zidqa brikha*).

Characteristic of the Mandaean religion is the close connection between rituals and gnostic ideas. It is not only "knowledge" (*manda, madihta, yada*) that brings salvation but the ceremonies, at first baptisms and "offices for the soul," which are indispensable means for the release. One may indeed say that here Gnosis has been implanted into the ancient stock of a cultic community of Jewish origin (cf. the so-called "baptismal sects"), but from this connection an authentic and even typical Mandaean-Nazoraean offspring has been created.

MANICHAEANS AND MANICHAEISM. Manichaeism was one of the major world religions and the only such religion to grow out of late antiquity's Near Eastern tradition of gnosis. See GNOSTICISM. Originally considered by Western scholars to be a Christian heresy, Manichaeism is now properly understood in the context of 3d-century Mesopotamian oriental religions. The religion was founded by the Iranian prophet Mani (216–77 C.E.) who deliberately created a universal and propagandistic religion in a context of diverse Christian, Zoroastrian, and Buddhist concepts. The religion moved E toward India and W into the Roman Empire already in Mani's lifetime, reaching as far W as Algiers and S Europe and as far E as central Asia and SE coastal China, where traces of the religion datable to the early 17th century can be identified.

A. Biography of Mani

1. Birth and Early Life. Mani was born on April 14, 216 C.E., to the southeast of the Mesopotamian city of Ctesiphon in the Parthian province of Asoristan. His parents were of Iranian descent. His mother, called Maryam in the Arabic, Syriac, and Greek sources, was related to the ruling Arsacid dynasty. His father, Patik, was a devotee in an Elchasaite Mughtasilist community, a Judeo-Christian baptismal sect with gnostic and ascetic features derived from the popular religious movement founded by the obscure figure Elchasai known from the Christian heresiologists (Merkelbach 1988a: 105–33).

Mani entered the baptismal sect at the age of four, but the most striking incident of his early life was a revelation he received at the age of twelve (April 1, 228) when an angel called "The Twin" (Arab *al-Twam;* Gk *suzugon*) appeared to him and ordered him to leave the baptismal sect at an unspecified later date. The crucial second revelation came at the age of twenty-four (April 19, 240) when the angel ordered him to begin his public ministry by openly preaching the newly revealed doctrine. This novel public teaching put Mani at odds with the traditional community and he was forced to leave with only the support of his father and two faithful followers. Although Mani's new doctrine contained many elements that were rejected by the baptismal community, the primary point of contention was probably his argument that ritual purity through baptism was of no avail and that true redemptive purity comes only from the physical and moral separation of light from darkness, spirit from matter, and good from evil.

2. The Universal Religion and Its Propagation. Mani proclaimed himself the apostle of light, the Paraclete incarnate (cf. John 14:16, 26), and the seal of the prophets who would bring the final revelation to the world. Mani viewed all previous religious traditions as contaminated versions of the originally true, though partial, teachings of the earlier prophets Buddha, Jesus, and Zoroaster (Zarathushtra). Mani, as the Seal of the Prophets, proclaimed instead the final revelation, the true universal religion which would unite all people through his teaching.

This grand plan required propagandistic methods designed to overcome the cultural and, especially, linguistic barriers which ultimately prevented the revelations of the earlier prophets from reaching the universal audience. Mani emphasized the need for the translation of Manichaean texts into all languages in order to propagate his teaching as effectively and quickly as possible. He even reformed the abstruse ideographic writing systems of the Iranian languages Parthian and Middle Persian by introducing the more comprehensive and phonetically oriented eastern Aramaic alphabet. He also produced in eastern Aramaic a corpus of seven canonical works, in direct contrast to the earlier prophets whose teachings were put into written form by their followers, who contaminated those teachings with their own

interpretations. Perhaps Mani's most effective propagandistic tool was his ability to instill in his followers a sense of the absolute necessity for a lifestyle characterized by the propagation of the religion. Mani himself traveled extensively during his own lifetime and was influenced by the popular image of the traveling Christian apostle Thomas, who tradition holds traveled as far as India to spread the Christian faith.

3. Mani's Sevenfold Canon. Mani himself wrote and published a canon of seven works in the eastern Aramaic language: (1) *The Living Gospel,* (2) *The Treasure of Life,* (3) *The Pragmateia,* (4) *The Book of Mysteries,* (5) *The Book of the Giants,* (6) *The Letters,* and (7) *The Psalms and Prayers.* Mani also wrote the *Shaburagan* which replaces the *Psalms and Prayers* in some canonical lists, but in the Middle Persian language and specifically for the emperor Shapur I. None of these texts is known to survive today in a complete form. Much previous research in Manichaeism had been dependent on a considerable number of quotes and descriptions in the writings of Christian and pagan heresiologists and historians. The most important works were the *Acta Archelai* (Ries 1959: 395–98; Lieu 1988: 69–88), the writings of the former Manichaean Augustine (cf. F.1., below), and the works of the late-10th-century and early-11th-century Arab authors al-Biruni and Ibn al-Nadim.

4. Mani's Missionary Travels, Later Life, and Death. Mani's first mission was eastward, like that of Thomas before him, and he met an early success in what is now SE Iran with the conversion of Turan-shah, the Buddhist king of Turan, and his entourage (ca. 240–42). He continued to meet success during his return journey through Persia, Susiana, and Mesene (ca. 242–50). Mani returned to the Persian Sassanid Empire when the emperor Ardashir I died and his son Shapur I assumed the throne. He met with Shapur and was granted the freedom and protection to propagate the religion throughout the empire. Manichaeism was adopted by members of the emperor's family and by influential political figures (ca. 250–55). Mani wrote the *Shaburagan,* a summary of his teachings in the Middle Persian language, during this period of imperial favor and dedicated it to Shapur. Manichaeism then spread throughout Persia, beyond its borders, and even westward into the Roman Empire (ca. 255–56). It is noteworthy that Mani accompanied Shapur in the victorious Persian campaign against the Roman forces in which the emperor Valerian was captured at Edessa in 260.

Although Mani enjoyed imperial favor under Shapur, the Magian clergy of the official state religion Zoroastrianism grew intent on persecuting the prophet. When Shapur I died (ca. 272), his successors Hormizd (reigned 273) and Bahram I (reigned 273–77) both favored the traditional state religion. The Zoroastrian high priest Kerder, now strengthened by widespread nationalist aspirations, was successful in convincing Bahram to begin official persecution of the minority movement. By order of the emperor, Mani was arrested, brought to Gundeshahbur (Susiana), interrogated for one month under Kerder, and died in prison in about the year 277.

B. History of Research through the 19th Century

The success of the intense and almost universal heresiological polemic against Manichaeism resulted in the effective censorship and eventual elimination of Manichaean texts from the Western and Eastern manuscript traditions. Heretics of all types throughout the medieval period were uncritically slandered as Manichaeans. Even Luther's Catholic detractors spoke of a revived Manichaeism. The Protestant response demanded a more objective understanding of Manichaeism, investigated known Manichaean evidences, and so initiated the modern study of the religion.

From the 16th through the 18th centuries, the works of Christian and pagan heresiologists were studied in depth, resulting in the interpretation of Manichaeism as primarily a Christian heresy, rather than as an independent religion in its own right (Ries 1988: 17–48). This position was challenged in 1734–39 by the Calvinist theologian Isaac de Beausobre who, apparently the first to reject the negative bias of the heresiological tradition, argued that Mani was a brilliant precursor of Luther and thus part of the history of reformed Christianity. Although this position was ultimately rejected, the great contribution of Beausobre's study was that it drew attention to the previously ignored Eastern sources, sources which a later generation was to take seriously (Ries 1988: 59–112).

About one hundred years later, F. C. Baur (1831) advanced Manichaean studies by explicating the significance of the Buddhist, Indo-Iranian, and Zoroastrian elements in Manichaeism, thus bringing the study of Manichaeism into its natural interpretive context: that of the history of oriental religions. G. Flügel (1862) was the first to discuss the significance of the newly discovered and less biased Arab authors, like the 10th-century historian Ibn al-Nadim, for a more objective understanding of Manichaeism. Flügel argued that Mani's eclectic oriental religion was primarily based on Zoroastrianism and Mughtasilism, which Mani then creatively reinterpreted using biblical models. K. Kessler's study (1889) pushed Manichaean origins even further back in time to the pre-Zoroastrian beliefs of Chaldeo-Babylonian religion. According to Kessler, Mani was concerned with recovering the original sources of Zoroaster's beliefs in an attempt to undercut his Magian opponents in the Sassanid court. To these ancient Babylonian beliefs Mani then added elements from Buddhism, Christianity, and Mithraism (a theory accepted by A. Harnack and W. Bousset).

C. Great Discoveries of Manichaean Literature in the 20th Century

The following survey of recently discovered Manichaean texts will cover only the most extensively studied and representative examples. Other texts are discussed by Lieu (1985: passim; cf. Ries 1988: 209–38).

1. Central Asian and Chinese Texts. German archaeological teams under the direction of A. von Le Coq and A. Grünwedel were engaged in four expeditions (1904–14) of ruined Manichaean monasteries at Turfan and Qoco in Sinkiang, China (north of Tibet; Lieu 1985: 199–201). The teams recovered thousands of fragments from heavily damaged Manichaean manuscripts. These Turfan fragments (many could not be conserved) are the disintegrated remains of what were once high-quality illuminated manuscripts which had suffered mutilation under Muslim conquerors in the 14th century. The texts are written in several Central Asian languages; the most common are Middle Persian, Parthian, Sogdian, and Uighur, but texts were also found in the rarely attested Tocharian B and Bactrian. They are now conserved in the collection of the Germany Academy of Sciences in Berlin.

Sir Aurel Stein discovered in 1905–7 the remains of a large hoard of Buddhist and Manichaean manuscripts in the Temple of the Thousand Buddhas at Tun-huang (500 km E-SE of Turfan). Stein recovered a long Manichaean confessional text in Uighur for Auditors entitled *Confessional for the Hearers,* and three Manichaean texts translated into Chinese from Iranian-language originals (Lieu 1985: 202–6; cf. the new text editions in Lin 1987: 168–265 and pls. 1–45): (1) the *Treatise,* a discussion on cosmogony and its implications for the everyday life of the Manichaean Elect and Auditors, now conserved in Beijing; (2) the *Hymnscroll,* now in London, and (3) *The Compendium of the Teaching of Mani, the Buddha of Light,* a summary of Manichaean teachings. This final manuscript's translation is dated in the text's preface to a date that can be assigned in the Western calendar to July 16, 731. The manuscript itself was physically divided into two parts before its acquisition by Stein in 1907 (London; Ms. Stein 3969) and Pelliot in 1908 (Paris; Coll. Pelliot No 3884; cf. Lin 1988: 89–92).

Western scholars are now informed of the numerous recent discoveries of Manichaean archaeological sites, artifacts, and texts in Central Asia and China through the works of S. N. C. Lieu (1985: 178–264, 322–25, 341–43) and Geng Shimin (1990). As an example of a most recent discovery of a Manichaean text in Chinese, Lin Wu-shu of Sun Yat Sen University (Guangzhou, China) published a fragmentary Manichaean inscription which was found in Fukien Province in 1988 (Lin 1989: 22–27, pls. I and II). The inscription on the large stele dates from 1315 to 1369, originally consisted of sixteen calligraphic Chinese characters (eight are fully extant and two are fragmentary), and is similar to another Manichaean inscription in Chinese in the famous Manichaean temple in Ch'üan-chou, also in Fukien Province. That temple was discovered in the 1950s and is today the only known intact Manichaean temple site (Lieu 1985: 212–13; Lin 1987: 145–58 and pls. 60a–b). The temple contains an intact low-relief statue of "Mani the Buddha of Light." Near the temple were found inscribed (ritual?) bowls and three Manichaean tombstones. The history of research on the temple site is surveyed with bibliographic data in a useful study by Geng Shimin (1990).

2. Greek and Latin Texts. Sensational discoveries of Manichaean manuscripts have also been made in the West. A. Henrichs and L. Koenen announced in 1970 the successful decipherment of a small parchment codex acquired by the University of Cologne (P. colon. inv. nr. 4780; all 192 pages were conserved by Anton Fackelmann in 1969). The *Codex Manichaeicus Coloniensis* (= *CMC;* from Lycopolis?) dates from the end of the 4th or the beginning of the 5th century and contains a Greek translation of a previously unknown Manichaean text originally written in Syriac with the title *On the Origin of His Body* (Koenen and Römer 1988). The text seems to be an anthology containing quotations from the works of several of Mani's early disciples edited by a final redactor around a core of Mani's own autobiographical statements. The traditions contained in the *CMC* concern Mani's latter days with the baptismal sect and his early missionary journeys after the age of twenty-four, and thus constitute some of the most important sources of information on the early period of Mani's life.

A fragmentary Manichaean parchment codex, the *Tebessa Codex,* written in Latin was discovered in a cave near Theveste (Algeria) in 1918 and placed in the National Library of Paris (*Nouvelles acquisitiones latines* 1114). Only twenty-five damaged leaves and the slight remains of four others are preserved from this codex with each page originally carrying two columns of Latin text (Merkelbach 1988b). The extant text contains two sections: (1) *cols. 1–20,* an apologetic discussion on the relationship between the two major groups in the Manichaean church, the Elect and the Auditors, with allusions to and quotations of relevant canonical gospel texts (like the relevant Mary and Martha story from Luke 10:38–42), and (2) *cols. 21–54,* a discussion in which the unknown Manichaean author defends the "nonwork ethic" of the Manichaean Elect (who had their practical needs met by the Auditors), apparently as an apologetic response to Christian charges that the apostle Paul had clearly condemned such dependent lifestyles in 2 Thess 3:10b ("If anyone will not work, let him not eat"). The Manichaean apologist begins with that Pauline text and then continues to defend the dependent lifestyles of the Manichaean Elect with allusions to and quotations of texts from nearly every letter in the Pauline (and Deutero-Pauline) canonical corpus (no reference to Romans or Galatians, or Hebrews, is found in the highly fragmented manuscript).

3. Coptic Texts. Any discussion on the sensational discovery of seven Manichaean books in the Coptic language from Medinet Madi, Egypt (ancient Terenouthis in the Fayyum), must begin with the famous "Mani-Fund" article of C. Schmidt and H. J. Polotsky (1933). The modern history of the manuscripts has been complex and tragic. Despite some early successes by British and German scholars, attempts to inventory, conserve, and edit the still unpublished and heavily deteriorated manuscripts have frustrated postwar researchers. However, a careful and detailed analysis of the manuscripts and the history of their research (up to mid-1989) has been produced by J. M. Robinson (1990). The present discussion is indebted to that study (and to unpublished files courtesy of J. M. Robinson and C. Colpe).

Seven papyrus codices with Manichaean texts in the Coptic language were discovered by local workers digging through the ruins of an ancient house in Medinet Madi probably sometime in 1929. An antiquities dealer showed at least one of the books, on November 29, 1929, in Cairo, to the Danish Egyptologist H. O. Lange, who did not purchase any of the books. They were all purchased in the next three years through a series of acquisitions by Sir Chester Beatty, an American businessman and art collector residing in England (two codices and parts of two others are now the property of the Chester Beatty Library, Dublin), and by the noted German papyrologist Carl Schmidt of Berlin (three codices and parts of two others are now the property of the State Museums of Berlin). A few leaves are in the national collections of Vienna and Warsaw.

The seven codices are listed and described below. The names for the books and their contents are mostly modern, based on extant titles or interpretations of the often obscure contents. A long awaited photographic facsimile edition of the Beatty codices is now available under the editorship of S. Giversen (1986–88; the Dublin manuscripts have been in Copenhagen since 1984). The peculiar Subachmimic Coptic dialect (L4) used in these texts has been discussed by W.-P. Funk (1985) and the date and morphology of the codices has been discussed by J. M. Robinson (1978: 33–43).

(i) The *Psalms* codex (Beatty Codex A) was divided into two parts before Beatty acquired it. The latter part of the codex was edited, translated into English, and published by C. R. C. Allberry (1938). The first

part of the codex, estimated to contain about 155 leaves, awaits editing in the Beatty collection (Böhlig 1968a: 177–78). The *Psalms* codex appeared in Giversen's facsimile edition in 1988.

(ii) The *Synaxeis* codex (Beatty Codex B) was also divided into two parts before Beatty's acquisition. Before World War II Beatty had arranged for the codex to be conserved in Berlin. The bulk of Codex B is now in the Egyptian Museum in Berlin and has received much attention in recent years. The Berlin holdings include 125 leaves (= 250 pages) conserved under glass, five more glass frames with fragments of leaves, and the fragile remainder of the unconserved book block containing an estimated 70 to 120 leaves. The upper-facing page of the book block presents one more readable page, giving a total of 251 pages of exposed text in the Berlin collection (Mirecki 1988: 135–45). Thirteen unedited leaves from Codex B are in the Dublin collection and have appeared as unidentified "Varia" in Giversen's facsimile edition (1987: 101–26). Before the codex was purchased by Beatty, the antiquities dealer removed at least 31 damaged leaves so as to improve the appearance of the codex. These 31 leaves were later acquired by Schmidt (P. 15995), transcribed by G. Robinson, and are now in the State Museum of Berlin (Mirecki 1988: 140 n. 16). The single biggest problem concerning the editing of Codex B is the lost pagination of the 339 conserved pages and their positional relations to the leaves in the unconserved book block. The present author's work in Berlin has resulted in the first theoretical model for the codicological reconstruction of the entire codex (Mirecki 1988: 137 n. 13). That model suggests that the codex contains two texts; the first remains unidentified (a lengthy prooemium to the second text?) and the second is generally understood to be a series of homilies (Gk *synaxeis*) which reflect the structure and contents of the lost *Living Gospel* of Mani (Böhlig 1968b: 252–66). It is hoped that the model for codicological reconstruction will facilitate the production of facsimile and critical text editions within the present generation.

(iii–iv) Two related codices are the first and second volumes of the *Kephalaia* (Gk: "central principles") text. Volume I of the *Kephalaia* is conserved in the State Museum of Berlin (P. 15996). Pages 1–292 were published in a critical text edition with German translation by H. J. Polotsky and A. Böhlig (1940). There are a few unpublished leaves in Vienna (acquired by Grohmann), Warsaw (acquired as war spoils from Berlin), and the State Museum of Berlin totaling some 122 pages with assigned pagination and some 48 to 64 pages without assigned pagination, giving 170 to 186 unpublished pages of volume of the *Kephalaia* was purchased by Beatty and is now part of the Dublin collection (Beatty Codex C). Volume II has been only partly transcribed. Giversen's facsimile edition appeared in 1986.

(v) The *Homilies* codex was also divided into two parts before its sale. The bulk of the codex was acquired by Schmidt (P. 15999) and a smaller portion by Beatty (Beatty Codex D). Beatty's part was conserved by H. Ibscher; a critical text edition with German translation was published by Polotsky (1934), and a facsimile edition was published by Giversen (1987). The bulk of Schmidt's unconserved codex was apparently taken from Berlin to Leningrad in 1946 and is now presumed a tragic loss.

(vi) The *Acts* codex was acquired by Schmidt (P. 15997) with its original wooden book covers still intact. A discussion and photograph of the intact codex was published by Schmidt and Polotsky (1933: 7–8, 27, pl. 2). Only a few leaves were conserved. One is now in the Beatty collection and its photograph was published in Giversen's facsimile edition (1987: viii–ix, pls. 99–100). Transcriptions by Schmidt and/or Polotsky of three pages, along with seven leaves transcribed by S. Patterson, and a possibly related eighth leaf transcribed by the present author, are in the State Museum of Berlin. A fragment of another possibly related leaf turned up in Warsaw after the war. The bulk of the *Acts* codex was never conserved, was apparently taken to Leningrad in 1946, and is presumed another tragic loss.

(vii) The *Letters* codex was also acquired by Schmidt (P. 15998). Confused museum records suggest that between 24 to 33 leaves (= 48 to 66 pages) are extant. Three leaves turned up in Warsaw after the war and the rest are in the State Museum of Berlin. As in the case of the *Homilies* and the *Acts* codices, the unconserved bulk of the *Letters* codex was apparently taken to Leningrad in 1946, and is presumed yet another tragic loss.

D. System of Belief and the Human Predicament

Mani's teaching embraced an elaborate historical drama of supracosmic proportions in which humanity's past origin, present predicament, and future possibilities are described. The drama centers its tacit theological concern on the existential question of the origin of evil in human experience. Mani employed a typical apocalyptic scheme in which cosmic history was divided into three time periods: the past, the present, and the future. The following discussion traces only the basic profile of Mani's system and refers the reader to the appropriate primary texts and the detailed discussions of Merkelbach (1986: 16–36) and especially of Lieu (1985: 5–21), to which it is largely indebted.

1. The Past Time and the Two Principles. In the *Past Time* there existed two eternal principles, one all good and the other all evil. The good principle exists exclusively within the Kingdom of Light and finds its focus in the Father of Greatness whose fourfold majesty embraces Divinity, Light, Power, and Goodness. His throne is surrounded by at least 156 peace-loving hypostases: twelve Aeons (in three groups of four each) and 144 Aeons of Aeons. The Kingdom of Light is constructed of five elements (*stoicheia:* air, wind, light, water, and fire) and contains five peaceful "dwellings" (intelligence, knowledge, reason, thought, and deliberation). The evil principle and the Kingdom of Darkness are the complete antitheses of the good principle and the Kingdom of Light. The many monstrous and agitated inhabitants of the Kingdom of Darkness are ruled by five evil archons (demon, lion, eagle, fish, and dragon) who are in constant opposition to each other and who, collectively, make up the hellish Prince of Darkness. They are sexually preoccupied, controlled by unreined passions, and dwell in an ominous netherworld of smoke, fire, wind, water, and darkness. The two kingdoms are completely distinct yet eternally coexistent.

2. The Present Time. The *Present Time* begins when the evil inhabitants of the Kingdom of Darkness drive a wedge into the Kingdom of Light in a lustful desire to mingle with the light. The Kingdom of Darkness is thoroughly aroused and its terrifyingly vicious inhabitants enter the light in a full-scale invasion. The Father of Greatness responds by evoking a series of hypostases which may need to be sacrificed to the invaders so as to satisfy them and stop the assault. The first evocation is the Mother of Life, who then evokes the Primal Man, who fights the incoming forces of darkness but loses his battle. The five evil archons (Prince of Darkness) then consume some of the light elements of the Primal Man's armor and, having unwittingly fallen into the trap of the Father of Greatness, are now dependent on the light for their continued existence. The Primal Man awakens from his sleep of forgetfulness, remembers his divine origins, and prays for his rescue. The Father of Greatness responds by evoking a series of beings who initiate the rescue of the Primal Man: the Friend of Lights evokes the Great Architect who then evokes the Living Spirit who evokes his five Sons (the Custodian of Splendor, the Great King of Honor, Adamas of Light, the King of Glory, and Atlas). The Living Spirit cries out from the Kingdom of Light into the darkness to the Primal Man, who answers. The Cry and Answer are hypostasized and ascend to the Kingdom of Light (representing the divine word of salvation and the positive human response). The Living Spirit then grasps the Primal Man by the hand and rescues him from the Kingdom of Darkness.

The rest of the drama in the *Present Time* focuses on the work of the Father of Greatness to regain all of the light particles swallowed by the five evil archons. The Living Spirit first creates ten heavens and eight earths out of the material corpses of the slain demons. He separates the swallowed light particles into three types: the first is undefiled and from it he creates the Sun and the Moon; the second is only partly defiled and from it he creates the Stars; the third is completely defiled and so he creates an elaborate cosmic mechanism (based on Persian alchemy?) to distill the light from the matter. The Living Spirit then evokes the Third Messenger, who evokes the zodiacal Twelve Maidens, collectively the Maiden of Light, who operate the cosmic Three Wheels created to distill the light particles out of the material universe. Another evocation is the Column of Glory (the Milky Way) which transports the recovered light particles from the distilling Three Wheels to the Moon and then the Sun, which function as ships transporting the light particles to their temporary haven (the New Earth created by the Great Architect). The Third Messenger and the Maiden of Light then excite the sexual nature of the male archons, causing them to ejaculate the light particles from within them. The Sun which excites the archons falls to the earth,

becoming the source of all plant life. The female archons miscarry their light-bearing fetuses, which fall to the earth and copulate among themselves, becoming the source of all animal life. The sum total of all of these light particles trapped in matter, including plants and animals, is called the Living Self in Eastern Manichaeism but in the West is called the Suffering Jesus (*Jesus patibilis*) who is on the Light Cross (*crux luminus*).

The Prince of Darkness, in an attempt to frustrate the cosmic distillation of light particles, gives birth to the two evil demons Saclas (Ashqulan) and Nebroel (Namrael) who eat the monstrous offspring of the miscarried fetuses in order to ingest their light particles. The two demons then copulate and Nebroel gives birth to exact miniature replicas (Gen 1:27) of the confused "light-matter" macrocosm: Adam and Eve. In a typically gnostic "inverted exegesis" of Genesis 1–5, the sexually oriented evil creator can only create by copulation and birth, and so can only create matter (which is inherently evil). He is completely unable to create in the manner of the Father of Greatness by *evoking* pure spiritual *hypostases.* Consequently, Adam (representing humanity) is specifically designed by the evil creator in his own image (Gen 1:26) to procreate sexually (Gen 1:27–28). Thus, Adam can only continue the evil cycle of birth, copulation, and rebirth and in so doing fulfills his natural inclination to be "fruitful and multiply" (Gen 1:28; 5:4b). Adam's nature (representing human sexuality) thus entangles the precious light particles, transmitted through male seed, in potentially endless generations of material bodies (representing human history). But Adam was ignorant of the light within him and the facts of his true origin in the Kingdom of Light. The evocations of the Father of Greatness then send Jesus of Light to awaken Adam (Gen 3:1), to inform him of his true nature (Gen 3:4–5), and to lead him to self-recognition (Gen 3:7, 11a, 22a). Jesus of Light helps Adam eat of the Tree of Life (Gen 3:22), warns him of the dangers of sexual procreation with Eve, and so encourages an ascetic lifestyle (central for Manichaean ethics). Then Eve and a male archon copulate and Eve gives birth to Cain (Gen 4:1), who then copulates with his mother Eve, who gives birth to Abel (Gen 4:2), and so begins the incestuous interaction of Cain (Gen 4:2a) and Abel with Eve and with each other's daughters borne by Eve (Gen 4:17). Eve then receives magical knowledge from an evil archon which would enable her to copulate with the ascetic Adam. She succeeds in her desire and bears Seth (Gen 4:25a), who, as the first true son of Adam (Gen 5:3, 4b), contains a significantly larger amount of light particles than the other offspring of Eve. The ascetic Adam and Seth, self-conscious particles of light entrapped in innately evil material bodies, become the exemplary human figures for Manichaean ethics (Gen 4:26b; 5:1–32; cf. Pearson 1988: 147–55).

3. The Future Time. The *Future Time* is the third and final act of the historical cosmic drama and provides for Manichaean ethics a preview into the system of rewards and punishments. The final and Great War will break out among the unenlightened powers of darkness when the distillation of light particles from the material cosmos has neared its completion. Jesus will return at a decisive eschatological moment as the Great King and will judge humanity and the infernal powers. The Elect will become angels, the Auditors will be judged righteous, and the sinners will be cast into hell with Eve and her hellish offspring. The cosmos will disintegrate and burn in a conflagration for 1,468 years. The remaining light particles will be gathered and finally return by ascent to the Kingdom of Light while the Prince of Darkness and his diabolical minions will be cast into a bottomless pit permanently sealed will a huge stone for all eternity. The two principles of Light and Darkness will again be two separate and distinct entities, but never again comingle.

E. Structure of the Manichaean Church

Just as Jesus of Light was the prime evocation of liberation for Adam, so the Great Nous (Great Mind) is the prime evocation from Jesus of Light for the liberation of Adam's descendants throughout human history, thus providing the unique Manichaean solution to the human predicament. The primary redemptive function of the Nous to reveal (1) the true knowledge of the origin and destination of the human soul (self-recognition) and (2) the two central precepts of Manichaean belief: the three periods of cosmic history and the existence of two eternally antithetic and supracosmic principles.

Individual human beings are replicant microcosms of the confused "light-matter" macrocosm. As such they endure an eternal struggle within their own souls for release from matter and return to their true

home in the immaterial Kingdom of Light. After the individual human soul has been awakened by the Nous, that individual is conscious of the eternal dualistic realities which control its fate and can then hope to succeed against influences from the lower nature. This internal struggle was described by Mani in Pauline terms concerning the "New Man" (1 Cor 3:9–10) and "Old Man" (Eph 4:22–24) who are locked in mortal combat. The individual can succeed in this struggle through the continued protection of the Nous, which is accessible only in the teaching of Mani and the guidance of the Manichaean church. Strict adherence to the extreme ascetic requirements (sexual abstinence, poverty, vegetarianism) are impossible to enforce on the popular level and, were they to succeed, would result in the eventual extinction of the human race. Knowing that such commitment could be expected only from himself and a few choice believers, Mani divided his church into two basic classes, the Elect and the Auditors.

The Elect were required to keep the "Five Commandments" (to be pure and poor, not to lie, kill, or eat flesh) and to adhere to the "Three Seals." First, the "Seal of the Mouth" (*signacula oris*) included the avoidance of evil speech, the drinking of alcohol, and the eating of meat. The vegetarian requirement was imperative for the Elect since plants contained more light particles than flesh. The light particles were digested through the bodies of the vegetarian Elect, released through their belches into the atmosphere, distilled by the cosmic machine of the Three Wheels, and finally sent on their homeward journey along the Column of Glory (Milky Way) to the Kingdom of Light. Heresiologists thus ridiculed Manichaean Elect as "saviors of god" (*salvatores dei*). Second, the "Seal of the Hands" (*signacula manuum*) forbade the Elect from any activity which might injure material objects containing light particles. Thus killing animals, planting, harvesting, or even walking over the smallest plants could prevent the liberation of the light particles (the divine Suffering Jesus). Since the procuring and preparation of vegetable foodstuffs often required the damaging or partial destruction of light-bearing plants, the Elect were not permitted to prepare their own meals, and instead were served by the Auditors, who were pardoned for the unavoidable destruction of plants. Even bathing was not allowed for the Elect since pure water could be defiled by contact with material bodily substances. Third, the "Seal of the Breast" (*signacula sinus*) focused especially on the avoidance of sexual intercourse since the process of birth, copulation, and rebirth was directly related to Adam's lower material nature and was meant by the evil creator to enslave light particles in material bodies. The "Three Seals" were required for all Manichaean Elect, while the Auditors were given lesser requirements allowing them to aquire wealth and to marry and/or maintain mistresses, but were urged to avoid sexual relations. Only the Elect would return to the Kingdom of Light directly after death, while the Auditors could only hope to enter into the bodies of vegetables after death and finally be freed through the digestive systems of the Elect. All humans who are not awakened by the Nous will be forever damned into an inescapable cycle of reincarnation in the bodies of animals, culminating in their permanent entrapment in the Kingdom of Darkness.

The leadership of the Manichaean church was comprised of the Elect. Extant Manichaean texts in Latin, Greek, Middle Persian, and Chinese are unanimous in documenting the four classes within the church hierarchy: (1) the central figurehead or pope (Gk *archegos;* Lat *princeps*) who is Mani's successor, (2) the Twelve Apostles, (3) the 72 bishops, and (4) the 360 elders. Only males could be enrolled in these four classes. Apart from this governmental hierarchy is the larger body of the Elect and the even larger group of Auditors.

F. The History of Manichaeism after Mani's Death

The history of Manichaeism after Mani's death is extremely complex due to its twelve-hundred-year development along a continuous geographical spectrum embracing western N Africa and S Europe on its western edge and coastal SE China on its eastern edge. The present study traces only the general profile of that geohistorical development and refers the readers throughout to the detailed study by Lieu, to which it is largely indebted, and the literature cited there (1985: 78–264).

1. Missions to the West. The intense heresiological polemic against Manichaeism resulted in a now only partially extant literary corpus reflecting the westward movement of the religion. One of the earliest influential anti-Manichaean texts was the *Acta Archelai* (ca. 340), first composed in Greek and then translated into Latin, Coptic, and probably Syriac. The *Acta* was a polemical biography of Mani, an

antihagiography meant to call into question alleged divine influence on Mani's life and teachings. It may have been one cause for the creation of Manichaean hagiographies such as that exemplified in the *Cologne Mani Codex.* Cyril of Jerusalem (d. 386) found the *Acta* to be useful in a pastoral context, especially for the catechetical instruction of former Manichaeans. Ephraim of Syria (d. 373) composed a series of discourses and polemical hymns against Manichaean teaching and practice, which nevertheless continued into the next century in Ephraim's own Edessa. Titus of Bostra (d. 371) was in conflict with the Emperor Julian (reigned 360–63) during the latter's neopagan revival, but remained an effective polemicist against the Manichaeans, writing a polemical commentary on Luke and a four-volume refutation of Manichaean doctrine. Titus focused on the Manichaean solution to the problem of evil: the presupposition of an eternal evil principle. Epiphanius of Salamis (d. 403) wrote a lengthy refutation of Manichaeism in his well-known heresiology *Panarion* (ca. 376). John Chrysostom (Antioch) wrote vehemently against the religion in his polemical commentary on Matthew (ca. 390).

Manichaeans probably entered Egypt from Persia. C.H. Roberts (1938) published a manuscript containing the text of a pastoral letter against the Manichaeans by an unidentified late 3d-century bishop (Theonas?) of Alexandria. Serapion of Thmuis also wrote a lengthy refutation, *Against the Manichaeans* (ca. 339), and at about the same time the Neoplatonist and former Manichaean Alexander of Lycopolis rejected the naive literalism of Manichaean cosmology, as Augustine was to do several decades later. At the end of the 4th century, Didymus of Alexandria wrote a polemical commentary on biblical texts employed by the Manichaeans. The discovery of seven Manichaean codices at Medinet Madi in the Fayyum (see C.3 above) and the *Cologne Mani Codex*, probably in Lycopolis (see C.2 above), is further evidence of Egyptian Manichaeism.

Manichaeans probably entered N Africa (Africa Proconsularis) from Egypt. The *Tebessa Codex* and Augustine of Hippo's (354–430) nine-year association with the religion and later polemical responses against Manichaean doctrine and practice are the most famous examples of Manichaeism in N Africa. Augustine (Ries 1988: 125–93) was a Manichaean Auditor for nine years while keeping teaching posts in Tagaste and Carthage. His studies in rhetoric led him to the philosophical analysis of logical problems, which ultimately resulted in his gradual abandonment of Manichaean solutions. Augustine made a lateral move into Christianity under the influence of Christian intellectuals like Bishop Ambrose of Milan. He became an effective and vehement polemicist against Manichaean doctrine and practice until at least 399. Augustine's so-called "Anti-Manichaean Pentateuch" included five tractates written before his ordination in 391: *De moribus ecclesiae catholicae* (ca. 388–90), *De moribus Manichaeorum* (ca. 388–90), *De libero arbitrio* (ca. 388/391), *De genesi contra Manichaeos* (ca. 388–89), and *De vera religione* (390). After his ordination he continued his polemics against the Manichaeans with *De utilitate credendi* (391), *De duabus animabus* (392), *Disputatio contra Fortunatum Manichaeum* (August 28–29, 392), *Contra Adimantum Manichaeum* (394), *Contra epistulam, quam vocant Fundamenti* (396), *Contra Faustum Manichaeum* (ca. 397–98), *Disputatio contra Felicem Manichaeum* (ca. 397–98/404), *De natura boni contra Manichaeos* (399), and *Contra Secundinum Manichaeum* (399). Apart from these fourteen polemical tractates (and disputation records) dealing exclusively with Manichaeism, Augustine also produced writings which indirectly deal with the religion: *Confessionum* (397–401), *Epistulae* (nos. *79* and *236;* ca. 386–429), *Enarrationes in Psalmos* (*Ps. 140;* ca. 392–420), *Sermones 1, 2, 12, 50, 153, 182,* and *237* (ca. 391–430), *De agone christiano* (396), and *De continentia* (ca. 416–26).

Early evidence of Manichaeans in Spain is reflected in the anathematic abjuration text *Commonitorium* (= *Commonitorium sancti Augustini*) often attributed to Augustine but probably produced by Vincent or Lerins (ca. 434) on the basis of Augustine's anti-Manichaean works. An expanded version of this abjuration text was used by a certain Prosper of Lyons nearly a century later (526).

Imperial policies against the Manichaeans are clear evidence of the religion's presence in Rome itself, greater Italy, and throughout the empire. The emperors Diocletian (302), Valentinian I (372), Theodosius I (381), Theodosius II (408–50), Anastasius I (491–518), Justin I (518–527), and Justinian (529) all sought to control the spread of the religion. The fear of subversive political infiltration from Persia set the Roman authorities on guard against Manichaeans. Pope Leo I (ca. 444–45) delivered sermons meant to

inform the faithful of the Manichaean threat, and even circulated a pastoral letter (*Ad episcopus per Italiam*) to the Italian bishops urging them to be aware of Manichaean infiltrations in the orthodox clergy. A 4th-century tombstone for a Manichaean Elect was found in 1906 in Salona on the Dalmatian (Yugoslavian) coast.

The dualistic teachings of various groups such as the Paulicians, Bogomils, Albigenses, and Cathars were misidentified as Manichaean, and these groups were consequently persecuted throughout the medieval period in W Asia and Europe. The early and influential anti-Manichaean tract *Acta Archelai* was an important heresiological weapon throughout much of this period and the history of its manuscript tradition reflects its usefulness in a wide variety of contexts.

2. Missions to the East. Manichaeism traveled eastward across Persia into Transoxania already in Mani's lifetime through the missionary work of Mar Ammo. In the 6th century the Eastern Manichaeans split from the authority of the Persian Manichaean *archegos* (under Mar Sad-Ohrmizd, d. 600) and established their own sect called "the True [Pure] Ones" or "Denawars," claiming authority from Mar Ammo. The Denawars moved eastward from Sogdiana and established in the Tarim Basin an ecclesiastical see in Qoco, the capital city of the Uighur Kingdom. The basin was a natural zone for cultural transmission between China and the West, so Manichaean missionaries in the basin followed the silk routes eastward and introduced the religion to China in the 7th century (T'ang Dynasty, 650–83). The common Buddhist culture shared by Turkestan and China facilitated this eastward expansion and accounts for many Buddhist features (technical terms) in eastern Manichaeism.

Manichaeans probably found their first converts in China among Turkish and Sogdian refugees who served as contacts for the native Chinese populace. Manichaean tradition in China maintained that the religion entered the Middle Kingdom through an unknown high-ranking Manichaean priest during the reign of Emperor Kao-tsung of the T'ang Dynasty. That priest's episcopal disciple Mihr-Ormuzd was later granted an audience with the reigning Empress Wu Tse-t'ien (684–704), herself a great patroness of Buddhism. Mihr-Ormuzd at this time initiated the translation of Manichaean works into Chinese. He presented the receptive empress with a Manichaean text entitled *The Sutra of the Two Principles* (*Erh-tsung ching*), destined to become the most popular Manichaean text in China. Her toleration of the religion alienated traditional Buddhists and Confucianists. The religion was subject to restrictive imperial legislation when her own ill-fated Chou Dynasty came to an end and the T'ang Dynasty was reestablished in 705.

Civil disturbances beginning in 721 caused the T'ang government to check foreign influence on local dissidents. A Manichaean priest was required in 731 to write a summary of Manichaean doctrine for official investigation (a copy of the text, now called the *Compendium*, was discovered by Aurel Stein at Tun-Huang in 1905–7; cf. C.1., above). This incident apparently resulted in the first Chinese imperial edict against Manichaeism in the following year (732), meant to limit the spread of the religion among Chinese nationals. It calls the religion a perverse belief masquerading as a school of Buddhism and intending to mislead the common people, and since it is the indigenous religion of the "Western barbarians," its followers will not be persecuted if they keep it to themselves and cease their propagandistic activities among the Chinese people.

The T'ang Dynasty encountered serious difficulties with the rebellion of the militarist An Lu-shan from 755 to 762. The dynasty had to abandon northern China to the rebellion and seek assistance from its western Uighur neighbors. The Uighur armies liberated the eastern T'ang capital city of Lo-yang in 762. It was in Lo-yang that Sogdian Manichaean missionaries converted the powerful Uighur Khagan, who then provided the religion with sorely needed political support in China. The T'ang government succumbed to political pressure from the Uighur Khagan to allow the propagation of Manichaeism in China. The religion spread through the Yangtze Basin, where four Manichaean temples were built in 768 and contacts with Chinese nationals were reinstated. The Chinese populace grew more intolerant against Uighur culture and the T'ang government began to legislate contacts between foreigners and the Chinese people. The government found itself relatively free of foreign influence when the Uighur Empire collapsed in 840. It closed Manichaean temples with an imperial letter of 843, resulting in a massacre of

Manichaeans. Buddhism, Zoroastrianism, and Nestorian Christianity also fell out of imperial favor as Confucian influence now predominated at the imperial court and Western contacts declined.

Sogdian Manichaean missionaries who had worked among the Uighurs began with the collapse of the Uighur Empire to propagate the religion among the Kirghiz conquerors. Much of the Uighur nation moved to the southeast where they settled on the NW border of China. It was in Tun-huang that three Manichaean texts were discovered by Aurel Stein in 1905–07 (see C.1 above). Manichaeans remained influential in the Uighur court in the capital city of Qoco, the original site of the ecclesiastical see of the early Denawar Manichaeans. A. von Le Coq's second German expedition of 1904–05 discovered in Qoco thousands of high-quality illuminated Manichaean manuscripts (see C.1 above). A Chinese expedition in 1930 discovered in Qoco a document detailing the economic and organizational issues related to Manichaean monasteries and their controlling house in Qoco, further evidencing the high economic and privileged social positions associated with the monasteries. Despite the political strength of the religion, the majority of people in the Uighur kingdom remained Buddhist or Nestorian. Evidence for Manichaeism in NW China cannot be found after the 10th century and the Tarim Basin itself came under Islamic rule in the late 11th century.

A fifty-three-year period of political chaos, commonly referred to as the Five Dynasties and Ten Nations (907–60), followed the fall of the T'ang Dynasty in 907 and provided Manichaean missionaries with the opportunity to propagate the religion in the coastal regions of SE China, notably in Fukien province. Buddhist historians of the following Sung Dynasty (960–1280) blamed the chaos of the Five Dynasties period, and other more current social problems, on Manichaeans who had by then integrated themselves into Chinese society. The Sinicization of Manichaeism, now called the Religion of Light (Ming-chiao), involved the establishment of Manichaean temples under the guise of Taoist temples. This resulted in one of the most significant early victories for Chinese Manichaeans: the inclusion of a major Chinese Manichaean text (*The Sutra of the Two Principles and the Three Moments*) into the official canon of Taoist scriptures compiled under Emperor Chen-tsung (reigned 998–1022). The text thus received imperial protection during the official confiscations of the early 1120s. The Fang La rebellion of 1120–22 set officials against unauthorized religious groups like Manichaeism, but focused especially on sectarian Buddhist and Taoist groups. Many such groups were called by the derogatory name "vegetarian demon worshippers" and were subject to blanket prosecution and harassment.

Invading Jurchens captured the N Sung capital in 1126, ending the Sung Dynasty's control over a unified N and S China. The Jurchens met difficult terrain and armed resistance as they attempted to conquer territories south of the Yangtze River. The remaining Sung government moved farther S, where it met established Manichaean communities. The government blamed five rebellions between 1130 and 1150 on "vegetarian demon worshippers" and issued twenty edicts against such groups between 1132 and 1209. Southern Sung Buddhist historiography was intensely polemical toward the memory of the Religion of Light. The Taoist historians, however, seem to be silent concerning the religion, perhaps as a result of their own syncretistic nature. Confucian scholars were often genuinely interested in Manichaean doctrine, but feared the social organization and potential political power of such groups.

The Sung government ended with the decisive invasion of the Mongols, under Kublai Khan, and a final battle south of Canton in 1280. China reopened its borders to foreign influence during the eighty-eight-year period of Mongol rule (1280–1368). The Silk Road was reactivated and the seas between the S China coast and the Persian Gulf were busy with trade ships. The Mongol policy of religious toleration, in contrast to that of the Sung, allowed Manichaean missionaries to continue their work without official harassment. Even Marco Polo seems to have encountered a group of Manichaeans he thought were Christians. The Mongol control of China began to erode with the death of Kublai Khan in 1294. A series of uncoordinated rebellions began in S China and increased to the point that one of the rebel leaders, the former Buddhist novice Chu Yüan-chang, recaptured Peking from the Mongols in 1368 and established his Dynasty of Light (Ming-chao). Several sects were proscribed by his edict of 1370, including the Religion of Light (Ming-chiao).

The rest of our knowledge of the Religion of Light in China concerns the Manichaean temple on Hua-piao Hill in Ch'üan-chou, Fukien province. An inscription on the temple's statue of Mani dates the statue to 1339. Historical references preserved in the writings of Ho Ch'iao-yüan (ca. 1600) suggest that the S Chinese Manichaeans in Ch'üan-chou were still considered a distinct social group at the beginning of the 17th century. But Chinese scholars of the Ch'ing Dynasty (1644–1912) had no exact knowledge of the identity and nature of the Religion of Light.

PAUL ALLAN MIRECKI

MANIUS, TITUS (PERSON) [Gk *Titos Manios* (Τιτος Μανιος)]. Var. MANLIUS; MANILIUS. One of two Roman envoys to the people of the Jews in 164 B.C.E. (2 Macc 11:34). There is no reference in any other source to an envoy named Titus Manius, and some believe the letter mentioned in this text to be fictitious. However, the content of the letter they sent to the Jews is plausible enough, for it accords with the policy of the Romans toward the area of Syria. The letter confirmed the privileges of Lysias to the Jews after his campaign of 163 B.C.E. against Judea. The Roman envoys offered to meet the Jews' own envoy in Antioch, and to present their proposals to the king.

In an effort to establish the identity of Titus Manius other ancient sources have been searched. Moffat points out that Polybius (31.9.6) mentions one Manius Sergius who was one of the envoys to Antiochus Epiphanes in 164 B.C.E., and Livy (43.2) speaks of a T. Manlius Torquatus who went on a mission to

Egypt; but there is no record of Roman envoys to Syria with the names mentioned in this text. Moffat does not support Niese's emendation of "Manios Ernios" to "Manios Sergios"; nor does he accept "Titus" as a corruption of a name ending in "-tius" (*OTP* 1: 148). These positions and their implications have been discussed more recently in greater detail by Goldstein, who concludes that it is best to consider 2 Maccabees as the sole surviving evidence for the embassy of Quintus Memmius and Titus Manius (Goldstein *II Maccabees* AB, 422–425). See MEMMIUS, QUINTUS (PERSON).

BETTY JANE LILLIE

MANNA. The daily bread given by God to the Israelites during their forty years of wilderness wandering. Manna received its name reportedly from the question the Israelites asked when they first saw it, "What is it?" or "manna." Manna was given when Israel arrived in the wilderness of Sin and, along with occasional quail, was the only miraculous food supply the Israelites received during the forty years (Num 11:6). In fact, the supply did not cease until the Israelites arrived at the border of Canaan. The provision of manna was daily. The Lord promised to rain bread from heaven upon the ground. The people were instructed to gather it daily with the exception of the Sabbath. If they gathered too much, the remainder would spoil. Only on the sixth day were they permitted to gather a double portion (Exod 16:1–30).

Manna was described as a fine, flakelike frost. It was like a coriander seed, white, and had the taste of a wafer made with honey (Exod 16:14, 31; Num 11:8). Manna could be prepared in a variety of ways: ground into a meal, boiled in pots, or made into cakes. In other passages, manna is described as "heaven's grain" (Deut 8:3, 16; Neh 9:20; Pss 78:24, 105:40).

The provision was considered so miraculous that Moses commanded Aaron the high priest to gather an omer of manna and place it in the ark of the covenant that future generations might be reminded of the Lord's supply of bread to the great host of Israelites for forty years. In the NT, Paul called manna "spiritual" or "supernatural" food (1 Cor 10:3). Christ also compared himself with the bread that came down from heaven (John 6:31–65).

Manna has often been associated with natural phenomena. The most common natural explanation of manna proposes its connection with a gum resin produced by one or more varieties of flowering trees, such as *Alhagi maurorum* (Sinai manna), *Tamarisk gallica,* or *Fraxinus ornus* (flowering ash). The tamarisk bush annually produces a gum resin for three to six weeks. Recently, however, the natural production of manna has been associated with the excretions of two species of scale insects. In particular, manna-tamarisk is produced by the secretions and sting of a tree louse.

MANNEANS. See MINNI (PLACE).

MANOAH (PERSON) [Heb *mānôaḥ* (מָנוֹחַ)]. The father of the Danite hero Samson. Dan is described in Judg 13:2 as a "clan" (*mišpaḥâ*) rather than a tribe (*šēbeṭ*), perhaps an indication that it is in the process of settlement. The Danite camp is located at Zoran and Eshtaol in the Shephelah (13:25; 16:31; cf. 18:11–12) at a time (the late 12th century B.C.E.) when Philistine expansion had begun to put pressure on the Israelite tribes in this area (Judah and Dan). Scholars debate whether the Samson stories represent a time before or after the Danite migration to the north (see Judges 18); clearly they reflect Dan's inability to settle in its assigned territory in the central hill country (Josh 19:40–48).

Manoah and his wife are the recipients of a birth announcement concerning Samson (Judges 13). Strikingly, in view of the fact that she has the central role, the woman's name is omitted. The story utilizes the typical motif of the promise to a barren woman of a son who will have a special destiny (cf.

Sarah, Rachel, Hannah). The divine messenger appears to the woman alone with a birth announcement and instructions (13:3–5). She tells Manoah the essential facts (the injunctions placed upon her, the boy's destiny as a Nazirite) but omits certain key elements (that their son may not be shaved and that he will begin to deliver Israel from the Philistines). Manoah prays to be included in the events, "let the man of God whom you sent come again to us, and teach us what we are to do with the boy that will be born" (v 8), but in response to his prayer, the messenger again appears to the woman alone: "but Manoah her husband was not with her" (v 9). Manoah is brought to the messenger by his wife. When Manoah questions him, he receives even less information from the messenger than he had received from his wife (13:11–18).

Manoah and his wife offer a sacrifice to God (13:16–20). Only when the messenger disappears in the fire of the sacrifice does Manoah realize his divine identity (13:21); his wife had sensed it from the start (v 6). Manoah fears death, for he knows the tradition that one cannot see God and live (Exod 33:20; Judg 6:22–23; Gen 16:13–14; Exod 19:21; Gen 32:30). His wife, however, perceives a purpose behind the theophany and birth announcement and assures her husband that they will not die (in theophanies God usually gives this assurance). Not only does Manoah know less about the child's destiny than his wife, he also comprehends less well the divine plan.

Manoah and his wife play a small role in chap. 14, but do not appear in chaps. 15–16. In 14:1–4, they object to Samson's desire to marry a Philistine, for they are unaware that Samson's folly is part of God's plan (v 4). They are mentioned as accompanying Samson to Timnah in 14:5; and in 14:10, Samson's father goes with him to Timnah, presumably to arrange the marriage. Samson does not tell his father and his mother about killing the lion bare-handed or about finding honey in its carcass sometime later; these events give rise to the riddle he puts to the Philistines at his wedding feast. When the Philistines answer the riddle, having deceitfully obtained the answer through Samson's wife, Samson pays off his wager and, in a rage, returns to his father's house (14:19). The final mention of Manoah's name appears in 16:31, where we are told that Samson was buried in his father's tomb.

MAOCH (PERSON) [Heb *māʿôk* (מָעוֹךְ)]. The father of Achish, king of Gath (1 Sam 27:2). He is often identified with Maacah, father of Achish, king of Gath, of 2 Kgs 2:39. The names are similar (*māʿôk* and *maʿăkâ*), but over forty years separates the two incidents, making such an identification problematic. See also Klein *1 Samuel* WBC; and McCarter *1 Samuel* AB.

PAULINE A. VIVIANO

MAON (PERSON) [Heb *māʿôn* (מָעוֹן)]. Son of Shammai, a descendant of Caleb (1 Chr 2:45). Whether Maon ("habitation") is the name of a person or the name of a town or region is not certain (compare Josh 15:55; 1 Sam 25:2); nor is it certain that this portion of the genealogy is in its original position. On the difficulties of the genealogy in 1 Chr 2:42–50a, see Williamson (Chronicles NCBC, 55) and Braun (*1 Chronicles* WBC, 40–41).

CRAIG A. EVANS

MAON (PLACE) [Heb *māʿôn* (מָעוֹן)]. The name of two towns in S. Palestine.

1. A town in the hill country of Judah (Josh 15:55; Kallai *HGB*, 335, 347), together with other towns like Ziph and Carmel, located along the W edge of the Wilderness of Judah. Maon was approximately 8 miles S-SE of Hebron. Scholars identify the ancient site with Tell Ma'in (M.R. 162090; *HGB*, 290). Maon

was in an area that provided pastureland for small cattle in the springtime (Aharoni *LBHG,* 30). The name "Maon" which means "abode" or "dwelling" suggests that the original settlement was named after the type of buildings characteristic of the town (Aharoni *LBHG,* 109), that is, dwellings, probably for herdsmen of that region. Reference to the "wilderness of Maon" (1 Sam 23:24–25; Maon in the LXX; Paran in the MT; Klein *1 Samuel* WBC, 245, see note 1.a) indicates that the name of the town was applied to the area around it (*LBHG,* 30). The "wilderness of Maon" was located in the Arabah S of Jeshimon (1 Sam 23:24).

In the OT, the wilderness of Maon and Maon the town are mentioned in the accounts of David's encounters during his flight from Saul. David sought refuge from Saul in the wilderness of Maon (1 Sam 23:24–25) following his escape from sites in the wilderness of Ziph (1 Sam 23:15–23). "The rock … in the wilderness of Maon" (v 25) probably refers to an area with rock formations, perhaps cliffs (see ROCK OF ESCAPE), that provided security for those seeking refuge. Maon was the hometown of Nabal, an influential citizen and wealthy herdsman in the area who operated a sheepshearing business in the nearby town of Carmel and with whom David had a serious clash (1 Sam 25:1–42).

While the history of Maon during the OT period has not been defined, it must have played an important role in the political and military matters in the hill country of Judah. David's marriage to Abigail, wife of the deceased Nabal, an influential citizen from Maon, seems to have had political overtones (1 Sam 25:39–42). Militarily, Maon was a valuable defense center since it and Ziph were fortified sites and formed a line of defense protecting Jerusalem from the SE (Har-El 1981: 14). A 7th-century-B.C.E. ostracon from Arad records the taxes the king of Judah received from Maon (*LBHG,* 399).

2. A site in SW Palestine about 11 miles S of Gaza, the modern Kh. Ma'in. Maon was one of the major synagogue site locations in Palestine (Meyers 1980: 98, see map and 105; *HAB,* 152, see map no. 2). See also MEUNIM.

LAMOINE F. DEVRIES

MARA (PERSON) [Heb *mārā*ʾ (מָרָא)]. An appellative for Naomi, the mother-in-law of Ruth (Ruth 1:20). See NAOMI. Naomi and her family moved from Bethlehem-Judah to Moab where her husband Elimelech and their sons Mahlon and Chilion died (1:1–5). Upon her return to Bethlehem, the women of the city who had not seen her for ten years ask, "Is this Naomi?" (1:19). Naomi answers their question with a play on her name. "Naomi" means "pleasant," but because she had experienced bitterness in Moab she implores them to call her "Mara," meaning "bitter." By objecting to the name "Naomi," she is expressing the inappropriateness of her name since her condition has changed from joy to sorrow.

The name "Mara" has been commonly analyzed as an Aramaic form substituted for the Hebrew feminine noun *mrh,* which is the reading in several mss, derived from *mrr.* Others have explained the form as Hebrew rather than Aramaic, understanding the ʾ*alep* as an orthographic difference or as a hypocoristicon.

The wordplay is completed by Naomi's explanation of her new name where the word *mar* is repeated: "for the Almighty has dealt very bitterly with me" (1:20b). This explanation was anticipated in 1:13 by the occurrence of the word *mar:* "it is more *bitter* for me than you." The use of wordplay and popular etymologies is a common feature of the Hebrew Bible. The story of Ruth is a storehouse of literary devices to inject subtle nuances of meaning, but Naomi/Mara is the only specific wordplay explained in the story itself.

KENNETH A. MATHEWS

MARAH (PLACE) [Heb *mārâ* (מָרָה)]. After crossing the Red Sea and singing triumphantly over the demise of the Egyptians (Exod 15:1–21), Moses led the people into the Wilderness of Shur. They went three days without finding water and when they came to Marah (v 23), they found water but it was

"bitter"; so they called the place Marah, which means "bitter" (BDB, 600). The usual interpretation is that the water was brackish, i.e., salty. The people complained and Moses cried to the Lord, who showed him a tree which he threw into the water and sweetened it.

After Marah, the Israelites traveled to Elim with its 12 springs and 70 palm trees (Exod 15:27). The summary of the wilderness wanderings in Numbers 33 says that after crossing through the sea, the people went three days into the Wilderness of Etham (v 6 gives Etham as the campsite after Succoth) and camped at Marah, and from there they went to Elim (vv 8–9).

Rylaarsdam (*IB* 1: 947) claims the Way of Shur is the familiar caravan route that approached Kadesh-barnea as it led to Beer-sheba. This is evidence that Mt. Sinai is in the Edom-Paran area and not at Jebel Musa in the S apex of the peninsula. It is impossible to definitely locate the site in his view. Brackish pools and wells are frequent in many desert areas. But a three-day journey by a caravan would perhaps cover 50 miles. The account in Exod 15:23 is in etiological form. Rylaarsdam notes a possible parallel story in Exod 17:7. It may be a different occasion of lack of water or it may be a different version of the same story. There was no water and people complained so Moses struck a rock and water came out. He called the place Massah ("proof" because they had "proved" the Lord) and Meribah ("contention" because of their complaints). This story is repeated without Massah in Num 20:1–12, at Kadesh-barnea after Sinai. In contrast to Rylaarsdam, Childs (*Exodus* OTL, 268) suggested the primary tradition is not etiological in form. If it had been, the new name would reflect the new state of the spring rather than the old.

Many locations have been proposed for Marah. While there is still some doubt, it was probably Ain Hawarah, 47 miles SE of Suez and ca. 7 miles from the Red Sea, separated from the sea by a range of hills. These are among the first springs on the ancient road to the Sinai mines which the Egyptians had exploited for centuries (Wright and Filson *WHAB,* 39). Keil and Delitzsch (n.d., 57) noted the first spot on the road through the Wilderness of Shur where water is found is Hawarah. Robinson described it as a basin 6–8 feet in diameter, with 2 feet of water in it. It was so bitter, so salty, Bedouins considered it the worst water in the whole neighborhood (1856: 66–67). Gehman (*NWDB,* 586) noted the well measures ca. 20 feet across but is much wider at the bottom and has a depth of perhaps 25 feet. The soil of the region abounds in soda and the water is salty and bitter.

Several other names have been compared to the Sinai exodus site. Maroth ("bitterness") is a town in Judah (Micah 1:12). "Merathaim," twofold bitterness or twofold rebellion, is a symbolic name for Babylon in Jer 50:21. The name may be a reference to Marratim, a lagoon or swamp in the region around the mouth of the Tigris and Euphrates rivers. The conclusion in any case is that though these are different places, they suggest the commonness of the place-name "bitter."

HENRY O. THOMPSON

MARANATHA. The sentence *Maranatha* appears in 1 Cor 16:22 and *Didache* 10:6, in both cases with liturgical contexts. It is not a Greek word or phrase, and is not Hebrew, but rather a transliteration into Greek letters of an Aramaic phrase. Underlying the Greek text are the Aramaic words *mar,* "lord," and a form of the verb *ʾăṯā,* "to come." The essential questions raised by the expression are the proper segmentation of the sentence (that is, as *maran atha* or as *marana tha*), its precise meaning, and the specific dialect of Aramaic that it represents.

The sentence *maran atha* would mean either "Our Lord/Master has come," or perhaps (if *atha* is interpreted as a participle) "Our Lord/Master is coming" (possibly, "will come"). The word division *marana tha* would give by contrast "Our Lord/Master, come!" (*tha* being the imperative). The proper segmentation of the expression is thus essential to its proper interpretation, and this in turn depends on a correct determination of the dialect of Aramaic it represents.

The context of the expression in both the NT and the *Didache* is formulaic. In Paul's usage it is linked to a curse: "If anyone has no love for the Lord, let him be accursed. *Maranatha*" (1 Cor 16:22). In the

Didache the context is eucharistic: "Let grace come and this world pass away. Hosanna to the God of David. If anyone is holy let him come; if he is not, let him repent. *Maranatha.* Amen" (*Didache* 10:6). The outlook is clearly eschatological. The same type of outlook also appears in 1 Cor 11:23–26, a eucharistic section which includes the injunction, "For as often as you eat this bread and drink the cup, you proclaim the Lord's death *until he comes*" (1 Cor 11:26 [emphasis added]; see Kuhn *TDNT* 4:471). This would point to the meaning "Our Lord, come!" Rev 22:20 indeed supplies such a sense: "Amen. Come, Lord Jesus!"

These examples of context and usage seem to indicate the segmentation *marana tha.* What, then, of the dialect? Presuming that the Aramaic noun *mār* ("Lord") carries a 1st-person plural pronominal suffix ("our"), is that suffix /-an/ (thus giving *maran*) or /-anā/ (giving *marana*)? (Both forms of the suffix are attested in different dialects of Aramaic.) Aramaic texts from Qumran and Wadi Murabba‘at, along with the earliest known rabbinic text, the *Megilḷ Ta‘anit,* support the longer form /-anā/ (with a single possible exception) rather than the shorter /-an/. (The latter, shorter form is the usual form of the suffix in the Palestinian Talmud and the Midrash.) Evidence from Aramaic of the 1st century C.E. also suggests that the verb (spelled in Gk *tha*) could be in Aramaic either *tâ (ʾ)* or *ʾětâ.* Spelled in the Aramaic script, the underlying forms would then be written *mrnh th* or *mrnh ʾth.* The first of these probably lies behind *marana tha,* and the correct sense of the expression is probably "Our Lord/Master, come!"

MAX WILCOX

MARCHESHVAN [Heb *marḥešwān* (מַרְחֶשְׁוָן)]. The eighth month of the ancient Hebrew calendar, roughly corresponding to October–November. See CALENDARS (ANCIENT ISRAELITE AND EARLY JEWISH).

MARCION. To the heresiologists of later centuries, Marcion was the most formidable heretic of the 2d century C.E. His teaching sprang from a radical emphasis upon the discontinuity between Christianity and Judaism. The God of Jesus, he asserted, was not the same as the God of the Hebrew Scriptures. While this ditheism was an important element of Marcionism, theological innovation was not Marcion's hallmark. In fact, he was a radical Paulinist who rejected the OT writings and organized a church with strong ascetic tendencies. The scripture of his church comprised one gospel (a version of Luke), ten letters of Paul (not including the Pastorals and Hebrews), and his own work entitled "Antitheses"—a catalog of contradictions between the teacing of Jesus and that of the OT. Indeed, the first clearly delineated canon in early Christianity was that of Marcion.

4. The Earliest Pauline Reform

———

A. Origin and Career

Marcion was born in Sinope of Pontus in NE Asia Minor in the latter half of the 1st century C.E. While it is likely that he was raised a Christian, the report of Hippolytus that he was the son of a bishop of Sinope is suspect. Hippolytus contends that Marcion was excommunicated by his own father for seducing a virgin. The account had the flavor of heresiological polemic. Often enough in the writings of Church Fathers the greatest antagonists to Catholicism were accounted moral degenerates. More reliable is the reference made by Tertullian to Marcion's occupation—that of a *nauclerus* (shipowner). This does not

seem to be polemically motivated and it accords with Marcion's later success as an organizer of a church that spread throughout the empire.

Biographical information on Marcion and his early work is scant and, as noted above, often of dubious reliability. Even the "one secure date" of Marcion's career, the year 144, in which he was excommunicated from Rome, has recently been called into question. It does not accord with the remark of Justin Martyr, who says in the year 150 that Marcion was alive "even until now." This and the fact that by Justin's time Marcionites could be found all over the empire suggest that he was active at least 10–20 years earlier (Hoffmann 1984: 44–47). The establishment of an earlier date for Marcion's activity is a matter of great significance for biblical studies, since it would strengthen the arguments of those who see the Pastoral Epistles or even the Acts of the Apostles as responses to Marcion's movement (Knox 1942: 139). At any rate, before his rejection in Rome he was active in western Asia Minor, specifically Ephesus. In Asia Minor he had encountered the Pauline corpus and was deeply affected by the struggles of the Apostle to the Nations. He began to teach the irreconcilability of the teaching of Paul and the prevailing Christian teaching, which was tightly bound to the OT.

B. Marcion's Teaching

To Marcion the only legitimate apostle was Paul. Other apostles, such as Peter, James, and John, had diluted and distorted the true teaching of Jesus. Marcion based this conclusion on his reading of Galatians 1 and 2. He saw in the letters of Paul dichotomies between faith and works of the Law—the way of Paul and the way of the Judaizers. He saw at the same time that Christianity was heavily reliant on the OT as a source of instruction and ethics. He noted that a great emphasis was placed on Christianity as the fulfillment of OT promises. One need only examine the patristic literature of the early 2d century (*1 Clement* and *Barnabas*) to realize that he was right. But Marcion noted, in addition, that the brilliant flame of the Apostle to the Nations had been reduced to a gentler glow. In many circles of Christianity Paul's basic teachings and writings were virtually ignored. Marcion surmised that Paul's gospel had been subverted, and so he set out to reconstruct that true gospel. This involved a summary dissolution of the tensions that characterized Pauline thought, namely, continuity with Judaism vis-à-vis discontinuity and freedom vis-à-vis obligation. The God from which Jesus was sent must have been other than the God of the Law (the Creator God). For the concept of another god, more precisely a lesser god—a Demiurge—Marcion was indebted to the gnostics. However, it is incorrect to label Marcion a gnostic. He did not engage in speculation about the creation of the cosmos. He did not interpret OT texts allegorically. He did not explain redemption in metaphysical terms nor insist on a secret, saving knowledge (Hoffmann 1984: 175–79). It seems, in fact, that he was not a deep or probing thinker. His theology was replete with discrepancies which Tertullian and others were only too happy to flaunt. But while his solution to the nettlesome features of Pauline theology lacked philosophical nuance, it provided a simple, graspable, and apparently consistent system—narrow in focus and easy to defend. His scriptures were selected and edited according to one overriding principle: the separation of Jesus from the OT God. He presented only one Gospel and one Apostle. To these he appended his own "Antitheses" in which he argued the principle of the opposition of the Gospel and the Law.

His christology has been characterized as modalist and docetic. It should be pointed out, however, that in his day neither of these had been officially condemned (Blackman 1948: 98). Jesus came from his Father, the Foreign God, and took on the appearance of flesh at that moment and maintained it until the crucifixion, at which point he left it. And so, for Marcion, what hung dead on the cross was not really Jesus. Yet this did not prevent Marcion from proclaiming that this apparent death had redemptive power. By it, Jesus saved the souls of those who would believe in him. Marcion even maintained the notion of the descent of Jesus among the dead. But for him this meant that Jesus freed those whom the Creator God had punished, e.g., Cain and the Sodomites. To Marcion the Creator God was not evil. He was only just. The Father of Jesus, in contrast, was loving.

When Marcion took his message to Rome he is said to have confronted Church leaders there with passages like Luke 5:36 (on sewing new patches on old garments). They found his solution to the

difficulties posed by these passages—the total separation of the Gospel from the Law, the God of Jesus from the Creator—entirely unacceptable, and they rejected him.

Any number of people before and since Marcion received such a rejection and resolutely went on teaching to those who would listen. In most cases, once they died their following disappeared shortly thereafter. Marcion went much further than that. He set out to organize his own church, "the True Church," in his mind. Marcion's church taught from his own scriptures and required sexual abstinence (procreation being a command of the Creator God), but otherwise looked very much like the church which had rejected him. He took over the basic structures of worship and organization. Marcionites celebrated baptism and the Lord's Supper. They maintained the roles of catechumens, deacons and deaconesses, presbyters and bishops. In the Marcionite liturgy water was used instead of wine, wine thought to be the product of the Creator. But in most other respects it seems that Marcionite worship resembled that of non-Marcionites.

Marcion's modifications of church order may have involved a system of short terms of office for bishops, participation of women in significant leadership roles (since "in Christ there is neither male nor female"), and a reduction of the distinction between clergy and laity in general. It is difficult to ascertain just how far these reforms were actually instituted within Marcionism, as there is disagreement among the heresiologists on some of them. Adding to the confusion is the fact that Marcionite practices are in some cases polemicized along with those of Montanists and other sects. It is safe to say, however, that the overall tendency was toward a rather loosely organized church. We do not hear of Marcionite councils or synods. Marcion's clearly delineated canon and the limited scope of his teaching provided sufficient consistency for strong cohesiveness without superstructures.

C. Marcion's Accomplishment

Whatever the precise nature of Marcion's system of organization, there can be no doubt it was effective. The surest proof of this is the horror and vehemence awakened in Marcion's adversaries. Scholars conjecture that in numbers alone the Marcionites may have nearly surpassed non-Marcionites in the decades of the 160s and 170s. Justin contends that even in his time the Marcionites were spread throughout the empire. Marcionite teachings were challenged in the writings of nearly every major Church Father from Irenaeus, through Tertullian in the West and Bardesanes in the East, to Epiphanius and Ephrem Syrus. Theodoret of Cyprus speaks of winning over large numbers of Marcionites in the mid–5th century. Although Marcionism had begun to wane in the West in the 3d century, it remained vigorous in the East well into the 5th. Throughout that period Marcionite churches or chapels existed side by side with those of their opponents. In fact, Cyril of Jerusalem felt it necessary to warn his catechumens when not to be misled to a Marcionite church entering a city in search of a Christian place of worship.

In the eyes of the pagans the Marcionites were not distinct from non-Marcionites. During the persecutions many Marcionites suffered the martyr's death. The centuries-long endurance of Marcionism is even more amazing when one recalls that they recruited members through adult conversion alone.

D. Marcion's Significance

The real significance of Marcion and his movement for contemporary biblical studies is not limited to his impressive record as a church organizer. His significance may be considered in four areas:

1. The Christian Canon. While not all scholars agree that Marcion forced the creation of the Christian canon, we cannot deny that his was the first. His influence in this matter is manifest in the composition of the NT canon that was later to emerge. Marcion's basic framework of gospel and apostle is seen in the Gospels and "Apostles" (i.e., Acts and Letters) in the Christian NT. What is new is the addition of an apocalypse, yet even this takes the form of a corpus of letters by a representative of the apostolic age. It should be noted that the primary difference between Marcion's canon and the Christian canon is that the former is singular and the latter plural. A conscious step in the direction of diversity was taken by anti-Marcionite Christians of the 2d through 4th centuries.

The vociferous insistence of anti-Marcionite Christianity on the validity of the OT within the canon is a point which should not be missed in our time. Since rejection of the OT was an essential feature of

Marcionism, it is straining the point only a little to say that among Christians today there are many virtual Marcionites.

2. NT Textual Criticism. Extensive quotations from Marcion's gospel and apostle have been preserved within the writings of his opponents. These provide the text critic with a reflection of the textual tradition of Luke and Paul in early 2d-century Asia Minor. The Marcionite text has been characterized as Western. Historically, the "Western Text" has been termed wild and loose, and relegated to a position of lesser importance in the assessment of text-critical problems. This situation is changing. The very term "Western Text" is considered by many to be misleading since it suggests reference to a single homogeneous text type. What has been called "Western Text" is in reality a number of non-Alexandrian text types. As text critics continue to analyze the "Western Text" and bring into sharper focus the disparate members within it, the testimony of Marcion, as one of the earliest reflections of a text in that group, will realize an even greater significance.

3. NT Literary Criticism. The shape of Marcion's gospel and Pauline corpus relates to questions about the composition of Luke and the Pauline corpus as a whole. It has been argued that Luke's gospel existed in an earlier form, without the infancy narratives and apart from Acts of the Apostles. Marcion's gospel begins with Luke 3:1. The question has been raised: Did Marcion actually remove chapters one and two from Luke, or did he receive that gospel in an earlier form which lacked them? The strength of this argument is diminished by the fact that in Marcion's gospel, Luke 4:31 seems to have followed directly on Luke 3:1. This increases the likelihood that Marcion was removing material. Nonetheless, the only known version of the Lukan gospel without the infancy narratives is Marcion's.

In terms of the Pauline corpus, Marcion attests a ten-letter corpus without the Pastorals. Was this an earlier form of the Pauline corpus than the fourteen-letter form which has come down to us? The earliest papyrus of the Pauline letters (P^{46}) does not include the Pastorals either. In addition, Marcion's order of the letters, once thought to be unique, has been found in some non-Marcionite Syrian catalogs. Thus the text of Marcion is an important piece in the puzzle of the development of the Pauline corpus. See MARCIONITE PROLOGUES TO PAUL.

4. The Earliest Pauline Reform. Perhaps the greatest significance of Marcion and his movement is the witness they provide of the earliest Pauline reform in the history of Christianity. Clearly, the success of Marcion's movement was not due to the depth or consistency of his theology. It has been explained here and elsewhere as a result of his skillful and energetic organizing, and the cohesiveness provided by his canon and sharply focused teaching. The powers of the letters of Paul as vehicles for reform must also be considered. The Pauline epistles have often triggered breakthrough insights. The examples of Augustine and Luther come immediately to mind. At several stages of the history of Christianity men and women have been inspired by Paul's willingness to challenge the recognized authorities on matters of principle. His passionate adherence to the truth of the gospel in the face of enormous personal risk is one with his incisive articulation of the central issues of the faith struggle.

It was an act of great courage for anti-Marcionite Christianity to accept into its canon the fuel for fiery reform—especially after they had seen the effects of its misuse by Marcion. Some have lamented that in the Christian canon the volatility of Paul and his teachings has been reduced by the inclusion of the Pastorals, Acts of the Apostles (in which Paul is subjugated to the Twelve), and other works in which anti-Paulinist references are made (2 Pet 3:15–17). But even if that be granted, history has shown that enough of the fire of Paul has remained in the Christian canon to trouble and to heal the Church.

JOHN J. CLABEAUX

MARCION, GOSPEL OF. One of the three major works, all now lost, from a famous dualist Christian of the mid-2d century: the other two were his *Apostle* and *Antitheses.* The basic theory of Marcion was that *the* gospel, known to Paul, was "interpolated by the defenders of Judaism," who corrupted it as they also corrupted Paul's letters. Marcion believed he could free the gospel from these interpolations, just as in his time scholars tried to reconstruct philosophies underlying Greek poetry or authentic ancient myths preceding current versions. In this way they "recovered" the authentic originals as Marcion recovered his *Gospel,* supposedly the original version of Luke. (Irenaeus says Marcion "circumcised the gospel.") Harnack and others tried to reconstruct Marcion's version but had to admit that the result was tentative because their reconstruction was based primarily on comments by his opponents. Tertullian (*Adv. Marc.* 4) wanted to show that even Marcion's Luke confirmed Christian doctrine: Epiphanius (*Haer.* 42) provided a similar discussion but cited 35 passages in which Marcion apparently altered the text. Inferences drawn from these witnesses are not fully reliable, though they are all we have, apart from a few details in the *Dialogue of Adamantius* and Syriac witnesses.

Harnack's reconstruction (1924) is based primarily on Epiphanius' supplemented from Tertullian. He rightly calls many passages in Luke "unattested" rather than "absent," noting how uncertain any reconstruction is, while Knox (1942: 86) lists "non-Marcionite passages": (cf. Hoffman 1984: 115–24).

B. Theological Modifications
C. Minor Verbal Changes or None
D. Uncertain Alterations
E. Principles for Discussing Marcion's Gospel

———

A. The Gospel

The *Antitheses* began with a Pauline exclamation about the gospel: "Oh wealth of riches! Folly, power, and ecstasy! seeing that there can be nothing to say about it, or to imagine about it, or to compare it to!" The *Gospel* was therefore a single, unique (and certainly not a four-part) work. Conceivably Marcion was protesting against the production of apocryphal gospels in his time.

The earliest witness to the *Gospel* is Irenaeus of Lyons (ca. 185), whose statements about Marcion's teaching are clearly based on it. "Jesus came into Judaea from that Father who is above the world-creating god, manifest in the form of a man, in the times of Pontius Pilate the governor, the procurator of Tiberius Caesar. He dissolved the prophets and the law (Luke 23:2 according to Marcion) and all the works of that god who made the world." Marcion "circumcised the gospel according to Luke and removed everything written about the birth of the Lord, and much of his teaching, in which he is plainly described as ackowledging the Creator of this universe as his Father."

Tertullian supplies more detail. Marcion "ascribed no author to the gospel" and held that "the title was adulterated" (4.3.5). The *Gospel* began thus: "In the 15th year of the principate of Tiberius he came down to Capernaum" (Luke 3:1; 4:31); compare 4:32, which Marcion reads as "They were astonished at his teaching, which was against the law and the prophets" (4.7.7). Compare Marcion's modification of Luke 23:2: "We found this man leading the nation astray" (Marcion adds "and destroying the law and the prophets") "and forbidding the payment of taxes" (adding "and leading women and children astray") "and calling himself Christ a king" (Tert *Adv. Marc.* 4.42.1).

B. Theological Modifications

Marcion thus did not preserve Luke's literary-historical prologue or relate stories about Jesus' family, his birth (rejecting the virginal conception with it), and his forerunner John (1–2; 3:1c–4:15; contrast 7:27). He said, however, that Luke 7:23, "Blessed is he who is not scandalized in me," refers to John the Baptist, as does "my messenger" in 7:27. (Harnack 1924: 197 claims that Luke 7:29–35 on John the Baptist was lacking but cites no evidence.) At Luke 16:16, "The law and the prophets until John," Marcion adds "from whom the kingdom of God is proclaimed," according to Tert *Adv. Marc.* 4.33.7: "and

everyone forces [his way] into it." At Luke 8:19a, 20a, Marcion deletes mention of Jesus' mother and brothers but is willing for people to refer to them generally as "your mother and your brothers," thus probably omitting verse 19 (Knox 1942).

The passages discussed just below are the most important ones theologically, though the minor alterations considered later offer greater possibilities for trying to decide the priority of Luke to Marcion because most of them are theologically neutral.

Luke 5:14. "Go show yourself to the priest and offer the gift … as Moses commanded, as a testimony to them" (Marcion substituted "that this may be a testimony to you"). Marcion usually avoids mention of officers of the Jewish religion (cf. 9:22; 20:19; 22:4, 50; 23:50).

Luke 9:22. "Saying, the Son of Man must suffer many things" (omitting "and be rejected by the elders and chief priests and scribes": cf. note on 5:14) "and be killed and raised" (substituting "after three days" for "on the third day" with Mark and Codex Bezae and OL: Tert *Adv. Marc.* 4.21.7 reads "after the third day").

Luke 9:30–31. "And behold, two men were speaking (Marcion substitutes "standing," as in v 32) with him, Elijah and Moses [order reversed] in glory." Knox suggests he omits 9:31 where the two witnesses predict his death.

Luke 10:21. "I thank thee, Lord of heaven"—omitting both "Father" and "of earth," but continuing with "Yea, Father." This is attested by Tertullian (4.25.1). Similarly Marcion retains Luke 11:5–13 but has it end "how much more the Father?" (deleting "from heaven").

Luke 10:25. From Tert 4.25.14: Marcion deletes "eternal" and reads "What shall I do to inherit life?" (i.e., long life as in the OT). The Lord answered in accordance with the Law, "You shall love the Lord your God with all your heart and all your soul and all your strength"—since the inquiry was about life under the Law.

Luke 10:26, 28 from Epiphanius: "He said to the lawyer, 'What is written in the law?' And answering in accordance with the answer of the lawyer, he said, 'You said rightly; do this that you may live.' " This explains the canonical text (Harnack 1924: 206) and avoids having Jesus ask for observance of the Law.

Luke 11:2. From Tert 4.26.3–4: it is very likely that Marcion's version of the Lord's Prayer began, "Father, let thy Holy Spirit come upon us and cleanse us" (Harnack 1924: 207). Marcion seems to have held that "in the gospel Christ himself is the kingdom of God" (Tert 4.33.8, though Kroymann bracketed *Christus ipse;* compare Origen *Matthew* 14:7) and thus did not want to begin with "Thy kingdom come."

Luke 11:29–32. "This generation, a sign will not be given it" (11:29). Marcion "deletes the words about Jonah the prophet and Nineveh and the queen of the south and Solomon" (11:30–32: so Harnack 1924: 209 and Knox 1942 with reference to Tert 4.27.1): Jesus was not really foretold in the OT. Similarly Marcion deletes Luke 11:49–51 because of references to the wisdom of God and the prophets (Harnack 1924: 210).

Luke 12:6. Marcion omits the verse about God's care for sparrows and probably v 7 about the numbered hairs of the head (cf. 21:18): Tertullian mentions neither verse (Harnack 1924: 212). For Marcion God is a god of grace, not of nature. Thus at Luke 12:28 Marcion deletes "God clothes the chaff," and perhaps omits the whole verse (Harnack 1924: 214).

Luke 12:8. Instead of "He will confess before the angels of God" Marcion reads (with Sinaiticus and Matt) "before God" (Harnack 1924: 212).

Luke 13:1–9. Marcion deletes the section, which suggests that repentant Israel will be saved.

Luke 15:11–32. Marcion deletes the parable of the Prodigal Son (Harnack 1924: 219).

Luke 16:17. Marcion substitutes "my words" for "the law" (Tert 4.33.9). Cf. 18:18: 23:55: 24:25.

Luke 17:10b. Marcion deletes "Say that we are unprofitable slaves: we have done what we ought to do," presumably because it could point to the duty of observing the Law.

Luke 17:12, 14, and 4:27 (the ten lepers). Marcion deletes many items, changes "He said to them" to "He sent them," and makes many other changes, adding "There were many lepers in the days of Elisha the prophet and only Naaman the Syrian was cleansed" (deletion of "in Israel"): the same combination is mentioned by Tert 4.35.6 (Harnack 1924: 223; but including "in Israel").

Luke 18:18–20. Marcion deletes the title "ruler" and after the question alters Jesus' answer. Instead of "Why do you call me good?" he reads "Do not call me good" and changes the statement "No one is good but the one God" to "One is the good God the Father." Instead of "You know the commandments" Marcion reads "I know the commandments" (cf. note on 16:17).

Luke 18:31–33. Marcion omits the whole of this passion prediction as repetitious (Harnack 1924: 226). Knox (1942) claims Luke 18:34 was also omitted because it reiterates the disciples' ignorance.

Luke 19:9b. Marcion deletes "as he [Zacchaeus] is a son of Abraham," and Tertullian (4.37.1) calls him a gentile (Harnack 1924: 227).

Luke 19:29–46. Marcion deletes the section about the ass and Bethphage, the city, and the temples as a house of prayer not a den of thieves, presumably because the section involves fulfillment of OT prophecy.

Luke 20:9–17. Marcion deletes the story about the vineyard given to farmers and "What is the stone which the builders rejected?" presumably because of its close connection with Israel.

Luke 20:19. Marcion deletes references to "scribes," "chief priests," and "the people" because he does not refer to official groups within Jewish society (cf. note on 5:14).

Luke 20:37–38. Marcion deletes these verses, presumably because they praise Moses and the patriarchs.

Luke 21:18. Marcion deletes "A hair of your head will not perish" (Harnack 1924: 231; cf. 12:6–7).

Luke 21:21–22. Marcion deletes "Then those in Judaea should flee to the mountains," etc., because of the impending events in the expression "until everything written is fulfilled." (Tert 4.39.9 passes from v 20 to v 25 and therefore Harnack 1924: 231 deletes 21–24.)

Luke 22:4. "He spoke with [omitting "the high priests and"] the generals about how to betray him to them" (cf. note on 5:14).

Luke 22:16. Marcion deletes "For I say to you, I do not eat this from now on, until it is fulfilled in the kingdom of God," and probably vv 17–18 also (Harnack 1924: 233).

Luke 22:35–38. Marcion deletes "When I sent you did you lack anything?" and perhaps "And this that is written must be fulfilled. 'He was reckoned with the lawless ones' " (Harnack 1924: 234).

Luke 22:50–51. Marcion deletes Peter's smiting and cutting off the ear of the high priest's slave as well as the healing; perhaps also the question in v 49 (Harnack 1924: 234; cf. note on 5:14).

Luke 23:33a, 34b, 43, 44–45. "And coming to a place called Skull they crucified him [omitting "and the malefactors" and *perhaps* 34a, "Father, forgive them for they know not what they do," Harnack 1924: 236] and distributed his garments."

Luke 23:43. Marcion deletes "Today you will be with me in paradise" (Harnack 1924: 236 also includes vv 35–43 or [so Knox 1942] vv 39–43).

Luke 23:50, 53. "And behold, a man named Joseph [deleting his description as a councillor] taking the body, wrapped it in linen and placed it in a hewn tomb" (cf. note on 5:14).

Luke 23:55–56. "And the women came back and observed the Sabbath in accordance with the law (Marcion substitutes "law" for "commandment," Harnack 1924: 237; Codex Bezae omits; cf. note on 16:17).

Epiph (Adv. Haeres) *42. 9:* Marcion cut much out of the end of the gospel (Harnack 1924: 237) but we do not know what it was. Some examples include the following: *Luke 24:5–7:* "Those in bright clothing said, 'Why do you seek the living one with the dead?' [omitting "He is not here," for Christ is everywhere? Harnack 1924: 238] he has been raised: remember what he said while still with you [omitting "in Galilee"] that the Son of Man must suffer and be delivered' " (order reversed by Epiphanius not Marcion: Harnack 1924: 238). *Luke 24:25–31:* Marcion revised what was said to Cleopas (18) and the other disciple (13) when he met them: " 'O stupid ones and slow to believe all [deleting "that the prophets spoke" and substituting "that I" (or "he," Harnack 1924: 239 from Tert 4.43.4: cf. note on 16:17)] spoke to you; did he not have to suffer these things?' … When he broke the bread their eyes were opened and they knew him." *Luke 24:38a, 39:* "Why are you troubled? [Omitting the parallelism.] See my hands and my feet, for a spirit does not have [omitting "flesh and" according to Tert 4.43.6–7: Harnack 1924: 239] bones such as you see me having." But did the risen Lord have only a skeleton?

C. Minor Verbal Changes or None

In addition to Marcion's significant changes there are many passages with less important verbal changes. These may reflect contemporary textual variants or even Marcion's editing for literary purposes, such as to simplify stories.

Luke 5:24. Marcion changes the word order to indicate that the Son of Man's authority was not on earth but to forgive sins on earth. Epiphanius himself has the same reading. This kind of change was typical of the 2d century and later.

Luke 6:3. "Did you not read this, what David did? … He went into the house of God." The story is simplified. *Luke 6:16.* "Judas Iscariot, who became the betrayer": no change. *Luke 6:17.* Jesus came down "in them," not "with them"—this is more spiritual or merely a verbal variant? *Luke 6:19a, 20a.* "And the whole crowd sought to touch him [see below, 8:42–46] and he, raising his eyes," etc. Basically the same.

Luke 7:9b. "I say to you, I have found such faith not even in Israel." The word order is changed, not the meaning, which puts a centurion's faith above Israel's. *Luke 7:36b, 38, 44b.* The only change, perhaps stylistic, depicts the woman as anointing Jesus' feet before kissing them.

Luke 8:23a, 24b. Marcion seems to accept the text or make trivial verbal changes, substituting "rowing" for "sailing" and having Jesus rebuke not the "wave" but the "sea," with Matthew and Mark. *Luke 8:42b, 43a, 44, 45a, 46a.* "It happened that as they went the crowds crushed him. And a woman touching him was healed of her blood. And the Lord said, 'Who touched me? Someone touched me, for I knew power going out from me' " (cf. Tert 4.20.8: "Who touched me? Someone touched me, for I felt power going out from me"). The whole story is simplified.

Luke 9:1–2, 6. Marcion's only change is to add "cities" to the "villages" of v 9 (*Dial. Adamantii* 2.12). *Luke 9:16.* "Looking up to heaven he blessed [Marcion adds "upon"] them." The expression occurs in Codex Bezae and OL. *Luke 9:19–20.* Marcion modifies the scene of recognition by minor changes and by deleting "of God" from "the Christ of God" (cf. Mark). *Luke 9:40.* "I asked your disciples to cast it out" (omitting "and they were unable").

Luke 11:42. "You neglect the judgment [*krisin*] of God." Marcion substitutes "calling," *klesin,* probably rejecting a judgment by the good God. But he does not necessarily delete the rest of the verse (Harnack 1924: 210). *Luke 11:47.* "Woe to you, for you build the tombs [*mnemata*] of the prophets and your fathers killed them." Perhaps Marcion read *mnemeia* = *monimenta* (cf. Tert 4.27.8; Harnack 1924: 211).

Luke 12:4a, 5b. "I say to [deleting "you"] my friends" [or "you friends," Tert 4.28.3: Harnack 1924: 211], Do not fear those who kill the body [Marcion deletes further details according to Epiphanius, not Tertullian] but fear him who has authority to cast it into gehenna after killing it." *Luke 12:30b.* Same text as Epiphanius, perhaps "your" (Father) should be deleted as in 12:32 (Harnack 1924: 214). *Luke 12:31.* "Seek for the kingdom of God and all these will be added to you"; so Clement and Epiphanius *Luke 12:32.* Instead of "Your Father" Marcion (with Clement, *Quis div. salv.* 31.2) reads "Father" (Harnack 1924: 214). *Luke 12:38.* Instead of "second or third watch" Marcion reads "evening watch" with Codex Bezae, OL, and Irenaeus (Harnack 1924: 215). *Luke 12:46.* Same as "canonical" text (Harnack 1924: 215). *Luke 12:58b.* Same (Tert 4.29.16).

Luke 13:10–17. Marcion discusses a healing on the Sabbath (Tert 4.30.1). *Luke 13:15.* "Does not each one of you free his ass or his ox from a crib on the Sabbath and lead him to water?" (Harnack 1924: 217) *Luke 13:16.* "This daughter of Abraham, whom Satan bound." Acceptable because she was bound by Satan. *Luke 13:28.* Marcion changes the sentence to "When you see all the righteous in the kingdom of God, but yourselves held outside, there will be weeping and gnashing of teeth" (cf. A. Kroymann on Tert 4.30.5 [CChr 1:1.629]; cf. Harnack 1924: 218) and deletes vv 29–35 because they suggest that Jesus' mission was to Israel.

Luke 16:22. Marcion retains the parable of Dives and Lazarus, and in 25b reads a reference to "this one" (Lazarus) rather than to "this place" (*Dial. Adamantii* 2.10 and a few NT mss agree: a trivial difference between *omicron* and *omega*). *Luke 16:29, 31.* He modifies Abraham's statement, "If someone from the dead came to them," to a more specific reference to the risen Jesus (so the author of *Dial. Adamantii* 2.10, though Harnack [1924: 222] claims that Epiphanius combined vv 29 and 31).

Luke 17:22. "The days will come when you desire to see one of the days of the Son of Man." Perhaps Marcion deletes "and you will not see it" (Harnack 1924: 224).

Luke 18:35, 38, 42. "It happened as they drew near to Jericho a blind man [Marcion may omit details] shouted, 'Jesus Son of David, have mercy on me' " (again, possibly omitting details, and adding 'And when he was healed" to "Jesus said, 'Your faith has saved you' ").

Luke 22:8. "And he sent [Marcion substitutes "said to"] Peter and the others, saying [Marcion deletes "saying"] 'Go and prepare that we may eat the Passover.' " These are stylistic changes. *Luke 22:14–15.* "And he reclined, and the [Marcion with many mss added "twelve"] apostles with him, and he said" [Marcion "to them"], 'With desire I have desired to eat this Passover with you before I suffer.' " Essentially the same. *Luke 22:41.* "He withdrew from them about a stone's throw and on his knees he prayed." There seems to be no change. *Luke 22:47–48.* "And Judas drew near to kiss him and [apparently deleting "Jesus"] said." *Luke 22:63–64.* Those present mocked him, beating and striking him saying, "Prophesy who it is [Marcion reads "was"] who struck you" (simply a grammatical correction).

Luke 23:44–45. "And the sun was darkened" (retained). *Luke 23:46.* "And crying out with a loud voice [including the quotation of Ps 31:6; Tert 4.42.6] he expired."

D. Uncertain Alterations

In several instances it is difficult to tell exactly what Marcion's reading was; the verses are: *Luke 5:39* (omitted, says Harnack 1924: 190, because lacking in Codex Bezae and OL manuscripts; unconvincing); *6:23c* (same as Luke); *9:35* ("beloved" with Matthew and Mark); *44b* (same as Luke); *22:44b* (did Marcion really omit the Bloody Sweat?).

E. Principles for Discussing Marcion's Gospel

In 4.43.7 Tertullian "explains" why Marcion's gospel contained passages favoring the Catholic position against Marcion's own views. He claims that Marcion left certain contradictory items in his gospel, so that from these he could argue both that he was not making deletions and that when he did so he was right. This psychological and theological claim is convincing only if Marcion was really editing the canonical Luke. If he used an earlier version the claim obviously fails. Unfortunately there is no reliable evidence for what Marcion's sources and procedure were, though it is reasonable to suppose, from what we know of his results, that Luke (or the version Marcion used) was not originally as full as it now is and that our text contains fewer interpolations than Marcion supposed. In other words, the book was not composed as systematically as either Marcion or his critics believed.

One might hope that early testimonies to Luke, canonical or not, could illuminate the situation, but Papias' comments on Luke, if any, are not preserved, and the "tradition" cited by Ignatius about the risen Lord may or may not echo Luke 24:36–43 (Koester 1957: 45–56).

As for studies of Luke's vocabulary and style, Knox claimed that they do not favor or oppose the traditional view, while Cadbury similarly argued that the presence or absence of non-Lukan words cannot be used to prove that Luke is or is not using a source. Such points, along with the failure of Tertullian's claim, suggest that details of Marcion's gospel can be recovered but not an overall picture. The argument that the "changes" correspond with Marcion's theology (Grant 1957: 115–19) is not convincing because conceivably Marcion may have relied on his "proto-Luke" instead of creating it.

ROBERT M. GRANT

MARCIONITE PROLOGUES TO PAUL. The Marcionite Prologues are brief introductions to all of the letters of the Pauline corpus (except Hebrews) which are found in all branches of the Vulgate (Vg) text. The shortest is a single sentence (13 words), the longest three sentences (43 words). The earliest and best Vg MSS include them. Among non-Vulgate Latin MSS they are most common in the OL: I-type. Their earliest attestation is in the commentary of Marius Victorinus on the Pauline letters (ca. 355–65). The date of their origin cannot be determined apart from a resolution of the controversy as to whether or not they were actually written by Marcionites. See MARCION.

A. Contents

The prologues to all of the community letters but 2 Corinthians and 2 Thessalonians follow a common pattern. Each begins with an ethnic or geographical identification of the recipients (e.g., "*Galati sunt Graeci*" and "*Romani sunt in partibus Italiae*"). Next noted or implied is that they received the gospel (some were, in addition, "overtaken by false apostles") and that they either held firm or betrayed the true gospel. Each prologue concludes with the remark that Paul commends the recipients, if they held firm, or calls them back, if they betrayed the gospel. In the same sentence reference is made to the city from which Paul wrote.

The prologues to 2 Corinthians, 2 Thessalonians, Philemon, and the Pastorals do not follow the pattern. These make no mention of the recipients maintaining or betraying the true gospel, but either identify the type of letter Paul wrote (2 Corinthians and Philemon) or summarize the contents (2 Thessalonians and the Pastorals). It is probable that these were composed at a time later than the prologues to the community letters.

B. Controversy over the Origin of the Prologues

The identification of these prologues as Marcionite derives from the argumentation advanced by de Bruyne (1907) and Corssen (1909), and has been held by Harnack, Knox, von Campenhausen, and Schäfer (1973). The prologues do not appear in any known Marcionite works nor are they mentioned by the heresiologists. But two facts would support a Marcionite origin. The first is the order of the letters that the prologues imply and the second is the emphasis they place on Paul as the apostle of the true gospel as opposed to other apostles. The first of these cannot be seriously contested. Connective words appear in some of the prologues which indicate that the prologue to 1 Corinthians ("these likewise heard the word of truth from the apostle") followed the prologue to Galatians ("these *first* heard the word of truth from the apostle"). Similarly, the prologue to Colossians probably came after the prologue to a letter to another city in Asia Minor such as Ephesus or Laodicea. In addition, the reference in the prologue to Philippians to that letter's origin in Rome would place Philippians near the end of a chronologically ordered Pauline corpus. The prologue to Romans makes sense only if one presumes it accompanied a 14-chapter form of that letter. All of this is explainable if the Pauline corpus for which the prologues were composed was the Marcionite one. Marcion's Pauline corpus as it can be reconstructed from the discussion of Tertullian throughout book 5 of *Adversus Marcionem* began with Galatians, had a shorter form of Romans, placed Colossians after Ephesians (which Marcion called Laodiceans), and placed Philippians near the end.

The emphasis within the prologues on Paul's opposition to false apostles has also been cited as evidence of Marcionite origin. It is especially significant that false apostles are mentioned in some of the prologues even though the letters they introduce do not dwell on that issue (Philippians and 1 Thessalonians). Many raise the question: Who but Marcionites would see the basic issue of almost every community letter in the light of Paul's opposition to false apostles?

The case is not unassailable. Objections were raised earlier in this century by Mundle, LaGrange and Bardy (*DBSup* 5: 877–79), and more recently by Schneemelcher, Frede (1964), Gamble (1977: 111–13), and Dahl (1978). Most of the proponents of the case for Marcionite origin must admit that the clearest expression of a Marcionite position—opposition to the Hebrew Scriptures—is found in the prologue to Titus, which most argue was composed by a "catholic" editor. A more serious objection is raised by the question with reference to all of the prologues: How did such tendentiously Marcionite material come to

be incorporated into the text of "orthodoxy" in the first place? Were ancient editors insensitive to Marcionite inferences?

These initial shortcomings open the door to more serious objections. The argument based on the order of the Pauline letters that the prologue presume is not compelling. The Old Syriac attests a Pauline corpus with a similar order (Dahl 1978: 253–54). Galatians can be in the first position for chronological reasons rather than theological ones. Textual studies at the Vetus Latina Institute indicate that several orders of the Pauline letters existed (Beuron 1969: 290–303). The short form of Romans is attested in mss that show no connection to Marcion whatever (Gamble 1977: 15–29). Textual studies that sought to demonstrate a significant impact of the Marcionite text on the ms tradition at large have been soundly rejected (Frede 1964: 167–68). As for the recurrent theme in the prologues of the opposition of Paul to false apostles—many modern commentators see this as an overriding issue in Pauline interpretation. Therefore, one need not assume that the ancient editors who composed or included the prologues were insensitive to the Marcionite positions expressed in them. Rather, they, as Marcion, considered Paul their champion against false apostles—but the false apostles would be their own theological opponents. Further, the prologues themselves are not unequivocal in their characterization of the "false apostles." The prologue to 1 Corinthians refers to Judaizers and to philosophers of "wordy eloquence" and the latter is not a dominant Marcionite concern. Thus, present scholarship is divided over the origin of the prologues and those who oppose their Marcionite origin are gaining momentum.

C. Implications of the Prologues

If the prologues are of Marcionite origin they represent a great irony in the textual tradition of the Bible. The Marcionites would have succeeded in planting the seeds of their thoughts into the books and minds of Western Christians for 16 or 17 centuries, since relatively recent editions of the Vg contained them. But if this is so, what must be concluded about the critical acumen of ancient authors and editors who have accepted and transmitted the prologues? Even Marius Victorinus took no exception to them. The consistent transmission of the prologues in certain branches of the Latin textual tradition would bespeak the inviolability of a written tradition once it had been taken up, even though erroneously. One might ask what other influences the Marcionites or other sects may have had.

If one does not accept Marcionite origin of the prologues, the implications for their inclusion in the Latin mss are less dramatic but still substantial. If the prologues were created for a Pauline corpus not Marcionite but similar in order and content to Marcion's, then how are we to understand Marcion's role as an editor? Did he inherit rather than create his Pauline Corpus? Dahl and Frede argue that such a 10-letter Pauline corpus did exist from before Marcion's time and that it has had an effect on the Western textual tradition of the Pauline letters especially in the OL and Old Syriac which is yet to be analyzed and explained. The disappearance of that 10-letter Pauline corpus must be reckoned with when the development of the Pauline corpus is discussed.

However one decides the origin of the prologues, they attest that editors of the 3d century (possibly earlier) saw Paul's opposition to false apostles as a crucial theme for understanding his letters. This insight either comes from Marcion himself, or is merely congenial to his viewpoint. In other words, either the Marcionites infiltrated the Latin MS tradition with their ideas, or an idea of theirs was taken up in modified form by orthodoxy at a later time against other opponents. There is a caution in all of this against drawing too hastily, or too sharply, the lines between orthodoxy and heresy in the early centuries of Christianity.

JOHN J. CLABEAUX

MARCUS AURELIUS (EMPEROR). Roman emperor (161–80) and Stoic philosopher who was born April 26, 121 as M. Annius Verus, son of a consular family of Spanish origin. His industry and seriousness were soon noticed by Hadrian, who arranged his education and betrothed him (136) to the daughter of L. Aelius Caesar, his adopted son and designated successor. When Aelius died (138), Hadrian took as his new heir Antoninus Pius. Pius in turn adopted Marcus, and Aelius' son Lucius.

After Hadrian's death (July 138), Marcus moved into the palace with Pius. He began higher studies, chiefly with the rhetorician Cornelius Fronto. A number of letters between them (the majority in Latin) survive in Fronto's correspondence, giving an insight into Marcus' nature at this time. It was only later (146–47) that his interests turned wholeheartedly to philosophy.

Quaestor in 139 and consul for the first time in 140 (with Pius), Marcus was betrothed (140) to Pius' daughter, his cousin Faustina the Younger. They married in 145, and in 146, on the birth of a daughter (first of thirteen offspring), he was granted the tribunician power and proconsular imperium. Succeeding Pius on March 7, 161, Marcus requested the same powers for Lucius, so making the principate truly collegiate for the first time. Marcus now took Pius' surname Antoninus, while Lucius took his surname Verus.

Although generally represented as a time of peace and prosperity, Marcus' reign had more than its share of natural disasters and military crises. An eastern war (162–66), in response to the Parthian seizure of Armenia, led to the importation of a plague which, combined with famine, seriously depopulated the empire. Then the northern provinces were invaded by migrating Germanic tribes (166–69), who were turned back only at Aquileia in northern Italy (169). On Verus' death (169), the need to stabilize the frontiers kept Marcus in the north (170–79) before he had to travel to Syria in response to the revolt (175) of Avidius Cassius. After the revolt fizzled out (176) Marcus journeyed northward again, leaving his son Commodus, now co-emperor (177), in charge in Rome. Successful against the Germanic tribes (177–79), Marcus was about to incorporate their territories into two new provinces when he fell ill and died at Vienna on March 17, 180.

It was during the northern campaigns that the *Meditations* (12 books, in Greek) were written. They contain few references to external events, but Marcus' preoccupation with the traditional Stoic principles of duty and self-sufficiency, and his obsession with life's transience and death as the common lot of humanity, clearly reflect the conditions under which they were written. Published posthumously with little editing, these personal, sometimes cryptic philosophical reflections rightly ensure for Marcus the fame on whose value and uncertainty he frequently ponders.

Like that of Epictetus, Marcus' Stoicism is more religious than philosophical in nature, emphasizing the need to love both God and one's fellow man. It is ironic, therefore, that Marcus should also be remembered as a persecutor of the Christians. Unjust too, for the anti-Christian hysteria of the 160s (Justin and his companions martyred at Rome, ca. 167, a date also given by Eusebius, perhaps wrongly, for Polycarp's martyrdom in Smyrna [Eusebius, *Hist. Eccl.* 4. 15; 16]) was a by-product of the plague, while the more extensive persecution at Lyons in 177 (*Hist. Eccl.* 5. pref; 1) was provoked by legislation allowing the use of condemned criminals as gladiators. The law was Marcus', not the use to which it was put.

JOHN WHITEHORNE

MARDUK (DEITY). Var. MERODACH. The patron deity of Babylon, Marduk first appeared in the 3d millennium B.C.E. as a minor Sumerian god. He was the son of Enki (Akk Ea) (Sommerfeld 1982: 9, 13). The status of the god rose with the fortunes of Hammurabi in the 18th century B.C.E.; yet throughout the Old Babylonian period Marduk's major concern remained the territory of Babylon (Hurowitz 1984: 191, 193–94). The Code of Hammurabi portrays Anu and Enlil proclaiming Marduk king over Sumer and Akkad, reflecting Babylon's rule over Mesopotamia (Ravn 1929: 88–90). In honor of their god the First Dynasty of Babylon appears to have built Esagila, the temple area dedicated to Marduk (Busink 1949: 54).

The decline of Kassite rule, in conjunction with a successful war against Elam (in which the statue of Marduk was recovered), sparked a theological glorification of the deity in the 12th century B.C.E. (Roberts 1977: 183–84; Lambert 1964: 10). At this time Marduk became viewed as the great cosmic ruler of the earth, taking on the deeds (and myths) of the major divinities of the Mesopotamian pantheon. The theology was embodied in the Enuma Elish in which Marduk appears as hero of gods and humans (Bottéro 1985: 115). See ENUMA ELISH. The creation of the universe by Marduk became the text for the New Year *akītu* celebration in Babylon (Black 1981: 40), where the recitation of the narrative and the names would recall Marduk's usurpation of the divine world (Bottéro 1977: 5–28; Lambert 1985: 60). By the 1st millennium B.C.E. Marduk was considered the supreme deity (Abusch 1984: 5), at least in Babylon.

The destruction of Babylon by Sennacherib's troops in 689 B.C.E. followed decades of turmoil in the city, which had been tolerated by the Assyrian rulers because of the veneration for Marduk and his city's culture; it is possible that the outpouring of Mardukian theology related to this event began with the turmoil itself (Diakonoff 1965: 346–47). The Esagila and its ziggurat, Etemenanki (first mentioned at this time in an historical text) were destroyed and the theological explanation was posited that Marduk, having grown furious over the corrupt behavior of his people, had, with all the other gods, abandoned the city to its enemies (Borger 1967: 12–19; *TCS* 5: 127). When the Assyrians left, they took the statue of Marduk with them. Esarhaddon reinterpreted Mardukian texts in order to rebuild the city and return the god, but not without checking the omens and not without trouble (Parpola 1983: 32–33; Lambert 1988: 158–59). The affair led to texts intended to show the relationship of Ashur and Marduk with respectful views of the latter (Soden 1955: 165; Frymer-Kensky 1983: 140).

The Neo-Babylonian Empire celebrated its independence with massive building projects, including the Esagila and Etemenanki. Marduk was glorified even to the point of being able to be seen as the *only* deity (Lambert 1975: 197–98). The divine family, Marduk, Ṣarpanitum, and Nabû, ruled the universe for half a century. When Nabonidus seized the throne in 555 B.C.E. he claimed that his right to rule and reform the cult came from Marduk (Beaulieu 1985: 83–86); then he abandoned the patron deity for the god Sin, leaving the *akītu* ceremonies to be improperly performed. This slight led Marduk's priests to seek Cyrus, the Persian, as a champion of their god. Cyrus claimed in an inscription that he was selected king and brought to the city by Marduk precisely to restore the lapsed cult (Beaulieu 1985: 354). The cult of Marduk survived into the Hellenistic period, though whether Marduk was worshiped to the time Babylon was finally abandoned late in the 1st century C.E. is unknown.

LOWELL K. HANDY

MAREAL (PLACE) [Heb *marʿălâ* (מַרְעֲלָה)]. A place on the S border of the territory of the tribe of Zebulun (Josh 19:11) in the Jezreel Valley. Its precise location is unknown. Aharoni suggests (*LBHG,* 257) identifying it with Tell Thorah (M.R. 166228).
RAPHAEL GREENBERG

MARESHAH (PERSON) [Heb *mārēšâ* (מָרֵשָׁה)]. Two individuals of the tribe of Judah.

1. Firstborn of the family of Caleb and the father of Ziph and Hebron (1 Chr 2:42). The text is confused at this point, which is possibly due to dittography. The Hebrew has *mêšaʿ,* "Mesha." However the RSV follows the LXX and reads "Mareshah."

2. Son of Laadah from the family of Shelah (1 Chr 4:21).
DAVID CHANNING SMITH

MARESHAH (PLACE) [Heb *mārēšâ* (מָרֵשָׁה)]. Var. MARISA. A town of Judah located in the S foothills.

A. Identification and History

Mareshah (Marisa, 1 Maccabees 5; 2 Maccabees 12) is identified with Tell Sandakhanna, located about 2 km S of Beit Govrin (M.R. 140111). This identification, first established by E. Robinson, is based on references from the Bible and Josephus. It is known as Marisa in the Apocryphal writings (1 Macc 5:66; 2 Macc 12:35) where it is only mentioned in passing.

Mareshah appears among the cities of Judah (Josh 15:44) and in the genealogies of the settlements (1 Chr 2:42) as belonging to the Calebites. The Bible gives no indication that it was a Canaanite city prior to the Israelite conquest. Following the division of the kingdom, Rehoboam fortified Mareshah as part of his SW defenses of Judah (2 Chr 11:5–10). Zerah the Ethiopian invaded the country about the time of Asa and reached Mareshah (about 900 B.C.E.), but was defeated in the major battle fought in the valley of Zephathah (N of Mareshah according to the LXX [2 Chr 14:8–9]). After the sack of Jerusalem by Nebuchadnezzar, Mareshah, together with all of S Judah, came under the influence of Edom.

In the Hellenistic period and perhaps even in the Persian period, a Sidonian community settled in Mareshah. Hyrcanus I captured Mareshah together with all of Idumea (*Ant* 14.364; *JW* 1.269). Afterward Beit Govrin replaced Mareshah as the district capital.

B. Excavations

An excavation was conducted at Tell Sandakhanna by F. J. Bliss and R. A. S. Macalister in 1900, as part of a series of excavations in the Shephelah in the years 1898–1900. Mareshah consists of a fortified upper city (ca. 150 m in diameter covering ca. 24 dunams), and a lower city, built around the upper city (covering ca. 300 dunams). The lower city included the subterranean complexes and the buildings above them. This area, together with the fortified tell, formed one of the largest Early Hellenistic towns in the country.

In 1902, Bliss and Macalister published the report of their excavation which concentrated on the upper city. Five years later, H. Thiersch published a detailed analysis of the report. A second analysis was published by Avi-Yonah 70 years after the excavation. The excavators identified three strata: two Hellenistic and one Israelite ("Jewish").

The Hellenistic city was almost square in plan (158 m E-W by 152 m N-S) and was surrounded by a wall defended with square and rectangular towers. The original plan of the city was organized according to the Hippodamian system, with 2 parallel main streets running E-W and 3 N-S streets intersecting the main streets at right angles. The streets varied from 2–6 m wide, most of which still had remains of paving. The street plan bounded 12 blocks of buildings, while the block located near the E wall was evidently the religious and administrative center. The three chambers in the center of the courtyard were used as a temple to honor a trinity of gods. A square structure with two courtyards, one a marketplace, the other a caravansary, also covered a city block.

Two types of buildings were identified: a large building consisting of rooms surrounding an enclosed court and a small building with rooms not arranged in a clear plan. Several buildings had remains of hearths, basins, shelves, and steps which led either to the roof or to the cellar.

Among the finds of the Hellenistic period were hundreds of vessels, Rhodian handles, 3 Greek dedicatory inscriptions, 16 small lead figurines which apparently served magical purposes, 51 limestone tablets, and 61 coins (including 13 Ptolemaic, 19 Seleucid, 25 from the time of John Hyrcanus, 1 Herodian, and 2 Greek coins of unclear provenance). Recent excavations directed by A. Kloner have found hundreds of vessels, Rhodian handles, figurines, and coins from the lower city and its caves.

The finds from the upper excavated tell and the underground systems indicate that at least three Hellenistic strata existed at Tell Maresha: Ptolemaic (3d century B.C.E.); Seleucid (2d century B.C.E.); and Hasmonean (late 2d–early 1st B.C.E.).

Beneath the Hasmonean layer, at a depth of 3.05 m, was an Israelite ("Jewish") stratum dated to the Iron Age 2C. The finds from this stratum include 17 *lmlk* seals—11 of the double-winged type and 6 of the four-winged type—from various cities: 3 from Hebron; 3 from *mmšt;* 6 from Socoh; 2 from Ziph; and 3 whose names are illegible.

C. Tombs

An extensive necropolis of the Hellenistic settlement surrounded the city. The E cemetery included 10 burial caves, 4 of which were investigated in 1902 by M. P. Peters and H. Thiersch. These caves, known as the "Sidonian tombs," contained many inscriptions, including the epitaph of Apollophanes, the son of Sesmaios, who died at 74 years old and who was the head of the Sidonian colony in Mareshah for 33 years. Two of these family tombs were richly decorated.

Tomb A, with the above-mentioned inscription, contained a painted frieze depicting someone playing a musical instrument, a rider, and many animals both wild and domesticated all arranged in a row above the gabled *kokhim* (loculi).

In Tomb B, among some of the paintings located on the inner wall of the cave and not recorded by the excavators, is a man crowned with a wreath, wearing a striped tunic, who walks while blowing a double flute. Behind him walks a woman playing a harp. Both these caves are dated, according to the dozens of inscriptions found there, to the 3d–2d centuries B.C.E.

The N cemetery contained 20 burial caves of the *kokhim* type. These *kokhim* were executed with gable-shaped facades and ceiling. Burial epitaphs were scratched above and between the *kokhim;* some were covered with later inscriptions written in mud. In all cemeteries, the entrances to the *kokhim* were built of small local blocks of soft limestone plastered over with mud. At least part of the population practiced secondary burial, with the bones of the deceased placed first in the *kokh* and later collected. Some of the caves of the N cemetery were reused in the 1st–4th centuries C.E. by the Jewish population of Beit Govrin.

D. Lower City and its Caves

Between the upper city and the groups of burial caves located 400–500 m away was the lower city. During the excavation of the upper mound, Macalister surveyed 63 subterranean complexes carved in the chalk. Most of these consisted of hall-like units, workshops, and storage rooms interconnected by passages and tunnels. Some complexes had more than 30 units. In recent reexaminations, additional rooms and halls were found which Macalister had not reached in his survey. Some new complexes were also found. Inside the systems were very rich finds from the 3d and 2d centuries B.C.E. In all, more than 100 cisterns, 40 columbaria used for underground pigeon raising, and 16 olive presses were found inside the halls of these complexes.

The well-known columbarium of A-Suk (Macalister no. 29) was a double cross in shape (28.36 m long) and had approximately 1900 niches. The majority of columbaria at Mareshah and other Hellenistic-Early Roman sites in the Judean Shephelah were carved in the same shape. The long walls enabled the carving of a maximum number of niches. In a columbarium unit in complex 21, four oil lamps were found in one of the niches and a small bowl containing unidentifiable material in another. These finds, contemporary with ceramic material found in the debris from the cave, date to the end of the 3d and the 2d centuries B.C.E.

Examination of the material recovered from the small bowls found *in situ* in the niches or in the central columbarium hall does not substantiate the theory that the columbaria were used for the ashes of human cremations. There were no remains of teeth or bone material. To this negative impression we may add the fact that there is no other evidence of Hellenistic columbaria in the country. The burials in Mareshah at the time were in *kokhim*-type burial caves. It is reasonable to assume that these small niches were dovecotes, which were familiar in the 3d century B.C.E. Later, in the 2d and 1st centuries B.C.E., the columbarium served a function unclear to us today.

Oil presses were installed in large underground rooms. The pressing was done by stone weights attached to the pressing beam. The beam was placed in a niche and held between two piers quarried from the living rock. The beam pressed the baskets of olive mash which were stacked in a deep circular shaft between the piers.

Mareshah was found to be an important economic center in the country during the Hellenistic period.

AMOS KLONER

MARI. The ancient name of Tell Ḥarīrī, a 54-ha. mound located in Syria on the middle Euphrates River (34°33′N; 40°53′E). This site has been extensively excavated, first by A. Parrot, and beginning in 1979, by J. Margueron. These excavations have yielded over 20,000 cuneiform texts, most of which are dated to the Old Babylonian period.

ARCHAEOLOGY

The city of Mari is found in the Syrian part of the Euphrates Valley 120 km S of the modern city of Deir-ez-Zor at the confluence of the river Ḫabur. It is also situated about 50 km N of the current border separating Syria and Iraq. The city was founded halfway up the side of the valley which distances it at more than 2 km from the right bank of the Euphrates River. Thus situated at the bottom of a valley,

bordered by plateaus, where the steppe and desert predominate, but which connects the opulent Mesopotamian plain to the rich crossroads toward Syria in the north, Mari appears as a city ideally suited to control the traffic which travels down the river as well as over land between these two poles.

At the time of its discovery, the tell consisted of a principal hemispherical-shaped hill with a recto-linear facade facing NE; to the W and to the S a mound of earth formed a regular curve. The enclosure which surrounded the city was easily recognizable and it was assumed that the city had been constructed along the river, which determined its hemispherical form. However, from the excavations over the past years, it is now known that the original situation was very different: actually the city did not rely directly on the river and it was founded on a circular plan of which now only a part remains. See Fig. MAR.01. It is thus necessary to reconstruct the entire N and NE part of the city which disappeared due to erosion. Thus the *intramuros* or diameter of the city seemed to have been a little under 2 km: the importance of the city from its very beginning can be understood from this one characteristic.

The most recent research conducted on the circular mound of earth has not uncovered the remainder of the enclosure; the arrangement that was brought to light seems to have been a dike to protect against floods rather than a defensive system. Therefore, it is not impossible that on this protective base a rampart had been built that would have subsequently disappeared. The major tell displays an asymmetry that is easily explained by the disappearance of part of the city: the culminating point juts out toward the NE and, while the inclines of the tell are slightly toward the W, S, and SE, there is a abrupt division to the N and NE where the most erosion has taken place. Finally it should be noted that the city was connected to the river by a canal which assured the continual supply of provisions and served as a link with the river traffic.

A. History of Exploration

Because it was situated off the path that descended into the Euphrates Valley, few travelers in the 19th and early 20th centuries had occasion to notice the desolate hills of Tell Hariri. But the accidental discovery of a statue fragment by bedouins who were burying one of their dead attracted the attention of Syrian archaeological authorities during the period of the French mandate in 1933. An exploratory mission was thus given to André Parrot, who examined the site beginning in December 1933. In January 1934 he found the Temple of Ishtar and its collection of statuettes, including the Lamgi-Mari statue that identified the site and the statue of Ebih-Il, perhaps the masterpiece of the Mari statuary. Thanks to this discovery it was decided that the site merited complete exploration. The following year, during the second dig, the discovery of the palace from the Old Babylonian (OB) period confirmed the exceptional value of the site. See Fig. MAR.02. Since then exploration has followed as regularly as the international situation has permitted.

During the first six seasons of excavation (1933–39) that he conducted before World War II, André Parrot concentrated his efforts on unearthing the different levels of the Temple of Ishtar, on unveiling the entire OB palace, sometimes called the Palace of Zimri-Lim (the name of the last sovereign who resided there), and on the study of the sacred precinct beginning with the excavation of the "ziggurat," of the Temple of Lions (still incorrectly called the Temple of Dagan), and of the Temple of Ninhursag.

From the resumption of the seventh season in 1951 to the tenth season in 1954 attention was given to the sacred precinct, followed by the unearthing of the Temple of Ninhursag, the uncovering of the different levels of the Temple of Shamash and of the *Massif Rouge*, and the discovery of the *Maison Rouge* and the temples of Ishtarat and Nin-zaza (that would provide the second collection of statuettes from the archaic period and make Mari the richest repository of 3d-millennium statuary). In addition, the Akkadian period was attested by a collection of bronzes inscribed with the names of the daughters of Naram-Sin.

The Suez crisis necessitated a new interruption in work. Thus the next period, from the 11th to the 21st seasons (1961–72) was a long period of regular research concerning the pre-Sargonic level which extends to the N of the ziggurat and above all several phases of the 3d-millennium palace rediscovered in 1964 under the ruins of the OB palace. The importance of Mari to the 3d millennium became immediately apparent.

A new interruption in the active excavation marked, from 1972 on, an interest in digging in order to preserve the notable ruins of the palace presumed to be pre-Sargonic. In 1974 a cover was put in place that slowed the destructive effects of erosion. A fourth period thus began in 1979 under the direction of Jean Margueron; five seasons of excavation were conducted until the fall of 1985. The research went on in the 3d-millennium palace since the layout of the palace was not yet understood, but the principal objective now was to obtain a better knowledge of the city itself. This permitted the unearthing of a palace from the Shakkanakku period (site A), the discovery of the oldest foundation of the city at the bottom of a stratigraphic boring (site B) and the defining of its original extension, and the study of the defensive system. The second objective—the study of the region and the integration of the city in the regional whole—was simultaneously taking place at the dig site and important results have already been obtained.

B. History of Mari

1. The Foundation of the City. The most recent research has thrown some light on the origins of the city, but important additions can still be hoped for. One must date the birth of Mari at the very beginning of Early Dynastic (ED) I. From this period on, the city had in all likelihood a circular configuration; from the original site only a third remains that can be explored. The essential characteristic that arises from this situation is that Mari was a new city founded under conditions of which we know nothing, but which probably accompanied the development of the valley, because in addition to the canal that links Mari to the river, a large canal on the left bank was discovered (already known in the beginning of its course under the name of Nahr Dawrin) whose beginning is found in the Ḫabur Valley more than 120 km upriver and which seems to have been principally destined to facilitate navigation. On the right bank, the remains of a large irrigation canal were found halfway up the hill, while a final canal was built at the foot of the W plateau to retain water which could rush down from the desert and to prevent it from flooding the fields and thus destroying the crops. The scale of this regional development is proof of the essential role played by Mari.

2. The First Centuries. We still know little about the city in these early periods; the base of the foundation was reached at only one point and if the ED II phase was found in several places one cannot really consider it known. The current documentation only permits one to say that the ED I period seems to have been quite long and that during the course of ED II, perhaps only at the end of this period, one notices vital improvements in living conditions and the introduction of collective improvements in the form of a sewage system. The great stone tombs from the Temple of Ishtar precinct—the oldest phases—belong to the beginning of this period.

3. ED III and the Beginning of the Akkadian Period. This is the 3d-millennium phase for which we have the most archaeological information and from which one can best see the organization of the city. In the palace, the P-1 phase gives us the image of a large-scale building whose dimensions remain unknown; the Sacred Enclosure, (i.e., the sanctuary itself) was still active, but the transformations affected the cultural structures; the altars constructed replace the slabs for libation from level P-2. The excavation permitted the unearthing of annexes and courtyards to the W and N of the sanctuary for which it is still difficult to define precise functions. A raging fire destroyed part of the building, which could have resulted in a reconstruction of certain sections (in particular the Sacred Enclosure and the building of the pillar room recently unearthed W of the annexes of Courtyard 4) and a simple redevelopment of the other sectors. It is, in any case, in this form that the use of the building extends into the Akkadian period. Undoubtedly tightly linked to this exceptional building was a section toward the E where André Parrot suggested that one could find the annexes of the 3d-millennium Dagan temple: however, the identification is not certain, even if a sanctuary can be discovered in the building that abuts the *Massif Rouge*, a high plateau in use during this period. Toward the S extends the sacred quarter, where some ruins belonging to the temples of Shamash and Ninhursag have been unearthed. However, from the other side of the line that divides this section, the temples of Ishtarat and Nini-zaza appear better preserved and present a comprehensible plan which allows one to place them in a category of sanctuaries belonging to Mari. One may add *La Maison Rouge* to the vestiges that are found SE of the sacred quarter, as well as the Temple of Ishtar to the W of the city and the abutting pre-Sargonic quarter. This period seems to have marked one

of the great moments in Mari's history, as evidenced by the architecture, by its dimensions and its originality, and also by the splendid collection of statuettes found in the temples of Ishtar and Nini-zaza.

The king Lamgi-Mari, the intendant Ebih-Il, the great singer Ur-Nanshe, the head surveyor Shibum, and many others prove at the same time that Mari belonged to the civilization created by Sumer which covered a large part of Mesopotamia. To this remarkable group of artifacts one must add a large collection of characters destined to become part of the composition of mosaic panels, several decorated vases, two beautiful architectual models of a circular plan, and objects from everyday life. One should also note that about 40 tablets have been found in various spots on the site that allow us to place Mari with respect to Mesopotamian centers like Lagash or Abu Salabikh, or Syrian centers like Ebla.

4. The period of the Shakkanakkus. This phase begins in the middle of the Akkadian period, but we still do not know under what conditions. The title *šakkanakku* appears to designate the sovereigns of Mari for a period that extends from the second half of the 23d century to the beginning of the 20th century B.C., during which time the city was extensively renovated. The extent of these operations certainly suggests a period of great power. Several sections of the great royal palace excavated by André Parrot—in particular the W wing and the throne room—were built above the 3d-millennium palaces. It was at this time also that the upper terrace was built (often designated by the inadequate name "ziggurat"), closely associated with the Temple of Lions that abuts from the south, a temple that was mistakenly attributed to the god Dagan. To the S extend anonymous temples and the sanctuaries of Ninhursag and of Shamash. To the E of the sacred quarter, excavations since 1979 have unearthed a new palace, the construction of which is to be credited to the Shakkanakkus. It added to the other palace without subtracting from it for, of smaller dimension, it served either to house members of the royal family or as a place to withdraw when important construction was taking place in the main palace. Finally the last excavations have allowed the discovery of two royal tombs that were built under the throne room and beneath another great hall.

Few materials are characteristic of this period even though it lasted almost four centuries. One should note, however, the celebrated and severe Ishtup-Ilum, whose statue was found in the throne room of the great royal palace. One should also note the large pictoral composition that decorated room 132 of the same structure; this one revealed itself to be the sanctuary of Ishtar within the palace, and not an audience hall as had been previously assumed.

5. The Lim Dynasty. The last half century of Mari's history is also the best known as a result of written documents found during the excavations in the great palace before the Second World War. Nearly 15,000 archival documents concerning politics, the administration, and the economy were uncovered. This exceptional discovery furnished documentation that goes beyond the area of the city of Mari and casts new light on the entire Near East at the beginning of the 2d millennium. This richness should not make one forget that the connection is still poorly understood between the Shakkanakku period and the Amorite Dynasty (ca. 1800 B.C.), up to the time when Zimri-Lim succeeded in retaking power (ca. 1775) by banishing Yasmah-Addu, the son of Samsi-Addu.

Of the city of this period, we know of part of the sacred quarter with the upper terrace associated with the Temple of Lions which was equipped with a reworked esplanade, a new terrace of small dimensions that appears to function with the Temple of Shamash, and the Temple of Ninhursag that perpetuates the ancient tradition. The palace of the Shakkanakkus is still being unearthed and will continue to be, just like another building that has been found on the NW promontory of the tell during the 1985 excavation and of which one still does not know either the construction date or the exact use.

Only the richest structure remains, that which was the great royal palace. Although its construction began during the Shakkanakku period, it continued to be expanded and renovated during the reign of Zimri-Lim. See Fig. MAR.03. Already renowned in antiquity, it was found in such a state of preservation that it became the symbol of monumental Western architecture of the 2d millennium. Its remains allow one to understand with precision its architectural characteristics and to define the components of royal architecture of the period of the Amorite dynasties. It still possesses traits that directly link it to its 3d-millennium ancestor. The different quarters are organized around two large courtyards. See Fig. ART.05. The first (131) is part of the welcoming hall directing traffic either toward the temples situated on the

former site of the ancient Sacred Enclosure, or toward the W half of the structure where the King's House and the House of the Women are. These latter houses are organized around the official grouping comprising the Palm Court (famous for the paintings that decorated its walls), the *Papahum*, and the throne room where important royal ceremonies and large banquets were held. The King's House encircled the throne room; toward the E, above a section of stores, the royal apartments were located on the second floor; to the S extended the servants' quarters; to the W one found the kitchens and the administrative offices. In this way the palace of Mari contains the different quarters which normally constitute a royal home from the beginning of the 2d millennium, but arranges them differently. Thanks to a unique preservation (walls more than 4 m high, murals still in place, intact daily conveniences such as the kitchen, bathrooms, etc.), a precise architectural study was carried out shedding new light on monumental architecture of this period.

6. The End of Mari. In a political context still somewhat obscure, it seems that Zimri-Lim, after a period of success, did not succeed in firmly implanting his control of the area. Hammurabi of Babylon, after having been his ally, turned against him in 1760 B.C. and defeated him; he then installed himself in the city, while Zimri-Lim disappears from our documentation. After having removed its riches (including probably most of the more important texts), Hammurabi decided to set the palace on fire, and then demolished it completely; the same end was reserved for other temples that were excavated, at the Shakkanakku palace, and at the building that was recently found on the NW promontory. Since then, Mari no longer existed as an important center, but only on occasion as a small town during the Assyrian period or as a village during the Seleucid period, as attested by the cemeteries that were found in various spots in the tell.

TRANS. STEPHEN ROSOFF

TEXTS

It is commonly asserted that at Mari, A. Parrot was the "discoverer" of a library of 20,000 cuneiform tablets. Parrot himself was the source of these reports and he contributed greatly to their diffusion by writing a scientific contribution that he entitled: "Zimri-Lim of Mari, a literate prince." However, it must be noted that Mari, in spite of the considerable historical interest of the documents discovered there, has given us no intentionally gathered collection of literary or scholarly scientific works. There is nothing in common, in this sense, with the collections of Sumerian works of Nippur and Ur, which were gathered on private initiative, or especially that of Boghazköy (Hattusas) or Nineveh, which were collected on royal initiative. The importance of the Mari documents lies elsewhere.

C. Importance of the Mari Texts

———

A. Nature of the Documentation

Prior to 1972 nearly 20,000 complete tablets and fragments were found at Tell Hariri by A. Parrot. Since 1979 other fragments of a few thousand documents have been discovered during the excavations of J. Margueron. Moreover, the site has not ceased yielding all the documents hidden in its debris. Now that a general inventory has been done, it is possible to take account of that which is missing. The understanding of what we today possess of the Mari documents is much more subtle than the previous and

crude distinction between "economic texts" and "letters" suggests. We are now able to provide a more detailed classification of the Mari texts.

1. Palace Administrative Texts. a. Expense Texts: Food and Drink. The major part of the administrative documents represents calculated expenses on reserves of raw materials gathered and stored in the royal palace. Moreover, since the management of these reserves was the main motivation for writing such texts, it seems that the absence of the king and his entourage from the palace brought a halt to this text writing. A spectacular example is given to us at the end of Zimri-Lim (ZL) year 8 and during the first four months of ZL year 9, when the entire court traveled W on a long trip that ended at Ugarit. All the texts from the palace that date from this time mark the royal periplus and point out the itinerary. The texts were brought back to the palace offices on the return journey, apparently no text having been written at Mari during the entire trip. Besides, one of the principal palace administrators, Dâriš-lîbûr, had left his offices in order to accompany the king.

It is not surprising that the text par excellence found in the royal palace is called "The King's Meal," which consists of monotonous listings *ne varietur* of meals served at the king's table and that of his follower (the *ṣâbum*), except for some wine and meat that were entered on other expense accounts because they probably originated from other departments independent from those that managed supplies of grains, oil, fruits, or sweets. These texts represent a total of more than 2,000 documents: good samples of them can be found in ARMT 9, 11, 12, and 21. A large number still remain unpublished. These documents are extremely important in determining when the king was present in his palace. Moreover, in addition to "normal" meals, they record, on recurrent dates, meals eaten in honor of the dead, either in honor of the souls of past kings (*kispum*) or of deceased members of the royal family (*mâlikum*).

b. Harem Texts. Distributions to the harem attest to the presence of a large number of women in the palace; daughters of the king (priestesses or princesses eligible to marry), women of the first rank (*kallâtum*), singers of first or second rank (most likely concubines), domestics of the two principal queens, and various female personnel maintaining the palace and its kitchens. This is well attested for at the end of the reign of Yasmah-Addu and for the beginning of Zimri-Lim's reign. Their presence, marked especially by texts showing expenses of oil or wool, is the sign of a retreat into the strongly walled palace of the female population that, in more secure and stable times, lived elsewhere (most likely in a less solemn and undoubtedly more comfortable place). If we are not informed as to what the royal harem was at the end of the reign of Zimri-Lim, we see by contrast Queen Shibtu and the royal children who, from the latter half of ZL year 10, came back to the capital, to the "little Eastern Palace," then took possession of the large palace itself. The small harem texts characteristic of the end of Yasmah-Addu's reign are studied in *MARI* 4, while good examples of the large harem lists dating from the first part of the reign of Zimri-Lim can be found in *ARMT* 22 and especially in *TEM* 4. The so-called *Archives of the Harem*, which represent fragments of administrative documents dealing with the management of the fortunes of the important women living in the palace, found in room 52, remain unpublished. At this point only the letters dealing with these women have been published (*ARMT* 10).

c. Audit Texts. The administrative activity in the palace periodically called for an audit. These audits are recorded by the writing of general inventories of expenses on raw materials. These texts are relatively isolated and they do not have the punctiliousness that one would imagine. They exist particularly in the first part of the reign, the time of the most intense occupation of the royal residence. It is likely that they were continued elsewhere from ZL year 5 and that they were filed and stored where the king was living. Upon reading them, one notices that they are not the simple recapitulative monotone of the small individual texts, written from one day to the next. It is possible that the scribes made some recording errors in writing the long summaries, because they were transcribing the different administrative actions from memory. In fact, one can also imagine that certain daily texts were written in a mechanical manner, and that the large summaries took account of performance slowdown or rectified certain views that were overly optimistic. Many of these large texts are published in *ARMT* 22.

d. Expense Texts: Metal and Fabrics. The major part of the expense texts is naturally made up of small tablets concerning the maintenance of the royal household. Aside from the table expenses (see

above), one finds more than anything else some texts dealing with metal or fabric, which were put away in the storerooms of the royal palace itself. Anything that left the treasury was counted, i.e., complimentary shipments to other rulers of the time (*šûbultum*), presents to the women of high descent, to messengers, etc. These texts, when taken together, are extremely valuable in reconstructing the diplomatic life of the time. Thus, it is not by chance that one must wait until the end of ZL year 4 to see a jewel sent to the king of Eshnunna. In fact, it was only a few months earlier that the two kingdoms ended a long and bitter struggle. Likewise, thanks to the counting of presents, one has very valuable chronological information on the contemporary Elamite dynasty (Durand 1986: 118–22).

The majority of tablets dealing with metals provide information about the manufacturing of luxury objects. The king placed great emphasis on all working of gold, silver, and precious stones (especially lapis lazuli and rock crystal) because these materials were rare and frequently defective. Since the reserves apparently were not sufficient to provide everything that one wished, old jewelry was sometimes remelted in order to obtain material for creating new pieces. At the mercy of these manipulations, the metal waste multiplied and losses accumulated. At several stages in this work an inspection was made—particularly by the loss controllers (*ebbûtum*)—and these different acts generated some very useful texts concerning technical history.

e. Publication of the Palace Administrative Texts. All these aspects of the administrative texts from Mari are illustrated by different volumes that have been published: *ARM (T)* 7, 9, 18, 21–25. Most of these scholarly volumes were devoted to the fragments found in particular rooms in the hope that the use of the various palace rooms could be reconstructed. For the most part, this hope was defeated because the techniques used by A. Parrot to record the epigraphic discoveries in the palace was quite disorganized. Most likely, too many mixtures took place during the actual excavation for us to do precise studies. Also, the move toward publication was accelerated: *ARMT* 23 (= *AAM* 1), the work of a new team of editors, was the edition of all the administrative texts catalogued by G. Dossin, to which the texts of room 215 were added. Besides these, there were some attempts at an edition grouped thematically: *ARM* 18 treats some documents of the administration of Mukannishum; *ARMT* 25 should in theory give us the edition of all the documents treating metal. Another publication (*AAM* 2) should procure the complete catalog of all the administrative texts of the palace, arranged chronologically (as much as possible), summarizing briefly those that had already been published, editing those that were not yet published, and reconstructing those where additions and collations changed the interpretation drastically. The texts found by J. Margueron since the new excavations of the palace must be part of *AAM* 2; those found "outside the palace" will be the subject of a separate publication, together with those from their proper archaeological locations.

f. Evaluation of the Palace Archives. It appears that the archives that would allow us to discover the composition of the palace stores are totally missing. Most likely, that results from the large door cleared by A. Parrot and whether it served as a visitor's passageway, and not as the place where deliveries were received. This latter was probably called "Nergal's Door"; located to the E of the ceremonial entrance, this door represented the place where chariots, loaded with raw materials, passed through. See Fig. ART.05. If the "administrative offices" (*bît têrtim*) were found at the door of the palace residence (*bâbekallim*), another administration was found at "Nergal's Door." The area was never excavated and currently is covered by dumps from the palace excavation. In contrast, the inventory of the Mari tablets indicates that several lists of proper names as well as administrative texts (in poor shape for conservation purposes) were found "outside the palace, in the area of the ziggurat." In fact, the inventory is concerned not with the exterior of the palace, but with the area where the storehouses were located. An eventual expansion of the excavations will perhaps allow us to find the new administrative archives. However, even if the receiving department was found at this second door, it is possible that the archives themselves had been kept more to the S, in what is considered the "area of reserves," which was found leveled to its foundations.

2. Other Types of Administrative Texts. a. Gift Texts. At any rate, it is easy to establish that the only "entrances for goods" in the palace of Zimri-Lim are for those called *šûrubtum.* These consist of

"countergifts," that is, in response to the *šûbultum* mentioned above. Thus one sees wine delivered, gifts coming from abroad (Carchemish, Aleppo, Kurdâ), olive oil sent from western regions (Alahtum), fine fabrics sent from the courts of Aleppo or Carchemish, etc. Such shipments are not only from neighboring kings, but also from great vassals and even great royal personages. Thus one can understand these taxes of grain (in relatively small quantities) on the "houses" of the great landowners in the surrounding areas of Mari, or shipments of one or two sheep to the palace from great dignitaries, sheikhs, governors, and even members of the royal family itself (including the queen and queen mother). All of these lists must be interpreted as "gifts" responding to a previous one, or expecting a "countergift" in return. These consist of personal, more or less spontaneous, contributions, never a general tax collection by the administrative authorities of the kingdom. Likewise, next to the small number of animals, one can see listed meat brought in (smoked?) from the S of Sinjar, or even farther. This consists of choice cuts which honor the king. Curiosities such as ostrich eggs and desert truffles (*kam*ˀ*atum*) also entered the palace. At certain times, the large courtyards of the palace were transformed into regular zoos by the number of animals sent by vassals and allies. All of these foodstuffs and animals so graciously given are meticulously recorded, probably because the king would take them into account in order to reciprocate at the appropriate time.

b. Texts Concerning Provincial Administration. It is not surprising that among the palace texts one finds nothing connected with the management of the provinces (*halṣum*) of the capital. These documents would have been found recorded in the palace of the governor (*šâpiṭum*), which has not yet been discovered. It is only through the misunderstanding of a name that Bahdi-Lim, governor of the capital, was called "Prefect of the Palace." Even if the two great ministers who presided over the king's relations abroad or with his subjects actually resided "at the palace door" and kept watch to maintain a strict separation between the internal affairs of the palace and the outside world, the administrative leaders over the provinces or the royal workshops as well as the military authorities, police, or religious leaders—in effect, all persons who had nothing to do in the palace except by transitory title when the king summoned them there—kept their archives elsewhere; these archives are missing. From this point on, a study on the kingdom of Mari must take into account these missing parts of the documentation.

However, in spite of the archival separation, the king was informed regularly on all important administrative matters and, for further information, one sent to the palace, for temporary consultation or for safekeeping in the archives, tablets written outside the palace concerning events that took place outside its walls. This is the source of some very important documents informing us about the fundamental aspects of the administration, even if we cannot always gather from them as complete a reconstruction that we would wish.

Thus the king was also kept up to date on certain censuses taken of the people. About 30 large tablets represent the palace's copies of texts of the great census (*têbibtum*) that took place at the end of ZL year 4, after the reordering of the Benjaminites who rebelled and after the expulsion of the troops of Eshnunna who had come to support them. One sees listed here people taking oaths, coarsely gathered together by occupation, and enumerated place by place and district by district. It is possible that only the population that had to do with the palace was summoned and that the *têbibtum* was also a way of certifying, through oath-taking, the loyalty of a substantial part of the population. This census undoubtedly intended to take a count of the people after a period not filled with bloodshed but nevertheless marked by a change in the status of a great many people: many lost their freedom at the time of the razzias; others were brought back into the palace departments to which the conquering king assigned them. Besides the obvious onomastic interest, these lists also inform us as to the local regrouping of toponymies of the provinces of Mari, Terqa, Saggarâtum, etc., the major towns of the kingdom. These are the texts that best allow us to understand the geography of the heartland of the kingdom of Mari.

On sporadic occasions, a land occupation reform took place and long lists of fields were recorded. These did not concern the establishment of a plot of land, but rather a count of how many units of land were removed from one plot and added to another. Likewise, certain texts probably represent tax estimates and indicate the expected grain production. These two kinds of tablets are very valuable for distinguishing the toponymies of the region of Mari.

More than 20 or so large tablets represent the palace's copies of oaths taken at the end of ZL year 9 by a large number of women who were named according to their social status. These consist of wives, widows (*almattum*), and single women of various backgrounds, the majority being women who had devoted themselves to a deity (usually *qaššatum*), priestesses (*NIN-DINGIR-RA*), or "ecstatics" (clairvoyants—*muhhûtum*). We are not always informed as to what motivated these great oath-takings by such a substantial number of women. It is, however, a very important source for feminine onomastics of the time. Two good examples can be found in *ARMT* 9 and *ARMT* 23.

Censuses were established for some army corps at the time of departure for military expeditions. This was often useful in determining whether the number of Haneans or Benjaminites who should have been conscripted indeed were conscripted. These documents are known as "large tablets" and the inventories mention the men "nominally" (*tuppi lú ù šum-šu*). These documents are major sources for geography and onomastics. Examples can be found in *ARMT* 23 at the time when the troops from Mari went to help Hammurabi of Babylon in battle against Rîm-Sîn of Larsa. The publication of these large lists will entirely change the image that we have of the population of Amorite Syria and will enable a pioneering work like *Amorite Personal Names* (Huffmon 1965) to be rewritten using an infinitely more vast basis of knowledge. However, one cannot claim to make a population count of the kingdom from these lists, nor to establish the rosters of the army.

The bills of sheikhs (*sugagûm*) that pay off a gift (*suggâgûtum*) consisting of gold, silver, or animals periodically informed the king of those who had sworn allegiance to him locally and who had thereby recognized his power. They are considered political texts, not texts of tax collections (as was initially believed).

The census listings, like those of the deported persons of Hurmiš (ZL year 11), had another motivation: that of informing the king of the increase of workers belonging to the royal residences following the conquests. These are specialized workers taken from their homeland along with their families. These lists inform us in an unexpected way about the population and the technologies of ancient Upper-Jezira and enable us to see more concretely the mobility of people torn from their native land, deported, redistributed, and diluted among other social groups into which they would eventually disappear. In capitals which were raided a short while later, one section of the population received special attention from the conqueror: the royal harems. These harems were brought back to Mari after an inventory noting the status of the various women (priestesses or wives) and the origin of royal captives. One finds the practice of combining the wives of the conqueror with those of the conquered to be rather systematic. For example, the texts show that the harem of Ashlakkâ, captured after the defeat of its king, was made up of the original princesses of other previously conquered capitals. This complexity of populations makes sense when one realizes that only two years later all the women of Zimri-Lim—girls, queens, concubines, and captives of diverse background—along with Zimri-Lim himself, either had to walk the road of victorious Babylon or be given in homage to other courts. All of these numerous texts allow us to understand better the incredible blend of populations, cultures, and languages that took place at that time in the Near East.

It is in these same categories of documents that the so-called censuses of teams of weavers must be included; this does not consist of inventories of "ergastulum" (*nêpârâtum*) but of counts of deported persons. One finds on these lists those redistributions of Benjaminite prisoners of war as well as the redemptions of slaves by their families throughout the Near East.

To these considerable administrative documents must be added some rare fragments of private archives of individual administrators, whose presence at the royal palace is still not understood. The legal texts must be considered, of which the partial edition in *ARM* 8 must be reconstructed after collations, additions, and adjunctions of unpublished material, in a later systematic study.

c. Expense Texts concerning the Palace Temples. Sacred expenses form another fragmentary group of tablets distinguished from the rest. The king of Mari and his court were not the only ones to inhabit the large palace. Since its very existence, the gods were believed to have resided there, because that which is called the Sacred Enclosure (considered by J. Margueron to be the avatar of the origin of the major temple

of the city) established itself in the palace and represents the temple of the "Lady of the Palace" at the time of Yasmah-Addu and Zimri-Lim. See Fig. ART.05. Room 130, on the other hand, is the "Temple of Ishtar" or *bît birmî* ("The Temple with Paintings") mentioned in the texts. Quite often, it is to the gods present in these chapels and not to those of the urban temples that most of the sacred expenses (included in the costs of the palace) were dedicated. Their worship represents a "palace act" just like the great sacred ceremonies "The Ritual of Ishtar" or "The Ritual of *Kispum*" of the time of Yasmah-Addu. They are spoken of in the texts found at the palace because they describe intrapalatial activities, and are addressed to Ishtar or to the Lady of the Palace and to her consort the sun god, who is distinguished from the "Sun of the Skies." These texts are taken up again with other unpublished material in *ARMT* 26/3.

3. Letters. The large amount of epistolary documents, the "prestigious" documents among the group of Mari texts and those that have, until now, (unfairly) received most of the attention, deal mostly with diplomatic and administrative activities, but the abundance of anecdotes and subjects dealing with everyday life makes this documentation irreplaceable.

Now that the census of senders has been compiled and the large epistolary files reconstructed, it is possible to establish enormous gaps in our documentation, which a priori we should have been able to suspect. These gaps are first and foremost the result of human initiative. It has long been known that after the fall of Mari, an inventory of the palace archives was taken by the conquerors and that the texts had been regrouped chronologically (since the labels dating from one year of Hammurabi speak of the "Tablets of the servants of Shamshî-Adad" and of the "Tablets of the servants of Zimri-Lim"). One can deduce that the archives were in the process of removal and that for whatever reason, this undertaking was not completed by the Babylonians. In fact, what was Hammurabi supposed to do with this huge amount of texts dealing with local administration? He should have looked systematically for others of more immediate interest to him. As a matter of fact, it is easy to note that from this point on, almost all the letters from the chancelleries of the great international capitals of the ANE are now missing (Qaṭna, Aleppo, Carchemish, Ekallâtum, Susa, Babylon, Eshnunna, and Larsa). Even if we imagine that there were periods of strained relations between Mari and other kingdoms such as Ekallâtum, Eshnunna, or Susa, we know (through quotations in some letters) the gist of the royal missives from these palaces and also that there were intense diplomatic relations through epistolary interchanges.

The most flagrant loss is the absence of practically all the letters of Hammurabi. While the kings of Mari and of Babylonia, up until the final confrontation, held common politics and alliances, all that remains from the Babylonian chancellery are some insignificant missives written to governors Meptûm, Bahdi-Lim, or Buqâqum, which were certainly forwarded to the palace "for informational purposes."

Practically all the texts from Qaṭna are from Išhi-Addu, king at the time of Shamshî-Adad. Missing are most of the letters sent from Aleppo, each of whose kings was very close to Zimri-Lim, being his father-in-law or brother-in-law. There are only some fragments or erratic texts that escaped the inventory of the enemies.

One can certainly wonder whether in fact the texts had been destroyed by Zimri-Lim himself or if they had been removed for safekeeping when the Babylonian troops were threatening Mari. The second hypothesis is supported by the discovery that confiscated correspondence was put into archives in the royal palace of Mari by the scribes of Zimri-Lim himself; either they were intercepted on the roads, or more likely they were brought out from the chancelleries of conquered kings. If one puts aside the documents manifestly communicated to the king of Mari through loyalty (like the circulating letter that the Sukkalmah of Elam sent "to all the kings of Subartu" that he wanted to impress), we are aware of two particularly spectacular examples of this fact.

The letters exchanged between the diviners of Mišlân and Prince Sûmû-Dâbî at the time of the great rebellion of the Benjaminite kings were archived (published in *ARMT* 16). We also have several compromising letters sent to the kings W of Ida-Maraṣ. Thus there is one from the king of Ashnakkum, Ishme-Addu, at the time of the Elamite invasion in ZL year 9. One of these documents was published a long time ago as *ARM* 4:20, but it was attributed to the correspondence of Yasmah-Addu of Mari and Ishme-Dagan of Ekallâtum. On the other hand, we have some missives addressed to the king Ibâl-Addu,

around ZL year 11, which must have been confiscated in the chancellery of Ashlakkâ after his fall. It is possible that the correspondence of Ishme-Addu was found in the chancellery of Ashlakkâ.

One cannot consider that the correspondence with the principal kings was placed elsewhere than at the royal palace, in a temple, for example, because it is among the documents from the palace that the correspondence between Zimri-Lim and his vassals from Ida-Maraṣ was found—those kings who call him "Father" or "Lord" (i.e., the various kings of Ashlakkâ, Ashnakkum, Ilân-ṣurâ, Kahât, and Razamâ, to mention the most important ones)—as well as correspondence that comes from the great kingdoms of south Sinjar—those kings who address Zimri-Lim as "Brother" (i.e., the kings of Kurda, Andarik, Qatarâ, or Karanâ). Similarly, we have found letters at the palace from kings farther away, whose kingdoms were beyond the Tigris, like the princes of the Turukkians and of Habiru, or on this side of the river, like that of Mardamân. These documents date from the beginnings of the reign. We must thus resign ourselves to having no more than a partial vision of the external politics of Mari, and it is especially the governors and generals, those who are "on a mission," who inform us about the great events. The royal documents that would have been able to give us firsthand information are missing.

Similarly missing are the "duplicates" (*meher ṭuppim*) of letters sent by the royal chancellery (letters of which a copy was kept in order to be able to quote *verbatim* a proposition or stipulation, as was the custom at that time). Even though we still have several documents of this type for the reign of Yasmah-Addu, whose politics were not really of much concern to the Babylonians, these texts for the reign of Zimri-Lim (that we know once existed) are missing. It is likely that all these tablets were systematically removed by someone curious to know "the seamy side of life." The diplomatic life is indeed under the sign of strict respect to the sworn oath and the divine curse, going all the way to the annihilation of the perjurer. Undoubtedly the savage sacking of Mari after its fall, which was neither the custom of the time nor that of the victorious King Hammurabi, received justification following the scrutiny of the royal archives. Moreover, we know (even if we do not understand all the details) that at the final end of Mari, its king, breaking the ancient alliances with Babylon, had tried a rapprochement with that country's traditional (almost ancestral) enemy, Eshnunna. This city was destroyed at the same time as Mari, although it was, like Mari, one of the millennial powers of the ANE.

4. Treaties. It is not surprising that all of the international treaties that we know to have existed and that we should be able to find in great quantity (seeing the various attestations and quotations that we read from the correspondence) are missing from the roll. If we count the existing documents it is easy to see that only very little remains.

A treaty project between Mari and Babylon against Elam belonging to a genre called "small tablet" was reconstructed from two fragments (Durand 1986). This is a working document from which the "large tablet" must have been written, an official document with curses against the offender and perhaps with imprints of the royal seal.

A large treaty between Zimri-Lim and Ibâl-pî-el II of Eshnunna (established in ZL year 4) remains, but it is savagely mutilated; either the Babylonians broke it intentionally at the time of the pillage, or the people of Mari themselves did it at the time of the rupture between the two kingdoms in ZL year 2. This latter view is undoubtedly the best because a mutilation at the time of the destruction of the city should still allow us to find the missing fragments.

Another version remains of the same text, but it is shorter and very mutilated. A "small tablet" concerning Atamrum, king of Andarik, is also preserved, as is the text (in the Hanean language [Amorite]) of a *mišpaṭum* between two rival towns of Ida-Maraṣ, both subject to Zimri-Lim.

It is significant that one no longer finds a single treaty made with the vassals of Ida-Maraṣ, whose letters are abundant. It is possible that Hammurabi took away these texts that sanctioned everlasting obedience to Zimri-Lim by the princes that Hammurabi now wanted to attach to himself, or perhaps the royal administrators at the last minute had been able to hide these treaties for safekeeping.

5. Other Types of Texts. a. Literary Texts. There are a few other types of texts in the Mari palace, but what we would consider "literary texts" in the proper sense are totally absent. This is not to say that such texts did not exist at Mari. One letter tells us about the myth of the battle between the storm god and the

sea, which is later recounted in texts from Ugarit. Two other letters make direct reference to the creation of man, or to a divine mission given to a human. Quotations from proverbs and wisdom literature are indeed plentiful. Thus it must be considered that the king's residence did not normally welcome this type of writing. The king did not intend to have a literary library. The tablets that contained such texts were at home among individuals whose trade was to read, write, and compose, perhaps in the private homes of the diviners (that we have not found). The few fragments of syllabaries found at Mari were in the small E palace, the temporary residence of the diviner Asqudum. The large palace has only yielded one syllabary of the TU-TA-TI type.

Two exceptional texts have been found at Mari which could possibly fall under the rubric of "literary." The first is the large "Epic Poem of Zimri-Lim," almost entirely preserved, of more than 100 lines, which sings the praise of the king and culminates in his entrance into the Temple of Dagan at Terqa at the end of the Benjaminite rebellion (cf. *AEM* 2). This is more a work by a lettered courtier than a gratuitous literary composition. It could have served as a composition destined to attract the good graces of the king. This work could also have served as a basis for a report on recent military events, made to the god Dagan of Terqa. The other text is a large bilingual letter, written in Sumerian and Akkadian and addressed to the king. It was written by a disgraced scribe who had his heart set on proving to his master his worth and abilities and thus seems to be a work of court flattery.

b. Ritual and Omen Texts. We have already seen above that the two great rituals which were found at Mari concerned palace events. Some fragments of bilingual psalms (Sumerian/phonetic Babylonian) must be added; maybe these were used, like several incantation tablets concerning the "dog bite," for prophylactic purposes. Perhaps, due to the dominant role that Asqudum played in the royal administration, we should have found among the documents from the palace a fragment of astrological omens and some pieces of hepatoscopic texts. These latter ones are attested to, however, by several quotations of primary clauses in the letters rather than through a library of textbooks.

Finally, all of these texts are more shreds of "utilitarian" and "technical" libraries (purification and divination) than proof that the king of Mari was a "clever scholar." However, it is permissible to wonder whether they were more numerous at a given moment and if what is missing was not made part of the booty of the conqueror. In fact, the hepatoscopic technique of Mari had its own specific characteristics and this practice supported those that were particular to Babylonia.

All of these texts are "royal" insofar as they concern the exercise of royal power in the highest degree. It is in this category, therefore, that the texts of "Protocols" will naturally fall; they represent oaths taken to the king by certain types of servants, and they also prefigure the "court edicts" several centuries before the Middle Assyrian or Hittite period, and the literature of the *adê*, more than a thousand years before the Neo-Assyrian Empire.

6. Texts from Other Periods. The texts that we have spoken about are those that compose the majority of tablets, dating from the 20 years covering the end of Yasmah-Addu and the reign of Zimri-Lim. Some texts from other periods exist, but in a much more limited number.

a. Earliest Texts. For example, some tablets come from the period prior to Sargon of Akkad (more or less contemporaneous with Ebla): about 50 such documents were published by Charpin (1987). The editor noticed that they were not all contemporary one with another and that they represented disparate archives. Judging from the great political importance of Mari at the time and from the state of preservation of the pre-Sargonic palace, it is likely that we will one day have, if not the ensemble of these archives, at least a most important census. At this time, the tablets should occupy only one extremely restricted zone: two or three rooms at the most, if they were not dispersed in antiquity at one time or another.

The actual time of Akkad is represented by only two or three documents, still unpublished. The UR III period is limited to two tablets, one of which may be a document from Tello, recently misplaced and confused with the exhumed tablets at Tell Hariri.

b. The *Šakkanakku* Texts. The documents called (by a misuse of the term) "šakkanakkus tablets" (*ARM* 19) in reality are documents immediately prior to the adoption of the writing method (phonetic values and paleography) known as "classic Babylonian" (see Durand 1985). The most recent of these

texts does indeed date from the reign of Yahdun-Lim, who undoubtedly gave back to Mari its status as an international capital. Some of the documents from the period enable us to examine in detail the exceptional time that represents a change in the standard of written notation, a true "reformation of writing." One can establish that in agreement with Mesopotamian standards, this change bears a fourfold aspect, concerning not only the paleography of signs, but also their system of symbols, the format of documents, and the choice of written dialect. These documents are therefore naturally taken up again in comparison with the texts of Yahdun-Lim which give us the key in *AAM* 2.

B. Arrangement of the Texts in the Palace

How were the texts of the 2d millennium arranged in the palace? Above, we considered the disorder found in the archivage of the finds at the time of the hurried digging that exhumed the documents. These texts, roughly arranged by room numbers, only received an inventory number for a short time.

One point can be henceforth established: the scribes of Zimri-Lim considered the epistolary documents of the officials of Yasmah-Addu and those of the new king's servants to be archivable for the same reason. Moreover, in many cases, the administrators served these two masters with the same efficiency and devotion. By contrast, the administrative documents of the reign of Yasmah-Addu had been thrown out and were rediscovered, for the most part, in the berms or the foundations.

The entire documentation from the reigns of Yahdun-Lim and Sûmû-Yamam, by contrast, was considered to be "dead archives." When the excavations of A. Parrot unearthed some of them, it should be noted that the workers who were excavating had crossed (intentionally or not) the ground from the period of Yasmah-Addu or Zimri-Lim. That explains the rarity of these texts and the almost complete absence of the diplomatic correspondence of these kings, while the recent excavations, taking down the recent structures, are discovering some underground. This supports the conclusion that the royal palace was unoccupied for several years after Mari fell into the hands of the dynasty of Upper Mesopotamia. We know that following this there was important work done in the royal palace to put it back in order when Yasmah-Addu came to settle there, a little while before marrying a princess from Qaṭna. At this time, one should have systematically made a "clean sweep" of a past which was not at all to be reclaimed.

At present, in spite of everything, one can still have a general (if not a precise) idea of the ancient arrangement. The bulk of the (nonfeminine) correspondence was found at room 115; the major part of the administrative texts, at room 102. See Fig. ART.05. There were, in fact, several archivage areas of the administrative texts. It is possible to identify various "administrative reception areas" made up of rooms at the entrances of different areas of the palace (Durand 1987b).

C. Importance of the Mari Texts

All of these discoveries lead us to affirm the political value of writing in this period. We have proof of it thanks to the written documentation of Mari. Before this we only knew about the acquisitions or confiscations of tablets dealing with religion and magic in Babylonia or Assyria at the time of the assembling of the "library of Nineveh" or about the pillage of prestigious artistic documents, like the Code of Hammurabi or the Babylonian Kudurru brought by the Elamites to the acropolis of Susa. It is hoped that all of these missing Mari documents (which are so important) will someday be found in their probable places of exile. If they still exist, one must imagine them to be in the palace of Hammurabi of Babylon.

Therefore, the large amount of "letters" found at Mari consists of those sent by the king's servants. Several categories must be distinguished. Concerning the administrators, a distinction must be made between those that inform us about their local functions, exercising the duty assigned to them by the king (this is the majority, spanning quite a large period of time and often with vague internal chronology) and those administrators who are on an extraordinary mission (dealing with punctual transactions and serving as a basis for our relative chronology).

Among those who write from the place where they govern, the first rank is held by the members of the central administration, those who were among the top ministers. However, they are by far the least interesting. Their proximity to the king means that there is little information left from them; we only have letters written by them when they were on an outside mission or when the king was absent and they sent

tablets to him to keep him up to date. Since these last letters were found at Mari and were obviously originals, we must deduce that the secretaries of the displaced king were carefully keeping these documents and were bringing them back with them to the palace when the king returned. Limiting ourselves to the time of Zimri-Lim, these high-ranking personages were Bannum, Asqudum, Sammêtar, Habdu-Malik, and Šunuhra-Halû. This last one held a special position: since it was he who apparently read the letters addressed to the king, letter writers often took care to send him a short personal note of explanation along with a gift so that the letter would be read to the king with goodwill. We have preserved almost all of these letters addressed to this important individual.

Several civil officials of high rank left important pieces of documentation: we refer to the *šandabakku* (accountant-archivist) Yasîm-Sûmû (*ARMT* 13) or Ṣidqi-Epuh. A special place is also held by the superintendent (*šatammum*) Mukannishum whose letters are an inexhaustible mine of information (*ARMT* 13 and *ARM* 18).

The correspondence from the governors, therefore, is the heart of our documentation. They had varying titles:

1. *šâpiṭum.* This title was used when the district was directly attached to the crown. Limiting ourselves only to the reign of Zimri-Lim and to the best-documented person, this applies to (a) the governors of Mari (Iṭ'r-Asdŭ and Bahdi-Lim), which clearly demonstrates the separation of the district governor from the royal palace itself; (b) the governors of Terqa (Sammêtar and Kibri-Dagan); (c) the governors of Saggarâtum/Dûr-Yahdun-Lim (Sûmû-Hadum, Sumhu-rabi, and Yaqqim-Addu); and (d) the governors of Qaṭna (Zimri-Addu and Zakura-Hammu). This exceptional documentation understandably received the most immediate attention and gave rise to some fundamental publications: *ARM* 3, 6, 13 (in part), and 14. Others will soon be available, such as the one concerning the governors of Qaṭna (*ARMT* 20).

2. *hazzânnum.* This title applied to a military official of a district. The clearest example is that of Tuttul, Lânasûm, whose correspondence is published in *ARMT* 26/1 and *AEM* 2.

3. *merhûm.* This was an authority who supervised people engaged in transhumance. During the reign of Zimri-Lim, this was associated with Ibâl-pî-El and Ibêl-El, in charge of the Haneans in Ida-Maraṣ, and especially with the character Meptûm in the south. The correspondence of Ibal-El, which informs us firsthand about the NW border, must be dealt with ever since the publication of *AEM* 2; the correspondence of Meptûm, which talks about the SE border, concerns relations with Eshnunna and Babylon. It is in this correspondence that the most direct information on the end of Mari can be found.

For some of these officials, especially those whose power is military (like Yamṣûm of Ilan-ṣura or Itûr-Asdû of Ashlakkâ), it is difficult to know their title. They seem to have had a very important informative role and they have left us a large corpus of letters. The letters from Yamṣûm (*ARMT* 26/2) reveal more about the events of Ilan-surạ than those from the local king, Hâya-Sûmû, who evidently did not want to tell everything about his own deeds and actions, especially when he was pursuing interests different from those of his suzerain and father-in-law.

4. *sugâgum.* This title applied to the sheikhs who represented various local authorities officially recognized by the king. The vassals of the Mari king (*šaknum* or *šarrum*) are only particular examples of those whose power received more special recognition. They can sometimes take the appearance of a military governor, such as Hammân of Dêr (in part *ARMT* 26/1). Their correspondence is all the more intense as their problems increase in size. They are not bound to a duty of relaying such precise information as the so-called officials from Mari. In addition, they only write in a time of crisis, as when Hammân is threatened by the Benjaminites and the kings of Zalmaqqum (Harrân).

A special place is held by the correspondence of the Benjaminite kings. Two categories must be distinguished: the kings before the rebellion (Hardûm, Yaggîh-Addu, and especially Sûmû-Dâbî) and those who settled at the end of ZL year 3 and at the beginning of ZL year 4 (Dâdî-Hadûn, Hammî-istamar, etc.). The Benjaminite kings practiced transhumance between the kingdom of Mari and the regions to the W, toward Yamhad to the N, going up the course of the Euphrates; toward Amurru to the S, and beyond the kingdom of Qaṭna to the shores of the Mediterranean. Certain letters are the fundamental documents

for understanding the spirit of the time. Their letters, insofar as they deal with events between the accession of Zimri-Lim and the end of ZL year 4 are edited in part in *AEM* 2.

Some files of extreme importance are composed of fairly numerous letters from officials of Mari on various missions. Their interest lies in that they are regrouped according to time and give us concentrated information about a specific region at a particular time. There are various types of missions:

1. Military: ZL years 11–12 (Ibâl-pî-El in Babylonia [in part *ARMT* 26/1–2]); ZL year 10 (Zimri-Addu from Larsa [ARM 20]); ZL year 11 (Yasîm-El, Iddiyatum, or Habdu-Malik, from the NW border against Ishme-Dagan of Ekallâtum [*ARMT* 26/2]);
2. Civil: ZL years 1 and 2 (Asqudum and Rishiya, from Aleppo: matrimonial mission); ZL year *X* (contribution of the *âlum* to the god Adad of Aleppo [ARMT 26/1]);
3. Diplomatic: ZL year 2 (Dâriš-lîbûr, from Aleppo: at the time of the first rebellion of the Benjaminite chiefs [ARMT 26/3]); ZL year 4 (Sammêtar, at the end of the war with Eshnunna, when he is going to put the affairs of the east of the Jezira in order [AEM 2]);
4. Economic: ZL years 10 and 11 (Šunuhra-Halû, Dâriš-lîbûr, and Ṣidqi-Epuh, from Aleppo, at the time of the colonization of Alahtum [ARMT 26/3]).

A special place must be reserved for the numerous letters of Nûr-Sîn, from Alahtum, between ZL years 10 and 12, when the king of Mari bought a province in the kingdom of Aleppo in order to obtain certain products that he was lacking. This particularly spectacular file informs us not only about the economy, but also about the religion of the large western kingdom (ARMT 26/3).

Among the royal servants, the diviners hold an important position due to their "informant duty." Not only do they give us information concerning "live" hepatoscopy, as seen by practioners, but they are the source of a wealth of information concerning geography and military and political events, about which they questioned the deities (ARMT 26/1).

The harem archives had kept an important number of letters making up the feminine correspondence. This famous group of texts, the subject of countless studies since its publication (as *ARM* 10), talk especially about the administration of the palace or about religious subjects, the queens (for the same reason as the governors) themselves transcribing the substance of prophetic oracles that they had been informed of. The prophetic documents are taken up again in *ARMT* 26/1. Numerous texts emanating from the women still remain unpublished.

Until now, these documents were published by the name of their sender. However, the events are related by several people at once and often it is only through the juxtaposition of different stories or the restoration of a broken document by another in better form that it is possible to reconstruct the tangled thread of stories narrated during the course of many days. In addition, it has now been decided to publish complementary historical files. Some examples of this were given in *ARMT* 26/2 and this undertaking must be pursued in *AEM* 2 by editing all the documents relevant to the Benjaminite rebellions.

From the viewpoint of oral history and politics, the documentation from Mari brings us information about a vast portion of the Near East over a period of 20 years. This period covers the final 6 years of Yasmah-Addu and the 14 years during which Zimri-Lim reigned. The archives of Mari enable us to write about nearly all of the history of the intended period and there is no region that is not documented, apart from Egypt.

Beyond the Jezira to the NE, a region not otherwise documented until the discovery of the first texts of Tell-Leilân (Shubat-Enlil), all the important cities are more or less mentioned. We have firsthand knowledge about Hazor, the country of Canaan, Byblos, Alashiya, Ruhizzi, the region of Damascus, Kadesh, Qaṭna, Nazalâ, Palmyra, Ugarît, the region of Alalakh, Aleppo, Carchemish, Ursûm, Harrân, Burŭshkhanda, Kanish, Hattusas, Ashur, Nineveh, Kalhu, Ekallâtum, Arrapha, Qabra, Eshnunna, Susa, Anshan, Dêr, Malgium, Babylon, Uruk, Maskan-Šapir, Larsa, even Dilmun. We learn of the succession of kings over several generations in many cities, the names of the deities, the order of worship, the formation of alliances, the manufacturing and production of local products; we also have an impressive onomastic and toponymic documentation. In particular, more than one place from the W regions of the Near East—

in the past documented solely at the time of Alalakh IV, from El Amarna, or from Ugarît—is now attested in these texts.

Finally, the interest of the Mari texts also lies in that they provide us with a host of details on the extremely diverse and complex area of everyday life. We actually see people live, pray, do business, fight, and plot, either succeeding or perishing. Few human aspects escape us. In particular, the female population or individuals who do not belong to the world of the palace (*muškênum*) are more clearly revealed to us, better than in contemporary Babylonia, and more so than at any other time in Mesopotamia (with the exception of the end of the Neo-Assyrian Empire, whose archives offer many analogies to those of Mari).

JEAN-MARIE DURAND
TRANS. JENNIFER L. DAVIS

BIBLIOGRAPHY

The publication series for the Mari texts is the *Archives royale de Mari,* which originally fell under the general series *Textes cuneiformes du Louvre* (= *TCL*), but after 1976 was considered part of the series *Textes cuneiformes de Mari* (= *TCM*). The *Archives royale de Mari* consists of volumes of texts in autograph (= *ARM*) and corresponding volumes of texts in transliteration and French translation (= *ARMT*). For a list of the titles of the *ARM* and *ARMT* volumes up to 1983, see Pardee 1984. Recently two subseries have been created which, although independent, also fall under the general rubric of *ARM (T).* These are: *Archives administratives de Mari (= AAM),* and *Archives épistolaires de Mari (= AEM).* These bear both their own volume numbers and *ARM (T)* series numbers.

Four studies by M. Birot on the economic texts found at Mari are commonly referred to in the Mari literature as TEM (= Textes économiques de Mari). These can be found in this bibliography under the following entries: TEM 1 = Birot 1953a; TEM 2 = Birot 1953b; TEM 3 = Birot 1955; and TEM 4 = Birot 1956. The journal entitled *Mari: Annales de recherches interdisciplinaires* (= MARI) is dedicated almost exclusively to Mari, and in it one can find many important studies not mentioned in this bibliography. Finally, two other recent summaries of the history and archaeology of Mari can be found in *RLA* 7: 382–90 (history), and *RLA* 7: 390–418 (archaeology, architecture, and art).

BRIAN E. KECK

MARIAMME (PERSON) [Gk *Mariammē* (Μαριαμμη)]. This well-known name, important in Jewish eyes because of its connection with Moses' sister Miriam, designated no fewer than six queens or

princesses in the house of Herod (see *HJP²*, 287–329 for a summary history). Given the ramifications of the Herodian Dynasty, an attempt is made here to demonstrate the position of each queen within it.

1. Mariamme I. The second wife of Herod the Great. Despite the impressive career of his father, Antipater, Herod was regarded by the Jewish aristocracy as a "common man" (*idiotes*). As an Idumaean, he could be termed a "half-Jew" (*hemiioudaios*, Jos. *Ant* 14 §403). His second wife, Mariamme, brought him the Hasmonaean connection he required (Jos. *JW* 1 §241). Her father was Alexander, son of Aristobulus II, the last Maccabean ruler before the Roman conquest. Her mother, Alexandra, was the daughter of Hyrcanus II. That made her a great-granddaughter of Alexander Jannaeus and Alexandra Salome, and a great-great-granddaughter of John Hyrcanus.

Mariamme's father came into conflict with several Romans, from Pompey and Gabinius to Q. Metellus Scipio, who executed him in 49 B.C. (*Ant* 14 §125). Herod, on the other hand, achieved recognition by the Romans as king when he journeyed to Rome in 40 B.C. This did not yet give him possession of the land, and for three years he besieged Jerusalem, held by the Parthian protégé King Antigonus, Mariamme's uncle. In the spring of 37 B.C., Herod interrupted the siege to marry Mariamme, then returned with Roman assistance and took the city (*JW* 1 §§342–53). Conquest gave him possession, and the marriage lent "legitimacy" to his reign.

Mariamme bore him two daughters, Salampsio and Kypros, who married well and added six children to his growing line. One of them married King Agrippa I. Mariamme also bore two sons, Aristobulus and Alexander; the latter married the Cappadocian princess Glaphyra. Both sons sired important children, a total of seven, but both also later fell out with Herod and were executed by him.

Mariamme's brother and mother caused Herod some distress. The brother, Aristobulus III, became high priest upon Herod's nomination, even though this was unlawful since an incumbent had to be removed. Mariamme, supported by her mother, Alexandra, urged Herod to this action. He complied, but soon afterward arranged to have the lad "accidentally" drowned in a pool at Jericho (*Ant* 15 §§31–41; 51–56). Alexandra disliked Herod even before the murder of her son, and more than once invoked the aid of Cleopatra and Antony against him. She ultimately tried to seize the fortified places in Jerusalem, but was thwarted by the loyalty of Herod's lieutenants. Herod ordered her executed (*Ant* 15 §§23–80; 247–52).

Mariamme was noted for her beauty and "greatness of soul" (*megalopsychia*). But even Josephus, who admired her, considered her unreasonable, quarrelsome, and dangerously outspoken. Herod, always violently jealous regarding her, finally believed charges that she was unfaithful and was plotting his death. He had her executed, probably in 29 B.C., but afterward suffered from deep remorse for this (*Ant* 15 §§218–46).

2. Mariamme II. Herod married a second woman of this name. She also had the reputation of great beauty, but being the daughter of a priest of Alexandrian family named Simon, her family was "not distinguished enough for close relationship" with Herod, and so marriage seemed out of the question. However, even though his desire for her was great, he realized that it would be unseemly for him to take her by force. An expedient solved the dilemma: Herod appointed Simon as high priest, even though he had to remove an incumbent (as he had reluctantly done in the case of the brother of Mariamme I (see above; *Ant* 15 §§320–23). Herod seems to have named one of the impressive towers of his Jerusalem palace after her. See MARIAMME (PLACE).

Together they had a son, also named Herod, who was esteemed so highly that he was designated second successor, after Antipater (Herod's son by his first wife, Doris (*JW* 1 §§563; 573). Antipater resented this infringement on his right to choose his own successor (*JW* 1 §588).

Mariamme II was later implicated in a plot against Herod, but Herod punished her son instead of her, deleting young Herod from his will (*JW* 1 §599). The younger Herod carried on the line, marrying Herodias, granddaughter of Herod the Great. The couple produced Salome, who married Philip, tetrarch of Trachonitis (*Ant* 18 §136; *PW* 14: 158–61). Mariamme's fate seems not to be recorded.

3. Mariamme III. The wife of Herod's son Archelaus, who was set aside so that he could marry Glaphyra, the Cappodocian princess who previously had been married to Herod's son Alexander (*Ant* 17

§350; *JW* 2 §115). This created a scandal, since Jewish law forbade marriage to a brother's wife (*Ant* 17 §341). No progeny are recorded for her, on present evidence.

4. Mariamme IV. The daughter of Olympias (Herod's daughter by the Samaritan Malthace) and of Joseph (son of Herod's brother Joseph; *Ant* 18 §134). This distinguished lineage suited her for a marriage high in the Judean aristocracy, which she achieved. She is recorded as the first wife of Herod's grandson, Herod of Chalcis. They had a son, Aristobulus, who served as king of Armenia Minor under Nero (*JW* 2 §221; *ANRW* 2/8: 319–21).

5. Mariamme V. Herod's granddaughter. Josephus mentions her as one of the five children of Herod's son Aristobulus and of Bernice (daughter of Herod's sister Salome). When Herod executed Aristobulus about 7 B.C., his anger did not extend to the children. He was observed "caring for the orphans" in remorse over their father's execution. The orphans are described as "children" and this gives a rough idea of Mariamme's age at the time of her father's death (*Ant* 18 §134 refers to them "infants" [*nepious*]).

Herod betrothed Aristobulus' orphaned daughters to various members of the royal family. One daughter, the famous Herodias, married Herod's son by Mariamme II, and then subsequently married Herod Antipas. Another daughter went to an unnamed son of Antipater, Herod's son by Doris: presumably this daughter was Mariamme V. Her betrothal received an unexpected alteration. Antipater had grown alarmed at the preferential treatment accorded to his brothers' orphans, and requested that Herod give Mariamme not to his son but rather to *himself.* Herod agreed, and Mariamme married Antipater, but further traces of Mariamme are lacking (*JW* 1 §§552–567).

6. Mariamme VI. The daughter of Herod's grandson, King Agrippa I. Her mother was Kypros, daughter of Salampsio (Herod's daughter), and Phasael (Herod's nephew). These strong connections made her a desirable match. At the time of her father's death in A.D. 44, she was ten years old. He had already betrothed her to Julius Archelaus, and the marriage took place. They had a daughter, whom they named Bernice, possibly after Mariamme's sister, the famous Julia Bernice, whose career culminated in her charming the Roman emperor Vespasian and living for a time with the future emperor Titus "as if she were his wife" (Dio 66.15).

About A.D. 54, when she was twenty, Mariamme renounced her marriage with Archelaus and married an Alexandrian Jew, Demetrius. He held the office of alabarch there, probably connected with customs and taxation. Mariamme's sister Bernice married the son of another alabarch (*ANRW* 2/8: 299–305). As could be expected, Demetrius was "in the first rank for descent and wealth." The couple had a son to whom they gave the Roman name Agrippinus, a name that was not surprising given the increasingly close connections of Mariamme's family with Rome. Mariamme's brother, Agrippa II, in fact later joined Bernice in Rome. In the summer of A.D. 70, an attendant of Mariamme is mentioned taking part in the Jewish War. That appears to be the final mention of her (*JW* 2 §200; 5 §474; *Ant* 18 §§130–32; 19 §§354f.; 20 §§140 and 147).

RICHARD D. SULLIVAN

MARIAMME (PLACE) [Gk *Mariammē* (Μαριαμμη)]. The name of a tower in Herod's palace at Jerusalem, and several towns in ancient Syria-Palestine. The popularity of the name was heightened by the fact it was also the name of six women in the Herodian Dynasty. See MARIAMME (PERSON).

1. One of three "royal towers" built by Herod for his great palace in Jerusalem for members of his royal family. It was probably built to honor Mariamme II, since Josephus conjoins the building of the palace and his account of that marriage (*Ant* 15 §317–32). The other two towers were named Phasael and Hippicus (*JW* 2 §439).

These three towers are also described as "standing the highest of the towers" in the city. Since they were built on a hill, they commanded an even more spectacular view and were imposing to those standing below. The "Mariamme" tower reached some 90 feet high ("55 cubits"), with the bottom 33 feet or so

("20 cubits") built solid. The breadth was also about 33 feet. Its top stories were residential, and were by far more ornate than those in the other three towers (*JW* 5 §170).

Josephus mentions the "Mariamme" tower in connection with the Jewish War of ca. A.D. 66–70. After the war, when Jerusalem was being destroyed, the three towers were spared by Titus, who wished to leave them as a reminder to posterity of the former strength of Jerusalem (*JW* 7 §1–4). The "Tower of David," part of the "Jerusalem Citadel" still flanking the Jaffa Gate in Jerusalem, may incorporate in its lower courses portions of one of these three towers (Phasael?), although exact attributions vary. Portions of the other towers may be associated with the internal structure of the podium excavated in the courtyard of the citadel in 1968–69 (Amiran and Eitan 1975: 54; see also Höscher's contribution in *PW* 14: 1745–46).

2. Not surprisingly, given the building program of Herod and the prominence of the royal women named Mariamme, several places beyond Jerusalem bore that name. In Syria, S of Raphaneae (modern *Rafnije*), a Mariammia stood near the Eleutherus River, with settlement reaching back possibly to Alexander the Great. The local name Marjamin identifies the site even today. The location about halfway between the Mediterranean and the city of Emesa, perhaps in the territory of the Hylatae, would have made the city a strategic one for Herod. Its position just N of Lebanon led to its being described in antiquity both as "a city of Phoenicia" and as "a town of Syria" (*CIL* 12: 4899, calling it Mareammea). It belonged to the Roman province of Syria Secunda, and bishops from there are mentioned in A.D. 451, 458, 518, and 536. In this last year, one source mentions "the church in Mariamme."

In Phoenicia, a village of Mariamme is variously described as "one and one-half [Roman] miles outside Damascus" and as "outside Heliopolis." As Honigmann (*PW* 14: 1745–46) suggests, there may have been two such villages. Four other modern villages called *Marjamin,* one near Tyre (one on the Orontes, and two others more obscurely located) may bear witness to ancient foundations by the Herodian dynasty obsessed with the royal name Mariamme (Jones 1971: 267, 543 [Appendix IV, Table II]).

RICHARD D. SULLIVAN

MARISA (PLACE) [Gk *Marisa* (Μαρισα)]. See MARESHAH (PLACE).

MARJAMAH, KHIRBET EL- (M.R. 181155). Albright (1923) suggested identifying Tell Marjamah with the town of Ephraim (2 Sam 13:23). However, the identification with Baal-shalisha (2 Kgs 4:42) in the land of Shalisha (1 Sam 9:3–4) seems to be more convincing (Kallai 1972b).

The tell encompasses 8.5 acres, 450 m above sea level, and is situated on one of the NE ridges of Mount Baal-hazor sloping down into the wilderness of Ephraim. It is bounded on the E by Wadi Sî'h, on the S and SW by Wadi Sâmiyah, and on the NW by a small fault line separating the acropolis from the ridge ascending to the mountain. The junction of the two wadis forms a broad valley, Wadi 'Ussah (Nahal Yitav). This is the agricultural hinterland, watered by several strong springs of which 'Ein Sâmiyah is the strongest, and constitutes a part of the ancient road from Shiloh to the Jordan Valley. The steep slope forced the inhabitants of the site to build their town on terraces which can be seen clearly on the surface and gave the name to the tell (*rajama* = to heap up stones). Several ancient stone dressings cut into the exposed bedrock can be seen on the top of the tell. These include cup marks and steps leading to a small platform which could be a *bamah* (Albright 1923; Kallai 1972a). Nearby the remains of a massive apsidal tower were visible.

A. Mazar conducted excavations in 1975 and 1978 (Mazar 1977). On the northernmost edge of the tell overlooking 'Ein Sâmiyah, a section of the fortifications of the Iron Age II were exposed. (For an isometric drawing of the site, see Mazar 1982: 172.) They consisted of double walls leaning against each other, resulting in a total thickness of 4 m and built with large fieldstones. In several places a 3.5 m–thick retaining wall fit into the crevices of the slope to support this city wall from the outside. This wall continues southward. Inside the wall, parts of three small living quarters were exposed, which were built

directly on the sloping bedrock and against the wall. The abundant jugs, bowls, sieves, lamps, and hole-mouth jars all date to the 9th–8th century B.C.E.

Some 15 m to the N of this area are the remains of the apsidal tower, protecting the natural moat against attacks from the ridge to the NW. The base of the tower was built with large boulders and is 14.4 m wide; the outside, facing the moat, was rounded. The overall length of the tower is ca. 20 m, preserved to a height of 6.5 m. On the top were remains of two rooms. Other smaller rooms were found farther inside.

In 1979 and 1980 another sounding farther toward the E was conducted by M. Zohar (1980). Five squares, extending from the edge of the tell up to the first terrace, yielded a dark earth mixed with ashes, bones, and a large amount of typical 8th-century pottery similar to Mazar's excavations on the top. The outlines of a casemate wall could be traced and one casemate room was cleared, which contained a variety of storage jars (but no bowls) and some clear indications of the final destruction—Assyrian bronze and iron arrowheads.

Beneath the floor of this casemate appeared the top of a massive stone wall which is dated tentatively to the EB Age. Farther up the slope remains of domestic architecture of the Iron Age were exposed. In one square, an attempt was made to reach earlier strata: below the floors of the Iron Age house was a fill containing a mixture of Iron Age I and LB IIB pottery, beneath which was a layer with typical LB pottery. 3.2 m farther down was a beaten-earth floor with MB III/early LB I pottery. Below this level was a soft brown-black earth mixed with ashes, bones, and characteristic EB sherds. On the E slope of the tell, facing Wadi Sî'ah, a substantial wall built of cyclopic masonry was visible on the surface. A sounding in the room of one of the towers associated with this wall revealed that these fortifications were constructed in the MB II and were reused in the Iron Age.

It is still unclear when the area around 'Ein Sâmiyah and Tell Marjamah was initially settled. It can safely be assumed that the site was one of the well-fortified cities of the EB II. The total absence of Khirbet-Kerak ware might imply that the site was abandoned during EB III. In the 2d half of the 3d millennium and the first centuries of the 2d, the area around 'Ein Sâmiyah was obviously an important tribal center for a pastoral population. This is evident from the rich cemeteries of the MB I in the vicinity and the still unexplored settlement on Dhahr Mirzbâneh across Wadi Sî'ah (Lapp 1966; Dever 1972; 1975; Yeivin 1971a, b, c).

Tell Marjamah resisted reurbanization until the MB, when a fortified settlement was erected over the EB remains, probably during the 17th century B.C.E. During the LB, the town grew beyond the walls spreading to the lower parts of the mound and was apparently unfortified. Base Ring II sherds indicate a continued occupation during the 14th (and probably also into the 13th) century B.C.E. There is so far no evidence for a destruction layer sealing the Canaanite town, and the ceramic remains of the early Iron Age are scanty, only some collared rim jars and a few typical cooking pots. During the 9th and 8th centuries, however, a well-fortified and prosperous Israelite town (Baal-shalisha?) developed on the site. It was destroyed by the incursions of the Assyrians under Shalmaneser V in 722 or slightly later under Sargon when the kingdom of Israel was conquered and its inhabitants led into the Exile.

The site of Tell Marjamah remained essentially deserted thereafter, with only minimal evidence of occupation during the Hellenistic and Roman periods. In Byzantine times a small church (14 by 10.5 m) and a vaulted water reservoir were built on the S edge of the tell, and the settlement moved to Khirbet Sâmiyah some 400 m down the valley.

MARK ANTONY (PERSON). The principal ancient sources are Plutarch’s *Life of Antony,* Books 2–5 of Appian’s *Civil Wars,* and Books 41–53 of Cassius Dio’s *History of Rome.* Antony was born about 83 B.C. and followed the usual “public” career for a well-connected young aristocrat with military service in various areas. This included service under Caesar in Gaul in the late 50’s, following which he became one of Caesar’s most ardent supporters. He was one of the tribunes in 49 who fled to Caesar’s camp, providing him with the pretext to start the civil war with Pompey. During the period of Caesar’s dictatorship, Antony was given various responsibilities, which culminated in the holding of a consulship with Caesar in 44. After Caesar’s assassination, Antony assumed that he would succeed to Caesar’s power, but he found a new and unexpected rival in Octavian, Caesar’s grandnephew and adopted son, who secured senatorial support. Octavian soon turned against the senate and became reconciled with Antony, who had been joined by Lepidus, another of Caesar’s adherents. These three men then took over the government, being named “triumvirs to reconstitute the state” (*triumviri reipublicae constituendae*) for five years. Enemies of each were proscribed, and a series of political executions followed. In 42 the triumvirs crushed the republican party led by Brutus and Cassius at the battle of Philippi; following this Antony went to Asia, which he had received as his share of the Roman Empire to control. It was now that he began his liaison with Cleopatra.

Problems for Octavian were stirred up in Italy by Antony’s wife Fulvia and his brother, but the triumvirs were reconciled in 40 following Fulvia’s death, the agreement being cemented by Antony’s marriage to Octavian’s sister Octavia. In 39 Antony returned to his provinces in the East and began preparations for a campaign against the Parthians, returning to Italy in 37 for the renewal of the triumviral powers for another five years. Back in the East, Antony now associated himself entirely with Cleopatra, assuming the style of an Eastern monarch and sending Octavia back to her brother. He invaded Parthia unsuccessfully in 36, but was more successful in Armenia in 34, capturing its king and taking him back to Alexandria. Taking advantage of the alienation of opinion which Antony’s “oriental decadence” caused, Octavian now decided that it was time to move against his rival. The civil war culminated in a sea battle off Actium in western Greece on September 2, 31, in which Antony and Cleopatra were defeated. They fled to Alexandria, where Antony committed suicide in the following year when Octavian appeared before the city.

In his youth Antony had been violent and dissolute; later he proved to be a natural soldier, and his courage and generosity made him an acceptable leader to his troops. He was not without skill as a politician, but his temper and self-will sometimes led him into serious error.

BRUCE A. MARSHALL

MARK, GOSPEL OF. Mark is, along with Matthew and Luke, one of the Synoptic Gospels. It is found as the second book in the NT canon.

F. Form and Function

A. Origin

Little is known about the origin, date, and authorship of this gospel. The earliest record we have of such data is in material cited by the Church historian Eusebius. In that account, Eusebius (*Hist. Eccl.* 3.39.14–17) quotes Papias, who in his turn was quoting someone he, Papias, identified as "the elder." In that thirdhand account, we learn that Mark had been Peter's "interpreter," and that he had written down "accurately all that he remembered" although "not in order." Both phrases of that statement are important for an understanding of what Papias does, and does not, intend with his comments. In the first phrase, the Greek word translated as "interpreter" is *hermeneutes*, taken by some to imply that Peter spoke in another language than his hearers could understand. Yet in an earlier passage Mark had been identified in a similar context simply as Peter's "follower" (*Hist. Eccl.* 2.15.1), indicating that the word "interpreter" may be less technically intended than might first seem the case. Papias gives no hint that Mark needed to translate Peter's sermons from one language to another. The point seems to be that Mark was in a position to have accurate knowledge of Peter's understanding of the gospel. With respect to the second phrase, it is not clear what "order" is missing in Mark. Perhaps Papias (or the "Elder" he is quoting) meant Mark does not follow the order of another of the gospels, or that the order in Mark is not in accord with theological points the elder took to be important. In any case, "order" probably refers to some kind of arrangement of content, rather than to an accurate historical ordering of events. Papias may also imply here that Mark was following the order Peter gave in his preaching ("[Peter] used to give teaching as necessity demanded but not making, as it were, an arrangement of the Lord's oracles"; *Hist. Eccl.* 3.39.15), thus excusing Mark from any intentional errors of arrangement of whatever sort in his gospel.

While this tradition sounds straightforward enough, there are several reasons why one probably ought not take it at face value. Perhaps most important in this regard is what Papias has to say about the gospel of Matthew, namely that "Matthew collected the oracles in the Hebrew language, and each interpreted them as best he could." The problem here is that there is no evidence that the gospel of Matthew we have was composed in any language but its present Greek. If Papias was not speaking of our present Matthew, then how do we know he was speaking of our present Mark? If he was speaking of the gospel according to Matthew, then he may have been as inaccurate about Mark as he was about Matthew. The attempt to rescue the accuracy of this statement by suggesting Papias may have intended to describe "Q," a document thought by many scholars to underlie parts of Matthew (and Luke), does not save us from the dilemma of his inaccurate language; if Papias said "Matthew" but meant one of Matthew's sources (i.e., the conjectured document "Q"), how can we assume that when he said "Mark" he meant that gospel?

1. Author. Contrary to Papias' claims, intensive study of the materials of which Mark is composed has convinced critical scholars that much of that material as it currently appears must have had a period of

oral circulation in the Greek language before it was included in the gospel, and that in addition it appears that some of the material in Mark was written down, perhaps even in rudimentary collections, before the writer incorporated it into his gospel. Perhaps most importantly, the gospel itself is anonymous; we receive no hint from its contents about its author. Had the author's identity been important for understanding the message, as was the case, for example, with the epistles of Paul, we would surely have been provided with the name in the gospel itself. Again, although tradition assigns the authorship to a man, there is no inherent reason why, given the gospel's own anonymity, it could not have been written by a woman, many of whom were prominent in the primitive Church (for the names of a few prominent women in only one of the churches Paul wrote to, see Romans 16:1, 3, 6, 12, 15). While we will follow the tradition, and will refer to the author in the masculine form, we will do so without prejudice to the real but unknown identity of the author.

With the falling away of any certainty that the author was someone named "Mark" there also fall away all attempts to identify him more closely by assuming any mention of a "Mark" in the NT must necessarily refer to the author of the gospel, and hence, by piecing together these references, to emerge with a portrait of the author. On that basis, many have conjectured that "Mark" was the son of the woman in whose house the disciples often met (Acts 12:12) and was a companion of both Paul (Acts 13:5; cf. 15:37) and Peter (1 Peter 5:13). Although his desertion of Paul and Barnabas on one of their missionary journeys (Acts 13:13) led to a low estimate of him by Paul (Acts 15:37–39), Paul's subsequent reference to him (Col 4:10) implies there was a later reconciliation between them. That gives us what appears to be a detailed picture of the author of the gospel according to Mark, yet most of that "information" about him has been secured in a rather speculative way. Add to that the fact that Mark was one of the most popular names in the Hellenistic age among both Greek-speaking people (*Markos*) and Latin-speaking people (*Marcus*), and one can see how gratuitous it is to assume that the John Mark mentioned in Acts is necessarily the "Mark" to whom a later tradition assigned the authorship of the gospel.

If we cannot establish the identity of the author of Mark's gospel on the basis of such speculative combinations of disparate biblical references, however, we can determine some hints about him from the gospel itself. His confusion about Palestinian geography (the Greek of 7:31 shows the author assumes Sidon is south of Tyre, and that the Sea of Galilee is in the midst of the Decapolis, inaccurately in both cases) and his fluency in Greek make it likely he grew up in an area outside Palestine. His use of "Latinisms" (Greek words taken over from Latin, e.g., "centurion," [15:39], "legion" [5:9, 15], "denarius" [6:37; 12:15; 14:5]) was once thought to provide evidence which indicated that the origin of the gospel, or at least its author, was to be located in a Latin-speaking area of the Roman Empire, perhaps even Rome itself, but we now know that such Latinisms occur even in the Hebrew Talmud, indicating the prevalence of such "loan words" wherever Roman imperial power made itself felt.

Some have even found a covert self-reference to the author of the gospel in the account of the lad who fled naked during Jesus' arrest (14:51–52). Yet, even if it did refer to the author, it would still tell us relatively little about him. It is more likely, however, that this reference, like the one to Rufus and Alexander as the sons of the Simon of Cyrene who was pressed into service to carry Jesus' cross (15:21b), is to be understood as something Mark's congregation would have known about, but which would soon have been forgotten. (Matthew and Luke omit both items in their accounts, indicating that by the time they wrote, knowledge of both had been forgotten.)

The author's origin outside Aramaic-speaking Palestine is confirmed by the type of readers for whom he was writing. In the first place, the Aramaic words and phrases which Mark apparently found in his sources, and which he includes in his story, are without exception translated into Greek (*talitha cumi* in 5:41; *ephphatha* in 7:34; *eloi, eloi lama sabachthani* [this phrase seems to contain elements of Hebrew as well as Aramaic] in 15:34). In the second place, the Jewish customs to which Mark refers are explained (e.g., 7:2–4, although somewhat anachronistically). Both of these facts indicate that the intended readers of the gospel were also from an area outside the Aramaic-speaking regions of Palestine. Tradition has located that area in Rome, because of the traditional association with Peter, or in Alexandria, based on some remarks of Clement of Alexandria, a learned Christian of the 2d century, and either place is

possible. Antioch, the place where the Christian gospel was first proclaimed to non-Jews (Greeks: Acts 11:20–21; cf. chaps. 10–11 for an account of the first gentile convert), would be another possible location. Given the present state of our evidence, however, it is very difficult to determine with any accuracy which site is most likely to have been the place where "Mark" wrote his gospel.

2. Date. The time of the composition of the gospel is also a matter of some speculation. To ask the question of the time of composition is, in the first instance, immediately to raise the question of the order in which the Gospels were written. Prior to the 19th century, it was generally believed that Matthew was the first gospel to be written, followed by Luke and then Mark. This position has found its most energetic proponent among current scholars in William R. Farmer, who has argued for the priority of Matthew, most notably in his book *The Synoptic Problem.* The theory of Matthean priority is called the "Griesbach hypothesis," named for the 19th-century German scholar who first gave it a detailed formulation. Although some scholars have supported Farmer's position, among them B. Orchard (1977) and H. H. Stoldt (1980), Farmer has failed for the most part to convince the majority of NT scholars, who continue to find that the evidence points to the priority of Mark. Although there are some apparent "conflations" (a combination of two phrases, both of which are presumed earlier than their combination) in the present text of Mark in such places as 1:32 ("that evening, at sundown"; cf. Matt 8:16 "that evening"; Luke 4:40, "at sundown") or 10:46 (cf. Matt 20:29 and Luke 18:35; for others, see Longstaff 1977), it is possible that such conflations resulted from a later revision of Mark after Luke and Matthew had appeared. The evidence for Markan priority remains convincing to the majority of modern scholars: for example, the tendency of both Luke and Matthew to shorten and polish Mark's stories (e.g., Luke 5:29 eliminates the ambiguity from the story in Mark 2:13–15 concerning in whose house the meal was held; Matt 17:13 eliminates a potential confusion about the subject of Jesus' conversation in Mark 9:11–13; Matt 8:28–34 and Luke 8:26–39 both condense and clarify Mark 5:1–20, but in different ways) and to eliminate many of the rough transitions in Mark's narrative. In addition, both Matthew and Luke possess two accounts of some sayings of Jesus, one of which is close to the form of the saying as found in Mark, and one of which is not, although its form in both Matthew and Luke is very close (e.g., Mark 4:25, Matt 13:12 and Luke 8:18 as one set; Matt 25:29 and Luke 19:26 as another). Such "doublets" look very much as though the authors of Matthew and Luke had a source of Jesus' sayings in addition to Mark which they used (scholars refer to it as the "Q" document); by including the similar saying from both sources, they produced the "doublets" we now find in Matthew and Luke, but not in Mark.

Scholars therefore find it easier to understand how the authors of Matthew and Luke, independently of one another, undertook to improve Mark's narrative, and supplement it on the basis of additional traditions (e.g., "Q," traditions about Jesus' birth and resurrection), than to understand why the author of Mark, possessing both Matthew and Luke, would rewrite some stories, making them less clear and less grammatically polished, and eliminate some other key materials from his own gospel which he would have found in the other two.

In determining the date of Mark, therefore, most modern scholars will assume that Mark was the first of the gospels to be written, and that hence it must obviously be dated earlier than either Luke or Matthew, who included among their sources (cf. Luke 1:1) a form of Mark very close to the one we have. References to the gospels in writings of the Church Fathers make it unlikely that any of the Synoptic Gospels could have been written much later than the middle of the 2d century; their evidence makes it more likely they were written at the latest near the turn of the 1st century. The destruction of the temple in Jerusalem in 70 C.E. would be useful in dating Mark if we could be certain there are direct references to it in any of the gospels. References to it in Matthew and Luke but not in Mark would be an indication Mark was composed prior to that date, and Matthew and Luke after it. Some have found references to the fall of Jerusalem in Matt 22:7 or Luke 19:43, neither of which has any parallel in Mark. Mark 13 does have references to the destruction of Jerusalem which some have seen as an indication Mark was writing around the time of its destruction in 70 C.E., but those references are cast in the future, and are indefinite in detail (e.g., 13:2; cf. 14:58; 15:29). Those who date it earlier, e.g., 64 C.E., do so on the basis of Papias' association of Mark with Peter, and the further assumption that Mark would have written his gospel

shortly after Peter's death, in its turn assumed to have occurred during Nero's local persecution of Christians in that year. We have already found reason to question the data from Papias, so a date around 70 C.E. is probably as good a one as any.

3. Occasion for Writing. If more exact knowledge of the circumstances of the writing of the gospel remains elusive, several decades of intense study of the gospel of Mark allow us to draw a number of conclusions about the kind of problems the author sought to solve by composing this gospel, the kind of traditions he had from which to draw, and the methods he used in composing his story of the career of the adult Jesus of Nazareth.

It is evident from other NT materials that predate the gospels, notably the Pauline letters, that individual traditions about sayings and deeds of Jesus circulated apart from their present gospel contexts. Paul quoted a saying of Jesus about marriage and divorce (1 Cor 7:10, 11b) which, while close to the Markan saying in 10:11–12, differs enough to make it clear that it circulated independently of the form Mark gave it in his gospel (for further instances, cf. 1 Cor 9:14 with Matt 10:10b; Gal 5:14 [see also Rom 13:8–10] with Matt 22:37–39). Luke also preserves a saying of Jesus in Acts 20:35 unknown in any of the gospels. Paul further records appearances of the risen Jesus (1 Cor 15:3–7) which differ significantly from the accounts in the gospels, indicating their independent origin. Paul also preserves an account of the origin of the Eucharist (1 Cor 11:23–26) similar to but in small ways different from the accounts in the gospels. Such evidence makes it clear that Paul did not get his material from the gospels we know, and it also means that that material circulated as individual accounts of sayings and events before they were incorporated into a narrative framework.

If independent traditions provided early missionaries such as Paul with information about Jesus which they could use in their proclamation of the Christian faith, some events must have occurred which made it apparent that those individual traditions were no longer adequate for such tasks. Again, we have hints in Paul of some such events. For example, although the Corinthians had been told about the origin of the Eucharist (1 Cor 11:23), that obviously did not keep them from turning it into a travesty of what it was supposed to be (cf. 1 Cor 11:17–22). Knowledge of that isolated tradition proved less than adequate in that situation.

Similar problems relating to individual accounts of certain events and sayings of Jesus are reflected in other places in the NT as well. For example, as Mark makes clear in his gospel account, Jesus worked many mighty acts ("miracles"), of which Mark tells only a sample (cf. Mark 3:10; 6:56). As such accounts were told and retold, there was a danger that Jesus would be identified as a magician, whose own name could be used in conjuring spells (that happened, as Mark 9:38 makes clear; in the account in Acts 19:13–16 it backfired on those who tried it). There was the further danger that other magicians would try to purchase rights to such "tricks" from the followers of Jesus (for an example, see Acts 8:9–19). The problem was therefore not that people would not know how to identify Jesus as one who performed mighty acts, but that they would know only too well how to identify him, namely, as another of the many traveling magicians that roamed the Hellenistic world.

Again, preachers recounting the wise sayings of Jesus ran the risk that those who heard such reports would categorize Jesus as another of the philosophers who also roamed the Hellenistic world, dispensing wisdom in public and giving private instruction for a fee. Paul's preaching in Athens encountered such an attitude, where some Stoics and Epicurean philosophers thought they found in Paul a kindred spirit who was teaching the philosophical system of his master, Jesus (Acts 17:17–21). Again, the problem was not that people would not know what to make of Jesus on the basis of his teaching, but that they would know all too well what to make of him, namely, they would see him as another of the philosophers with whom they were so familiar.

Mark's solution to these problems was to incorporate the individual traditions of Jesus' mighty acts, his sayings, and the events of his life (e.g., the Eucharist) into a narrative that led inexorably to its climax on the cross. By devoting fully a third of his narrative to the last week of Jesus' life, spent in Jerusalem, Mark placed the whole account of Jesus under the rubric of his passion. In that way, Jesus' death and resurrection became the hermeneutical framework within which the sayings and deeds of Jesus were to be

understood. Only if one understood that the Jesus who did the mighty acts and spoke wisdom was the one who died on the cross, Mark intends to say, would one truly understand Jesus. To show that it was the same Jesus to whom the individual traditions referred, Mark in his narrative reproduced those earlier traditions faithfully, so that the readers of the narrative would recognize the familiar forms of those earlier traditions they had known. It is that characteristic of Mark that makes his narrative seem less polished than that of Matthew and Luke, but it was necessary if people who read the narrative were to be assured that this was the story of the Jesus with whom they were familiar, not a new and different person with that name.

The emphasis on the suffering of Jesus, as well as of those who follow him (e.g., Mark 8:34–37) may also point to the fact that the readers for whom the gospel was written were now in danger of such persecution, and needed to be told that such persecution did not mean their faith in Jesus as God's Savior had been misplaced. The advent of persecution would have been discouraging for those who became Christian under the kind of glowing proclamation of which we find examples in the letters of Paul (e.g., 1 Thess 4:16–17; 1 Cor 15:51–55). Such a "theology of glory" would be called severely into question if persecutions were to arise. Such persecutions were of course possible at any time in the Hellenistic world for those who held to a religion other than that of the community in which they lived. Yet so long as Christians were identified with the Jews, as they were, since at first all were Jews, they could safely hide behind the concessions Jews had gotten from various Roman emperors. For example, Jews were excused from normal patriotic duties so long as daily prayers were said for the Roman emperor in the temple in Jerusalem.

When it became apparent, however, that Christians were different from Jews, they could no longer avoid confrontation when they avoided participation in the normal Roman festivals which, as a matter of course, included worship of pagan deities. At that point, they would be open to charges of social disruption and political disloyalty. Price (1984) has made a careful study of what the imperial cult meant in terms of participation for the average Roman citizen outside Rome itself in the period following the reign of Augustus, and shows how hard it would have been to avoid participation in such public festivals.

Mark's emphasis on the fact that no one could understand Jesus prior to his suffering and death on the cross, not even his own disciples (see 6:51–52; 8:17; 9:9–10), and the emphasis that if the master suffered so must his followers (e.g., 8:34) may well have been intended to meet just such a situation in which a theology of glory was called severely into question.

A third emphasis in Mark, namely the assurance that one cannot calculate by historic events when the risen Christ would return in glory, found again and again in chap. 13, may have been designed to head off discouragement when the destruction of the temple in Jerusalem was not immediately followed by that return. Mark preserves traditions that Jesus had predicted the destruction of the temple (e.g., 13:2), a charge his opponents had used against him at his trial (14:58; 15:29; for a thorough investigation of this matter, see Juel 1977). If, as 13:2 suggests, Jesus coupled such a prediction with statements about the coming kingdom of God (as he does in the rest of chap. 13), then it would not be surprising if many assumed that with that destruction, Jesus would return and bring in God's reign with power. The danger was that when that did not occur, many would assume the substance of the Christian faith had also been shown to be false. To prevent such a conclusion, Mark was careful to include traditions pointing out that not historic events (cf. 13:7–8, 12–13, 22–23) but cosmic signs (24–25) would herald Jesus' return. Indeed, the impossibility of such calculation is emphasized by Jesus' statement that not even he knows the time the kingdom will come into power (13:32).

If that is in fact what underlies the present shape of chap. 13, it helps us in solving a problem we mentioned earlier, namely the date of Mark. The understanding of Mark 13 proposed above would argue for a date of composition sometime around the destruction of the temple in 70 C.E., probably when that destruction seemed inevitable but had not yet occurred, e.g., between 68 when Jerusalem was invested, and 70, when the city fell.

In sum, the anonymous author of Mark, faced with the problems we have discussed, which seem implied by the particular emphases of Mark's gospel, resolved them by collecting and setting down a

variety of traditions about Jesus which heretofore had circulated independently. The author of Mark put those traditions into a narrative controlled by the importance of Jesus' death and resurrection. It was the scholarly discipline called "form criticism" which made it possible to identify and isolate these originally independent units in Mark's narrative, and which therefore underlies the kind of solutions outlined above. The work of Bultmann (1963), Schmidt (1919), and Dibelius (1934) pioneered in this area.

B. Purpose

1. Lack of Historical Interest. Further careful study of the gospel of Mark confirmed the conclusion that when the author created his narrative in the way he did, he was more concerned to solve theological than historical problems, with the result that the gospel does not fit modern canons of historical accuracy. Study of the order of events as they occur in the gospel showed clearly enough that the author was not concerned with accuracy in the presentation of the itinerary of Jesus or in the chronology of his movements. For example, Mark uses an idiom (*eis to peran*) which means cross "from west to east" (cf. 10:1, where the force of *peran* is apparent from the context in which it is set) of two sea voyages in sequence with no intervening return, either by boat or on foot (4:35 and 5:1 for the first voyage; 5:21 for the second). Obviously, such a procedure is impossible. One simply cannot make two successive trips from west to east without returning, however that return be understood. Yet Mark has no mention of any return whatever. Again, in 6:45 he directs his disciples to take their boat to Bethsaida while he dismisses the crowds; in 6:53, with Jesus in the boat, they land at Gennesaret. Of course Jesus could have told the disciples of a change in plans when he got into the boat (v 51) or the wind could have blown them off course (v 48), but Mark's omission of such details indicates he was not interested in them when he composed his narrative.

The evidence for Mark's indifference to chronological accuracy is also attested in numerous places. If one limits oneself strictly to the chronological indications given in the narrative of Mark, for example, and does not supplement them from one's own imagination, one will note that all the events between 4:35 (evening) and 6:2 (a Sabbath, which began at sunset, i.e., 6 P.M.) will have taken place within a couple of hours, namely the time from late afternoon (the time indicated in 4:35) to the onset of the Sabbath with sunset (the next indication of time in 6:2), or at most within a 24-hour period, in either case a patent absurdity. Of course Mark did not mean that, but again, his lack of any specific notations of time which would make that clear shows this was not the kind of point about which he intended to be careful in constructing the narrative.

It was the dawning awareness of this fact that brought to an end the attempt to write lives of the "historical Jesus" based on the materials in the gospels purged of their supposedly later theological increments. The attempt to write such "lives" occupied gospel scholarship to a major extent both in Europe and American from the mid-19th to the early 20th century. It became clear that so much of the material necessary for such a "life" of the "historical Jesus" had to be provided by guesswork to fill in the gaps, however, that the course of such a "life" tended to reflect more the prejudices and presuppositions of the one making the guesses than it did the actual course of Jesus' life. Scholars have therefore concluded that based on the evidence we have, an accurate historical account of the life of Jesus cannot be reconstructed, whether on the basis of the material found in Mark alone, or on the basis of a combination of materials from all of the gospels.

Further study of the reasons for the order in which Mark placed his traditions, a study based on a method called "redaction history," led scholars to appreciate the theological subtlety with which this unknown author approached his task of constructing a narrative of the adult life of Jesus of Nazareth. The first redaction-historical work on Mark was published by Marxsen (1969). Norman Perrin (1969) gives a good account of this method of examining the gospel traditions, with a number of examples drawn from Mark's gospel, and Achtemeier (*Mark* Proclamation Commentary) gives a convenient summary of current methods of study and the conclusions about Mark such methods have made possible. An extensive bibliography of Markan studies has also been provided by Humphrey (1981).

2. Theological Purpose. The overall organization of the gospel of Mark, which indicates where Mark laid his priorities in his account of Jesus, must also be understood in theological terms. The following outline indicates how the structure of the narrative turns on points that bear such theological importance.

1. Jesus appears, preaching God's reign (1:1–3:6).
   A. John the Baptist appears; the story begins (1:1–8).
   B. Jesus introduced (1:9–15).
   C. Jesus' ministry begins; he chooses disciples (1:16–20).
   D. Jesus teaches and heals (1:21–45).
   E. Jesus rejected; conflict with religious authorities (2:1–3:6).
2. Jesus ministers in Galilee (3:7–6:6).
   A. Jesus designates 12 (3:7–19).
   B. Jesus designates true followers (3:20–35).
   C. Jesus teaches in parables (4:1–34).
   D. Jesus performs mighty acts (4:35–5:43).
   E. Jesus rejected; conflict with his own (6:1–6).
3. Jesus and the disciples under way (6:7–8:21).
   A. Jesus sends out 12; John is killed (6:7–29).
   B. Jesus feeds and heals (6:30–56).
   C. Jesus teaches about the Law (7:1–23).
   D. Jesus heals and feeds (7:24–8:10).
   E. Jesus misunderstood by disciples and Pharisees (8:11–21).
4. Jesus heals blind eyes; teachings on the life of discipleship (8:22–10:52).
   A. Jesus heals blind eyes (8:22–26).
   B. First Passion prediction and attendant events (8:27–9:29).
   C. Second Passion prediction and attendant events (9:30–10:31).
   D. Third Passion prediction and attendant events (10:32–45).
   E. Jesus heals blind eyes (10:46–52).
5. Jesus in Jerusalem (11:1–16:8).
   A. Jesus appears in the Temple (11:1–12:44).
   B. Jesus tells of final events (13:1–37).
   C. Jesus' final acts—failure of disciples (14:1–42).
   D. Jesus the king—failure of the authorities (14:43–15:47).
   E. Jesus is risen—failure of the women (16:1–8).

The last verses in the text of Mark (16:9–20) are included in some translations, but they do not appear in the earliest manuscripts. These verses are clearly an amalgam of traditions from the other three gospels which was appended to the gospel of Mark to provide it, like the others, with resurrection appearances. In the opinion of most modern scholars, the gospel ended originally with 16:8. Boomershine and Bartholomew (1981) have done a careful literary and stylistic study of Mark which also supports that point.

Careful consideration of the outline given above will indicate the care with which Mark has constructed his gospel. Parts 1, 2, and 3, for example, each end with opposition to Jesus. Again, parts 2, 3, and 4 each begin with some action involving the twelve disciples. Or again, part 1 begins with John the Baptist as precursor of Jesus in preaching, while part 3 begins with John as precursor of Jesus in death at the hands of political authorities. One will note also that part 4 is artfully arranged to show that while Jesus can cure physical blindness, the disciples persist in their spiritual blindness, and that segments C, D, and E of part 5 each display the failure of some group around Jesus. It is clear from such examples that Mark did more than simply construct a random arrangement of traditions linked, if at all, by catchwords or catchphrases, as some form-critical scholars had once argued. Rather, Mark in fact exercised considerable care in the way he arranged and juxtaposed the various traditions available to him.

A careful examination of some of the points from the outline we noted above will show in more detail some of the points the author was making by the shape he gave to the gospel. It will also show how the author makes those points, namely more by the juxtaposition of the traditions with which he had to work than by extensive, or even minimal, editorial comments. Markan editorial activity is pretty much limited to occasional framing of an account from his traditions in order to fit it into his narrative (e.g., 4:1–2; 6:30–33), to various summaries of Jesus' activities (e.g., 3:7–12; 6:54–56), and to summary statements of points he wants to make (e.g., 8:19–21).

a. Opposition to Jesus. In pursuing that more detailed examination, we can gain some insight into how Mark arranged his traditions to show growing opposition to Jesus (the conclusions of parts 1, 2, and 3) by examining the collection of materials which concludes part 1, namely 2:1–3:6. Even a cursory reading will show that Mark has done little to integrate these stories into a smoothly flowing narrative unit. The almost accidental character of the arrangement is shown when one compares the way Matthew and Luke made use of this material. Neither evangelist felt compelled to reproduce either Mark's order (Matthew uses three of the stories in one place and two in another), or the method by which he connected the traditions (Luke, as we saw above, removes the ambiguity about whose house was the locus of the feast following Levi's becoming a follower of Jesus). Even though Mark did not rework his traditions, or put them in any necessary order, but simply placed them side by side, he nevertheless prepared the way for the point he makes in the concluding verse (3:6), where the authorities plot Jesus' death. Any one of the little stories in this collection made it clear enough that Jesus was coming into conflict with religious authorities, a conflict which would, if allowed to proceed, inevitably lead to Jesus' condemnation by them. It is just that point that Mark has emphasized by placing five such stories one after another, and placing at the conclusion the reference to the violence against him contemplated by the Pharisees and the Herodians. That Mark makes that point less by comment than by position of traditions is typical of his way of constructing his gospel, as is his intimation this early in the gospel of the final fate of Jesus. It is just that point, as we saw, that Mark emphasized about Jesus by making it the concluding point of each of the first three major segments of his gospel.

b. Role of the Disciples. The second point noted above in relation to the structure of the gospel, namely the prominence of the disciples in the opening material of each of the first three major parts of the gospel, also shows the care with which Mark arranged his materials for the theological point he wished to make. The theme here considered, namely discipleship, is woven throughout the entire narrative, and a look at some of the ways that theme is dealt with will indicate the points Mark makes by his use of the traditions he had concerning the disciples.

The major theme in the treatment of the disciples is their inability to understand fully what Jesus intended by what he said and did during the period prior to his death and resurrection. This is displayed in exemplary fashion in the account of the transfiguration (9:2–8). The content of the event recorded here makes it unmistakable who Jesus is: he is to be associated in importance with Moses, the law-giver, and Elijah, who is by tradition the precursor of the Messiah (see 9:11–12). Indeed, God here identifies Jesus as his own son, with the additional command to the three disciples present (Peter, James, and John) to pay strict attention to what Jesus says. The further command that this event not be reported until after the resurrection (9:9) gives a clear indication that comprehension of the true nature and role of Jesus depends on that future rising of Jesus after his death on the cross.

Within that framework, Peter's confusion in v 6 is significant: in the midst of a visible display of Christ's heavenly glory, and in company with Moses and Elijah, Peter remains confused and fearful. That this is a Markan emphasis in this tradition is indicated by the fact that Luke's account of the same event omits Peter's fear (9:33), and Matthew in his account omits in addition Peter's confusion (17:4). The point here concerns less the character or mental acumen of Peter than it concerns Mark's understanding of the meaning of the career of Jesus. What is at issue is the point at which it becomes possible truly to understand who Jesus is and what he is about, and the answer implied here is that it is not possible prior to Jesus' death on the cross and his subsequent resurrection.

That same point appears in another episode involving Jesus and the disciples, namely the story of Jesus' appearing to the disciples in the midst of a stormy sea (6:45–52). The astonishment of the disciples is due less to their lack of mental acumen than to their sheer inability to understand at that point, as the final verse (52) makes clear: their incomprehension was due to the fact that "their hearts were hardened." Since in Semitic understanding, the heart was the seat of intellection, this statement concerns the disciples' inability to understand, not their inability to react emotionally. The passive form ("were hardened") is to be understood as the reverential passive, common among pious Jews who held that not only the name of the deity but even the word "God" was to be avoided where possible; the passive thus has the force here of "God hardened their hearts." This same point is made in an episode where Jesus again declares that comprehension has been withheld from them (8:17). In both cases, the disciples' incomprehension is something over which they have no control. For Mark, Jesus' fate is not determined by the mental acuity or its lack among his followers; rather his fate is in God's hands, and hence his suffering is inevitable.

The inevitability of that suffering is further emphasized in those passages where Jesus predicts to his disciples his impending fate in Jerusalem at the hands of the authorities (the Son of Man "must" suffer; 8:31). The repetition of that prediction (9:31; 10:33–34) emphasizes its certainty: Jesus' suffering in Jerusalem is not probable, it is inevitable. Yet even in the midst of such certainty, the incomprehension of the disciples remains uncompromised (9:32). The fourth major segment of the gospel (8:22–10:52) is shaped around the twin themes of the certainty of Jesus' impending suffering and the incomprehension of the disciples. The passage is bracketed by the two stories in Mark which concern the overcoming of blindness (8:22–26; 10:46–52), a device well known to ancient writers called an *inclusio,* whereby a part of a longer text was delimited through the repetition of some phrase or similar event. Taken in itself, the fact that the stories defining the unit deal with the healing of blindness implies the theme of the section: the blindness of the disciples.

The first passage about blindness overcome is followed by the confession of Peter that Jesus is the "Christ" (8:29). That confession, taken for itself, is in Mark's view correct; Mark shares the primitive Christian conception that Jesus is the one anointed by God ("Christ" is derived from Greek *chrio,* "anoint") to be his son and the savior of humankind. The problem lies not in the title as such, but in Peter's inability to include the dimension of suffering within his understanding of the task of God's anointed one, an inability which is identified as demonic (i.e., contrary to God's purposes; 8:32–33). This inability to understand the association of suffering with God's anointed one is not limited to Peter; it follows on each of the three predictions of the passion. In fact, it is part of a pattern that consists of a prediction by Jesus of his impending suffering (8:31; 9:31; 10:32–34); an account which reveals that one or more of the disciples have failed to comprehend that point (8:32–33; 9:32–34; 10:35–37); a further statement by Jesus on the nature of discipleship (8:34–38; 9:35–37; 10:38–45), and a tradition that indicates Jesus' exceptional nature (9:2–8; 9:38; 10:46–52). The remaining materials in this segment which fall outside that repeated pattern nevertheless also deal in one way or another with discipleship. Thus one of the five major segments of the gospel deals specifically with discipleship, and it is structured by a pattern of the disciples' lack of comprehension concerning what Jesus says about himself and about what following him, i.e., discipleship, means. Thus the point is reinforced that no one can understand, or follow, Jesus until after Jesus' suffering and resurrection.

The picture of failure on the part of the disciples is not limited to the early parts of the gospel, however. It continues in the account of Jesus' final hours with them. Here the inability of the disciples to comprehend takes the form of a vivid contrast between their expressed intentions and their actual deeds. In the setting of the final meal of Jesus with his disciples, for example, Jesus solemnly announces that one of them will betray him. Their response takes the form of each disciple individually asking Jesus "Is it I?" (14:17–19). Although the English can be ambiguous here—it could represent their dawning realization they were capable of such treachery—the Greek is expressed in such a way (*meti ego*) that the only answer the disciples will allow in response is "Of course not, don't be silly." Thus any hint of a self-probing on the part of the disciples is absent; each asserts that to think betrayal on his part is possible is to have a totally false view of him and his dedication. The same theme of the inability of the disciples to

imagine they could abandon Jesus is represented in the scene that follows, which is set on the Mount of Olives (14:27–31). Jesus again has predicted his betrayal and abandonment by the disciples, and again, led by Peter, each denies himself capable of such an act.

The events which follow make clear the extent of the gulf between what the disciples imagined their situation to be, and what it in fact was. In Gethsemane, with Jesus in agonizing prayer, the disciples sleep (14:32–41). When Jesus is arrested, in stark contrast to the repeated asseverations of loyalty, they flee (14:50), even though there are some there willing to risk armed confrontation (14:47; it was not until later tradition that this act was attributed to Peter [John 18:10]). Peter, who led the group of disciples in their protestations of loyalty to the door of death, is singled out for special treatment. His threefold betrayal of his master, the third time accompanied by an oath (14:66–72), may reflect Jesus' threefold prediction of his passion.

In ways such as this, Mark illustrates that the resolve, even the dedication and asserted loyalty of the disciples comes to grief when it is tested. This is not for the sake of a psychological profile of the disciples, or to demonstrate their unalleviated perfidy (for a contrary view, see Weeden 1971). Jesus' promise to meet them in Galilee (14:28), repeated by the figure at the empty tomb (16:7) shows clearly enough, as does the very preservation of materials only the disciples could have known, that they did regain their loyalty and confidence in the risen Jesus. Rather, the point Mark makes by means of the way he deals with the traditions concerning the disciples relates to their inability, prior to Jesus' death and resurrection, to understand him, something that, upon his death, even so unexpected a person as a Roman centurion could do and publicly announce (15:39).

By means of such an arrangement of the traditions about the disciples, Mark makes his point that the passion of Jesus is the interpretative key to his career and its meaning. Despite all Jesus had told them, despite their association with him and their seeing what he did, despite their repeated oaths of loyalty to him, they could not understand him, or act upon such an understanding, until after the events of Jesus' passion and resurrection, which in Mark's view climaxed Jesus' career.

c. Role of John the Baptist. In addition to the order in which Mark placed the traditions he had which concerned opposition to Jesus (2:1–3:5, with the climax at 3:6), and those which concerned the disciples (esp. 8:22–10:52), Mark makes his theological point by the way he arranged the materials about John the Baptist, the first character mentioned in the gospel. A consideration of that arrangement will further illustrate how Mark achieved his theological points, namely more through the arrangement of traditions than through overt editorial comment.

The very first verse of the gospel shows the importance Mark attached to the figure of John. That opening verse may be paraphrased: "The beginning of the gospel of Jesus Christ was the appearance in the wilderness of John the Baptist, fulfilling the prophecy of Isaiah …" By beginning the story of Jesus in this way, Mark made it evident that one could not understand the significance of the total event of Jesus of Nazareth unless one also understood John the Baptist.

Part of that significance lay in the relationship of John's appearance to the tradition of the appearance of Elijah prior to the coming of the Messiah. John is described in 1:6, for example, in language that closely parallels a description of Elijah found in the LXX version of 2 Kings 1:8 (LXX 4 Kgdms 1:8). Again, according to another tradition, the hairy mantle was the sign of the true prophet (Zech 13:4; for a false prophet to wear such a mantle was a reprehensible attempt to deceive). Mark presents John as the long-awaited Elijah, a point that Jesus himself later affirms (Mark 9:13). By beginning the story of Jesus' Galilean ministry with John the Baptist, Mark announces his importance for understanding that mission, a point again confirmed by Jesus when he identifies the ability to understand the significance of John the Baptist with the ability to understand his own: to fail to understand the one necessarily leads to failure in understanding the other (11:27–33). Both Jesus and John share the same God-given authority.

Mark saw a further significance in John, however. Not only was John the precursor of Jesus in his preaching of repentance (cf. 1:4 with 1:15), he was also Jesus' precursor in his final fate. That point is made in the traditions that Mark assembled in 6:14–29. In one tradition (6:14–16), there is a discussion about the way in which Jesus was perceived by the public. Several possibilities are listed: Jesus is Elijah,

he is another of the prophets. The major identification, however, is with John the Baptist. That is the official view, since that is also the identification Herod makes (6:16). Immediately following that identification, Mark appends the story of the death of John the Baptist, giving it all the more importance by telling it out of its natural sequence. This is one of the very few places Mark uses the literary device of the "flashback," withholding the narration of an event until a more appropriate time for its telling. The rarity of that device focuses all the more attention on it when it is used here. Clearly, John's death is very important for Mark in the story of Jesus of Nazareth.

The point to be made here is that just as John was Jesus' forerunner in his life and his preaching, so was he his precursor in his death. Thus John brackets the story of Jesus: just as John's appearance signaled the importance of the coming of Jesus of Nazareth, so the final fate of Jesus is announced by John's own death. As John preached, so did Jesus; as John died, so will Jesus: at the hands of ambivalent civil authorities (cf. esp. 6:20 with 15:10, 14). In this connection, it is interesting to note that contrary to other, non-Markan traditions, John did not die for political crimes. Such a tradition was current in 1st-century Palestine, and it can be read in Josephus' account of the people of Israel (*Ant* 18.5.2). There John was executed because Herod feared him as a potential political revolutionary. That is not the case in Mark, however. In Mark's narrative, it is clear, John died because of the religious content of his message (6:17–18). Like Jesus who was to follow in that fate, John ran afoul of the authorities because of his attacks on their observance of the religious law of Israel, or lack of it.

All of that shows the importance Mark placed on the figure of John the Baptist, both for Jesus' career and for his death. By using the traditions he had about John the Baptist in that way, and by reserving the story of John's death for a rare flashback in the narrative, Mark shows again how he makes his points by the arrangement of his traditions. In this instance, Mark made clear that Jesus' death was a necessary, indeed inevitable, climax to his career, just as it had been for his forerunner.

C. Structure and Literary Patterns

We have now seen some examples of the way in which Mark has created his narrative by a careful positioning of traditions which, for the most part, he reproduced in their familiar form, adding a minimum of material to give coherence to the story. In the course of such an arrangement of traditions, Mark put them into certain repeated patterns of organization. One such pattern is the collection of similar stories into one place. We have already seen one example of that (2:1–3:5), and the pattern is repeated in other places as well (e.g., parables, 4:1–34; discussions, 11:27–12:34).

1. Intercalation. There is another characteristic arrangement of traditions Mark used when he wished to indicate that two stories are to be linked, and are thus to interpret one another: that was to bracket one tradition with another. Thus, for example, into an account of the cursing of a fig tree (11:12–14, 20–21) Mark has inserted ("intercalated") the account of the cleansing of the Temple (11:15–19), indicating in that way that the "cleansing" in fact amounted to a "cursing" of temple worship which would bring it to an end as surely as the cursing of the fig tree brought it to an end. Again, Mark inserted the story of the healing of a woman with a flow of blood (5:25–34) into a story of the raising to life of the dead daughter of Jairus (5:22–24; 35–43), in that way bringing into the story of Jairus' daughter the emphasis on faith contained in the story of the woman cured of her blood flow.

To see the subtlety with which Mark created his narrative, it will be useful to examine a longer passage which illustrates how Mark made use of these devices of intercalating and collecting in his efforts to make his point by the juxtaposing of his traditions. To do that, we will examine the materials contained in 3:20–4:34, a passage which contains disputes, sayings, parables, and even references to mighty acts.

The first unit of the text, comprising 3:20–35, displays the common Markan technique of intercalating or bracketing one tradition within another in order to aid in the interpretation of the combination thus created. In this instance, an account of disbelief on the part of the scribes in the benevolent nature of Jesus' demon exorcisms and Jesus' reply (3:22–30) has been bracketed by an account of the judgment on Jesus by his own family as a result of a report that has reached them concerning his activities (3:21, 31–35; v 20 is Mark's introduction, emphasizing the crowds around Jesus). In this instance, it appears that the material within the bracketing traditions aids the interpretation of those placed around it.

There is no question about the negative evaluation put on Jesus by the scribes. They accuse him of being able to do his exorcisms because he is in league with Satan, the prince of the demons. Hence, they imply, demons obey Jesus as they would obey Satan, whom Jesus serves. Jesus' response indicates such an accusation is illogical, since, were Jesus working by Satan's power, it would mean Satan was in rebellion against himself, and therefore was destroying his own power (vv 23–26; the assumption is that Satan extends his power through the demonic possession of human beings). The statement is more than illogical, however; it is also blasphemous, since to say that about Jesus is to attribute to God's enemy what God himself is doing, something here identified as the one unforgivable sin (thus Mark in v 30 interprets the saying of Jesus in vv 28–29). To attribute to Satan the power of God which is able to overcome Satan (the point of v 27: Satan has been overcome by Jesus, who by God's power is the stronger) is to cut oneself off from the one who alone is able to rescue one, through the forgiveness of sin, from the power of Satan.

It is around that negative, and false, judgment of Jesus that Mark has set the tradition of Jesus' questioning relatives (as 3:31 makes clear, they are Jesus' immediate family). In this context, it is clear that we are not to interpret the desire of his family to draw him away as innocuous. The bracketed tradition makes it clear that the family shares, in one way or another, the negative viewpoint of the scribes toward Jesus. Mark thus guards against an interpretation of the coming of Jesus' immediate family to bring him away as motivated by incipient belief or sympathy toward what Jesus was doing or teaching, as Luke does in his gospel (see Luke 8:19–21, in its context there). Here the context (the scribes' negative judgment) reinforces an impression from the material itself (3:31–35, Jesus' physical family contrasted with his true family), namely that at this point, Jesus' family was completely unsympathetic to what he was doing. Typically for Mark, the traditions thus arranged confirm the point made by the collection of stories in 2:1–3:6: opposition to Jesus is growing, and it now includes not only the religious authorities, but even his own family.

Of significance within the bracketing tradition is the contrast between those who are "outside" and those who are "around Jesus" (his immediate family is outside, v 32; his followers are around him, v 34, and hence are his true family). The reader of Mark's narrative had learned earlier the names of some of those who are "around Jesus" (the Twelve, 3:13–19), and here the reader learns about some of those who are on the "outside" (scribes, representing the religious authorities in Jerusalem; his own immediate family). Two groups are thus identified, each characterized by its reaction to Jesus: those who reject him, and those who associate themselves with him. Of further interest is the fact that the groups who oppose him comprise, at this stage, those who ought to know Jesus best (his own family), and those who ought to know the most about the God by whom Jesus was sent (religious authorities). Those who ought to be most supportive of Jesus are therefore, in Mark's gospel, precisely those from whom he has the most to fear. These traditions thus imply what Mark will make explicit in 6:4: Jesus is without honor "in his own country, and among his own kin, and in his own house." The ultimate fate of Jesus—his death on a cross—is already inevitable, a point Mark surely intends to make by this arrangement of traditions.

2. Grouping of Similar Materials: Parables. The next unit of the narrative, 4:1–20, begins with the characteristic Markan notice that Jesus was surrounded by a crowd (4:1; remarks about crowds, along with remarks about Jesus being engaged in teaching, and being near the sea, occur most frequently in material that introduces and connects what by every evidence were once independent traditions, and hence show themselves to be written by Mark). That puts the reader on notice that again, Mark is responsible for joining the following material to what preceded it, just as he had combined the two earlier traditions by bracketing the one with the other. We are thus clearly involved here with material that Mark himself has combined.

It is further evident that Mark took the parable of the sower to be of central importance for understanding what Jesus was about. The double imperative relating to hearing in v 3 (the RSV omits one of them in its translation) indicates that while the parable itself began with such an imperative ("pay attention"), Mark has added a second ("listen"), thus pointing to its importance. He also added an injunction to listen after the parable's conclusion (v 9; the same saying is repeated in v 23), thus framing

it with imperatives to pay close attention. In a later verse, Mark has Jesus identify this as his most important parable, and thus the key to understanding all others (v 13).

The parable tells about the ordinary actions a Galilean farmer would undertake in order to increase the harvest of his normal crop by some seven to ten fold. What is therefore striking about the parable is not the actions of the farmer, but the prodigious results of his activity (4:8). What on first observation seemed quite ordinary is, in the end, shown to have been quite extraordinary, yet no one could have realized that until the end, with its harvest, came along. That contrast between ordinary beginnings and extraordinary results dominates the parable, not, as some have suggested, the contrast between the seed wasted (vv 4, 5, and 7) and that which yielded grain (v 8). This latter interpretation is rendered unlikely by the fact that the word for "seed" in vv 4, 5, and 7 is in the singular, while in v 8 the word is found in the plural ("seeds").

The surprising contrast is in the way the parable ends after an ordinary beginning. Up to that time, it would have been possible, observing the sower, to assume he was nothing out of the ordinary, yet such an assumption would have been mistaken, as the harvest showed. Clearly something extraordinary was under way even as the sower began, but that was not clear from the beginning, only from the end. Applying normal criteria to the sower would have led one to miss this sower's significance. Hence the parable ends with a warning not always to trust normal judgments based on what seem at first normal phenomena. To judge Jesus that way means to miss his significance which will become evident at the end of his life (his resurrection) and at the end of his career (the Parousia).

In the context in which Mark has placed this parable, those who have performed such errors in judgment are the scribes and Jesus' family (3:20–35), who have judged Jesus by the normal criteria one would apply in such a situation. An ordinary person doing what Jesus was doing would have to be in his family's judgment "beside himself" (i.e., not in full control of his words and acts) just as any ordinary person performing the exorcisms Jesus did would stand under the judgment pronounced on him by the scribes. Those who judge Jesus on that basis have missed his connection to God's coming rule (cf. 1:15), and when that kingdom comes in power, they will be unprepared. Only those, apparently, who recognize that in Jesus God is doing something extraordinary will hold fast to the end, and be vindicated rather than surprised by his relationship to God's rule.

The following verses (14–20) provide an explanation of the parable, an explanation introduced with the observation (v 13) that this is the key to all of Jesus' parables. This explanation emphasizes to the virtual exclusion of all other points the need to listen carefully and hold fast to what Jesus says, regardless of subsequent difficulties one may encounter. The point Mark makes turns on how one listens, and responds, to Jesus, the point also of vv 10–12. Mark's Greek makes clear that what the disciples ask in v 10 is not *why* Jesus speaks in parables, but rather their question "concerns" the parables. It is a question therefore of the meaning of the parables, and Jesus answers in terms of the parable of the sower (v 13: "this parable"), thus pronouncing it the key to all the other parables as well. The answer is another formulation of the point that those who know what is going on with Jesus (the secret of v 11a, namely Jesus' connection to God's coming kingdom) do not err in their judgment of what he says and does, whereas those who judge him by usual criteria fail completely to understand anything about him at all (v 11b); to them all things are as obscure as the parables he tells. While they may see what he does, they do not really perceive its meaning; they may hear what he says, but they do not really understand its significance.

These verses (11–12) are introduced with the formulaic statement ("and he said [to them]") Mark regularly uses (see also 4:13, 21, 24) to incorporate independent sayings of Jesus, usually by adding them at the end of a tradition (cf. 2:27–28). The content of vv 10–11 shows the relation Mark saw between them and the traditions he placed prior to his collection of parables (i.e., 3:20–35). It was in those earlier verses that we found an example of those who could not perceive the meaning of what they had seen (the scribes and Jesus' exorcisms), just as it was there we found an example of those who could not understand what they had heard about Jesus (his family). Because they had thought they could judge Jesus the same way they judged others who might have done what he did (the ordinary sower!), they are fated to be no more than uncomprehending observers of just those events involving Jesus with their incredible import (4:12). Familiarity with religious matters, such as the meaning of exorcisms, or even familiarity with

Jesus as a person, will not guarantee that one understands him. Those who fail to see his relation to the kingdom (the secret of 4:11) remain outside (the same word appears in vv 3:31, 33 and 4:11). Those who see in Jesus something worth following will one day possess that secret (the kingdom). It is they who are "around him" (the same phrase is used in 3:34 and 4:10).

The remaining verses (21–34) show, by the repeated use of the formulaic "and he said (to them)" in vv 21, 24, 26, 30 and the repetition of the injunction to careful listening in v 23 (see v 9), that this subsequent material about parables has also been assembled by Mark from independent traditions. The parable of the seed growing secretly (26–29) and of the mustard seed (30–32) again contrast beginnings and endings, the latter by contrasting an insignificant beginning (the small seed) with an unexpectedly great ending (the large bush), while the former points to the inevitability of the end (the harvest) once the beginning has been made (the sowing). The sayings (21–22, 24–25; 23 repeats 9) concern appropriate activities (putting lamp on lampstand [21b]; listening carefully [24–25a]) and inappropriate activities (putting lamp under bushel [21a]; not listening [25b]). Again, as in the parable of the sower, the need for the appropriate reaction is stressed.

The final two verses (33–34) represent the conclusion to the collection of parables and parabolic sayings. Since both verses presume the present context, and since v 34 employs yet another characteristic way Mark arranged his traditions, a characteristic we will examine in more detail below, both verses are probably to be assigned to Markan composition.

In that way Mark has taken a group of individual traditions (3:20 with 31–35; 3:22–27; perhaps 3:28–29; 4:3–8; 4:11–12, 14–20, 21–22, 24–25, 26–29, 30–32) and by arranging and connecting them (editorial work is probably to be found in 3:20, 30; 4:1–2, 9–10, 13, and 33–34) has created a coherent unit of his narrative which portrays both positive and negative reactions to Jesus. The rejection by those closest to him by blood (his family) and religious interests (the scribes as religious authorities) in its turn also points to that final abandonment of Jesus by all those who had been nearest to him.

3. Public and Private Teaching. There are additional patterns of traditions within the gospel of Mark that show some further characteristics of its author in the matter of creating his narrative. One such pattern which is to be found is displayed in those places where the public teaching of Jesus is followed by private instruction to his disciples (e.g., 4:1–12, 33–34; 7:14–23; 10:1–10) or public acts similarly followed by private explanation (9:14–29). Here the contrast between those "within" and those "without" appears to have determined this pattern of organization.

4. Passion Predictions. The pattern of the three predictions of Jesus' passion also display, as we have already seen, an arrangement of traditions which shows (a) the prediction, (b) failure to understand what Jesus has said, (c) instruction on discipleship, and (d) some indication of Jesus' exceptional nature (8:31–9:8; 9:30–41; 10:33–45). In addition to that, it also points to a certain predilection in Mark's gospel for events occurring in series of three: the three passion predictions and the three denials of Peter are perhaps the major examples of this tendency. A further pattern of which we have already seen examples and which is found throughout the gospel concerns the inability of anyone to understand who Jesus really is before his passion. Although the reader knows from the very first verse that Jesus is the Christ and the Son of God, that knowledge is shared prior to Jesus' death only by God (1:11; 9:7) and the supernatural demons (1:24, 34b; 5:7).

It was this inability of persons to recognize Jesus that caused Dibelius to characterize Mark as a book of "secret epiphanies" and William Wrede (1971) to speculate that the phenomenon of nonrecognition of Jesus as Messiah during his lifetime was due to the combination of later, messianic traditions with earlier traditions which were still nonmessianic in nature. Further study has indicated that it would probably be more accurate to speak of "messianic secrets" rather than to try to bring under one rubric all the material that points to a lack of recognition of who Jesus was prior to his passion. The phenomenon of "secrecy" probably has more to do with Mark's theological than with his historical strategy in his gospel, i.e., *no one* can understand Jesus prior to his death. (For a recent, careful discussion, see Raisanen 1976.)

The question of understanding or recognizing Jesus immediately raises the question of who the author of Mark thought Jesus to be, and what "understanding him" would entail. To raise that question in its turn is to be involved in the matter of the christology of Mark, and it is to that topic we must now turn.

D. Christology

That christology is an important question for Mark is clear from the very first sentence of the gospel, where Jesus is identified as "Christ" (unlike Matthew [1:21] Mark does not give the name "Jesus" an interpretation, and so it does not figure in Mark's christology), and as "Son of God" (although some early Greek manuscripts omit the phrase "Son of God" from 1:1, its importance for Mark is such that it must be considered in any discussion of christology, whether or not it was originally present in that first verse).

1. Son of God. While the title "Son of God" is known from contemporary Greek culture as a way of designating honor to outstanding individuals, the setting of the beginning of Mark's gospel, with its opening quotation from the OT (contrary to Mark's identification in v 2, that quotation given in that verse is from Mal 3:1, not Isaiah; v 3 is, however, taken from Isa 40:3), shows clearly enough that Mark's frame of reference is not contemporary Hellenistic culture, but the background of the Christian faith in the career of Israel as God's chosen people.

The first implied use of that title occurs in the story of Jesus' baptism, where a voice from heaven (following Jewish usage in which God's voice [Heb *bat qōl*] represents God himself) identifies Jesus as "my (i.e., God's) son." The language of 1:11 reflects Ps 2:7 and Isa 40:1. The point which appears to unite those two quotations is the kingly power associated with the title "Son of God" in the OT. While royal power is implied in the verse from Isaiah, where God's "chosen servant" (Isa 42:1) will establish "justice in the earth" (Isa 42:3b–4a), a task surely implying a king's power, the verse from Psalm 2 expresses the royal context outright. Originally an enthronement psalm, Psalm 2 was composed to celebrate the assumption of royal power by a king chosen by God to rule his chosen people and exercise vengeance over their foes who in opposing his people also opposed God. Verse 6 declares the enthronement; v 7 declares the enthroned king to be God's son, thus establishing the link between royal power and the title "Son of God" in the Psalm. That title is also used in the discussion of the establishment of a Davidic dynasty in 2 Sam 7:5–16. In that passage, Nathan announces God's will to David, and in describing David's eternal dynasty, cites God's promise that David's royal descendants will be "my son"—i.e., that "Son of God" will be a title for each succeeding king of Israel of the Davidic line.

Against that background, it appears one is to understand Jesus' baptism as his enthronement: at this point he receives the royal accolade "my son" directly from God. Yet in Mark the baptism is a private affair; the Greek of 1:10–11 makes clear that Jesus alone saw the heavens opened and the spirit descending, and the voice was directed to him alone ("*you* are my beloved son"; such privacy was eliminated by Luke, who described the opening of the heavens as an objective occurrence [3:21], and by Matthew, who also added that the voice was addressed to the bystanders ["*This* is my beloved son"; 3:17]). That raises the question about the point at which public acknowledgment will be made of the fact that Jesus is king. Since God himself has announced it, there can be little question of its truth, yet then why the secrecy? Why is the voice addressed only to Jesus? Even when the heavenly voice, in the Transfiguration (Mark 9:2–8), is directed not to Jesus but to the disciples with him there (v 7: "*This* is my beloved son"), the disciples are exhorted not to mention it until a specific future event (Jesus' resurrection; v 9). Indeed, the first public acknowledgment of Jesus as Son of God, made by supernatural demons who know about the divine sonship of Jesus, is met with the command to keep silent on that fact (1:25; see also 1:34; 3:12). When, then, will Jesus be enthroned? When will he be publicly acknowledged the king God has designated him to be? To read Mark's gospel is to be confronted with that question from the outset.

2. Christ. The second title applied to Jesus at the beginning of Mark's narrative, "Christ," simply intensifies that question. Derived from the Greek verb *chrio,* meaning "to anoint," the Greek adjective *christos* means "anointed (one)." The Hebrew equivalent also appears in Psalm 2, again to designate the king (v 2). It was with that act of anointing that one became king over God's people; that is the way both Saul (1 Sam 9:16; 10:1) and David (2 Sam 2:4; 22:51) were so designated. Thus the title "Christ"

confirms the royal power declared in the title "Son of God" and that in turn raises the more insistently the question about when Jesus will be publicly acknowledged and ascend his God-appointed throne.

As was the case with the first public announcement of Jesus' close relationship to God ("Holy One of God," 1:24–25), so the first public utterance identifying Jesus as "Christ" is met with the command not to use the title publicly (8:29–30). Although Jesus does not deny the validity of the title "Christ" applied to him any more than he had denied the validity of the title "Son of God," Peter's reaction to Jesus' prediction of his own suffering indicates Peter had not used the title correctly (8:32–33). To assume that because Jesus was the Christ he would be immune from suffering is not only incorrect, it is in fact satanic (v 33b). The denial of Peter's understanding of the title "Christ" does not deny the appropriateness of applying the title to Jesus, including the royal implications it carries. Rather, the clarification Jesus gives to Peter's understanding of the title begins to clarify the kind of king Jesus is to be.

If the terms "Son of God" and "Christ" cannot yet be applied to Jesus, there is a term which can be appropriately applied to him, and that is the term "Son of Man." In fact, it is that phrase which Jesus substitutes for himself (8:31) immediately after he cautioned his disciples not to apply openly to him the term "Christ." Such substitution of the term "Son of Man" for other titles is in fact something Jesus regularly does in Mark (see esp. 14:61–62).

3. Son of Man. If therefore "Son of Man" is the designation Jesus applies to himself in Mark, we will have to assume it is a correct one as far as the evangelist is concerned, and investigation of its use will aid us in understanding how the author of this gospel wanted us to understand Jesus. Again, if, as we saw, the OT derivation of "Christ" and "Son of God" aided in understanding their meaning, the same approach ought to yield meaning in this case as well.

It is an interesting phenomenon that the phrase "Son of Man" is used only by Jesus in Mark (that is also the case, with one exception, in the other three gospels as well), and only to apply to himself. It is never used by Jesus of anyone else, and no one else ever calls Jesus by that term. That has led some scholars to theorize that the exclusive attribution of that term by Jesus to himself reflects an accurate historical reminiscence, and shows that the origin of the use of the term for Jesus goes back to Jesus himself. Again, while Jesus uses the term in Mark to designate himself in three general ways, namely in his current activity (e.g., 2:10), in his coming suffering (e.g., 8:31), and in his future return in glory (e.g., 14:62), no saying ever combines the latter two points. That led some scholars to postulate that the term was therefore used in two pre-Markan sources, one of which used the term to designate Jesus as the suffering one, the other to designate him (or another) as the one who would return in glory, but that those two traditions existed independently of one another; thus it was Mark's contribution to combine the two (e.g., Toedt 1965).

Despite intensive research, there is at present no scholarly agreement concerning this phrase. While there is at present a tendency to see it as a descriptive phrase, rather than as a messianic title current in Judaism in Jesus' time, scholars are currently in disagreement both about its origin and its meaning. Some have argued for an origin in the confession of the early Church, while others assign its origin to Jesus himself. Those who assign it to Jesus are in disagreement about whether its origin for Jesus was simply an Aramaic idiom used to refer to oneself and hence said nothing more about Jesus than it would say about anyone else who used the idiom, or whether Jesus himself derived it from Dan 7:13–14 and hence from the beginning intended it as an eschatological title.

Two carefully researched and well-documented books illustrate the problem. On the one hand, Kim (1983) has provided a cogent argument for the position that Jesus, deriving the term from Daniel 7 and combining it with insights drawn from the figure of the servant in Isaiah, intended it to be an eschatological description of his own function as one sent from God. On the other hand, Lindars (1983) has provided an equally cogent argument that the title cannot have originated in that way, but could only have been derived from an Aramaic idiom, and hence meant no more in Jesus' mouth that "this human being." Only later did Christian tradition provide the link to Daniel 7.

Whatever the origin of the term "Son of Man" may have been, however, by the time Mark was written, it had in fact come to be associated with Daniel 7, and was used as an eschatological title (for a different

conclusion, see Kingsbury 1984). In that light it is interesting to examine the context of Dan 7:13–14, an examination which reveals that the phrase "Son of Man" is used to designate a royal figure. The Son of Man is to be given "dominion and glory and kingdoms, that all peoples, nations and languages should serve him; his dominion is an everlasting dominion, which shall not pass away, and his kingdom one that shall not be destroyed." Clearly the term "Son of Man" in this passage carries the same royal connotations that "Christ" and "Son of God" had carried: it points as they did to Jesus as God's king. Yet the way Jesus employs the term "Son of Man" in Mark's gospel provides the clue as to what kind of king Jesus is to be. He is to be a suffering king. The three times Jesus predicts his passion, he calls himself Son of Man (8:31; 9:31; 10:33). When Jesus faced the Jewish authorities at the time of his trial, and was asked whether he was "the Christ, the Son of the Blessed" (i.e., Son of God; 14:61), Jesus for the first time publicly admitted he was and immediately referred to himself as Son of Man (14:62).

The language of Jesus' reply to that key question is drawn from two sources which again prove instructive to examine. The first part of the answer, referring to being "seated at the right hand of power," is drawn from Ps 110:1, the content of which clearly marks it again as an enthronement Psalm (see esp. vv 1–3). The second part of the answer, referring to his return in divine glory (the meaning of "clouds of heaven") is drawn from Dan 7:13. Thus Jesus' public confession in Mark of who he is points to the equivalence of the three titles used, Christ, Son of God and Son of Man, with their one common element the reference to kingly power.

4. King. Jesus is thus, as his use of the phrase "Son of Man" makes clear, a suffering king. Yet the original question remains: when will he ascend his throne and be publicly acknowledged as king? The answer is provided in chap. 15 of Mark, where the term "king" is used of Jesus for the first time, but once it is introduced, it is thereafter used with great regularity. The use of the term "king" for the first time in chap. 15 has struck some as puzzling, since, they argue, Mark has to that point given no indication that that would be an appropriate designation for Jesus. Yet, as we have seen, the titles applied to Jesus in the preceding chapters in Mark have in fact not only prepared for its use, but have set the stage so that its use can be climactic for the narrative Mark has created.

The theme for this climactic chapter, namely the kingship of Jesus, is introduced in the opening scene with Pilate (v 2: "Are you the King of the Jews?"). The repetition by Pilate of that title in v 9 indicates it was not an accidental use or an aberration in Mark's narrative. Whether or not this title reflects the actual historical charge on the basis of which Jesus was crucified is not at issue here; as far as the gospel of Mark as narrative is concerned, it clearly reflects Pilate's opinion of Jesus. When the Praetorian guard also uses that title (15:18), it is clear that Jesus' public acknowledgment as king has begun a public acknowledgment that continues when he is openly identified as king by his enemies (15:32).

Still further confirmation that Jesus is now understood as king is furnished by the placard which was required at official Roman executions. That placard gave the reason for the execution, and had either to be affixed to the cross, or hung around the condemned criminal's neck. In the case of Jesus' execution, the placard read "The King of the Jews" (15:26).

It is only at this point that we find our answer to the question posed by the christological titles applied to Jesus in Mark, namely when he will be acknowledged as king and ascend his throne. Now the reader understands when Jesus is to be publicly acknowledged as king: in the moment of his suffering. Now the reader knows when Jesus will ascend his throne: when he is nailed to the cross. Now the reader has final confirmation of the kind of king Jesus is: a suffering king.

In addition to furnishing the climactic acknowledgment of Jesus as king, chap. 15 contains a further climax to Mark's narrative, namely the public acknowledgment by the centurion at the moment of Jesus' death that he, Jesus, is God's Son (v 39). As soon as Jesus died, the centurion—a soldier and hence hardly one learned in Jewish religious affairs—is able immediately to recognize Jesus as God's Son. Up to that point, no human being had been able correctly to identify Jesus in that way; at the moment of his death, an outsider is able at once to recognize who Jesus is. A key point in Markan christology is thus confirmed here: only after Jesus' death can he be recognized for who he truly is.

That is why the disciples were unable to recognize or acknowledge who Jesus was, simply because he could not be truly acknowledged as the king he is until he was enthroned—on the cross; he could not be confessed as king until he had been crowned—with death. That is also one reason why the demons were not permitted to acknowledge him: they knew him as a victorious, not a suffering, king (e.g., 1:24), and that could not be announced until after his passion. That is also why, in Mark's narrative, Jesus denied that he was David's son (12:25–37; cf. 11:10, where although in Matt 21:9 he is hailed as son of David, and in Luke 19:38 as king, in Mark only David's kingdom is mentioned, not his son), since the king of David's line was to be a victorious king who restored Israel's fortunes.

Yet kings are victorious; could God's anointed king be any different? Where are we to find Jesus' victory, particularly after his cry of dereliction from the cross (15:34)? Is Jesus finally a tragic rather than a triumphant king? To answer that question, another characteristic of Jesus in Mark's gospel must be considered, namely Jesus' wondrous foreknowledge. See also SON OF GOD; SON OF MAN.

E. Literary Structure

At this point in the investigation of Markan christology, we must follow a further step in the history of Markan research. Redaction-historical work led scholars to see that Mark had a theological purpose when he arranged his traditions in the order he did. That led to the further insight that such a careful ordering of material in order to make a particular kind of point was something Mark's gospel shared with other literary works. An outgrowth of the redactional-historical way of investigating Mark has thus been the attempt to investigate the gospel as a literary work, and to seek to determine its unity of plot and characterization without raising the question of whether a given passage comes from pre-Markan tradition or from the hand of Mark himself. An increasing number of scholars, borrowing from the insights of those who have analyzed literary narrative, have begun to investigate Mark in an effort to determine what results that kind of investigation would achieve. While some, like Kermode (1979) have concluded Mark's narrative is opaque (perhaps deliberately so), and hence finally unyielding to such efforts, and others, like Meagher (1979), have decided that the narrative is too confused to yield useful results to such investigation, still others, more numerous than those who have come to negative results, have found in Mark evidence of a carefully wrought narrative, with a coherent plot and consistent characterization. Among them are Kelber (1979); Petersen (1978; 1980); Rhodes and Michie (1982); and, from a slightly different perspective, but with the same result as far as the unity of Mark is concerned, Robbins (1984). McKnight has provided a good introduction to the method of literary criticism as practiced by these biblical, particularly NT, scholars (1985). It is within the framework of such an investigation of Mark's gospel as a unified literary work, particularly with respect to elements of plot contained within the narrative, that we must approach the question of Jesus' foreknowledge.

1. Jesus' Foreknowledge. It is evident that the Jesus who appears in Mark's gospel is able to know things that ordinary people cannot. There are reports that Jesus knew what other people were thinking (e.g., 2:8); he knew when a particular person had touched him even though crowds were pressing around him (e.g., 5:30); and the fact that in each case he remained uncontradicted when he revealed the thoughts of others shows that Mark understood Jesus to have been correct. More important for Mark's gospel is Jesus' knowledge of events yet to occur. Such prescience is displayed most clearly prior to the last week in Jerusalem in the three predictions of his passion. When those predictions turn out to have been correct, even in detail (cf. 10:33 with 14:63 and 15:1; 10:34 with 15:19), the reader's confidence in the accuracy of Jesus' foreknowledge is enhanced. Indeed, they are a way the author of Mark has used to heighten the reader's confidence that whatever Jesus predicts will happen, will in fact occur. It is just that confidence that will help answer the question about whether or not Jesus is a victorious king; we must now see how that works itself out.

While there are other instances of Jesus' ability to foreknow the future, we will limit ourselves to a discussion of those instances reported in chaps. 14–15. The first instance of Jesus' foreknowledge occurs in the account of the woman who anoints him with precious ointment (14:3–9). Jesus announces that by doing this she has prepared his body for burial. When we read later that Jesus was placed in the tomb without the usual preparation of the corpse (cf. 15:46 with 16:1), and that therefore his anointing at

Bethany was his last anointing prior to burial, the striking nature of Jesus' foreknowledge is shown. It is probably not accidental that this prediction/fulfillment brackets the account of Jesus' final days in Jerusalem reported in chaps. 14–15.

Such prescience is again demonstrated when Jesus, in an earlier episode (13:2), tells his disciples that the temple in Jerusalem will be destroyed, a destruction already symbolically announced when Jesus temporarily brought worship in the temple precincts to an end (11:12–25). That predicted destruction then begins with Jesus' death, when the curtain that protects the holiest room in the temple (the "Holy of Holies") from profanation is torn from top to bottom (15:38); a profaned "Holy of Holies" is no longer a fit place for a holy God.

Jesus' foreknowledge is demonstrated a third time when he instructs his disciples about arrangements for their Passover meal together (14:12–15) and it occurs, even in detail, just as he had said it would (14:16). Mark gives no hint that Jesus had made these arrangements beforehand; that idea is a figment of modern historical imagination. During that Passover meal, Jesus predicts that his betrayer will be one of the Twelve with him at the meal (14:18–20), a prediction that proves tragically accurate with the betrayal by Judas (14:42). After the meal, Jesus foretells the desertion of all his disciples (14:27), and specifically the threefold betrayal by Peter (14:30), events that then occur, again in detail, as Jesus has said (14:50; 14:66–72).

In that way, Jesus' predictions are proved true, and the reader of Mark's narrative gains confidence in Jesus' ability to foreknow the future. That is important, since the events we have been discussing were not the only things Jesus predicted. Before the officials of Judaism, in answer to the question of Jesus' identity, he had said those questioning him would see him "sitting at the right hand of Power, and coming with the clouds of heaven" (14:62). That has yet to occur. Again at the Last Supper, Jesus had said he would drink wine anew in God's kingdom, and that has not happened. There is Jesus' statement to the disciples that he would go ahead of them to Galilee, after he was raised from the dead, and that isn't fulfilled in Mark's narrative either. Yet this very important promise is repeated and thus confirmed by the "young man" at the tomb (16:7), as though in that way the reader is assured that all other unfulfilled predictions of Jesus will also yet find their fulfillment.

In that way, Mark's narrative points beyond itself (its "narrative time") to a final fulfillment yet to occur. Perhaps for that very reason the gospel ends in so incomplete a fashion with 16:8, as though to emphasize that although Mark's narrative about Jesus is finished, the story of Jesus has yet to be completed. In that case, Mark will have called upon his readers to complete what remains of the story (e.g., 8:34–38; cf. 13:13b with 13:35–37; 14:9) in their own lives.

2. Jesus' "Mighty Acts." It is likely that Mark has devoted proportionately more space to stories about Jesus' mighty acts than has any other gospel author because they were a firm part of the tradition he was using, as Achtemeier (1970) has urged. Yet Mark has set those stories within a narrative framework that points attention away from the miraculous as such, and toward their significance for the ongoing importance of Jesus. The way Mark has used the first mighty act in his narrative illustrates that point.

The exorcism reported in 1:23–27a is interesting on two counts; the first because in it Jesus does not follow the normal course of an exorcist of that time in driving out the demon, and the second because of the framework Mark has put around it. First, the exorcism itself is unusual in that ordinarily an exorcist must first determine the name of the demon before he or she can command it to obey (e.g., 5:9). Again, in order to perform the exorcism, the exorcist must either delude the demon into thinking the exorcist is a supernatural being more powerful than the demon, or must convince the demon the exorcist is acting as a follower or "in the name of" some being more powerful than the demon (for the latter point see 9:38a). In this exorcism, Jesus does none of that. Indeed, since the demon already knows Jesus' name ("Jesus of Nazareth," 1:24), one would expect that the demon would therefore be in a position to control or at least resist Jesus. Yet none of that happens; Jesus simply commands the demon to depart, and it does. Little wonder the people are astonished (1:27a). Here is an exorcist who is so powerful he need not even follow the normal "rules of the game."

The second interesting point about this story is the kind of framework into which Mark has put it. 1:21–22 show the characteristics of Markan literary activity, and they present the exorcism in terms of teaching (vv 22, 27b) not of a mighty act. That is in fact characteristic of Mark: he associates Jesus as teacher with the mighty acts far more often than other evangelists do, often having him addressed as "teacher" in the midst of a mighty act in a way the other evangelists find inappropriate, and hence change (as just one example, cf. Mark 4:38 ["teacher"] with Luke 8:24 ["master"] and Matt 8:25 ["lord"], although English translations often misrepresent the Greek in these and similar verses). Thus, it is characteristic of Mark to associate Jesus as wonder-worker with Jesus as teacher. The point, made evident in what Mark must have meant as paradigmatic when he framed in that way the first mighty act of Jesus he reported—the point is that the power Jesus displayed in his mighty acts he also displayed in his teaching. As a consequence, even if the power displayed in his mighty acts is no longer available after his death, the power embodied in his teaching nevertheless is. Hence even those who follow Jesus in the period after his earthly life ended can still share in the power he displayed while he walked the land of Galilee. Thus mighty act and teaching both share in the same power at work in Jesus, and the combination of the two tells the reader that that power did not disappear with the death of Jesus.

3. Irony. A final characteristic of Mark's gospel to be mentioned is the irony that pervades the narrative. Perhaps because of the irony that lies at the heart of the story Mark tells—the Son of God who is rejected and killed by the very human race he had come to save—it is a characteristic appropriate to this kind of story. While the central core of that irony is surely the cross and resurrection—what God's enemies had meant as their victory and his defeat (the crucifixion of Jesus) he has turned into his victory and their defeat (the resurrection of Jesus)—there are other secondary ironies that abound in the narrative.

There is the irony contained in the story of the healing of a man with a paralyzed hand on the Sabbath (3:1–6). Some background is necessary to understand the story. The Jewish people regarded the Sabbath as a great treasure of their religious law, and its observance (no labor was permitted Jews on the Sabbath) had been officially acknowledged by Roman authorities since Julius Caesar decreed that the Jews had the right to observe it throughout the Roman Empire. Some rabbis affirmed it was the unique element of the Jewish law that set Israel apart from all other peoples: if other peoples had moral and sacrificial laws from their gods, they did not have the Sabbath. Obedience to Sabbath laws thus constituted Israel's primary religious responsibility. To be sure the Sabbath law to abstain from labor was not broken, the rabbis forbade any conduct that could contribute to labor: for example, one was not to carry anything, lest one carry tools; again, one was not to walk far from one's house, lest one go to one's fields. Establishing such rules to keep a law from being transgressed was called "building a fence around the law," and it was enjoined as one of a rabbi's chief endeavors (see Danby 1954, tractate *ʾAbot* 1.1). The point was clear: it was essential to protect the Sabbath law from transgression by all possible means. See SABBATH.

On such a Sabbath, Jesus was confronted in a synagogue by a man with a withered hand. The question was, would Jesus heal it on the Sabbath? It was not a question of whether mercy could be practiced on the Sabbath; the rabbis agreed that in an emergency help could be given on a Sabbath even if it did involve labor (see Matt 12:11). Rather, it was a question of timing: this was no emergency. The man had had the withered hand for some time, and could wait until the end of the Sabbath at sundown to be healed. In this situation Jesus posed a question about what was lawful on the Sabbath: "to do good or to do harm, to save life or to kill" (3:4). The question has an obvious answer; of course it is not lawful on the Sabbath, any more than on any other day, to do harm or to kill. Yet the reaction of the Pharisees, when Jesus healed the crippled hand, was to hold "counsel with the Herodians against (Jesus), how to destroy him" (3:6). What irony, when the Pharisees by their plotting demonstrate that they thought Jesus' good deed to the cripple was illegal while they, careful observers of God's law, on that same Sabbath tacitly affirmed the legality of doing harm by plotting to kill.

Again, there is the irony that scribes from the heart of Jewish religion, Jerusalem, who studied God's Torah to learn his will, were unable to recognize that the power by which Jesus worked was from that same God whose law they studied, and thought it came instead from God's enemy, Satan (3:22). Those

who considered themselves most alert to God's ways with humanity were here unable to recognize what God was doing in Jesus.

There is the irony that those closest to Jesus, who responded to his call to accompany him with no question (1:16–20), would produce from among their number the one who was to betray Jesus, and that they themselves would not understand him (e.g., 8:17–18; 9:6) and in the end ignominiously desert him (14:50; 66–72).

There is the irony surrounding the parable Jesus told to the religious officials in the temple court, a parable about a vineyard and its owner, whom the tenants ignored and whose son they killed (12:1–12). By the very act of rejecting the content of the parable, they brought it to reality when they, too, rejected the owner of the "vineyard" (see Isa 5:1–7, where the vineyard is clearly Israel and its owner is God, a passage this parable clearly reflects) and killed his son, namely Jesus himself.

There is the irony of the treatment of Jesus before the Sanhedrin when, thinking to ridicule him by revealing the gap between what he had apparently claimed about himself (14:62) and what he was able to do, they called upon Jesus to "prophesy" (14:65), that very Jesus whose predictions, as Mark's narrative had shown, were so often and so remarkably proved to be true.

The trial of Jesus is, as one might suspect, shot through with irony. There is the irony of Pilate's action in the face of the charge of insurrection against Jesus, a charge presumed in his first question to Jesus (15:2; to claim to be king was to assert Caesar was not king, and hence was insurrection). Pilate's task as a Roman official was to maintain the *Pax Romana,* and to put down sternly any insurrection that threatened to breach the Roman rule so necessary for that peace to be maintained. Yet Pilate, in his attempt to temper justice with mercy, released Barabbas, who had been imprisoned precisely for his role in an insurrection and thus represented a threat to Roman rule, and condemned Jesus to death for the crime of insurrection he had not committed.

There is the irony of the action of the Roman soldiers at Jesus' trial who, thinking to mock Jesus by clothing and hailing him as king (15:17–18), in fact by those actions acknowledge him appropriately for what he was: God's chosen and anointed king.

There is the irony that Jesus' religious opponents were able neither to tell the truth nor lie when they intend to. Intending to tell the truth about Jesus when they accuse him of blasphemy in calling himself God's son (14:64), something God himself had twice acknowledged (1:11; 9:7), they pronounce a falsehood, only to be unable later to tell a falsehood when, intending to lie about Jesus by mockingly acknowledging him as Israel's king (15:32), they inadvertently announce the truth.

Perhaps the most striking irony of all is bound up with the strange ending of Mark's gospel (16:8). The women who had remained and watched the crucifixion of Jesus and who, coming to anoint his corpse, had instead been commissioned by the "young man" at the empty tomb to tell the disciples the good news of Jesus' resurrection and to remind them of his promise to meet them in Galilee failed to do so because of fear. These women had remained faithful to Jesus when the disciples, who could not come to terms with Jesus' impending death, had fled. It was that death that caused them to fear, and flee. Here, however, in a strange twist of irony, the women, hearing of Jesus' resurrection, similarly flee in fear. If the disciples were unfaithful because they could not come to terms with Jesus' death, the women proved unfaithful precisely because they had come to terms with it: it was the news he was no longer dead that proved unsettling to them. They in their turn were unable to come to terms with his life.

In the end, therefore, none proved faithful to Jesus. Yet the story of the career of the disciples with Jesus was eventually told, as was the story of the fear-filled disobedience of the women. Reconciliation with the risen Jesus thus did take place, allowing the story recorded in Mark's narrative to be told. Perhaps in that way Mark intended to point to the power of the risen Christ as alone able to reconcile to himself and to God a humanity given to treachery and desertion.

It is apparent, therefore, that even though the oldest manuscripts of Mark contain no accounts of the appearance of the risen Jesus, there can be no question that Mark knew Jesus rose from the dead. The promises of Jesus, which, as we saw, regularly turn out to be fulfilled, included his promise that he would meet his followers in Galilee (14:28), a promise repeated at the empty tomb (16:7). It was also repeated

each time Jesus formally foretold the circumstances of his impending death (8:31; 9:31; 10:34). Another reason must therefore be found for the omission of accounts of resurrection appearances than that Mark somehow was embarrassed by them, or did not know about them. That reason is, as suggested above, likely to be theological, and has to do with Mark's strategy for the whole gospel.

It appears that one of Mark's theological goals with his gospel, therefore, was to move his readers from observers to participants, and thus to move them to share in the gospel whose beginnings he had narrated in his account of Jesus of Nazareth.

F. Form and Function

From all that has been discussed thus far concerning the gospel of Mark, it appears that the major problem with which Mark was working, namely the identity of Jesus, and the form of literature he chose to solve it, namely a narrative, were intimately related. That is to say, Mark's creation of his narrative structure embodied his solution to the problem of Jesus' identity (i.e., his christology), in that, as Mark understood it, Jesus' identity was a function of his destiny. Only when one knows what happened to Jesus (cross and resurrection) can one understand the meaning of what he said and did, and therefore who he was: God's son, the king of God's redeemed humanity.

It was to reinforce that point that Mark made all other christological titles subservient to the phrase "Son of Man." The superiority of that title over the others lies in the fact that for whatever reason, Mark saw it as the expression of Jesus' destiny, namely his death and resurrection. "Son of Man" in Mark therefore describes not so much identity as destiny. Yet in Mark, as we have seen, identity and destiny are inseparably bound up with one another. Thus when Jesus predicts his passion, he refers to himself as Son of Man, and whenever the question of his identity arises, whether implied or explicit, Jesus responds by referring to himself as Son of Man. Can Jesus, as one who employs God's prerogative of forgiving sins, be recognized as Son of God (2:5, 7)? No, he is Son of Man (2:10). Can he, when his actions reveal him to be Lord of the Sabbath, be recognized as son of David, who had acted in similar fashion (2:25)? No, he is Son of Man (2:28). Can he, as successor to John the Baptist and the prophets, be recognized as Christ (8:28–29)? No, he is Son of Man (8:31). Can he, in transfigured form, be recognized as Son of God (9:7)? No, he is Son of Man (9:9).

In similar fashion, when the question of Jesus' identity is finally answered, it is answered in terms of his destiny (14:61), that is, his identity as anointed Son of God is qualified by his destiny as Son of Man (14:62). Again, in a climactic statement defining the identity and purpose of Jesus, namely to atone for the sins of humankind, it is the title "Son of Man" that is used (10:45).

Again, because destiny and identity are so closely linked in Mark, the only ones who are able to identify Jesus as Son of God during his earthly career are those unaffected by that redemptive destiny: God himself (1:11, 9:7), and the demons (1:24; 3:11; 5:7). For all others, until Jesus' destiny is fulfilled on the cross, his identity as Son of God remains hidden. It was to make that point, it appears, that Mark gathered together the independent traditions circulating in the early Christian community of which he was a part, and assembled them into the narrative which he identified as "the beginning of the gospel of Jesus Christ, the Son of God."

PAUL J. ACHTEMEIER

MARK, JOHN (PERSON) [Gk *Ioan (n)es Markos* (Ἰοαννες Μαρκος)]. An early Jewish Christian who assisted with the 1st-century missionary activities of Paul, Peter, and Barnabas and who is associated by tradition with the gospel of Mark. The name is a combination of two appellations, the Heb *yōhānān* ("Yahweh has shown grace"; cf. 2 Kgs 25:23) and the Latin "Marcus" (or the Greek *Markos*). Dual names commonly were employed during the period as a common custom within Hellenistic Judaism (see Acts 1:23, Joseph-Justus).

The NT provides scant information about the figure of John Mark. He initially is introduced at Acts 12:12, a scene in which Peter returns from prison to the home of Mary, "the mother of John whose other name was Mark." Both the house itself and the household of Mary probably were significant for the early Christian community in Jerusalem, since Peter seems to have known that Christians would be gathered there for prayer. Thus the role of John Mark in early Church tradition often is associated with the presumed wealth and prestige of Mary, who was a homeowner with a maidservant (Rhoda) and who could support gatherings of early Christians for worship. The common, though most likely errant, belief that John Mark was the "young man" who escaped capture by the Romans at the arrest of Jesus (Mark 14:51–52) rests upon the assumption that the Garden of Gethsemane was owned and tended by the family of Mary. According to this view, John Mark perhaps would have been stationed at the garden as a guard during the night watch. Another tradition, which maintains that the Last Supper (Mark 14) was held in the home of Mary, assumes that the household was familiar with the work of Jesus and was receptive to his activity. Papias of Hierapolis argues against a close relationship between Jesus and the family, however, since he notes specifically that Mark "had not heard the Lord, nor had he followed him" (Eus. *Hist. Eccl.* 3.39.15).

The only clear comment upon the activities of John Mark that is provided in the NT is the observation that he was one of numerous evangelistic missionaries who circulated during the 1st century (one of the 70 missionaries who are mentioned in Luke 10:1?). Accordingly, he is listed as an assistant to Paul and Barnabas during the first Pauline missionary journey (Acts 12:25; 13:5). Though the nature of that assistance is not specified, he may have served as a recorder, catechist, and travel attendant. Because of his status as the son of a prosperous Jewish-Christian family in Jerusalem and as the cousin of the wealthy landowner Barnabas (Col 4:10; Acts 4:36–37), John Mark would have been a natural selection for such a role. He later separated from Paul and Barnabas "in Pamphylia" (along the coast of S Anatolia), perhaps as the result of some unspecified disagreement. Paul thereafter refused to include him in subsequent travels (though Barnabas took him onward to Cyprus; Acts 15:37–39), and the account of Acts records his activities no further.

Apart from the testimony of Acts, his name (now listed only as Mark) reappears throughout the Pauline literary tradition as a reconciled missionary companion of Paul. Here he is remembered as one who labored faithfully for Christianity (2 Tim 4:11 and Philemon 24). The association of Barnabas with John "who is called Mark" in the record of Acts, on the one hand, and of Barnabas who was the "cousin" of Mark in the witness of Colossians, on the other hand, is an "undesigned coincidence" which suggests that the accounts of Acts and the Pauline Epistles in fact make reference to the same person (Taylor 1955: 29).

Though the figure of John Mark became a casualty of disputes within the Pauline missionary thrust, the Petrine tradition soon adopted an association with the name that has stood for centuries in ecclesial history. The initial evidence for this association appears in 1 Pet 5:13 where John Mark (again listed only as Mark) is mentioned by the author of the letter as "my son." While the name Mark in 1 Peter cannot be identified definitively with the figure of Mark who appears in the Acts narrative, a consistent picture of the role and activities of John Mark would result if such an association can be accepted (Martin *ISBE* 3: 260). From the testimony of Papias (Eus. *Hist. Eccl.* 3.39.16) we learn that common ecclesial tradition recognized Mark as the "interpreter" of Peter who recorded the words of the apostle as the foundation for a written gospel (cf. also Iren. *Haer.* 3.1.1). There is no question that Papias here refers to the gospel of Mark as we know it. And again, while the association of Mark (as recorded by Papias) with John Mark of Jerusalem is not above suspicion, this consistent caricature has been preserved by subsequent Christian tradition.

Numerous traditions about the person and activities of Mark soon arose among the Church Fathers. Hippolytus, for example, refers to Mark as "stump-fingered" or "shortened." The former translation may indicate that the historical figure of Mark possessed some peculiar physical characteristic (as is suggested by the *Anti-Marcionite Prologue* to the gospel from the 2d century). Modern scholars, however, often prefer to use the latter translation as a reference to the abbreviated nature of the gospel text itself (when compared to the other NT gospels) or in support of the manuscript tradition that concludes the gospel at Mark 16:8. Several early Christian traditions suggest that a close association existed between the figure of John Mark and the congregations of Alexandria, based upon the belief that he traveled to Egypt from Rome after the martyrdom of Peter (Eus. *Hist. Eccl.* 2.16.1). There is little information about the death of Mark. The claims for the martyrdom of Mark that appear in the *Paschal Chronicle* and in the *Acts of Mark* probably do not predate the 4th century (Swete 1909: xxvii–xxviii). For further discussion see Pesch *Mark* HTKNT.

CLAYTON N. JEFFORD

MARK, SECRET GOSPEL OF. An edition of the gospel of Mark known only from an incomplete letter of Clement of Alexandria discovered at the Greek Orthodox monastery of Mar Saba in the Judean desert. M. Smith has described how he found the hitherto unknown Clementine letter as he was studying and cataloging manuscripts in the monastery library in 1958. The letter was written in cursive Greek, dated to about 1750, on two and a half pages at the back of a printed volume of the letters of Ignatius of Antioch (Isaac Voss, editor, *Epistulae genuinae S. Ignatii Martyris* [Amsterdam: Blaeu, 1646]). In 1973 Smith published both his scholarly and his popular editions of the letter of Clement and the *Secret Gospel of Mark*, and almost at once controversy began to swirl around the text. The controversy has focused upon questions concerning the authenticity, contents, and interpretation of the Mar Saba text. To the present day Smith seems to be the only scholar who has seen the original manuscript, although at least one other scholar (T. Talley) made an unsuccessful attempt to view the text. Nonetheless, as Smith has summarized in his bibliographical essay (1982), most scholars he has reviewed

now are willing to attribute the letter to Clement of Alexandria and the letter itself has been included in an addendum to the second edition of O. Stählin's *Clemens Alexandrinus.*

The Mar Saba manuscript opens with a titular phrase that indicates the source of the letter: "From the letters of the most holy Clement, (author) of the *Stromateis*" (lr:1). In the letter Clement commends and supports the recipient, a certain Theodore, for his opposition to the Carpocratians, who were libertine gnostics well known from ancient heresiological reports (Clement of Alexandria, *Strom.* 3.2–6; Iren. *haer.* I.25; Hippol. *haer.* 7.32; cf. Smith 1973b: 295–350). According to Clement's letter from Mar Saba, the Carpocratians employed an edition of the gospel of Mark which Carpocrates falsified by "mixing the most shameless lies with the undefiled and holy words" (lv:8–9). In contrast to the Carpocratian edition, Clement recognizes two authoritative editions of the gospel of Mark: (1) a public edition of the gospel, which Mark composed while Peter was in Rome and which seems to be identical or nearly identical with the canonical gospel of Mark; and (2) the *Secret Gospel of Mark*, "a more spiritual gospel for the use of those being perfected," which also included "the things appropriate for those progressing in knowledge" (lr:20–22). When Mark died, Clement writes, he left the *Secret Gospel* to the care of the Church at Alexandria, "where it even now is very carefully guarded, being read only to those being initiated into the great mysteries" (lv:1–2).

According to the letter of Clement, the *Secret Gospel* contained at least two passages not included in the public gospel of Mark, and Clement cites both of these two passages. The first passage (lv:23–2r:11), to be located immediately after Mark 10:34, recounts the story of the raising of a rich youth (*neaniskos*) of Bethany (cf. themes in Mark 10:17–22 par.). At the request of the sister of the youth, Jesus goes to the tomb, rolls the stone away from the door, and raises the youth from the dead. The youth looks upon Jesus and loves him, and after six days Jesus instructs him. In the evening the youth, "wearing a linen cloth on his naked body" (2r:8; cf. Mark 14:51–52, also perhaps 16:1–8), comes to Jesus, and Jesus teaches him "the mystery of the kingdom of God" (2r:10; cf. Mark 4:11). The second passage (2r:14–16), to be located within Mark 10:46, describes Jesus coming to Jericho and refusing to receive three women, including the sister and the mother of the youth.

Recent studies on the *Secret Gospel of Mark* suggest that the significance of the text may be realized through a redaction-critical study of the *Secret Gospel.* Several scholars (H. Koester, H.-M. Schenke, J. D. Crossan, M. W. Meyer) have proposed interpretations of the *Secret Gospel* that attempt to place the text within the redactional history of the Markan tradition, and in so doing they are unanimous in advocating the priority of *Secret Mark* to canonical Mark. "The basic difference between the two," Koester has stated, "seems to be that the redactor of canonical Mark eliminated the story of the raising of the youth and the reference to this story in Mark 10:46" (1983: 56). Scholars have also noted that this Markan account of the raising of the youth is remarkably similar to the story of Lazarus in John 11, except that the *Secret Gospel* account may well be more primitive than the Johannine account (the *Secret Gospel* lacks the details—personal names, descriptions of features of the miracle, etc.—and the theological themes of John 11). The presentation of the youth "whom Jesus loved" in *Secret Mark* (2r:15; cf. Mark 10:21) also bears striking resemblance to the BELOVED DISCIPLE in the gospel of John. These observations contribute to the discussion of the relationship between the Markan and Johannine traditions, and the roles of the Johannine Beloved Disciple and the Markan *neaniskos* as paradigms for discipleship.

MARKETPLACE. See TRADE AND COMMERCE (ANE).

MAROTH (PLACE) [Heb *mārôt* (מָרוֹת)]. A village in the Shephelah of Judah (Mic 1:12), otherwise unknown. LXX reads *odynas,* "sorrows." Identification with Maarath [Heb *maʿārād*] in the hill country of Judah (Josh 15:59) is unlikely since it does not account for the LXX reading, explain the loss of *ʿayin,* or match well with the other known towns in Mic 1:10–16, which are located W of the Judean hills in the Shephelah (cf. Josh 15:33–44). Similarly, the Galilean Meroth mentioned by Josephus (*JW* 3.3.1) is out of the question. Micah employs the feminine singular participle *yôšebet* (lit: "inhabitant of") within this dirge (vv 11, 12, 13, 15) to personify the population of these towns and villages which formed the defensive approach to "Mother Jerusalem" as her "daughters" (Heb *bānôt*; see 2 Chr 11:5–12; Judg 1:27; Haag *TDOT* 2: 336; cf. 2 Kgs 18:13–16). Maroth itself is a play on Hebrew *mārar,* "be bitter," and *mārâ,* "be rebellious." Hence, the paronomasia of 1:12 yields a sense akin to "Yes, Daughter Bitterbury longs for something sweet [Heb *tôb*], but no, something sour [Heb *rāʿ*] descends from YHWH to the very gate of [Mother] Jerusalem." See MORESHETH.
LAMONTTE M. LUKER

MARRIAGE. This entry consists of two articles. The first explores the subject of marriage and marriage customs in the ancient Near East and in the Old Testament. The second focuses on marriage as it is presented in the New Testament.

OLD TESTAMENT AND ANCIENT NEAR EAST

Like other features of religious communities, marriage and wedding customs tend to be traditional and time-honored. This is not an area where novelty reigns. Archaic language like "thereto I plight thee my troth" is quite acceptable at the ceremony of marriage, but very strange elsewhere. The OT covers a period of approximately 1400 years (Abraham to Ezra). It would seem, contrary to the statement made above, that marriage patterns in the patriarchal age differed, in some ways at least, from marriage patterns in the postexilic era (late 500 to 400 B.C.).

3. Monogamy/Polygamy
4. Among the Prophets
5. In Wisdom Literature
6. Levirate Marriage
7. In the Creation Narratives

———

A. Introduction

Ancient Israel never produced a marriage manual for its citizenry. The creation story of Genesis 1 does indeed climax its narration with a wedding, an activity described by the narrator as "very good" in God's estimation. Similarly, the account of Genesis 2 concludes penultimately with the programmatic exhortation "a man shall leave his father and mother and cleave to his wife, and the two shall become one flesh" (2:24).

Even if this statement was first penned by later priestly writers, its placement near the beginning of Israel's canon of sacred literature may indicate its preeminence and foundational nature vis-à-vis marriage, at least in the judgment of those involved in the shaping of that canon. And yet the statement is

primarily an idealistic one. It is surprising how few marriages in the OT, if any, conform to Gen 2:24. One would have to scour the pages of the OT to find instances of the man leaving his home, uniting with his wife, and forming a "one flesh" relationship.

The laws pertaining to marriage in the legal codes distributed throughout the OT are few and scattered. Most of these address issues such as whom one may not marry, how to determine virginity, the dissolution of marriage, remarriage, what is to become of a childless widow, etc. This is unlike ANE codes which tend to discuss matters of legal interest in *seriatim* fashion; thus the laws on marriage are for the most part all sequentially arranged in corpora like Hammurabi's Code (nos. 128–84; *ANET,* 171–174) or the Middle Assyrian Laws (nos. A.25–39; *ANET,* 182–183).

What we do have abundantly in the OT are stories about the marriages of men and women. On occasion the narration of these marriages is pivotal in the development of a major theme or motif. At other times their telling appears but peripheral. Some of these marriages appear, on surface, to be normal and predictable, while others border on the bizarre. Some of these marriages are marked by sanctity and integrity, while others are aberrant and profane. Taking all these marriage stories together, looking for common threads, and on that basis trying to construct an OT concept of marriage is like sitting beside our highways and parkways, observing the flow of traffic and the driving patterns of individuals, and on that basis composing a driver's manual. Both in driving and in marriage there is often a considerable difference between prescription and practice. For this reason, we will need to distinguish between the divine will in marriages and OT marriages as they are illustrated. The latter may reflect the former, but not necessarily so.

B. In the Ancient Near East

Most of what we know about marriage and wedding customs in the ANE is based on accounts of marriages involving people of power and influence in society, i.e., kings, pharaohs, potentates, nobility, even the gods themselves, or some epic hero whose legendary accomplishments raised him into the area of the divine. This is to be expected. The literature of antiquity highlights royalty more than it does the exploits of commoners. Thus, to read about the marriage of a pharaoh to his queen does not likely provide us any information on the marriage customs of the pharaoh's thousands of pyramid laborers, any more than the wedding of an Assyrian king served as a model for the wedding of one of his canal excavators. Likewise, one can't assume that the marriage of Prince Charles and Lady Diana was a typical late 20th-century wedding in England.

To begin our survey, we turn out attention to the Canaanites as revealed in the texts from Ugarit. Marriage is illustrated at three levels in Ugarit. First is marriage among (royal) mortals. In five of six cases the king was followed on the throne by his son. One king, Niqmad II, was succeeded by his son Arḫalba (ca. 1345–1336 B.C.). He in turn was followed not by a son, but by his brother, Niqmepa. Arḫalba was childless, and so he willed that his wife, Kubaba, should, after his death, be wed to her brother-in-law Niqmepa. Furthermore he added a solemn warning that no other man outside the family should seek the hand of Kubaba in marriage. Thus, in an Akkadian document from Ugarit (*PRU* 3: 16.144), Arḫalba warns: "Whoever, after my death, takes (in marriage) my wife, Kubaba daughter of Takan (?), from my brother—may Baal crush him …"

This text is of interest for two reasons. One, it illustrates the existence of levirate marriage (to be discussed below) at Ugarit. Two, Arḫalba's imprecation on anyone marrying his widow, excluding his brother, may reflect the desire to avoid loss of family property to outsiders; more likely, it illustrates the fact that Ugarit shared with Israel the concept that marriage to a former king's wife, or even his concubines, bestowed legitimacy on an aspirant who otherwise had no claim to the throne (see 2 Sam 3:7; 12:8; 16:21; 1 Kgs 2:13–25; Tsevat 1958).

The second level at which marriage is illustrated in Ugarit is in the marriage of the epic hero King Keret (named after the eponymous ancestor of the Cretans). As the epic opens, Keret's wife has been taken from him before she has given him an heir. The text reads (A.i.14; *ANET,* 143) that Keret "married the woman, and she departed." "Departed" here may be understood as a euphemism for "died" and thus Keret intends a second marriage (*ANET,* 143), or else his wife was kidnapped, and thus Keret intends the recovery of

his abducted wife (Gordon 1964). In either case, the remainder of the epic details Keret's journey at El's direction to Udum, his eventual obtaining of his wife, Hurrai, their trip back to Keret's place, their marriage (or reuniting), and finally the divine promise of progeny. This text demonstrates, among other things, that real love and romance did play a vital part in marriage at Ugarit. Keret (Gordon 1966: 105) describes Hurrai in terms reminiscent of the Song of Songs: "Whose charm is like Anath's charm / Whose loveliness is like Astarte's loveliness / Whose brows are lapis lazuli / Eyes, bowls of alabaster!"

This concern with passionate devotion is a feature that Ugarit shares with pre-Solomonic historiography. By contrast, in the earlier literature of Egypt (e.g., Sinuhe) and Mesopotamia (e.g., Epic of Gilgamesh), and in post-Solomonic historiography, little interest is shown in romantic marriage. It is interesting to note even the structural parallels (Aitken 1984: 12) between the wooing of Rebekah (Genesis 24) and of Hurrai: (1) lack of a wife; (2) commission to secure a wife; (3) travel to land or city of the future bride; (4) rendering of divine aid; (5) beauty of bride remarked; (6) negotiations for the bride; (7) sending off of the bride; (8) marriage blessing; (9) travel back with the bride; and (10) the marriage.

The third level of marriage at Ugarit is marriage between gods and goddesses. Of particular interest is the marriage between the Canaanite moon god Yarih and the Mesopotamian moon goddess Nikkal. The purpose of the wedding is clearly fertility, symbolized in the child that Nikkal will bear to Yarih. Yarih is willing to pay her father a bride–price (*muhr*) of "a thousand (shekels) of silver / A myriad of gold" (beyond the range of normal human ability to pay) so that "she may enter his house." In return he will make her fertile: "I shall make her field into a vineyard / The field of her love into an orchard" (Gordon 1966: 99). The text is a *hieros gamos,* a wedding of the gods, whose fertility stimulates plentiful harvests for mankind. Although a mythological text, it demonstrates most of the major points of marriage at Ugarit: paying the bride–price by the groom to the bride's father, the dowry for the bride, a virilocal marriage in which the bride moves in with the groom, and a heavy concern with fertility. Thus, even the mythological narratives of Ugarit presumably reflect a common sociological province of marriage procedures and customs.

The marriage of the gods is certainly no innovation with Northwest Semites in the 2d millennium B.C. Well-known Sumerian inscriptions from the end of the 4th millennium B.C. describe in texts that are belletristic and ritual in nature the rite of sacred marriage of the bride Inanna (originally goddess of the communal storehouse), who meets her groom Dumuzi (the god of the date palm) at the gate and admits him and his servants who carry the bridal gifts. This scene is depicted on the Uruk Vase. Dumuzi is the personification of the power behind and in the annual date harvest, and Inanna is that storehouse in which Dumuzi deposits and stores his yield. Their mating is what Jacobson (1976: 47) calls "the sacred cosmic sexual act in which all nature is fertilized."

Akkadian myths might even portray the possibility of marriage between a goddess and a mortal. In the Gilgamesh Epic, Gilgamesh is proposed to by the goddess Ishtar (*ANET,* 83):

> Come Gilgamesh, be thou (my) lover!
> Do but grant me of your fruit.
> You shalt be my husband and I will be your wife.

Gilgamesh rejects her offer of marriage, primarily because of her past marital affairs (*ANET,* 84):

> Which lovers did you love forever?
> Which of your shepherds pleased you for all time?

After listing some of Ishtar's ex-lovers, Gilgamesh exclaims (*ANET,* 84),

> If you should love me, you would (treat me) like them.

As we indicated above, Mesopotamian legal documents deal with matters of matrimony. They do not deal abstractly, philosophically, or theologically with marriage. They are rules, plain and simple, defining the permissible and the nonpermissible with respect to items like divorce, dowry, marriage–price, and remarriage. A few samples from Hammurabi's Code will suffice. For example, a marriage contract is absolutely essential for a marriage (no. 128). If a man outlives his wife, her dowry belongs to her children, not to her husband (no. 162). If, however, the wife died without mothering any children, he is entitled to some of the dowry, but only if his father-in-law has returned the marriage–price (nos. 163, 164).

The Middle Assyrian laws provide legal justification for the institution of levirate marriage (discussed above in connection with Ugarit). Law no. 33 from Tablet A reads: "If, while a woman is still living in her father's house, her husband died and she has sons … If she has no sons, her father-in-law shall marry her to the son of his choice …" This law and others like it (nos. 25, 26, 27, 32) begin conspicuously with the phrase "if while a woman is still living in her father's house." Law no. 27 adds "and her husband has been coming in frequently." Assyriologists often call such a marriage whereby the husband lives with his wife in her father's house *erēbu* marriage (*erēbu* means "to come in, pay visits [to one's wife]"). The term is acceptable; however, the very next two laws (nos. 28, 29) indicate that *erēbu* was also used of normal marital arrangements in which a woman "went in/entered" her husband's house. The closest parallels to *erēbu* marriage in the Bible would be Jacob living with his wives in the home of Laban, Moses living with his wife Zipporah in the home of Jethro, and Samson who goes down to "visit" his wife at Timnah. An Egyptian example would be Sinuhe, a courtier in the entourage of Sesostris I, who in a time of crisis fled to Canaan, lived with a local family, and married the daughter. Of course, these examples are a bit different from the law cited in the code in that the husband is an outsider, a foreigner, while in the code the man initiated into the family is a native.

The 15th-century-B.C. cuneiform texts from Nuzi in NE Iraq have contributed significantly to our understanding of marriage in Mesopotamia. Since the majority of these texts are private documents, personal matters such as marriage are frequently mentioned. As in most of the Near Eastern cultures, heavy emphasis is placed on procreation as the main purpose of marriage. What is unique in the Nuzi texts is the inordinately heavy stress laid on the bride's fertility. In fact, a majority of the texts contain clauses concerned with the possibility of childlessness and the groom's right to acquire/be provided a new wife in case the first wife proves barren (Grosz 1981: 182).

Thus one marriage document (Grosz 1981: 166) reads:

> Zike, son of Akkuya, gave his son Shennima in adoption to Shuriḫa-ilu, and Shuriḫa-ilu gave Shennima all these fields. Should there be a son of Shuriḫa-ilu, he will be the chief heir, and Shennima will be secondary heir … And he [Shuriḫa-ilu] gave Kelim-ninu as wife to Shennima. If Kelim-ninu bears children, Shennima will not take another wife, but if Kelim-ninu does not bear children, Kelim-ninu will take a slave-girl from the land of Nullu as wife for Shennima, and Kelim-ninu shall have authority over the child [of the slave girl].

This text not only parallels Sarah giving Hagar to Abraham (Gen 16:2) and Rachel giving Bilhah to Jacob (Gen 30:3), but the laws in Hammurabi's Code (nos. 144, 146, 147), all of which concern the (barren) wife who gave to her husband as surrogate for herself a female slave, and the female slave's ability or lack of ability to bear a child. It also illustrates an uxorilocally residing son-in-law who had to be adopted by his father-in-law lest the son-in-law's children belong to the father's lineage and not the father-in-law's lineage.

While this text has some affinities with the Jacob and Leah/Rachel marriages, the following text is even closer (Gordon 1964: 24–25):

> The adoption tablet of Nashwi son of Arshenni. He adopted Wullu son of Puhishenni. As long as Nashwi lives, Wullu shall be the heir. Should Nashwi beget a son, [this son] shall divide equally with Wullu, but [only] Nashwi's son shall take Nashwi's gods. But if there be no son of Nashwi, then Wullu shall take his daughter as wife to Wullu. And if Wullu takes another wife, he forfeits Nashwi's lands and buildings. Whoever breaks the contract shall pay one mina of silver [and] one mina of gold.

The Nuzi texts are, as one would expect, full of references to the bride–price (*terḫatu*) paid by the groom's family to the bride's family (i.e., her father or brother), and to the dowry (*mulūgu*), a gift received by the bride from her father at the time of her marriage. Such frequent emphasis on the bride–price (the references to *terḫatu* are more numerous than to *mulūgu,* and the *terḫatu* is always greater than the *mulūgu*) has the effect of role-casting the wife as the object of the marital agreement rather than as the subject.

In fact, there is some indication in the Nuzi texts that the payment of the bride–price could be postponed until the marriage was consummated, or until the bride had proven her fertility. Along possibly these same lines one text (Grosz 1981: 175) reads:

> Declaration with Kuni-ašu, daughter of Ḫut-tešup, made in front of these witnesses: "In the past, Akam-mušni married [me] off and took 40 shekels of silver for me from my husband, but now Akam-mušni and my husband are [both] dead, and now [as to] myself, Akkiya, son of Ḫut-tešup, seized me in the street as his sister and took the authority [of brother] over a sister for me. He will marry me off and taken 10 shekels of *šurampašḫu* silver from my [future] husband.

What is of special interest here is the reduction of the bride–price for Kuni-ašu from her first marriage (40 shekels) to her second marriage (10 shekels). This may be due to the fact that she is no longer a virgin, or that she has proved herself barren with her first husband (Grosz 1981: 175).

C. In the Old Testament

1. Parentally Arranged/Self-Initiated. The Hebrews shared with others of the ANE the practice of parentally arranged marriages. The basis for making this claim is scattered references in the OT narrative to such procedure. There is, however, no OT law that mandates this. Nowhere, for example, is there a law in the Deuteronomic code (Deuteronomy 12–26) to the effect that it is the responsibility of a father to select a bride for his son. There is a law that outlines procedures for dealing with a rebellious son (Deut 21:18–21), a recently married son (Deut 24:5), and a deceased son with no son of his own (Deut 25:5–10), but not one for an unmarried son. This is in contrast to the Laws of Eshnunna (ca. 2000 B.C.) one of which (no. 27) states (*ANET,* 162):

> If a man takes a (nother) man's daughter without asking the permission of her father and her mother and concludes no formal marriage contract with her father and her mother, even though she may live in his house for a year, she is not a housewife.

Similarly, the OT Wisdom Literature, while having much to say about healthy marital relationships, never classifies as wise one who chooses a wife for his son with prudence. Indeed Prov 19:14 affirms that a good wife is from the Lord, not from the husband's father.

The first instance of a parentally arranged marriage in the OT is Hagar selecting a wife for her son Ishmael from Egypt (Gen 21:21). If one attributes any credence to the year numbers of Genesis, which state that Abraham was eighty-six when he fathered Ishmael (16:16), and one hundred years old at Isaac's birth (21:5), and give a year or two for Isaac to be weaned (21:8), that would suggest that Ishmael was fifteen or sixteen when his mother arranged his marriage to a native-born Egyptian. This may reflect one of the justifications for parentally arranged marriages, namely, the relatively young age at which boys and girls reached marriageable age. It is unlikely, however, that Hagar's selection of a wife for her son may be sustained as an illustration of a parent's assuming the responsibility of spouse selection for a young child. Apart from the problems about the chapter's portrayal of Ishmael as still quite young (see 21:14–19), possibly still an infant in fact, Gen 21:20–21 indicates that Ishmael grew up, became an expert with the bow, and lived in the wilderness of Paran. Eventually Hagar chose a wife for him from Egypt (Gen 21:21). The interval between 21:14–19 and 21:21 is unknown. Even if Ishmael is cast out from Isaac at 15 or 16 years of age, he could be 17, 20, or 30 before his wife is chosen for him. On the other hand, those who were older when they married (Jacob, Esau, or Boaz) played a much larger role in the selection of their mate. But even advanced age did not itself guarantee autonomy in matrimonial matters. For example, Isaac is forty (Gen 25:20) when Rebekah is chosen for him, and Pharaoh gave Asenath, daughter of Potipherah priest of On, to Joseph as wife when Joseph was thirty years old (Gen 37:45–46). The choice of Rebekah is the classic case of parentally arranged marriages (through Abraham's faithful servant [Genesis 24]). Isaac played no role, other than finding the choice to his satisfaction (24:67). Incidentally, the OT never mandates an ideal age range for marriage (cf., however, Buchanan 1956). In Egypt girls were married between the ages of twelve and fourteen, and young men between fourteen and twenty. In Greece girls were usually between fourteen and twenty, and men usually between twenty and thirty. In Rome, at the time of Augustus, the legal minimum age for girls was twelve, and for boys fourteen. The Talmud recommends marriage for girls at the age of puberty, which would be twelve or thirteen (*Yebam.*

62b). Males are encouraged to marry between fourteen and eighteen. A girl younger than twelve-and-a-half, according to Talmudic law (*Qidd.* 2b), could not refuse a marriage arranged by her father. Beyond that age her assent was essential (Yamauchi 1978: 241–43).

While Judah, son of Jacob, seems to have exercised considerable freedom in the selection of his wife (Gen 38:2), he did not extend that liberty to his son Er, but instead took Tamar as the wife for his firstborn (Gen 38:6). Subsequently he instructed another son, Onan, to "marry" his widowed daughter-in-law (Gen 38:8). Exod 2:21 implies that the Midianite priest Reuel selected Zipporah from his seven daughters and gave her to Moses, as Moses shifts from houseguest to helping hand to husband. Again in this latter case, Moses is no young immature adolescent who lacks the wisdom to select his own spouse. In the words of Exod 2:11 this happened sometime after Moses had "grown up," an age range that Stephen specifies with the proverbial "forty" (Acts 7:23).

Caleb, in an attempt to stimulate support for an invasion of the city Kiriath-sepher, offered his daughter Achsah as a trophy and wife to any man who would spearhead the attack. Othniel accepted the challenge, and in the process gained the hand of Achsah (Josh 15:16, 17 and Judg 1:12, 13). This particular story illustrates the fact that an esteemed bride could be obtained not by expensive gifts or a monumental bride–price, but by deeds of valor. It is comparable with David's marriage to Michal. Viewed from one perspective, David's marriage to Michal is parentally arranged (1 Sam 18:21), albeit for an ulterior motive. In the end, however, David won Michal not by paying a conventional bride–price, but by routing and slaughtering 200 Philistines and presenting their foreskins as evidence of his triumphs (1 Sam 18:27; 2 Sam 3:14). Even earlier than this, Saul tried to give his daughter Merab to David (1 Sam 18:17), again as a means of having David killed.

The pattern of parentally arranged marriages seems not to continue beyond Saul. Jesse, father of David, played no role in David's marriage to Abigail (1 Samuel 25), to Ahinnoam (2 Sam 2:2), to Maacah (2 Sam 2:3), to Haggith (2 Sam 2:4), to Abital (2 Sam 2:4), or to Eglah (2 Sam 2:5). And David did not select the Pharaoh's daughter for his son Solomon (1 Kgs 3:1), nor any women in his 700-member harem (1 Kgs 11:3).

Accordingly, we note a number of marriages in the OT in which the parents played an incidental, if not nonexistent, role in the marriage of their progeny. As we indicated above, where an older male was involved, the man, in several instances, took more responsibility in choosing a wife. We have already mentioned the marriages of Jacob (with, however, some guidance from the parents [27:46–28:2], even though Jacob must be older than 40 [cf. 26:34]), Esau, and Boaz. To these we might add Shechem's directive to his father about Jacob's daughter Dinah—"get me this young woman as a wife" (Gen 34:4), and similarly Samson's ultimatum to his parents—"I have seen a woman in Timnah of the daughter of the Philistines; now therefore, get her for me as a wife" (Judg 14:2). Samson's marriage is suspect on three grounds: (1) he marries a foreigner, (2) it is initiated by sexual attraction, and (3) it is against his parents' will (Bal 1987: 42). Both of these stories demonstrate that even when the initiative for spouse selection was with the husband-to-be, the formalities of parental arrangement were still followed. In such instances parental approval was assumed rather than solicited.

Abraham did not pick out a wife for Isaac. All that the father legislated was that the servant fetch a wife for Isaac from the country of Abraham's birth, and that she not be a daughter of the Canaanites (Gen 24:3, 4). If anything, the story highlights the role of divine providence in marriage. Parents supply only the most general guidelines. Furthermore, one reads in the story that Rebekah had the choice either to accept the servant's invitation to return to Canaan with him, or refuse that invitation (Gen 24:58). Her family fully honored her power of acceptance or veto. Interestingly, Abraham played no role in the story's climax. It was the servant and Rebekah, then Rebekah and Isaac alone in his late mother's tent. The text simply says (v 67), "and he loved her." Terrien (1985: 32) reminds us that the verb "to love" is susceptible of two different vocalizations: an "active" one ("and he made love to her"), which would emphasize the erotic aspect of their relationship, and a "stative" one ("and he was in love with her"), which expresses a lasting feeling rather than a temporary sensation. The Hebrew manuscripts clearly indicate the stative use.

Similarly, Isaac does not pick Jacob's wife. Like his father, his concern is that Jacob marry endogamously (Gen 28:1–5). Isaac and Rebekah are grieved by Esau's marriage to Judith and Basemath, who are Hittites (Gen 26:34, 35), but they cannot veto it. The same goes for Esau's subsequent marriage to Mahalath, the daughter of Ishmael (Gen 28:6–9).

To those who have lived all their lives in the West, parentally arranged marriages will seem strange, maybe even absurd, and at least an illegitimate extension of parental authority; however, much of the world still operates in this fashion. There is at least a double rationale for parental selection of marriage partners. For one thing, such an arrangement focuses attention upon the entire family unit, and not just on the couple alone. Secondly, it permits an understanding of love which has as much to do with the commitment of the will ("I love you because you are my wife") as it does with emotions, glands, and hormones ("you are my wife because I love you") [Baker 1984: 97].

2. Endogamy/Exogamy. Endogamy is the custom of marrying only within one's own group, such as a clan, tribe, etc. Exogamy is the custom of marrying outside one's own clan, tribe, etc. The OT reflects both systems in operation. Sometimes the two different types of marriage exist side by side, but more often than not, one exists to the virtual exclusion of the other.

Endogamous marriage is the norm in the patriarchal age. Thus we read that Abraham married his half-sister (Gen 20:12), Nahor married his niece Milcah (Gen 11:29). Isaac married his cousin Rebekah (Gen 24:15). Esau married his cousin Malhalath (Gen 28:9). Jacob also married his cousins Rachel and Leah (Gen 29:12). This latter case illustrates the common phenomenon of cross-cousin marriage, i.e., marriage between the offspring of siblings of opposite sex, one in which a man marries the daughter of his mother's brother, despite the close degree of consanguinity. It is a marital relationship that avoids "the extremes of too much endogamy on the one hand and too much exogamy on the other hand" [Oden 1983: 199]. Amram, father of Moses, married his aunt (Num 26:59). The unmarried daughters of the sonless Zelophehad raised the question of what would happen to inheritance in case of the marriage of female heirs (Num 27:1–11; 36:1–13). Would it be possible in such a situation for family inheritance to move outside the tribe? To prevent that, Moses informed the concerned parties that they could marry anybody they wish (note the latitude given here), but they could marry only within the family of their father's tribe (Num 36:6).

The justifications for endogamy are clear enough. It could be based on such a thing as unfriendly relations with a neighboring tribe. Or it may signal a need for separation from a majority group while living among or adjacent to foreigners. Thus, to give a contemporary example, a member of an Amish community could not marry somebody from a mainline Protestant denomination and remain in good graces with the Amish community. Where substantive religious issues are involved, endogamy reflects the practical need to preserve a certain norm of religious behavior, and also to maintain the ethnic purity of the tribe or family. The smaller the group, and the more entrenched its religious ethos, the greater the threat presented by exogamy to that group.

But the same biblical traditions also demonstrate that endogamy was not inviolable. Esau married two Hittites (Gen 26:34) and a Canaanite (Gen 28:6–9). Joseph married an Egyptian (Gen 41:45), Judah a Canaanite (Gen 38:2), Moses a Midianite/Cushite (Exod 2:21, Num 12:1), Samson a Philistine (Judges 14; 16:4–22), Boaz a Moabitess (Ruth 4:13), David a Calebite and Aramean (2 Sam 3:3), and Ahab a Phoenician (1 Kgs 16:31). Solomon pursued exogamy to the extreme (1 Kgs 3:1; 11:1; 14:21). There are also a few instances of an Israelite woman marrying a foreigner. Bathsheba married Uriah the Hittite (2 Sam 11:3); the Phoenician Hiram's mother was from the tribe of Naphtali (1 Kgs 7:13, 14), and Esther married the Persian King Ahasuerus. There is also the instance of Sheshan, who had only daughters, so he gave one of his daughters to his Egyptian slave (1 Chr 2:34–35). These exogamous marriages took place: (1) out of spite (Esau's); (2) when one was living in a foreign land for an unusually long period of time (Joseph's, Moses', Esther's); (3) with divine approval (but parental disapproval) as a means of moving against the enemy (Judg 13:3, 4); (4) for consolidation of political power (David's, as argued by Levenson and Halpern [1980: 507–18], Solomon's); (5) in blatant disregard for religious norms (Ahab's and Solomon's).

It is an overstatement to claim that the OT prohibits intermarriage with all gentiles. To be sure, Ezra and Nehemiah do make such a prohibition (Ezra 9–10; Neh 13:23–27) and probably were not the first to fulminate against exogamy, leading as it could to compromise or indifference. Judg 3:5, 6 makes the point in connection with its commentary on the apostasy of Israel that part of that downfall was due to Israel's intermarriage with the nations among whom she lived. Josh 23:12, 1 Kgs 11:4, and the priestly Exod 34:16 (in the context of a renewed covenant) emphasize the same.

It should be noted that one of the key passages on the subject in Deuteronomic literature, Deut 7:3, forbids intermarriage with the seven peoples to be dispossessed from the land, but does not name other foreigners. Interestingly, Leviticus 18 and 20 are replete with sexual taboos, but intermarriage is not among them (probably because the concern of these two chapters is with intrafamilial marriage). If all intermarriage is forbidden, then the law of Deut 21:10–14 would be odd, for it permits the Hebrew warrior to take a wife from female war prisoners. Furthermore, Deut 23:7, 8 seems to allow marriage with an Edomite or Egyptian after three generations (perhaps to provide sufficient time for the non-Israelite to acclimatize to Israelite practices). Amalekites, on the other hand, never qualify (Deut 25:17–19). It has been suggested that one interpretation for the Ammonite and Moabite "entering the congregation of the Lord" only after the tenth generation (Deut 23:2–6) is that intermarriage between Israelites and these two groups was postponed for ten generations. Contextually this interpretation is lent support by Deut 22:13–23:1, which deals with marriage laws. But in light of the book of Ruth, where intermarriage with Moabites did take place, it seems that "enter the congregation" is another way of saying "enter the temple of the Lord."

If the exogamous marriages of kings like David, Solomon, and Ahab are typical, then it is possible that "from the beginning of monarchy, the number of intermarriages increase, and exogamy is socially tolerated to the point where it inspires indifference rather than anxiety" (Brenner 1985: 116–17). If so, then perhaps the legal prohibitions against intermarriage were a Deuteronomic response to intentional deviation from the norm, a deviation made even more possible by the religious and political demoralization brought by the fall of N Israel in 722 B.C.

What was a minor entry in the Deuteronomic platform became a major component in the reforms of Ezra and Nehemiah. Two entire chapters in Ezra (9 and 10) are devoted to this subject (see also Neh 9:2; 10:30; 13:3, 23–27, 28). The guilty parties included members of the priests (Ezra 10:18–22), the Levites (Ezra 10:23–24), and the laity (Ezra 10:25–43). The postexilic prophet Malachi, and probably a contemporary of Ezra and Nehemiah, rebuked his people for marrying "the daughter of a foreign god" (Mal 2:11). Malachi's *bat-ʾēl nēkār* is the equivalent of *nāšîm nokriyyôt* in 1 Kgs 11:1, 8; Ezra 10:2; Neh 13:26. That Malachi uses the phrase "daughter of a foreign god" rather than "foreign women" suggests not only the evil of intermarriage per se, but the inevitable religious syncretism that accompanied such exogamous marriages. It is not difficult to see why such marriages might flourish in the postexilic era. For one thing, impoverished exiles, stripped of home and possessions, would opt to marry women from wealthy families (i.e., foreign) in order to advance their economic status. And again, the openness of the Persian administration fostered a more intimate give-and-take between its own populace and various displaced persons living within its borders (Glazier-McDonald 1987: 605).

Given this situation, Ezra's reform had as its goal a separation of Israel from everything that induced contamination. His goal, as argued by Bossman (1979: 36), was the purification of the people according to a priestly ideal of separation from all that is unclean. For Ezra it was impossible to make consonant with each other this penchant for intermarriage and God's call to his people to be holy. Anything that threatened to abort this movement of reformation in a community recently resettled, uncertain of its future, and searching for its identity had to be dealt with forthrightly, even if the measures seemed distasteful and counterproductive to the majority. Incidentally, there is no indication that Ezra's interdiction of marriage with foreign women extended to marriages of Judean Jews with Samaritan women. The latter do not fall into the category of *nāšîm nokriyyôt.*

It appears that postbiblical Judaism is closer to Ezra than it is to Moses on the question of endogamy/exogamy. For instance, *Jubilees* (mid-2d century B.C.) 30 states (incorrectly) that Moses

outlawed intermarriage with all gentiles. However, *Jubilees* 30 (esp. vv 7–11) builds not on the locus classicus Deut 7:3–4, but on Lev 18:21.

Unlike the integrating Hellenizers of the 2d century B.C., the Maccabeans, of whom *Jubilees* is a product, pushed for stability through separation. Where could such separation be more manifest than in the avoidance of exogamous marriages? In agreement with *Jubilees*, the 1st-century-A.D. Jewish philosopher from Alexandria, Philo (*Spec Leg* 3.29), argued strenuously against intermarriage, using Moses for support, especially Deut 7:3–4, as did the Jewish historian in Rome, Josephus (*Ant* 8.190–96). For both of these authors exogamy was a violation of a Mosaic ordinance.

In contrast to *Jubilees*, Philo, and Josephus, rabbinic society seems not to have been disturbed by intermarriage. Both the Palestinian Talmud and the Babylonian Talmud are relatively quiet on the issue, and the prohibition of intermarriage does not even appear in the Mishnah (Cohen 1983: 27–28).

3. Monogamy/Polygamy. The ideal marraige in OT society was a monogamous one, one man for one woman, one woman for one man. The creation narrative (Gen 2:24) makes this point with its call to the man to forsake his mother and father and cleave unto his wife (not wives). In fact, there is only one illustration of the violation of that pattern in primeval history, and that is Lamech (Gen 4:23). A number of laws have been cited (*IDB* 3: 281) as support for monogamous marriage: Exod 20:17; 21:5; Lev 18:8, 11, 14, 15, 16, 20; 20:10; 21:13; Num 5:12; Deut 5:21; 22:22. Wisdom Literature also provides copious texts in support of monogamy: Prov 12:4; 18:22; 19:13; 21:9; Eccl 9:9; Job 31:1, 9–12; Sir 26:1–4. It would appear, however, that the main justification in using these verses to substantiate monogamy is the use of *ʾiššâ* in the singular. But a closer look at these verses raises serious questions about whether or not they provide credence for monogamy. For example, Exod 20:17 and Deut 5:21 list several things one is not to covet, and all the objects the individual is warned against coveting are in the singular. If it is possible for a man to have more than one manservant, maidservant, ox, or ass, he could have more than one wife. Or again, Lev 18:8, 11, 14, 15, 16, 20 all refer to uncovering the nakedness of somebody's wife, again always in the singular. However, one should not suppose, for example, that a person has only one sister (e.g., 18:9) since "sister" appears in the singular as well. In fact, Lev 18:9 warns against uncovering the nakedness of one's sister, who is further identified as "the daughter of your father or the daughter of your mother," indicating that a man could have multiple wives, providing sons and daughters from different mothers.

Indeed, the OT is replete with illustrations of polygamous marriages. To be more precise, it tells of instances of polygyny (one husband, more than one wife), but no instance of polyandry (one wife, more than one husband). Apart from the two wives of Lamech already noted, we recall (1) Abraham with Sarah and his concubines Hagar and Keturah (Genesis 16; 25:1–2); (2) Jacob with Leah and Rachel (Gen 29:15–30); (3) Esau with three wives (Gen 26:34; 36:2; 28:9); (4) Gideon with his "many wives" (Judg 8:30); (5) Elkanah with Hannah and Peninnah (1 Sam 1:2); (6) David with seven named wives (1 Sam 18:17–30; 25:38–43; 2 Sam 3:2–5) and additional unnamed ones (2 Sam 5:13); (7) Solomon and his royal harem (1 Kgs 3:1; 11:3; Cant 6:8); and (8) Rehoboam with his eighteen wives (2 Chr 11:21). There is one law in the Deuteronomic code (Deut 21:15–17) which does allow for one man to be married simultaneously to two wives. And the only individual who is admonished in the same code not to multiply wives is the king (Deut 17:17). No such prohibition is directed to the king's subjects.

Looking at these lists of polygamists, one is led to the conclusion that polygyny may have been limited to men who occupied leadership positions, who were well off, or who had some other claim to distinction. Indeed, de Vaux comments (*AncIsr*, 25): "it is noteworthy that the books of Samuel and Kings, which cover the entire period of the monarchy, do not record a single case of bigamy among commoners (except that of Samuel's father, 1 Sam 1:2, at the very beginning of the period)." However, the books of Samuel and Kings record little about any commoner, or the marriage of any commoner.

It is clear that in most of the above-cited instances polygyny was a major contributor to problems in the household. Witness the debacle between Hagar and Sarah, or Rachel's envying of Leah's fertility (Gen 30:1–2, 15), or the frustration of Esau's parents (Gen 26:35), or the liquidation of Gideon's seventy sons by Abimelech, his son by concubine (Judges 9), or Peninnah's provocation of Hannah (1 Sam 1:6), or

David's in-house squabbling and treachery among half-brothers and half-sisters (2 Samuel 13, 1 Kings 1–2), or Solomon's forfeiture of his empire (1 Kings 11).

Wherever the emphasis of marriage is placed on procreation or the sexual satisfaction of the man, more than likely polygyny will flourish. But one should not attribute all instances of polygyny to lust. In a society that is overwhelmingly seminomadic and agricultural, the maintenance of several wives would supply an abundant work force to tend flocks and work fields.

4. Among the Prophets. It is the prophets whom we must credit with conceiving the idea of Yahweh as the husband of Israel in their attempt to graphically portray God's covenant election of Israel. The Torah, however, already hints of this kind of relationship between God and his people. For example, the commandment that urges aniconic worship of the deity finds its motivation in the affirmation that Yahweh is a "jealous" God (Exod 20:5). The Hebrew for the adjective "jealous" is *qannā*› (see also Exod 34:14). The related noun *qin*›*â* and verb *qinnē*› describe the agitation of a husband suspicious of his wife's infidelity (Num 5:14, 30; cf. Prov 6:34 for this noun *qin*›*â* used to describe the passionate feelings of a husband vis-à-vis his wife). The Torah also uses the verb *zānâ* ("go whoring") to express apostasy of Israel from Yahweh (Exod 34:15, 16), as well as the noun *zônîm* ("harlotry," Num 15:39).

The prophetic development of this figure built upon this tradition reflected in the Torah. Hosea was the first to advance the metaphor significantly. He was then followed by Jeremiah, Ezekiel, the exilic Isaiah, and Malachi. In Hosea's case his own marriage to Gomer was intricately connected with his meditation on Israel's marriage to Yahweh. It is still a moot point whether or not God instructed Hosea to marry a lady who was already a street harlot in order to illustrate God's choice of an already loose-living people, or whether Hosea married a lady who was potentially promiscuous, who subsequently abandoned the prophet, thus providing a poignant illustration to Hosea of Yahweh's hurting and grieving heart over the apostasy of his spouse.

Hosea 3 is the autobiographical account of Hosea's new marriage or remarriage. He "bought" (3:2) his spouse for fifteen shekels of silver. In between these two marriages of the prophet the second chap. expands on Hosea's experiences, justifying Hosea's divorce from Gomer (2:3–15—Eng2:1–13), and addressing theologically Hosea's second marriage (2:16–25—Eng2:1–23). Hosea is told by God to speak to the woman's children (i.e., the citizens of northern Israel) and urge them to "arraign your mother" (i.e., the kingdom of northern Israel), for of that Israel God will say: "she is not my wife [›*ištî*] and I am not her husband [›*îšâ*]" (Hos 2:4—Eng2:2). In the second half of this chapter, however, the emphasis is reversed, and Yahweh's marriage, or remarriage, with the people is depicted.

What is of special import here is the indication that because of God's (re)marriage to Israel, "In that day, says Yahweh, You will call me My husband / My man [›*îšî*], And no longer will you call me My master / My owner [*ba*‹*lî*]" (Hos 2:18—Eng2:16). To be sure, the use of *ba*‹*lî* is directed against the false worship of the Canaanite baals of the fields, as the next verse makes clear: "And I will remove the name of the Baals from her mouth, and they shall no longer be mentioned by their name." But this is more than simply a broadside against Canaanite fertility concepts. What Hosea affirms is that in God's (re)marriage with his people, there will be more than a master-slave relationship. As Terrien (1985: 54) has stated, Hosea attacks the idea of "marriage as a contract of ownership through which a woman is nothing more than the property of a man. Israel … will not look at her God as if she were the slave of her master, but she will enjoy with him the status of partner and trusted friend."

It is of interest that it was Hosea, and not some of his contemporaries, such as Amos or Micah or Isaiah, who got the most mileage out of this daring marriage metaphor. There are hints of the concept in Amos, e.g., when he refers to "the virgin of Israel" (5:2), or when he uses a phrase like "you only have I known among all the families of the earth" (3:2), with its apparent conjugal symbolism. But there is nothing approaching Hosea's bold use of the metaphor. Nerved by his strong foundation in covenant theology with its emphasis on moral love, and caught in the trauma of his own marriage experience, Hosea may use the marriage metaphor as graphically as he does precisely because he is, unlike Amos or Isaiah, meeting head on a pagan cult that includes marriage themes in its mythology and sexual acts in its praxis (Hall 1982: 170).

Hosea's appropriation of Yahweh as husband and Israel as bride is the forerunner for similar emphasis in subsequent prophets. Jeremiah picks up this imagery in Jer 2:20–25 and 3:1–3. He even calls Judah's allies her "lovers" (22:20, 22; 30:14; see also Hos 8:9). Ezekiel 16 with its extended discussion of Judah as a nymphomaniacal adulteress is a classic passage. Two expressions, both in v 8, describe God's "marriage" to Judah before she sought other lovers. The first is "I spread my skirt/wing over you," which is another way of saying "I married you" (see also Deut 23:1—Eng22:30; 27:20; Ruth 3:9; Mal 2:16). In marriage the man's garment covered the woman's nakedness, whereas adultery uncovered it. The second phrase is Ezek 16:8, "I entered into a covenant with you." This is one of only two places in the entire OT where marriage is spoken of as a covenant. The other is Mal 2:14. Finally, the later Isaiah used the same metaphor for God's attachment to Israel (Isa 61:10 and 62:5). In the latter God is compared to a bridegroom exulting over his bride. The prophets shared completely their Hebrew tradition that Yahweh is never conceived of as having sexuality. And yet they were not hesitant to speak of Israel as God's bride, an imagery that abounds in non-Israelite religions where the gods and goddesses were explicitly sexual. In exploiting the marriage metaphor even at the divine level, the prophets were in effect engaging in a demythologizing hermeneutic.

Apart from their symbolic use of the marriage metaphor, four of the prophets integrated their own marriage, or lack thereof, into their message. We have already mentioned Hosea's marriage to Gomer and the three children born of this marriage, to whom were given richly symbolic names. Isaiah fathered two children by his wife, who is simply styled "the prophetess" (Isa 8:3), and each of the children bore a symbolic name, ambiguous in their interpretation as either signs of hope or signs of judgment. The death of Ezekiel's wife, called "the desire of your eyes" (Ezek 24:16), is foretold to Ezekiel, and the prophet is instructed not to mourn for her, not even to shed a tear (Ezek 24:16–18). Similarly, mourning is to be withheld from those about to experience their own demise. Finally, Jeremiah provides the only illustration in the OT of a divine call to celibacy (Jer 16:2). The joy and fulfillment denied to him is a harbinger of days of judgment for Jeremiah's contemporaries. This particular prohibition for Jeremiah is not dated, but it must have come at a point in his ministry where all hope for the repentance and salvation of his peers became impossible. Jeremiah faced extinction on two fronts, one from his enemies, who wished to cut him off and blot out his name, the other from God, who denied him marriage, and thus progeny to perpetuate his name.

5. In Wisdom Literature. Ecclesiastes and Proverbs affirm repeatedly the happiness and delight in the reciprocal love of a man and woman in marriage. The writer of Ecclesiastes vetoes the solitary life with his famous "two are better than one" (5:9), then describes the life of mutuality these two may share (5:10–12). While these four verses may be describing simply the value of a friend, they suggest that marriage at its heart is a friendship, not a hierarchy between suzerain and servant. Thus there is a time for embracing (3:5b). Is it possible that the enigmatic "there is a time to cast away stones, and a time to gather stones" (3:5a) refers to times of sexual intimacy and euphoria and to times of sexual abstinence (Loader 1969: 242)? In both phrases the emphasis is on giving oneself to another, to intimacy. Eccl 9:9 admonishes one to live joyfully with the wife whom you love.

Proverbs reverberates with the same theme. See, for example, Prov 5:18–20; 6:29; 12:4; 18:22; 19:14; 30:19; 31:10–31. It is well known that Proverbs is written from the man's/husband's point of view. So Proverbs speaks of the husband who must live with a nagging wife who is like a dripping faucet (17:1, 14; 19:13; 21:9, 19; 25:24; 27:15–16; 30:23). Nowhere is there a proverb that counsels the wife on what she is to do when she has to share the home with an insensitive and obnoxious husband. To aid the male in finding the right wife, Proverbs lists a sample of commendable traits such a woman should exemplify (31:10–31). It does not provide a parallel list in order to assist the female to find a "virtuous husband." At the same time, the list of gifts possessed by this ideal wife are hardly the traditional cooking, cleaning, and conceiving. She is, in addition to a devoted mother and a loving wife, a business woman, a real estate agent, a farmer, a philanthropist, a craftsman, a seller, purchaser, and administrator.

We include the Song of Songs in this section even though it does not fall into the category of Wisdom Literature. One reason for utilizing the Song of Songs at this point is that, unlike Proverbs, it is written

from a woman's point of view. It is a passionate love song in which a young bride and groom, now at the point of readiness for consummation of marriage, celebrate their reciprocal erotic love. Especially prominent in this rhapsody is the woman's passion for her lover. She is the one who seeks him, not vice versa (3:1–4; 5:6–8), and it is her recollections of his attractive features that are given prominence. It is important to observe that the Song extols not fertility but human love. For this reason, there is no allusion to any legal aspect of marriage, to procreation, or to the institution of the family. Here is further evidence, then, of the Bible's moving away from an exclusive focus on marriage as primarily the siring of progeny, i.e., marriage as a means to an end.

6. Levirate Marriage. Deut 25:5–10 provides legal sanction for a marriage between a widow whose husband died without offspring (the *yĕbāmâ*) and the brother of the deceased (the *yābām*). It is the responsibility of the latter "to perform the duty of a husband's brother" (*yābam*). When the brother-in-law chooses not to marry the *yĕbāmâ,* the ceremony of *ḥălîṣâ* (removal by the widow of the brother-in-law's sandal) takes place, and the widow spits in his face as well. This latter is a point of interest, for this law is the only one in the OT that includes in its statement of penalty an act of humiliation against the villain. The removal of the shoe by the woman is not an additional part of the insult. Rather, in removing the brother-in-law's shoe, with the town's elders as witnesses, the woman assumes the right to her freedom and full control of her destiny.

This type of marriage is known as levirate marriage, from the Latin *levir,* "brother-in-law." Its continuation into the NT era is demonstrated by the Sadducees' question to Jesus about the childless woman who was married in sequence to six of her late husband's brothers (Matt 22:23–33 = Mark 12:18–27 = Luke 20:27–40). We have seen that levirate marriage existed in Ugarit, in the Middle Assyrian (no. 33) and Hittite law codes (no. 193), and possibly in the Nuzi texts. In these texts the primary concern is with producing a (male) child to carry on the name of the deceased husband.

Two stories in the OT portray levirate marriage in operation: Genesis 38 and Ruth. However, when either one of these stories is aligned with the law in Deuteronomy, significant differences are apparent. For example, in Deuteronomy and Genesis 38 the levirate is compulsory; in Ruth it is not. Again, Deut 25:5–10 limits the levirate to brothers "who dwell together" (i.e., brothers who have not yet come into their inheritance and who have not yet established families of their own). On the other hand, Genesis 38 extends the levirate to the father-in-law and Ruth to a distant relative. Genesis 38 at least accords with Middle Assyrian Law no. 33 and Hittite Law no. 193, both of which mention first the brother as the normal partner, but allows his father this function as well. And thirdly, Deut 25:7 makes it clear that the levir's responsibilities are "to raise up a name for his brother." But note that it is Judah and Boaz, i.e., the real/biological fathers, who are mentioned in the genealogies of Perez and Obed, and not Er and Mahlon.

This latter point suggests that levirate marriage in the OT is not simply concerned with producing a male child nor with producing an heir to the dead man's property. It is concerned just as much, if not more, with the support and protection of the widow, and the perpetuation of family property within the immediate family (Thompson and Thompson 1968: 96). How close, one might ask, does the levirate marriage come to incest? At the end of the Genesis 38 story we read that the father-in-law Judah "did not lie with her [Tamar] again," for a marriage between father-in-law and daughter-in-law is not normal. By contrast, we do not read that Boaz ceased to "know" Ruth after he fathered Obed by her. His relationship to Ruth was distant enough for levirate marriage to evolve into normal marriage. In Lev 18:6–8; 20:11–12; and Deut 2:20, 22–23 appear kinds of sexual unions between kin that are illicit according to covenant morality. The various prohibitions include six relationships of consanguinity (based on blood), Lev 18:7, 9, 10, 11, 12, 13, and eight of affinity (based on marriage), Lev 18:8, 14, 15, 16, 17, 18. Presumably the list is selective rather than exhaustive, for how else would one account for the absence of both cousins and daughters from the above lists (Gottwald 1979: 302)? One of the sexual unions forbidden between relatives on the basis of affinity is sexual intercourse with one's sister-in-law (Lev 18:16). Now since the law of the levirate requires the brother-in-law to raise up a child to his deceased brother by way of marrying and having intercourse with his sister-in-law, then we have to assume that the legislation of

Deut 25:5–10 is an exception to the legislation regarding marriage and/or sexual intercourse with one's sister-in-law.

7. In the Creation Narratives. The emphasis in Gen 1:1–2:3 in terms of human beings is first the creation of male and female with no differentiation between temporal priority and function, and second, the blessing of fertility and the mutual exercise of dominion given to these two. It should not go unnoticed that the two places where God "blesses" someone or something (1:22, 28) are followed immediately by the imperatives "be fruitful and multiply." Male and female in Genesis 1 are more of a biological pair than a social partnership. Little attention is paid to the relationship of male and female to each other, or to marriage per se. And yet the very fact that the power to reproduce is a blessing given to the male and female at their simultaneous creation, and therefore not dependent upon subsequent recitation of myth, is itself a refutation of the rationale of the fertility cult (Bird 1981: 147).

If Gen 1:1–2:3 says much about fertility and little about marriage, Gen 2:4–25 says much about marriage and nothing about fertility. In this portion, usually called the Yahwist (J) creation account, Yahweh-Elohim created the male first. Shortly thereafter Yahweh arrived at the conclusion that it is not good for man to be by himself. It was Yahweh, not the man, who made this determination, and he turned his attention to rectifying the situation of man's aloneness. Yahweh-Elohim proceeded to make for man a helper (v 18). The Hebrew word for "helper" (*ʿēzer*) has particularly rich nuances throughout the OT. For example, of the twenty-one times it is used, fifteen times it refers to divine help. Most of these refer to help in times of despair or distress. As his helper, woman rescues man from his loneliness and delivers him from his solitude. She is not somebody who supplies the necessary anatomical apparatus to allow the man to produce a second man.

This helper is to be "meet for him" (KJV) or "fit for him" (RSV), which are attempts to translate a Hebrew expression which reads literally "like what is in front of him," (*kĕnegdô*). A good translation would be "corresponding to," suggesting that both man and woman form a polarity. Neither is inferior/superior to the other, but one without the other is incomplete.

After extracting a "rib" (?) of Adam (the only time this Hebrew word [*ṣlʿ*] is so translated in the OT), Yahweh-Elohim "built" it into a woman (v 22). Upon seeing her, the man exclaimed: "this one is bone of my bones and flesh of my flesh" (v 23). This is more than simply an affirmation of blood ties. Both "flesh" and "bone" carry a double meaning. *Bāśār* means both "flesh/meat" and "weakness" (Isa 31:3). *ʿEṣem* means both "bone" and "strength" (cf. the verbal form *ʿāṣamtā* in Gen 26:16 ["you are stronger than we are"]). There is in both the man and the woman the inevitable presence of the strong and the weak, and the two are therefore necessary for each other "in sickness and in health" and "in plenty and in want" (Brueggemann 1970: 534). Marriage, then, is essentially a bond of covenant loyalty.

The penultimate verse in the Yahwist's account of the primal marriage is that a man is "to leave his father and mother and cleave unto his wife" (v 24). The verbs "leave/cleave" (*ʿāzab/dābaq*) are not chosen haphazardly. Both enforce the idea of marriage as covenant. For instance, *ʿāzab* is used to describe Israel's abandoning her covenant relationship with God, i.e., terminating one relationship only to start another (Jer 1:16; Hos 4:10). And *dābaq* is the verb used to encourage Israel to be faithful to her covenant relationship with her God (Deut 10:20; 11:22; 13:5; Josh 23:8; 1 Kgs 11:2). The result of such leaving/cleaving is that man and woman become "one flesh."

It is perhaps somewhat surprising to read that it is the man who abandons his parents and attaches himself to his wife. Would it not be more appropriate, especially in a patriarchal society, for a woman to leave her parents and attach herself to her husband? While this might possibly be a reflection of *erēbu* marriage, discussed above, it more likely reflects the revolutionary concept that a marriage between a man and a woman takes precedence over a man's duty to his parents. In Terrien's words (1985: 17) " 'maritality' displaces patriarchal filiality."

VICTOR P. HAMILTON

NEW TESTAMENT

It is frequently stated that the relatively few explicit statements on marriage in the NT make it impossible to identify either a specifically Christian marital ethos or a specifically Christian teaching on marriage, that Jesus' teaching on marriage is found primarily in the Synoptics' pericope on divorce (Mark 10:2–12), and that Paul was a misogynist who had a decidedly negative view of marriage. Each of these presuppositions relative to the NT authors' views on marriage stand in need of further nuance in the light of recent biblical scholarship.

A. Jesus

1. Jesus and the Commandments
2. Jesus and Divorce
3. The Demands of Discipleship
4. Marriage and the Resurrection
5. The Marriage Banquet

B. Paul
1. 1 Thess 4:3–8
2. 1 Corinthians 7

C. The Post-Pauline Tradition
1. Household Codes
2. The Pastoral Epistles

A. Jesus

The relatively rare references to marriage in the canonical gospels is most probably due to the fact that the historical Jesus accepted marriage as a normal institution of his day, just as he accepted most other social institutions of his times. With his fellow Jews, Jesus regarded marriage as an integral and essential element in the fabric of Jewish life.

Although late in their origins, and permeated with significant theological motifs, the infancy narratives of both Matthew and Luke announce Jesus' birth within the context of the marital union of Mary and Joseph (Matt 1:18–25; Luke 2:4–6; cf. Matt 13:55). The Lukan infancy narrative significantly reflects the importance of offspring within marriage in its portrayal of the birth of John (Luke 1:5–25, 57–58). A history-of-traditions analysis of the first Cana pericope (John 2:1–12) suggests an early Sitz im Leben in the life of the historical Jesus, namely Jesus' attendance at a family wedding where his mother and other relatives were also present.

Jesus shared with his contemporary Jews a patriarchal view of marriage: a man marries and a woman is married (Luke 14:20; cf. 24:34–35; Mark 12:25; Matt 22:30). In accordance with typical Jewish mores, for which Gen 1:28 served as a scriptural warrant, many (probably most) of his disciples were married (Matt 8:14; 20:20; 27:56; Mark 1:30; 15:40; Luke 4:38; 8:3).

1. Jesus and the Commandments. Pre-Markan traditions, the nucleus of which may well go back to the historical Jesus, highlight Jesus' acceptance of the contemporary marital ethos. In a "rabbinic dialogue" (Mark 10:17–22; Matt 19:16–22; Luke 18:18–23), Jesus reiterates the importance of the commandments "do not commit adultery" and "honor your father and mother." An ancient tradition which most probably enjoyed an independent existence in the Palestinian church was used by Mark (Mark 7:9–13; Matt 15:3–6) to highlight the distinction between the commandments of God and human traditions. The pre-Markan tradition stressed the responsibility of children to provide for their parents.

The second antithesis of Matthew's Sermon on the Mount (Matt 5:27–28), which explains the commandment "you shall not commit adultery," in radical fashion so that it prohibits lust as well as adultery, reflects the catechetical tradition of Matthew's Hellenistic Jewish community. The Jesus who is presented as thus upholding the marital and familial *halakhah* is one who shares the views of his people. The logia attributed to Jesus in this regard are similar to statements attributed to various Jewish authorities.

2. Jesus and Divorce. Jewish authorities disagreed among themselves as to the interpretation of Deut 24:1. A well-known debate between the school of Hillel and the school of Shammai focused on the interpretation of the biblical phrase "something indecent." The disciples of Shammai interpreted the phrase strictly, that is, in terms of sexual immorality, while the disciples of Hillel interpreted the phrase more broadly so that divorce—a concession to the husband—was possible even if his wife spoiled a meal for him (*m. Giṭ.* 9:10). This debate provides the historical background (cf. Mark 6:17–18; Matt 14:30; Luke 3:19) for the controversy story in Mark 10:2–10 (Matt 19:3–12).

The core of Jesus' saying in Mark 10:11 (Matt 19:9) is certainly authentic since it is also found in the Q tradition (Luke 16:18; Matt 5:32) and as an independent word of the Lord in the Pauline tradition (1 Cor

7:10). Perhaps Matt 5:32 represents the oldest attainable version of the logion; it reflects a typically Jewish position in which only the man "who marries" may avail himself of Deut 24:1. Also, Mark 10:9 (Matt 19:6) can plausibly be attributed to Jesus.

As presently narrated, however, the entire dispute seems to reflect the kind of controversy in which the early Palestinian church was engaged. Moreover, both the Markan and the Matthean versions of the controversy give evidence of editorial modifications by the respective evangelists. Thus it is impossible to state just how much of the extant narrative reflects the historical ministry of Jesus. It is, nonetheless, quite probable that Jesus often spoke about marriage, most likely in a confrontational situation with some of the Pharisees. The extant narratives vividly proclaim that from a Jewish and a Christian perspective, the marital union is founded upon God's creative will.

Given the multiple attestation of Jesus' teaching on divorce within the NT, there is a virtual consensus among scholars that Jesus was unequivocally opposed to divorce. His teaching was a "hard saying," even for the NT authors. In order to accommodate the saying of Jesus' to his Hellenistic, and presumably Roman readership, Mark expands Jesus' saying so as to invoke Jesus' authority as also prohibiting a wife's divorce of her husband. His modification of the Jewish patriarchal tradition is also apparent in his addition of "against her" in Mark 10:11.

Matthew's redactional addition, "except for unchastity" (Matt 19:9; cf. Matt 5:32), is an obvious accommodation to his Hellenistic Jewish audience. The awkward phrasing of the exception in the original Greek shows that it relates to the interpretation of Deut 24:1. Scholars continue to debate about the meaning of the exception. The most common views are that it is a good-conscience clause directed to those who have availed themselves of the possibility provided by Deut 24:1, interpreted in a relatively strict sense, or that it reinforces the tradition of Jesus itself by exempting incestuous unions from the prohibition of divorce. Arguments for the latter opinion can be found in some parallel texts from Qumran (cf. CD 4:20–21; 11QTemple 57:17–19). In 1 Cor 7:12, Paul contrasts the traditional saying of Jesus with his own statement on the possibility of marital separation when a believer is married to an unbeliever. See also DIVORCE.

3. The Demands of Discipleship. In its present narrative context, Mark's version on the controversy over divorce is a story of the demands of discipleship relative to marriage. Mark also preserves the memory of earlier traditions which indicate that normal familial relationships are profoundly affected by discipleship and the announcement of the coming of the kingdom (Mark 10:29–30; par. Matt 19:29; Luke 18:29–30; cf. Mark 3:31–35, par.). Similar traditions are preserved in the Q material (Luke 12:53; Matt 10:35; Luke 14:26; Matt 10:37; cf. Luke 9:59–60; Matt 8:21–22; Matt 10:21), thus increasing the likelihood of their reflecting a situation in Jesus' own preaching. The early tradition does not suggest that discipleship entails the separation of husband and wife; however, Luke's editorial modification of the tradition indicates that discipleship could adversely affect even the marital relationship itself (Luke 14:26; 18:29).

4. Marriage and the Resurrection. Luke's redactional modifications of the earlier tradition may well reflect a tendency against marriage among some early Christians. The tendency was not only due to popular philosophical notions which viewed sex as evil and marriage as unwarranted, but also to common Jewish apocalyptic notions which hold that there is neither sexuality nor marriage in the age to come (cf. Rev 14:4). Such views, for which early Jewish Christians had some sympathy, are reflected in the dispute on levirate marriage (Mark 13:18–27; Matt 22:23–33; Luke 20:27–38). The controversy story reflects the polemics of the early Church, although some of its elements may go back to the historical Jesus. Not only does it contrast life in the age to come from life in the present, but it also proclaims that marriage for the sake of the name of a woman's first husband is inconsistent with a Christian view of marriage.

5. The Marriage Banquet. Early Jewish Christians capitalized on a biblical tradition (Isa 54:5; Jer 2:2; Hos 1:2–9; etc.) which found in marriage a symbolic expression of God's covenantal union with his people. Matthew, in traditions taken from Q (Matt 22:1–14) and his own sources (Matt 15:1–12) used wedding celebrations to symbolize the significance of Jesus' mission. The Johannine tradition spoke of Christ as the bridegroom (John 3:29; 2:9–10; Rev 19:7–9) and used the story of the wedding at Cana to

symbolize the new relationship established by Jesus. Similar views were expressed in a much earlier period by the apostle Paul himself (2 Cor 11:2).

B. Paul

Paul's own views on marriage as it was to be lived among Christians were essentially expressed in 1 Thess 4:3–8 and 1 Cor 7:1–40. His letters nonetheless indicate that most Church leaders in his day were married (1 Cor 9:5) and there is substantial exegetical opinion to support the view that Paul himself may have been married, though he was apparently not married when he wrote 1 Corinthians (1 Cor 7:8). Certainly the marital team of Priscilla and Aquila were an important part of the gentile mission during Paul's time (Acts 18:18, 26; Rom 16:3–4; cf. 1 Cor 16:19; 2 Tim 4:19). Paul's espousal of some traditional (Jewish) views on marriage is reflected in 1 Cor 11:2–16, a passage which emphasizes that both men and women are to be properly attired when they make use of their prophetic gifts.

1. 1 Thess 4:3–8. Paul's earliest views on marriage are expressed in the earliest of his epistles. Paul shared the view of the Jewish paraenetic and polemical traditions in which sexual and marital mores distinguish God's people from the gentiles. He uses them to distinguish the behavior of the believer from the nonbeliever (v 5). Because Paul made use of a traditional *topos,* familiar to Hellenist and Jew alike, there is no real reason to think that the sexual and marital practices of the Thessalonian Christians were particularly lax. Paul was simply exhorting the neophyte Christians to a pattern of behavior consistent with their new situation. Specifically, he exhorted them to avoid immoral behavior, and positively encouraged them to marry (v 4, a verse that some authors, incorrectly, take to be an exhortation to sexual asceticism), while warning against adultery within the Christian community (v 6, a verse that some authors interpret as an exhortation to integrity in financial affairs). Paul urges that the marital relationship, lived as he encourages them to live it, be seen as a matter of their belonging to God ("their sanctification," v 3), a relationship in which the spirit is the empowering force (v 8). In typical fashion, Paul proposed fidelity to Jesus, the relationship with fellow Christians, and the fear of divine vengeance (see also Heb 13:4) as a triple motivation for the pattern of life which he had encouraged the Thessalonian neophytes to live.

2. 1 Corinthians 7. Paul's views on marriage and sexuality were reiterated and somewhat modified in 1 Corinthians 7. A letter from one of the Corinthian communities provided Paul with the occasion to offer his opinion. A popular slogan, "it is good for a man not to touch a woman," summed up the rigorously ascetical view entertained by some Corinthians. They rejected sexual intercourse and marriage. The slogan seems to reflect a rather dualistic understanding of the human being, most probably under the influence of some form of gnostic thought, and may well have represented the position of those elitists and enthusiasts whom Paul took to task in various other passages of his correspondence (cf. 1 Cor 8:1; 13:1).

Paul's response (1 Cor 7:2–5) to the Corinthians' query essentially reiterates the views which he had expounded in 1 Thess 4:3–8. In order that immorality be avoided (cf. 1 Thess 4:3), each person should have his or her own spouse (vv 3–4), a rather egalitarian view which distinguishes Paul's teaching in 1 Corinthians from the earlier expression of his teaching on marriage. This egalitarian view is consistent with Paul's exposition in the entire chapter (vv 10, 12–14, 16, 32–34).

The avoidance of immorality as a motivation for marriage (v 36) is entirely in keeping with the Jewish tradition. A novelty, however, is Paul's opinion that marriage is a charism, a special gift from God (v 7), a point of view that is in keeping with Paul's emphasis on the role of the spirit in 1 Thess 3:8. For Paul marriage is a sanctifying and salvific reality whose benefits redound not only to the believer but also to an unbelieving spouse and the children born of the marital union (vv 14–16).

In vv 5–6, Paul adds a brief thought on sexual abstinence to his response to the Corinthians' question. His thought patterns are in keeping with Jewish tradition. The schools of Shammai and Hillel disagreed among themselves as to how long a man might abstain from sexual intercourse with his wife, the former indicating two weeks as the permitted period, the later allowing only one week's abstinence (*m. Ketub.* 5:6), and then only under the condition that the wife's consent had been obtained. Among the rabbis an exception was made for the disciples of the sages who desired to study the Law, but even then the time of

abstinence was limited to but thirty days. By way of concession (v 6), Paul allows for the possibility of sexual abstinence, but only under three conditions: that the abstinence be for the purpose of prayer, that there be mutual agreement, and that the period of abstinence be limited to a short time.

Despite Paul's rejection of the view that the moral good requires the avoidance of marriage and abstinence from sexual intercourse, Paul is disinclined to recommend marriage for all. Four times he expresses the view that it is preferable for Christians not to marry (vv 8, 25–35, 36–38, 39) and offers his current marital status as a desideratum. His dominant opinion, undoubtedly motivated by his eschatological views, is that one ought to remain in the state in which he or she was called: the married should remain married; the unmarried should remain unmarried (vv 12, 17, 24, 29).

Although Paul's opinion was undoubtedly formed in the light of his expectation of the proximate coming of the final times (v 26), he has also cited a pragmatic and functional thought as to why the unmarried should remain so. Just as some philosophers from within the Cynic-Stoic tradition had viewed marriage as necessarily burdensome and full of care, with the consequence, as expressed by some (e.g. Epict. *Discourses* 3.7 §19–22), that it is inappropriate for one with a divine mission, so Paul cited the normal cares and concerns of marriage as a reason why it might be preferable for the believer to remain unmarried. His stated advice was quite understandable within the Jewish and Hellenistic world in which he lived.

To which categories of Christians did Paul direct his advice that it was preferable for the unmarried to remain in an unmarried state? First of all, to the "unmarried (probably widowers) and widows" (v 8; cf. v 39). Paul had also been asked about virgins (v 25). Scholars debate as to what kind of "virgins" Paul had in mind as he responded to the inquiry. Were the virgins those who had never been married (with Paul's response then being ultimately directed to their fathers), those who were engaged (with the response then directed to the couple itself), or those involved in some sort of sexually abstinent "spiritual marriage"? Many scholars believe that having introduced the topic in v 25, Paul has first written rather generally about the marriage of the unmarried (with the practical result that the "virgins," *parthenōn,* of v 25 are simply the unmarried). Then, in v 36, Paul turned to the specific topic at hand and there, plausibly, "the virgin" is one who is engaged.

In sum, Paul's reflections are a mixture of tradition, theological reflection, popular wisdom, and pragmatism. He desires that both the married and unmarried remain in the state in which they are called and that they live accordingly.

C. The Post-Pauline Tradition

The dispute with groups influenced by various gnostic tendencies seems to have largely shaped the formulation of late first-century Christian views on marriage, particularly those that fall under the influence of the Pauline tradition. These views are most explicitly expressed in the household codes, whose presence is a characteristic feature of post-Pauline epistolary paraenesis.

1. Household Codes. The oldest Christian use of this motif appears to be in Col 3:18–4:1. Strikingly, the first pair of exhortations is addressed to wives and husbands. Wives are urged to be subject to their husbands, and husbands urged to love their wives. This paired exhortation introduces a series of two other relationships in which the socially inferior are exhorted to be obedient to the socially superior, while the socially superior are exhorted to be responsible toward those who are socially inferior. The exhortation addressed to wives (v 18) demands their obedience, but the middle voice of the Greek verb (*hupotassesthe*) appears to invite their voluntary submission while the imperative used in vv 20, 22 demands absolute obedience. While the use of the household code reflects the socially acceptable morality of the times, its insertion in a Christian "epistle" reflects the view that concrete social relationships are affected by one's relationship to the Lord.

The author of Ephesians has reformulated and considerably expanded (Eph 4:21–5:9) the paradigm which he found in Colossians. Significantly, he has provided the entire topos with a pertinent title, "Be subject to one another out of a fear of the Lord" (v 21). His reflections on the marital relationship continue to maintain a dominant patriarchal point of view, even to the point of apparently citing a supportive proverb (v 28b). In keeping with Jewish usage, wherein reflection on the household codes was enhanced

by scriptural citations (the philosophical ethicists cited the ethical masters), the writer cites Gen 2:24 as the scriptural ground for marriage. While reflecting a contemporary view of how the marital relationship fits in with an ordered society, the writer uses marriage (both the relationship [vv 22–25, 29–32] and the wedding [vv 26–27]) as a metaphor for the relationship between Christ and the Church.

1 Peter also belongs to the body of post-Pauline epistolary literature. Its household code (1 Pet 3:1–7) continued the common Greco-Roman demand that wives be submissive to their husbands, but adds to it the injunction that husbands should live considerately with their wives. The exhortation which it addresses to wives is particularly significant in that it has an apologetic function insofar as Christians in an alien land were expected to live in such a way as to impress the gentiles by their socially acceptable conduct (1 Pet 2:11). Moreover, 1 Pet 3:17 provides additional motivation for marital submissiveness: there are biblical models to be followed (vv 5–6); the behavior of wives was also expected to lead to the conversion of their unbelieving husbands. When husbands were believers, their marital union could be considered as a union in the gift of life.

2. The Pastoral Epistles. While the household codes represent a Christian appropriation of dominant social standards, the Pastoral Epistles speak somewhat otherwise of marriage. Both overseers and servants are expected to be men of one wife (1 Tim 3:2, 12). The meaning of the expectation is uncertain. Are overseers and deacons expected to be chaste within marriage, monogamously married (i.e., one wife at a time), or married but once in their lifetimes? In context, the phrase "of one wife" expresses not only a moral qualification expected to be realized in the lives of Church leaders; it also expresses a necessary condition for their establishment of a personal household whose conduct provided an experience of household management for those called to management of a household church. Moreover, it espouses a view of marriage contrary to that held by those under the influence of Gnosticism, who avoided marriage and sexual relationships (1 Tim 4:3). To a large extent the anti-gnostic orientation of the Pastorals has also influenced the formulation of 1 Tim 2:15, on the relationship among marriage, salvation, and childbearing. Women are not to avoid marriage because of some sort of religious enthusiasm. For the pastor, marriage has its place in the real world in which Christians are called to live (1 Tim 5:14; Titus 2:4).

MARRIAGE, SACRED. See SACRED MARRIAGE.

MARSANES (NHC X,*1*). The gnostic tractate contained in Nag Hammadi Codex X. The codex, inscribed in the Lycopolitan (Sub-Akhmimic) dialect of Coptic, is poorly preserved, and considerably less than half of its text is recoverable. It is not absolutely certain that *Marsanes* was the only tractate in Codex X, but the extant material at the beginning and the end is coherent enough for that to be assumed. The subscript title is partially preserved on a small fragment of the last inscribed page (68).

"Marsanes" is the name of a gnostic prophet known from two other sources: the untitled text from the Bruce Codex and Epiphanius' account of the "Archontic" gnostics (*Haer.* 40.7.6). According to these external testimonia Marsanes was a visionary who experienced an ascent into the heavens. An ascent

experience and heavenly revelations are also features of the tractate *Marsanes*. In terms of literary genre, *Marsanes* is an "apocalypse" in which the author speaks in the first person to a group of initiates. The author is either someone named Marsanes, or, more likely, one who writes in the name of a prophet by that name. ("Marsanes" is probably a Syrian name; *mar* means "master" in Syriac.)

The first ten pages are relatively intact, and contain material relating to a gnostic ascent experience, or perhaps an ascent ritual. It includes a discussion of various levels of reality, symbolically referred to as "seals," ranging from the "worldly" and "material" (2,16–21) to the realms of the invisible "Three-Powered One," the "nonbeing Spirit," and the "unknown Silent One" (4,12–23).

Enough material is preserved in the middle of the codex to indicate that it contains speculations on the mystical meaning of the letters of the alphabet, and their relation both to the human soul and to the names of the gods and angels of the heavenly spheres.

The very fragmentary pages at the end contain material dealing with visionary experiences and a baptismal ritual. The tractate concludes with a word of encouragement to "those who will know him" (68,17, probably referring to the supreme Father mentioned at the beginning, 1,11–25).

Marsanes, a non-Christian gnostic text, belongs to those tractates whose features reflect a common "Sethian gnostic" system. The name "Seth" does not appear in the extant portion of the text, but it is possible that "Marsanes" is here considered an "avatar" of Seth, like "Zostrianos" in the tractate that bears his name (Pearson 1981a: 494–98). *Marsanes*, also like *Zostrianos*, is one of the tractates in the Nag Hammadi corpus that have been profoundly influenced by Platonist philosophy. The others are *The Three Steles of Seth* and *Allogenes*. *Allogenes* and *Zostrianos* were read in Plotinus' school in Rome, and it is possible that *Marsanes* was one of the "other," unnamed "apocalypses" referred to in Porphyry's account (Porp. *Vit. Plot.* 16).

The kind of Platonism reflected in *Marsanes* is one that coheres well, both in terms of its metaphysics and its ritual references, to that of the Syrian Neoplatonist philosopher, Iamblichus of Chalcis (ca. 250–325 C.E.). For *Marsanes*, as for Iamblichus, matter is not evil per se, and is even capable of salvation (5,14–26). The ritual material in *Marsanes* is comparable to "theurgy" as discussed by Iamblichus in his famous treatise, *On the Mysteries of Egypt* (Pearson fc.). The original Greek version of *Marsanes* was probably written sometime in the 3d century, perhaps in Syria.

BIRGER A. PEARSON

MARSENA (PERSON) [Heb *marsĕnā*› (מַרְסְנָא)]. One of the seven princes of Persia and Media who were the advisers of King Ahasuerus (Esth 1:14). See CARSHENA (PERSON). Although the presumption that the names of these counselors are Persian is reasonable (see the arguments of Millard 1977: 481–88, who counters the excessive caution of Moore [*Esther* AB, XLI–XLIV] regarding the reliability of the MT spellings), no name equivalent to this has thus far been found in the extant extrabiblical literature nor has a generally acceptable Persian etymology been suggested. The ending *-na*›, however, could well exhibit the same patrynomic suffix *-ina* that has been postulated for the name "Carshena," another of the seven advisers (Millard 1977: 485). For attempted etymologies see Paton *Esther* ICC, 68 and Gehman 1924: 324.

MARSH. See GEOGRAPHY AND THE BIBLE (PALESTINE).

MARTHA (PERSON) [Gk *Martha* (Μαρθα)]. Martha (from the Aramaic meaning "lady" or "mistress") appears in the gospel of Luke as the sister of Mary (Luke 10:38–42). She reappears in the gospel of John as the sister of Mary and Lazarus (John 11:1–12:11). The family were inhabitants of Bethany, a town located about two miles (ca. 15 stadia; cf. John 11:18) from Jersualem. Luke does not mention that Martha had a brother named Lazarus nor that the sisters hailed from Bethany, but his placing of the story of Jesus' visit to their home immediately after the parable of the Good Samaritan which mentions the road from Jerusalem to Jericho (Luke 10:30–37, v 30) argues for a situs of their village near Jerusalem.

A. Luke

Scholars generally agree that the Lukan story has its basis in historical tradition. Martha was apparently the elder of the two sisters and the householder, since it was she who received Jesus into her house (Luke 10:38). For apparently unmarried women to have received a teacher into their home and engaged him in dialogue represents an unusual social situation in 1st-century Palestine.

A practical woman, Martha was distracted with the many demands of hospitality during Jesus' visit and petitioned his assistance in obtaining her sister's help. Her request apparently merits a mild rebuke from Jesus (Luke 10:41–42, whose Gk text exists in several variant readings). Jesus' words do not denigrate Martha's household service, but imply that the female disciples of Jesus, as the male disciples, are first called to be hearers of the word (cf. Luke 11:27–28). Some commentators take the repeated "Martha, Martha" of v 41 as an indication that Jesus' seeming rebuke is, in fact, a call to discipleship (cf. Gen 46:2; 1 Sam 3:4; Acts 9:4; etc.).

B. John

In the Fourth Gospel, Martha and Mary, along with their brother Lazarus, are said to be loved by Jesus (John 11:5). In the canonical gospels they are the only persons so described. The Johannine story of the encounter between Jesus and the family at Bethlehem (John 11:1–12:11) is one of the longest in the NT. Scholars dispute among themselves as to the relationship between the Johannine narrative and various Lukan accounts (principally Luke 10:38–42, but also Luke 7:11–17, 36–50; 16:19–31; and 19:41–44), as well as the historical character of the Johannine story, but they stand in almost unanimous agreement in the affirmation that the Johannine characteristics of the account clearly mark it as a Johannine composition. The story has two principal parts, the story of Lazarus' resurrection (John 11:1–44), in which Martha enjoys a principal role, and the story of Jesus' anointing (John 12:1–11), where Martha's role is secondary to that of Mary.

In general the character portrayal of Martha in John 11–12 is similar to that of Luke 10:38–42, especially her initiative in dialogue and her service at table, but the central role accorded to the dialogue between Martha and Jesus in John 11:17–37 is proper to the Fourth Gospel. Martha has been inserted into the narrative by the evangelist as a mouthpiece for his own theology. The evangelist's composition of vv 20–27 and 39b–40 allows him to use Martha as a foil for Jesus' affirmation that he is the resurrection and the life (John 11:25).

Like the mother of Jesus (cf. John 2:3, 5), Martha sets the scene for Jesus' self-manifestation (John 11:21–22, 24, 39). Her belief is initially inadequate, not going beyond the future eschatology of the Bible and some contemporary Judaism (John 11:24). Later, in response to Jesus' question, "Do you believe?" Martha responds with the most fully developed confession of faith in the Fourth Gospel: "Yes, Lord, I believe that you are the Christ, the Son of God, he who is coming into the world" (John 11:27). Martha's profession is a model for the evangelist's own community. She sees in Jesus the Messiah, the Son of God, and the one sent by the Father.

That the evangelist considers Martha to be a model believer is evidenced not only in her confession of faith, but also in the fact that she is beloved by Jesus (11:5), is the recipient of a self-revelation by Jesus

(11:25–26), and tells another about Jesus (11:28). Thus, despite her initial grief (11:19) and seeming incomprehension (11:39–40), she manifests the full pattern of discipleship.

C. Later Tradition

Many of the traits attributed to Martha by the evangelists correspond to those of deacons in early Church communities. Her portrait could be cited as a precedent for women deacons. An occasional feminist reading of the Lukan narrative suggests that the Lukan story, with its rebuke of Martha in 10:42, may have served to restrict women's leadership in the Church. The longer variant Greek readings of 10:42 may indicate that some Church circles found the shorter statement too radical. The short reading ("one thing is necessary") has often been used to contrast the active and contemplative lives, but this represents a use of the text beyond the exegetical warrants.

In the Coptic version of the early 2d century *Epistula Apostolorum,* Martha is portrayed as a witness to the risen Jesus and the first to tell the apostles about the resurrection, only to have her testimony rejected by them (see APOSTLES, EPISTLE OF). Her presence in this version is apparently in opposition to Mary Magdalene, the heroine of the gnostic tradition, whose presence in an analagous role is cited in the Ethiopian version of the manuscript.

RAYMOND F. COLLINS

MARTYR, MARTYRDOM. In dealing with the phenomenon of martyrdom in the ancient Western world one immediately comes up against a complex of definitional problems (see also SUICIDE). Simply put, martyrdom refers to the act of choosing death rather than renouncing one's religious principles. Death then is voluntary, but not wholly so, since some element of compulsion exists, and some noble cause (in this case a *religious* one) is at stake. Is there a difference between taking one's life directly and allowing one's life to be taken? In some of the cases cited below the traditional "martyrs" seem eager to embrace death. Often there is a way of escape, some alternative to choosing death (as in the classic case of Socrates), so the degree and kind of compulsion can vary. It is particularly difficult to sort out the distinction between deaths motivated by religious principles, and others perhaps equally noble and morally motivated, but not directly associated with formal dogma. "Suicide," a comparatively recent word in English (Daube 1972), is often used to label cases of voluntary death which are viewed as less than noble, while "martyrdom" reflects a wholly positive evaluation. Yet it is clear, certainly in our ancient materials, that one person's suicide is another's martyr and vice versa. Here we enter the world of social and religious propaganda and polemic where the categories are loaded and the definitional lines are thin (Droge and Tabor 1992). Accordingly, in dealing with this topic, what is included, and perhaps more important, excluded, becomes crucial.

———

A. Hebrew Bible

There are at least six cases of voluntary death recorded in the Hebrew Bible: Abimelech (Judg 9:54); Samson (Judg 16:30); Saul and his armor bearer (1 Sam 31:4–5 = 1 Chr 10:1–7); Ahithophel (2 Sam 17:23) and Zimri (1 Kgs 16:18–19). Based on the viewpoint of the authors and editors, are any of these understood as martyrs? Certainly not in the case of Abimelech. The deaths of Ahithophel and Zimri are recorded neutrally, with no evaluation either way. The death of Saul is seen as a fated punishment for his sins, and that of his armor bearer an accessory. Samson's case stands out in this regard. The account in Judg 16:31 is wholly positive. Samson's choice of death is his own, but he is supernaturally aided by Yahweh. Given his hopeless circumstances in the hands of the Philistines, his death becomes an act of self-sacrifice for the cause of Israel. This text might well be classed as a proto-martyrdom account.

The idea of choosing death as some type of a religiously motivated self-sacrifice occurs already in late portions of the Hebrew Bible. The so-called "suffering servant" texts in Second Isaiah (40–55) speak of a "servant of Yahweh" who willingly gives his life "like a lamb led to the slaughter" (53:7). He "makes himself an offering for sin" by "pouring out his soul to death" (53:10, 12). These texts became the source of much dispute and speculative interpretation among Jews and Christians (Williams 1975). Whether the author had in mind an actual or idealized individual, or the nation of Israel itself, the gripping language about choosing death captured the popular imagination (McKenzie *Second Isaiah*). Psalm 44, perhaps dating from the same period, appears to lament the death of those faithful to Yahweh in a time of persecution: "Nay, for thy sake we are slain all the day long, and accounted as sheep for the slaughter" (v 22).

There is a further reference to the idea of dying for religious faith in the book of Daniel, probably the latest document in the Hebrew Bible. Daniel tells of a time when a contemptible, blasphemous, gentile ruler will come to Jerusalem and profane the Temple, forcing Jews to violate the covenant (Dan 11:21, 29–32). During this time faithful Jews "shall fall by sword and flame, by captivity and plunder, for some days" in order to "refine and cleanse them" (vv 33–34). This terrible time of trouble will mark the end of the age, and lead to the resurrection of the dead and a final judgment (Dan 12:1–3).

Critical scholars are agreed that these thinly veiled references are to the Syrian successor of Alexander, Antiochus IV (Epiphanes), who in 167 B.C.E., according to Jewish legend, entered the Jerusalem Temple, instituted rites of idolatrous worship, and attempted to stamp out certain observances of Judaism. Interpretations of his motives and what actually transpired are disputed. The popular and legendary account is given in 1 and 2 Maccabees, though scholars dispute its historical accuracy (Bickerman 1937; Tcherikover 1959; Hengel 1974: 1.267–309). The author of Daniel sets his stories and visions in a much earlier time, during the 6th-century Judean captivity by the Babylonians, and the transition to their successors, the Persians. His well-known story of the three Hebrew youths, Shadrach, Meshach, and Abednego, who are thrown into a fiery furnace for their refusal to worship an image of gold, captures the essential spirit of an oft-repeated scenario (Daniel 3). They reply boldly to the Babylonian king Nebuchaddnezzar: "If it be so, our God whom we serve is able to deliver us from the burning fiery furnace; and he will deliver us out of your hand, O King. But if not, be it known to you, O king, that *we will not serve your gods or worship the golden image* which you have set up" (Dan 3:17–18). The key element here is the absolute and stubborn refusal to compromise, even if threatened with death.

In this story, written to build faith and encourage such resolution, the youths are delivered and the king himself becomes a convert to Yahweh. Yet Daniel is written to address those who had not experienced any such dramatic supernatural rescue. Is God unable or unwilling to intervene? Instead of immediate deliverance, Daniel holds out the imminence of the end of the age and the final judgment as incentive to those who so choose death. His message is clear—a heavenly reward is near, and the oppressors will soon be everlastingly punished (12:1–3). Clear and undisputed references to these ideas of final judgment, resurrection of both the righteous and wicked dead, and eternal life or everlasting punishment occur only here in the Hebrew Bible. Yet in the Hellenistic period they are found throughout our Jewish sources and become prime factors in the discussion of voluntary death. In all of the texts from this period on, beginning with Daniel, new answers are given to this old question—why do the righteous suffer and the wicked prosper? Vindication is promised, especially for those who choose to die, but only at the final

judgment. Hand in hand with this expectation there is a full development in Jewish thought of notions about the afterlife, particularly the current state of these dead heroes who have offered up their lives and await vindication (Nickelsburg 1972; Collins 1974 and 1978). Also, as noted above, these terrible times come upon the people of Israel in order to "refine and cleanse" them before the end. Throughout these texts there is the notion of a faithful persecuted remnant, an "elect" group, who endure it all and will receive their reward.

B. Apocrypha and Pseudepigrapha

The *Testament of Moses,* parts of which come from this same period, also addresses this problem of the persecution of the righteous. Chaps. 8–10 appear to refer to the Antiochian "persecution." Chap. 8 describes the various tortures to be inflicted on Jews who will not give up their faith. In chap. 9 a Levite named Taxo exhorts his seven sons:

> Now, therefore, sons, heed me. If you investigate, you will surely know that never did our fathers nor their ancestors tempt God by transgressing his commandments. Yea, you will surely know that this is our strength. Here is what we shall do. We shall fast for a three-day period and on the fourth day we shall go into a cave, which is in the open country. There *let us die rather than transgress the commandments* of the lord of lords, the God of our fathers. For if we do this, and do die, our blood will be avenged before the Lord
>
> (9:4–7)

This is an extraordinary text. It seems to advocate a withdrawal from the world through fasting and retreat, ending in voluntary death of some type (perhaps through fasting?). This sacrificial death will bring about the intervention of God, and the manifestation of the kingdom described in chap. 10. Morton Smith (1971) has suggested on the basis of an earlier passage in 5:4–5 that the group behind this document, like other Jewish sectarians such as those at Qumran, rejected the sacrifices of the Jersusalem Temple as impure (1971: 120). If so, it might be that like the early Christians, these Jews saw the voluntary deaths of the righteous in sacrificial terms.

The books of the Apocrypha contain many such stories, often rivaling one another in their lurid accounts of heroism in the face of torture. 1 Maccabees reports that in the early stages of the revolt the Jewish rebels refused to fight, even if attacked, on the Sabbath day, choosing rather to die than to violate this commandment of God. They exhorted one another: "*Let us all die* in our innocence; heaven and earth testify for us that you are killing us unjustly" (1 Macc 2:37). On one occasion 1000 people, including women and children, chose to die in this manner. According to 1 Macc 2:39–41 this decision to allow oneself to be killed rather than resist on the Sabbath day was reversed by Mattathias and his men once they realized what a disaster the policy had brought about.

One of the more vivid stories in 1 Maccabees concerns one Eleazar, who fought against the Syrians under Antiochus V. The Syrians were using elephants in the battle. Eleazar, thinking that Antiochus himself was riding one particular beast, threw himself under the elephant, stabbed it from beneath, but was crushed to death when the animal fell. What might be seen as the foolish miscalculation of a would-be hero is transformed by the author into an act of salvific self-sacrifice. He comments: "So he *gave his life to save his people* and to win for himself an everlasting name" (1 Macc 6:44).

2 Maccabees, an epitome of a five-volume history by Jason of Cyrene, offers an extreme and exaggerated version of this period, roughly paralleling 1 Macc 1:10–7:50 (180–161 B.C.E.). Jason appears to be the first writer to celebrate the glorious deeds of these heroes who are willing to die for the faith. He fully accepts the developing idea of resurrection of the dead and final judgment and even endorses the notion of prayer and sacrifice for the dead (2 Macc 12:39–45).

According to this author the offenses of Antiochus were unconscionable. He dedicates the Yahweh Temple to Zeus, fills it with harlots and merchandise, and offers pigs and other abominable offerings on the altar. Jews are forbidden to circumcise their children and to practice the Torah, and were compelled to participate in the pagan sacrifices (2 Macc 6:1–7). He tells of two women who had dared to circumcise their children being paraded about the city "with their babies hung at their breasts, then hurled … down headlong from the wall" (2 Macc 6:10). Another group were burned alive when they gathered secretly to

observe the Sabbath day (6:11). All this came about "not to destroy but to discipline our people," he declares (6:12). He recounts the dramatic story of Eleazar, an aged scribe of high position who chose the rack and death rather than eat swine's flesh (2 Macc 6:18–20). The author concludes the story noting that Eleazar's death left "an example of nobility and a memorial of courage" (v 31).

Two major themes in this account occur repeatedly in subsequent stories: the *willingness* of the individual to die, and the *nobility,* that such a death exemplifies. These are the very elements which complicate the questions of categorization and definition mentioned in the introduction above.

2 Maccabees contains an even more vivid version of the infamous story of the martyrdom of the mother and her seven sons. The "king" tries to force them one by one to eat swine flesh, and he falls into a rage as each in turn refuses. Echoing the determination of Daniel's three companions they declare, "We are ready to die rather than transgress the laws of our fathers" (2 Macc 7:2). They are subject to gruesome torture: scalping, amputation of hands, feet, and tongue, and being fried in a pan until dead. Each breathes his last with declarations of faith in the resurrection of the dead and warnings of future judgment for the torturers. The faith in justice and vindication in the afterlife (i.e., resurrection) is a dominant element of this story, and is repeated eight times.

The tales of Eleazar and the martyrdom of the seven brothers with their mother are picked up and elaborated in the 1st century book of *4 Maccabees,* which was never canonized but was treasured in the Eastern churches. The book is essentially an expansion of 2 Macc 6:12–7:42. In this later account Eleazar taunts his torturers: "I will not transgress the sacred oaths of my ancestors concerning the keeping of the law, not even if you gouge out my eyes and burn my entrails … get your torture wheels ready and fan the fire more vehemently!" (*4 Macc.* 5:29–32). In the case of the brothers and their mother, a new element is introduced. After denouncing his attackers the youngest brother "*flung himself* into the braziers and so ended his life" (*4 Macc.* 12:19). Similarly, his mother "when she, too was about to be seized and put to death, *she threw herself into the fire so that no one would touch her body*" (*4 Macc.* 17:1). This element of taking a hand in one's death comes up repeatedly in such stories and gives rise to obvious difficulties of interpretation and evaluation.

4 Maccabees also advocates the striking idea that these deaths bring *vicarious atonement* for the sins of the nation. The language used in this record is of particular importance. They become a "ransom for sin" and "through the blood of those devout ones and their death as an expiation" Israel is preserved (*4 Macc.* 17:21–22). They are those who "gave over their bodies in suffering for the sake of religion" and by them the nation gained peace (18:3–4; cf. 1:11).

The most gruesome story in the Apocrypha is that of Razis, an elder of Jerusalem in Maccabean times. His tale represents still another level of ambiguity in these accounts, for though under threat, he clearly takes his own life. He was denounced to Nicanor, the Syrian governor of Judea, as a strong and stubborn advocate of the Jewish faith. Nicanor sent 500 soldiers to arrest him. Razis took refuge in a tower and as the soldiers were about to break in he fell upon his own sword, "*preferring to die nobly* rather than fall into the hands of sinners and suffer outrages unworthy of his noble birth" (2 Macc 14:42). He only wounded himself and as the crowd burst through the door he ran upon the outside wall and jumped down into a courtyard below. The story ends with a vivid, indeed grisly, account of his death.

> Still alive and aflame with anger, he rose, and though his blood gushed forth and his wounds were severe he ran through the crowd; and standing upon a steep rock, with his blood now completely drained from him, he tore out his entrails, took them with both hands and hurled them at the crowd, calling upon the Lord of life and spirit to give them back to him again. Such was the manner of his death.

(2 Macc 14:45–46)

C. New Testament

Seeley has related these martyrdom tales to the wider Greco-Roman concept of the "Noble Death," and shown how the NT materials build in various ways upon such an understanding (Seeley 1990: 84–112). What they lack is the kind of extended polemical defense and praise of voluntary death that one finds in these Jewish materials from Maccabean times. The early Christians simply begin with the presupposition

that to die for the faith is thoroughly noble and good. The deaths of John the Baptist (Mark 6:14–29 = Matt 14:1–12; Luke 9:7–9), Stephen (Acts 7); and James (Acts 12:1–2) are all reported with this presupposition. The book of Acts reports numerous occasions when either mobs or authorities try to kill Paul (10:23–25; 14:5, 19; 17:6–10; 21:30–31; 22:22–23; 23:21) as well as Paul's own preconversion efforts to imprison and slaughter early Christian believers (8:3; 9:1). Paul confirms the essential points of Luke's account in his own letters (2 Cor 11:23–33; 1 Cor 15:9; cf. 1 Tim 1:12–15).

Of course Jesus himself is the preeminent model of the faithful martyr in the NT. He is directly called such twice in Revelation (1:5; 3:14). All four gospels stress that his death was voluntary. "No one takes it [my life] from me, but I lay it down of my own accord" declares the Jesus of the gospel of John (10:18). Mark places both the necessity of Jesus' death and his willingness on the lips of Jesus himself (Mark 8:31–33; 9:30–32; 10:33–34, 45; 14:36). Both Matthew and Luke follow Mark closely in this regard (e.g., Matt 16:21–23; Luke 9:51), while John makes the same point independently (12:27). Matthew and John place particular stress on Jesus' freedom to escape, and his willingness to die, at the time of his arrest (Matt 26:53–54; John 14:30; 18:4–8). This emphasis comes up repeatedly in various other ways in all four gospels (Droge and Tabor 1992). Paul's own understanding of Jesus' death appears to have close ties with the Maccabean materials surveyed above (Seeley 1990).

This willingness to choose death in the face of opposition is presented as a necessary and model behavior for the followers of Jesus as well (Mark 8:34–35 = Matt 16:24–25; Luke 9:23–24; John 15:18–20). Predictions that followers will be delivered up and killed, which may reflect social conditions of the post–70 C.E. period, run through all layers of the gospel materials (Mark 13:12–13 = Matt 24:9–10; Luke 21:12–17; Q Luke 12:4–5 = Matt 10:28; John 16:2).

Paul asserts not only his willingness to die, but even his preference for death over life (Phil 1:19–26). The way he poses his dilemma, and even the language he uses, reflects Greco-Roman philosophical disputes over the appropriateness of suicide (Droge 1988; Daube 1962; Palmer 1975). Such discussions are rooted in a long tradition of evaluations of the death of Socrates (Droge and Tabor 1992). How Paul actually died, whether by execution or by his own hand, or some combination of both, is unknown.

The book of Revelation refers to martyrs several times (5:9–11; 16:6; 17:6). They are singled out for special reward during the millennial reign of Christ (20:4–6). A specific individual at Pergamum, one Antipas, otherwise unknown, was apparently slain by authorities and is called "my witness [Gk *martys*] my faithful one" (3:13). Revelation also mentions the "two witnesses" or martyrs who are to appear at the very end of history, be slain, but then be resurrected from the dead after three days (11:4–13). The book of Hebrews exhorts its readers to be willing to die for the faith, like heroes of old, but the writer admits few if any have actually been faced with such choices (11:32–40; 12:3–4).

D. Josephus

Josephus is the richest source for examining the general phenomenon of voluntary death among Jews in Roman times. In his *Jewish Antiquities*, which covers Jewish history from Adam and Eve to the emperor Nero, he includes his own interpretation of the six standard examples of voluntary death in the Hebrew Bible. He also provides accounts of the Jews who chose to die around the time of the Maccabean revolt, all of which he views in a most positive way. His histories are full of a variety of other accounts of voluntary death; he reports as many as 25 separate incidents, with double accounts of several of them in the *Antiquities* and the *Jewish War*. Most of these took place during the war with Rome and more often than not he views them as heroic (Droge and Tabor 1992). He tells of his own narrow escape from a "death pact" at Jotapata while serving as commanding officer of the Galilean rebel forces during the Jewish revolt (*JW* 3.329–91). He is our main source for the infamous case of Masada, where, according to Josephus, 960 men, women, and children took their own lives rather than face Roman capture (*JW* 7.320–406). In the incidents at Jotapata and Masada he also provides us with extensive philosophical discussion of the general problem of voluntary death. Ironically, in the Jotapata situation, when his own life is at stake, he argues against suicide and counsels for surrender to the Romans. On the other hand, in his long account of the Masada episode he presents the arguments of the Jewish leader Eleazar with some degree

of sympathy. Even so, for Josephus these unfortunate victims of the revolt are still not the popular martyrs of subsequent imagination, whether ancient or modern (Ladouceur 1987).

E. Rabbinic Materials

The Mishnah, Talmud, and Midrash contain anecdotal accounts and technical discussions of the problems associated with voluntary death. The rabbis are interested in determining when, and under what conditions, one might endanger or take one's life, or allow one's life to be taken (see *Ber.* 3a, 8b; *Šabb.* 32a; *Pesaḥ.* 112a; *Taʿan.* 5b and the discussions by Goldstein 1989; Droge and Tabor 1992). The account of the death of Rabbi Hanina b. Teradion, who lived during the time of Hadrian, brings together some of the major interpretive difficulties (*b. Abod. Zar.* 18a–18b). He is taken by the Romans and burnt at the stake with a Torah scroll wrapped around him. At one point, seeking to lessen his suffering by hastening his death, his disciples cry out to him, "Open your mouth so that the fire enters into you." Haninah replies "Let Him who gave me [my soul] take it away, but *no one should injure himself*." The text continues:

> The Executioner then said to him, "Rabbi, if I raise the flame and take away the tufts of wool from over your heart, will you cause me to enter into the life to come?" "Yes," he replied. "Then swear to me" [he urged]. He swore to him. He thereupon raised the flame and removed the tufts of wool from over his heart, and his soul departed speedily. The Executioner then jumped and *threw himself into the fire.* And a *bat-qôl* exclaimed: R. Hanina b. Teradion and the Executioner have been assigned to the world to come. When Rabbi heard it he wept and said: *One may acquire eternal life in a single hour,* another after many years.

Hanina's basic position is that one must not take a hand in even *hastening* one's death, God is the one who must take away life. Such a position might have been based on texts of the Bible (Job 1:21; 2:9–10; Eccl 3:2), or even the quotation from *ʾAbot* 4.22, "*without your will* you will die." In content it is reminiscent of the statements in Plato and Cicero that one is not to depart this life except at the bidding of the gods. And it closely echoes the argument of Josephus against suicide at Jotapata. But in this story, Hanina nonetheless agrees to have someone else, the Executioner, *act in his behalf,* immediately bringing about his death. Presumably this means he is not directly responsible. Yet *he* makes the choice, and accordingly, has an indirect part in the action. It is not clear in this story whether Hanina expects the Executioner to jump in the fire with him when he promises him eternal life for his assistance. Regardless, the act of the Executioner receives the highest approval, the voice from heaven declaring that he has obtained eternal life. If one can obtain life by a deliberate act of self-destruction, what happens to Hanina's original statement that one must not even hasten death, much less directly destroy oneself?

The text leaves all these elements in unresolved tension. The final declaration that "one may acquire eternal life in a single hour" is indeed a radical one. Here we have an outsider, a Roman official at that, who receives eternal life instantly *through voluntary death.*

F. Later Christian Martyrs

Christian accounts and discussions of martyrdom from the 2d and 3d centuries C.E. exhibit many of the same ambiguities and problems as these Rabbinic materials (Frend 1967; Fox 1986). It is seldom clear under what circumstances one is to offer up one's life, whether one can take a hand in one's own execution, and whether one should avail oneself of the opportunity of escape. The debate over martyrdom in early Christianity was extended and intense and often echoed the more general discussions about voluntary death and suicide in Greco-Roman culture (Droge and Tabor 1992). Ignatius, who died in 107 C.E., appears almost too willing to die. Like Paul, he sees his death as a means of joining Christ. "I long for the beasts that are prepared for me … I will force them to it … may I but attain to Jesus Christ" (*Ign. Rom.* 4–7). Like Razis and the Jews of Maccabean tradition, he views his death in sacrificial terms, but in this case following the model of Jesus. In the well-known *Acts of Perpetua and Felicitas,* a group of North African Christians are martyred during the reign of Septimius Severus. Perpetua, on trial, stresses her own free will in her death. She subsequently takes the hand of the young gladiator and guides it to her throat, showing that "she could not be killed unless she herself was willing" (21.8–10). This problem of "voluntary martyrdom" becomes a serious one. Eusebius preserves numerous accounts from the Great Persecution (303–312/3 C.E.) of individuals turning themselves in to be martyred or outright killing

themselves (Droge and Tabor 1992). For example, he relates that a woman and her two daughters opted for "flight to the Lord" rather than be raped by their captors. They asked for privacy to relieve themselves and threw themselves into a nearby river.

Augustine, in response to the Donatist martyrs, and later in dealing with the chaos of the barbarian invasion of Rome in 410 C.E., sought to draw firm and dogmatic distinctions in his discussions of voluntary death and martyrdom. He argued that killing oneself, no matter what the circumstances, was a violation of the sixth commandment ("You shall not kill") and was, accordingly, murder (*City of God* 1. 19; see Droge and Tabor 1992 for a full discussion of the complexities of his position). Augustine's formulations dominated Western Christian thinking about all forms of voluntary death, whether understood as suicide or martyrdom, until modern times.

JAMES D. TABOR

MARY (PERSON) [Gk *Maria* (Μαρια)*; Mariam* (Μαριαμ)]. The name of six or seven women mentioned in the NT. The name derives from Heb *miryām.*

1. The mother of Jesus. See MARY, MOTHER OF JESUS.

2. Mary Magdalene. One of the most prominent of the Galilean women to have followed Jesus. Although none of the canonical gospels tells the story of the initial encounter between Mary Magdalene and Jesus, she appears in all four accounts, most significantly as a witness to the death, burial, and resurrection of Jesus.

a. The NT. The city from which Mary came is located at the S end of the Plain of Gennesaret, on the shore of the Sea of Galilee to the N of Tiberias. The Talmud situates a city known as "the Fish Tower" (Aram *Migdal nûnayyā*ʾ) at a distance of 2000 cubits from Tiberias (*b. Pesaḥ.* 46a). The city is not mentioned by its proper name in the Bible, although a derived adjectival form *Magdalēnē* occurs in the NT (Matt 27:56, 61; 28:1; Mark 15:40, 47; 16:1, 9; Luke 8:2; 24:10; John 19:25; 20:1, 18), exclusively as a description of Mary. See MAGDALA (PLACE). Given its etymology, the city is probably to be identified with the Tarichaeae, known to Josephus (*JW* 2.21.3–4). The presence of a hippodrome in the city is an indication that its population of approximately 40,000 was predominantly gentile. Among the Jews the city enjoyed a poor reputation; later rabbis attributed the fall of the city to its licentiousness (*Midr. Lam.* 2:2).

(1) Luke. According to Luke, a Mary called Magdalene (*Maria hē kaloumenē Magdalēnē,* only in Luke 8:2) was one of a large group of women who provided for Jesus and the Twelve out of their means (Luke 8:2). The group included some women who had been healed of evil spirits and infirmities. One of these was Mary "from whom seven demons had gone out" (Luke 8:2; cf. Mark 16:9), an indication that because of her serious condition, an exorcism had been performed on her, most probably by Jesus himself. Mary

was with the band of Galilean women who accompanied Jesus to Jerusalem, witnessed his crucifixion from a distance, observed the tomb with his body in position, went to the tomb with the burial spices which they had prepared, found the tomb empty, and experienced the startling appearance of two men in dazzling apparel (Luke 23:49, 55–56; 24:1–9). In the Lukan account, Mary is specifically identified as one of those who told the apostles about the Easter day events, only to have the report fall on deaf ears (Luke 24:10–11; cf. Mark 16:9–11).

(2) Mark. In the earlier, Markan narrative, the presence of Mary Magdalene at the crucifixion (Mark 15:40), the tomb (Mark 15:47), and the empty tomb (Mark 16:1) provides a link of continual witness to the death, burial, and resurrection of Jesus. In this role Mary is accompanied by Mary, the mother of James and Joses, and Salome (whose presence at the tomb is not specifically cited in Mark 15:47), but the role of Mary is preeminent since she is always cited in the first instance. These three women are clearly identified as disciples of Jesus ("they followed him," Mark 15:41) who ministered to him. Their purpose in going to the tomb on the day after the Sabbath was to anoint Jesus' body. At the site, they discovered the open tomb and heard the paschal proclamation. Overcome with astonishment, they were afraid to tell anyone about the occurrence.

The so-called shorter ending of Mark, found in a few of the ancient versions, and some of the Greek manuscripts (but none earlier than the 7th century) corrects this image with a description of the women narrating the events to Peter and his companions.

(3) Matthew. Matthew's gospel closely follows the Markan account in identifying Mary Magdalene as one who observed the crucifixion (Matt 27:56), the burial (Matt 27:61), and the (empty) tomb which she had come out to see (Matt 28:1). Matthew, however, departs from the Markan story in citing the names and purpose of the women who accompanied Mary Magdalene. Matthew also significantly varies from Mark insofar as Matthew states that the women joyfully, albeit fearfully, ran from the empty tomb in order to tell the disciples the good news. Subsequently they encountered the risen Jesus who likewise entrusted to them the task of announcing the pascal proclamation (Matt 28:9–10). This pair of verses, which describe the women taking hold of Jesus' feet and worshiping him, is a literary doublet of the account of the appearance of the angel of the Lord.

(4) John. Mary is abruptly introduced into the Johannine narrative—similar, in many respects, to the Matthean—at John 19:25, where she is portrayed as being at the cross in the company of the mother of Jesus and Mary, the wife of Clopas. The Fourth Gospel does not portray her as an observer of the burial, but it does include a significant narrative account of Mary's presence at the empty tomb. In John 20:1–2, an unaccompanied Mary Magdalene goes to the tomb, which she finds empty, and thereupon runs to tell Peter that "they have taken the Lord out of the tomb."

Mary's solitary presence at the tomb is an example of Johannine dramatization, but the evangelist further exploits the tradition about her in an eight-verse narrative, where a scene is set at the tomb itself (John 20:11–18). The narrative, without parallel in the Synoptic Gospels, contains the only two NT passages in which Mary Magdalene is simply called "Mary" (John 20:11, 16). Although an apologetic motif is present in the narrative insofar as Mary, representing the disciples (John 20:2, 13; cf. v 15), expresses the view that Jesus' body had been taken away by someone else, the dominant theme of the narrative is the development of Mary's faith.

Initially she had seen the empty tomb and had reacted in merely human fashion with tearful distress. Subsequently she saw Jesus, but did not understand who he was. The call of his voice allows her to recognize him but she believes him to be as he previously was, a teacher who could be physically embraced. Jesus then reveals that his resurrection implies his return to the Father. Commissioned to announce the meaning of the resurrection to the disciples, Mary makes the paschal proclamation: "I have seen the Lord." Thus Mary Magdalene typifies adequate faith in the resurrection of Jesus.

b. Other Traditions. From about the 6th century in the Western Church, but not in the Eastern, traditions developed which tended to identify Mary Magdalene with the sinful woman of Luke 7:36–50 and/or Mary of Bethany (John 11:1–12:8; Luke 10:38–42), but there is no historical evidence on which to

base such identifications. Indeed, the weight of evidence of the canonical gospels would seem to militate against such identifications.

Undoubtedly the unsavory reputation of the city of Magdala contributed to the identification of Mary Magdalene and the woman of Luke 7:36–50. However, Mary Magdalene is formally introduced into the Lukan narrative at 8:2 (just two verses after 7:50), with no suggestion that she is a figure already known to the gospel's readership. Counterposed to the identification of Mary Magdalene with Mary of Bethany is the fact that Bethany is a Judean site while Magdala is a city of Galilee and Mary Magdalene is clearly portrayed as a Galilean woman in the Synoptic accounts.

Despite the unanimous witness of the fourfold gospel to Mary Magdalene's function in the resurrection narratives, she is not cited in the list of authoritative witnesses to the resurrection given by Paul in 1 Cor 15:5–6. Nonetheless, her role as an Easter figure and as the first resurrection witness is amply attested in later literature, most of it of gnostic origin.

One designedly anti-gnostic text which tells about Mary Magdalene is the 2d-century *Epistula Apostolorum.* The Ethiopic version (the role is played by Martha in the Coptic version) tells the story of Mary Magdalene, at Jesus' command, telling the disciples about the resurrection. According to the account, the disciples refused to accept both her testimony and that of a second woman. They did not come to believe until Jesus himself appeared to them.

c. Gnostic Literature. The 2d-century *Gospel of Peter,* of less than fully orthodox, but not yet fully gnostic, tendencies, specifically identifies Mary Magdalene as a "woman disciple of the Lord" who, for fear of the Jews, did not weep (as was customary) at the burial of Jesus. Determined nonetheless to weep at the sepulcher, she went to the tomb accompanied by other women. Having discovered the empty tomb and heard the paschal proclamation from a young man in shining robes, they fled the site in fear (*Gos. Pet.* 12–13).

The Coptic *Gospel of Thomas* (ca. 200 A.D.), attests to a competition between Mary Magdalene and Peter and the special relationship that bound Mary to Jesus. In the final logion (*Gos. Thom.* 114), Peter says to Jesus: "Let Mary leave us, for women are not worthy of Life." Jesus responds: "I myself shall lead her in order to make her male (a kind of androgynous reality), so that she too may become a living spirit resembling you males." In another logion, Mary (*Mariham*) is presented as asking Jesus, "Whom are your disciples like?" (*Gos. Thom.* 21).

The figure of Mary Magdalene appears in two other apocryphal gospels, preserved in fragmentary form, the 2d-century *Secret Gospel of Mark,* cited by Clement of Alexandria, and the *Gospel of Mary* (Magdalene). In the *Secret Gospel of Mark* an unnamed woman, identified as the sister of the one loved by Jesus and raised by him at Bethany, is rebuked by the disciples and, along with his mother and Salome, not received by Jesus. In the first part of the *Gospel of Mary,* Mark (Gk *Mariamme*) greets and consoles the sorrowing disciples. In the second fragment, Mary plays a dominant role. Her communication of the secret revelation made to her by the Lord, apparently in a vision (Gk *horama*) of the risen Lord, is met with unbelief by Andrew and with ridicule by Peter. She is, however, defended by a certain Levi who describes her as one made worthy by the Lord, known by him and one loved by him even more than the disciples.

The role of Mary (Coptic *Mariham*) as a questioner of Jesus is fully exploited in the early-3d-century *Pistis Sophia.* Thirty-nine of the sixty-four questions addressed to Jesus in that long text are attributed to Mary, who admits her persistence in questioning: "I will not tire of asking thee. Be not angry with me for questioning everything." Jesus replies: "Question what thou dost wish" (*Pistis Sophia* 139).

In the *Pistis Sophia* Mary is described as blessed, she whose heart is more directed to the kingdom of heaven than all her brothers, excellent, blessed beyond all women, beautiful in speech, the pleroma of all pleromas, the completion of all completions, superior to all the disciples (along with John the Virgin), and related hyperbole (*Pistis Sophia* 17, 19, 24, 34, 97, etc.). The *Pistis Sophia* also attests to Mary's role in the resurrection story (*Pistis Sophia* 138) and to the competition between Mary and Peter (*Pistis Sophia* 36).

In the *Sophia of Jesus Christ,* Mary twice appears as a questioner of Jesus, once with regard to the source of superhuman knowledge and once with regard to the disciples (NHC III,*4*). These are the only passages in the document where a woman is mentioned by name (*Mariamme* in Coptic), although the document makes reference to seven women.

In *The Dialogue of the Savior,* another Nag Hammadi text, Mary (Coptic *Mariam*) is portrayed as one of three disciples chosen to receive special teaching but she is more significant than the others, Matthew and Thomas, because "she spoke as a woman who knew the All" (NHC III, 139).

In the late-3d-century *Gospel of Philip,* Mary is called the companion of the Lord and described as one who always walked with him (*Gos. Phil.* 59, 63). She is portrayed as one whom Christ loved more than the other disciples and as one who was frequently kissed by Christ. The other disciples took umbrage at this and merited a rebuke from the Lord in the form of a parable (*Gos. Phil.* 63–64). In the 4th-century *Acts of Philip,* a woman named Mariamne appears as the sister of Philip. Her role is similar to that of Mary Magdalene in the gnostic tradition. She consoles Philip, is at the risen Christ's side when he divides the world into missionary sectors, and then accompanies Philip on his mission.

As a heroine in gnostic literature, Mary Magdalene appears as the first witness of the risen Jesus, as one particularly loved and praised by him, and as the recipient of secret revelations (many of the texts have the literary form of a dialogue with Jesus). This gnostic portrayal of Mary was apparently known to some of the Fathers, notably Hippolytus (*haer.* 5.7.1), Origen (*Cels.* 5.62.11), and Epiphanius (*Haer.* 1.2.26.41).

The developments of the portrait of Mary Magdalene depicted in gnostic literature are rooted in the tradition, attested in the canonical gospels, that the risen Jesus first appeared to Mary Magdalene and other women from Galilee. Many proponents of a revisionist version of early Christian history suggest that the role of Mary Magdalene was diminished in canonical literature because of the patriarchalism of early Church structures (Schüssler Fiorenza 1983: 50–51; 321–23; 332–33). The prominence accorded to Mary Magdalene in gnostic literature preserves and develops the earlier memory (Meyer 1985; Pagels 1979). The competition between Mary and Peter reflects the tension between heterodox Christianity and apostolic orthodoxy.

RAYMOND F. COLLINS

3. Mary of Bethany. Mary appears as the sister of Martha of Bethany in the gospels of Luke (Luke 10:38–42) and John (John 11:1–12:11). Luke does not identify her as having a brother named Lazarus nor as coming from Bethany, a town near Jerusalem (John 11:1, 18). The extant gospel accounts are colored by the language and theologies of the respective evangelists; nonetheless, given the remarkably similar character portrayal of Mary in both accounts, there is little reason to doubt that a single historical person lies behind both the Lukan and the Johannine narratives.

a. Luke. According to the Lukan account, "Mary sat at the Lord's feet and listened to his teaching" (Luke 10:39). Her demeanor, that is, her posture—indicated by a technical expression "to sit at the feet of" meaning "to be a disciple of"—and her listening clearly indicates that Luke considers her to be a disciple of Jesus. In the eyes of her sister, Mary is neglectful of the household responsibilities. Martha's criticism of Mary merits a mild rebuke from Jesus, who extols Mary's discipleship (Luke 10:42). In Luke's gospel Mary serves as a role model for female disciples.

b. John. In the Johannine narrative, although Mary is characteristically introduced as the one "who anointed the Lord with ointment and wiped his feet with her hair" and Lazarus is identified specifically as *her* brother (John 11:2; cf. v 32), Mary's role in the dialogue with Jesus prior to the resurrection of Lazarus is less significant than that of Martha (John 11:1–40). Mary quickly ran to Jesus (v 29) and fell at his feet (v 32), but she says only, "Lord, if you had been here, my brother would not have died" (v 32), a gentle reproach to Jesus, who had delayed his arrival (v 6). Mary's principal narrative role seems to have been to introduce the Jews, apparent sympathizers with her grief (vv 31, 33) who will later capitalize on the Lazarus incident in their plot against Jesus (John 11:45–53).

The Johannine technique of dramatization typically focuses upon one feature of the persons introduced into his narrative. In Mary's case, it is her anointing of Jesus, summarized in 11:2 and described at length in 12:1–12. Her gesture is characterized by its utter radicalness: (1) in the Jewish world it was scandalous for a woman to let down her hair in the presence of a man who was not her husband; (2) the anointing of feet was the task of slaves; and (3) the cost of the perfume (not mere oil) was extravagant (costing approximately 300 days' pay for the ordinary laborer).

Despite Judas' rejoinder, Mary's act was praised by Jesus and interpreted by him as a symbolic gesture. Since the anointing of feet was a typical funeral rite, Mary's anointing of Jesus' feet was a dramatic foreshadowing of his future burial. The evangelist does not, however, suggest that Mary had been aware of the symbolic nature of the dramatic expression of her devotion to Jesus.

The role accorded to Mary of Bethany in the gospels of John and Luke serves as a reminder of the role of female disciples in the communities of the respective evangelists. Jesus' praise of Mary makes her the only woman to be twice praised in the gospels for her devotion to Jesus (Luke 10:42; John 12:7). The mention of Jesus' love for her (John 11:5) singles her out as one of only two women (Martha is the other) cited in the canonical gospels as having been loved by Jesus.

c. Tradition. Scholars continue to study the relationship between the Johannine narrative of Jesus' anointing by Mary of Bethany and the Synoptic stories of the anointing of Jesus' head by an unnamed woman (Matt 26:6–13; Mark 14:3–9) and of the sinful woman forgiven by Jesus (Luke 7:36–50). The latter story was often later used as a link in the confusion between Mary Magdalene and Mary of Bethany, to which some Church Fathers (e.g., Augustine; Gregory the Great) and some gnostic texts (e.g., the *Secret Gospel of Mark*) attest. The majority of critical commentators refuse, however, to identify Mary of Bethany with Mary Magdalene. They consider the Johannine account (John 11:1–12:8) to be a radical reworking of ancient traditions by the author of the Fourth Gospel.

4. The mother of James and Joses. This Mary was one of the women who followed Jesus during his Galilean ministry and who witnessed Jesus' crucifixion (Mark 15:40–41). Mark identifies her as the mother of James (the Little) and Joses (15:41), while Matthew calls her "the other Mary" (Matt 27:61), after first calling her the mother of James and Joses (Matt 27:56). Luke simply calls her the mother of James (24:10). It is difficult to know whether or not Mary the mother of James and Joses is to be identified with "Mary (the wife?) of Clopas" (see #5 below) mentioned as being at the cross in John 19:25, or even as the sister of Jesus' mother Mary. The former suggestion is probably overly harmonistic, since we are told at Mark 15:41 that there were many other female followers of Jesus present and

watching his crucifixion. The latter suggestion is doubtful since it would require that two daughters in the same family be called Mary, though such a practice was not unprecedented in early Judaism.

Mary was a traveling companion of Jesus'; in fact, the comment that she "served him" probably means she provided financial support for Jesus' itinerant ministry. Mary accompanied Jesus on his last trip to Jerusalem (Mark 15:41), witnessed the burial of Jesus (Mark 15:47), and was involved with other women planning to wrap Jesus' body with spices on Easter morning (Mark 16:1). Thus, she was one of the first witnesses of the empty tomb and the angelic message about the resurrection (Mark 16:2–7 = Matt 28:8; Luke 24:9–11). Matt 28:9–10 may also suggest that she saw the risen Lord.

5. A follower or possibly a relative of Jesus mentioned by name only in John 19:25 where she is said to be "of Clopas." The Greek is elliptic and one can insert "the sister," or "the mother," or most likely "the wife" before "of Clopas." She may be the same Mary that the Synoptics identify as the mother of James and Joses, but we cannot be sure. It is possible, but not probable, that Clopas is to be identified with the Cleopas mentioned at Luke 24:18, since Cleopas is not a rendering of a Semitic name but a diminutive of Cleopatros, a Greek name. Thus, all we know about this Mary is that she was probably married to a man named Clopas, and she seems to have been a follower or relative of Jesus, since she is grouped with others who clearly fall into one or the other of these categories.

6. The mother of John (Mark), depicted only in Acts 12:12–16. This is probably the John who traveled with Paul and Barnabas doing missionary work in Cyprus (Acts 13:5), and who wrote the gospel bearing the name Mark. That Mary is a widow is indicated by the reference to the house belonging to her, rather than to her husband. That she is well-to-do is substantiated by the references to many people meeting at her home, and by her home having a courtyard with a gate and gatekeeping servant.

Mary's home is portrayed as a regular place for gathering and praying suggesting this Jerusalem home as one of the earliest house churches in all Christendom. Particularly in Jerusalem, having a house church took faith and courage in view of the precarious status of Christianity in its early years. Not only does Acts 12:1–7 tell of the arrest of Christian leaders such as Peter and the execution of James by Herod Agrippa I, but both Acts and the Pauline corpus indicate that at least some fellow Jews and some Jewish authorities did not accept Christianity merely as another Jewish sect (Acts 6:8; 8:3; 9:1–2; 1 Cor 15:9; Gal 1:13–14; 1 Thess 2:14–15). It is possible that the meeting discussed in Acts 12:12–16 was attended only by women since Peter's words suggest that James and the brethren are not present to hear his parting remarks.

In Acts 12, Luke stresses the importance of Mary and her contribution to early Christianity through her hospitality and her influence on her family. She is portrayed as a notable early Christian.

7. A Roman Christian who received greetings from Paul in Rom 16:6. Paul had been informed that she had "worked hard" in Rome (for a discussion of this phrase, see TRYPHAENA AND TRYPHOSA). There are two possibilities for identifying Mary (see the material in *StadtrChr* 66–67, 146–47, 152–53, 296). (1) "Maria" represents the Semitic *miryām,* in which case she was a Jewish Christian. But only nineteen Roman inscriptions show Jewish women bearing the Semitic name. (2) Five times more Roman inscriptions (ca. 108) suggest that "Maria" was the Latin name of the gens *Maria* (cf. "Marius"); women were often called by the name of their gens without cognomen. Two groups carried the name of the gens *Maria:* the noble members of the famous gens and the freed (wo)men of the gens with their descendants. The second group outnumbered the first. The chances therefore are that the Christian Mary was a freedwoman of the gens *Maria* or a descendant of a freed slave of this gens. Either way, she probably had Roman citizenship: slave masters with famous gens names like "Marius/is" possessed Roman citizenship

and in most cases passed it on to their slaves on the occasion of their emancipation; the freed slaves then bequeathed the citizenship and the gens name to their freeborn children. Mary was probably a gentile Christian. See NEREUS.

PETER LAMPE

MARY, BIRTH OF. Title of the apocryphal text more formally called the *Genna Marias,* also variously known as the "Genealogy of Mary" or "Descent of Mary." One of the many books no longer extant that were popular among gnostic sectarians, *The Birth of Mary* is known only from an excerpt found in Epiphanius' *Panarion* (26.12.1–4). In the section cited by Epiphanius, the motivation for the execution of the prophet Zacharias on the Temple precincts (Matt 23:35; Luke 11:51) is elucidated by the identification of the prophet with the father of John the Baptist who sees a vision of God in the Temple while performing his priestly duties (Luke 1:22). In *The Birth of Mary,* Zacharias recounts his vision in the Temple as being an appearance of the God of the Jews as a man in the form of an ass. This anti-Judaic representation of the Jewish God is not unexpected, as the notion that the supposedly formless Yahweh of the Jews in truth had the head of an ass was common in pagan anti-Jewish polemic and also complies with various gnostic portrayals of the evil creator god often identified with the God of the Hebrew Scriptures. Although little can be determined concerning the provenance of *The Birth of Mary,* it is thought to have been composed sometime during the mid-2d century C.E.

KATHLEEN E. CORLEY

MARY, DESCENT OF. See MARY, BIRTH OF.

MARY, GOSPEL OF. The first treatise in the Berlin Codex 8502. It represents a translation into Sahidic of a Greek original. The text is in poor condition, with several pages missing from the beginning and middle of the work (pp. 1–6 and 11–14). Greek fragments representing a variant of 17:5–12 and 18:5–19:5 were found in the Oxyrhynchus papyri of the Rylands library (Ryl 463). This Greek version is not identical with the Coptic. Greek words used in the latter do not always match what is found in the existing Greek fragments. The Coptic contains Mary Magdalene's reaction to Peter's rejection of her revelation (18:1–5), which is missing in the Greek. Thus there were at least two versions of this work in antiquity. The two writings which follow it in the Berlin Codex, *Apocryphon of John* (NHC II,*1;* III,*1;* IV,*1*) and *Sophia of Jesus Christ* (NHC III,*4*) survive in additional Coptic versions in the Nag Hammadi collection. The Greek papyrus has been assigned to the early 3d century C.E. This date would suggest that *Gos. Mary* was composed sometime in the late 2d century.

What remains of *Gos. Mary* consists of the ending of two separate revelations held together by a frame story about the gathering of the apostles after Jesus' ascent to the heavens. The first revelation is a dialogue between the risen Jesus and his disciples. The second is Mary's report of a private vision and its interpretation that the Lord had granted her.

The framework draws on a motif found in a number of Christian gnostic writings like *Ap. John* and *Soph. Jes. Chr.,* where the risen Lord instructs the disciples in the secret gnostic teaching which they are to spread in the world. The opening dialogue between Jesus and the disciples apparently provided the cosmological foundation for salvation in a teaching about the natures and their roots. Whatever has a material root is subject to passion, evil, sickness, and death. The gnostic possesses a different root and is enjoined not to participate in the passions of material nature (7:1–8:10). As he departs, the Lord commissions the disciples to preach the gospel of the kingdom. This commission alludes to several NT passages (8:7–9:4; Matt 28:10; John 14:27; 20:19–21; Luke 24:36; Matt 24:4; Luke 17:21; Matt 24:23; 7:7; 4:23).

Instead of fulfilling the commission, the disciples despair over the suffering that surely awaits them. At this point, Mary reminds them of the Lord's grace and protection. She alludes to their restoration to their true gnostic identity, "he has prepared us and made us into men" (cf. *Gos. Thom.* 114; and "put on the

perfect man," *Gos. Phil.* 75: 20–35). Peter requests that Mary recount a revelation that she had had from the Lord which was unknown to the apostles. What survives of that section opens with a teaching about the mind as the intermediary between the soul and the spirit which makes the vision possible (10:10–22). It continued with an account of the soul's ascent past the cosmic powers to the triumphant announcement that it has overcome the world's bondage and will obtain rest (15:1–17:9). The objections to this teaching given by Andrew and Peter (17:10–22) may reflect those raised by orthodox Christians to gnostic teaching. They are silenced by Levi as contrary to the choice of the Savior. He has made Mary worthy of the revelation (18:2–16). Similar episodes in which Mary Magdalene's gnostic insight is defended can be found in *Pistis Sophia* and *Gos. Phil.* (II 63:34–37). In *Dial. Sav.* (NHC III,*5* 139,12–13) she is one of three disciples chosen by the Lord for a private revelation of the soul's destiny. They may indicate that the importance of women teachers in some gnostic circles survived the exclusion of women from teaching roles elsewhere in early Christianity. Finally, the apostles take up the Lord's commission to preach (18:17–19:2). A similar conviction that the apostolic preaching to the world was gnostic is found in *The Letter of Peter to Philip* (NHC VIII,*2*) where revelations are embedded in a frame story that alludes to Acts.

PHEME PERKINS

MARY, GOSPEL OF THE BIRTH OF. An abridged version of the Latin pseudo-Matthean infancy gospel, also known as the "Story of the Birth of Mary," which was composed sometime during the 8th–9th centuries C.E. Written as a corrective to the then widely popular tales which elevated Mary the Mother of God as the "queen of virgins," this narrative eliminated from the story the tradition of Joseph's first marriage which had been condemned as heretical, as well as omitted other particulars of the legend that were considered risqué. Although *The Gospel of the Birth of Mary* was often included among texts falsely attributed to Jerome, it gained its wide popularity after being included in James de Voragine's *Golden Legend* (1298). See also *NTApocr* 1: 406–7.

KATHLEEN E. CORLEY

MARY, MOTHER OF JESUS. Mentioned by name only in the Synoptic Gospels and Acts, the mother of Jesus is a character of some importance in the gospel of John as well (though her name is never given). She appears by implication elsewhere in the NT also, and becomes a figure of increasing attention in the noncanonical literature of early Christianity. The witness of the Christian Scriptures is the foundation of subsequent development of Mariological tradition in theology, doctrine, and devotion.

Genuine Pauline letters provide the earliest witness to the mother of Jesus. Although her name does not appear in any Pauline epistle, there are references to Jesus' birth in which his mother is implied. Among these are pre-Pauline formulas: "though he was in the form of God … he emptied himself … coming in human likeness; and found human in appearance" (Phil 2:6–7 NAB), in a context that stresses preexistence; "who was born of the seed of David according to the flesh" (Rom 1:3), part of the *praescriptio* (1:1–7) whose intent is to contrast Jesus' fleshly (i.e., Davidic) status with his spiritual (i.e., resurrected) status. The statement by Paul in Galatians that Jesus was "born of a woman" (4:4) may not carry any reference to his actual mother, because the expression is a commonplace designation of any human being (Job 14:1; 15:14; 25:4; cf. 1 Esdr 4:15; 1QH 13:14). The analogy between Jesus and Isaac, "born according to the Spirit" (4:29), does not necessarily indicate that Paul knew a doctrine of the virginal conception of Jesus, though the matter is problematic (see Brown et al. 1978: 45–49). There is no pervasive Isaac-Jesus typology in Paul. Pauline focus on the Jesus resurrection limits interest in his earthly life.

The two-source hypothesis of the Synoptic Gospels and the theological intentionality of the Matthean and Lukan infancy narratives together indicate Mark as the earliest witness to Marian tradition. Mark 3:31–35 (= Matt 12:46–50; Luke 8:19–21) describes Jesus' relationship to Mary and his family in a context of questions and controversy: Jesus' family sets out to seize him, apparently thinking him to be "beside himself" (3:20–21); Jesus, meanwhile, has spent his time with his chosen ones (3:13–19) and the crowd (v 20). Scribes from Jerusalem claim Jesus is possessed and casts out demons by Beelzebul's power, but Jesus replies in parables (3:22–27). When the "mother and brothers" of Jesus arrive, they stand outside and request to see him; but Jesus identifies those sitting around him as "my mother and brothers," the ones who do God's will (Mark 3:31–35). Thus the Markan context sets up a sharp distinction between "outsiders," i.e., Jesus' natural family and the scribes, and "insiders," i.e., his followers. Jesus declares his preference for an eschatological family (3:33–35). Membership in Jesus' family is not to be based on the relationships of kinship that are valued in society. The Matthean and Lukan parallels omit negative portrayals of Jesus' relatives, though they retain the saying that identifies his family as the ones who hear God's word and act on it (Matt 12:48–50; Luke 8:19–21). Matthew and Luke do not exclude Jesus' mother and brothers from the eschatological family, which later includes Mary and Jesus' brothers (Acts 1:14).

After Jesus' arrival in "his native place," i.e., Nazareth (NAB), family members are mentioned in a discussion about his teaching (Mark 6:1–6a = Matt 13:53–58; Luke 4:16–30). The epithet "Son of Mary" (Mark 6:3 = Matt 13:55; Luke 4:22) implies neither a doctrine of virginal conception nor Jesus' illegitimacy; the terms "brothers" and "sisters" in the same passage denote blood relations and extended family members (Brown et al. 1978: 65–72). Jesus' saying about a prophet's honor except among relatives (Mark 6:4; Matt 13:57; Luke 4:24) designates his family as "outsiders" unable to believe. Witnesses of the crucifixion are not identified with Jesus' family (Mark 15:40 = Matt 27:56; cf. Luke 23:49).

Christology is the primary focus of the Matthean and Lukan infancy narratives, which constitute the latest stage of gospel tradition (Brown 1977: 25–38). The narratives (Matthew 1–2; Luke 1–2) retroject the proclamation of Jesus' divinity at the resurrection and during the public ministry to his conception. Their historical value is open to question, including the portraits of Mary they give.

Matthew identifies Jesus as "Christ, the Son of David, the Son of Abraham" (1:1) in an unusual genealogy (1:1–17) which includes names of four women, Tamar (v 3), Rahab, Ruth (v 5), and Uriah's wife (Bathsheba, v 6), whose irregular conjugal unions nonetheless participate in God's plan. The story of Jesus' birth (vv 18–25) strengthens Mary's association with the women and Joseph's role (Brown 1977: 71–74). The extraordinary conception of Jesus is disclosed. Mary, "betrothed to Joseph," i.e., formally vowed to him but not sharing his home, is "with child of the Holy Spirit" (v 18). Joseph's predicament about the pregnancy and his resolution "to divorce her quietly" (v 19) is reversed through an angelic dream which also confirms the initial disclosure: Mary's conception is "of the Holy Spirit," i.e., the creative agency of God (v 20). A fulfillment formula (vv 22–23) associates Isa 7:14 with Mary's conception and birth of Jesus. The literary device is not recognized by some who read Isa 7:14 as a foreshadowing of Jesus' virginal conception and birth (Brown 1977: 143–53). Joseph, "son of David," obeys the dream directive in assuming legal paternity by taking Mary into his home and naming Jesus (vv 21, 25). Emphasis on Mary's virginity before Jesus' birth (v 25) neither affirms nor denies a sexual relationship with Joseph afterward. Joseph, directed by dreams (2:13, 19) provides lodging (2:11) and protection for the child and Mary (2:13–21), who functions stereotypically (2:11, 13–14, 21–22).

In the Lukan infancy narrative (Luke 1–2) Mary is featured in two pairs of scenes concerning the annunciation of Jesus' birth (Luke 1:26–38) and the birth itself (2:1–21). Surrounding these are stories that indicate the superiority of Jesus to John the Baptist (Luke 1:5–25, 39–56, 57–66, 67–80). The story of the annunication of John the Baptist's birth (Luke 1:5–25) to an elderly couple, Zechariah and his barren wife Elizabeth (1:7), stands in contrast to the annunciation of Jesus' birth to the virgin Mary (1:26–38), betrothed to Joseph (1:27; cf. Matt 1:18). A pattern of birth announcements familiar from the OT structures the scenes. An angel appears to Zechariah and Mary (vv 11, 28); they respond fearfully (vv 12,

29). Reassuring them, the messenger reveals God's agency in births from a barren, elderly womb and a betrothed virgin, and reveals the name of each child and his destined role in salvation (vv 13–17, 30–33). In both cases, the recipients of the message question the angel's revelation (vv 18, 34). The messenger responds and offers a sign (vv 19–22, 35–38). Some critics consider Mary's question in vv 34–35 an addition interrupting the sequence of the narrative. The question is best understood as a literary device to inform the reader, not an examination of Mary's personal psychology (Brown 1977: 303–9). The reply (v 35) describing God's creativity ("Holy Spirit … overshadow") is figurative language, excluding a sexual implication. It does not address Mary's biological virginity. Analysis of pre-Lukan and pre-Matthean tradition about the historicity of the virginal conception of Jesus is inconclusive (Fitzmyer *Luke I–IX* AB, 337–42). Mary's role as the "favored one" (Luke 1:28), i.e., mother of Jesus (Miriam of Nazareth), is the basis for her symbolic function as the disciple who hears and responds to God's word (v 38; cf. 8:19–21, 11:27–28; Acts 1:4).

The visitation episode (1:39–56) brings Mary to assist Elizabeth (1:36) in Zechariah's home. Elizabeth praises "the mother of my Lord" (vv 42–45) to which Mary's attributed Magnificat (vv 46–55) extols God who reverses the situations of the powerful and weak (Fitzmyer *Luke I–IX* AB, 357–71).

The diptych of the births (1:57–80; 2:1–20) presents additional parallels: birth, circumcision, naming, canticle. Joseph's lineage and relationship to Mary (1:27) is delineated in the enrollment in Bethlehem, Jesus' birth, shepherds' visitation, and Temple scenes (2:1–7, 16–38, 41–52). Mary's response to the shepherds' message (vv 17–19), Simeon's prophecy (v 34), and Jesus' words in the Temple (v 49) indicate her role as the believing disciple (vv 19, 50–51; cf. 1:38, 45) when the scenes are interpreted for their literary and theological intent rather than for their value as eyewitness testimony (Brown et al. 1978: 147–62).

The Fourth Gospel introduces the mother of Jesus at the wedding at Cana (2:1–11) and at the cross (19:25–27; cf. Mark 15:40–41 [= Matt 27:55–56]; Luke 23:49). The scenes are similar. There are no proper names: "mother of Jesus" (2:1, 2, 5, 19:25–26), "woman" (2:4, 19:26), "disciples" (2:2, 11), "Beloved Disciple" (19:26–27). Speech takes place in dialogue (2:3–5) or monologue (19:26–27). The scenes are linked to each other: Mary's misunderstanding (2:3) is a foil for her final role (19:26–27) just as the disciples' initial dependence on a sign (2:3, 12) is superfluous later (19:25–27). Historically improbable, the scenes symbolize the faith of Jesus' mother, who is dependent on familial ties (2:3–5). At Cana she and Jesus' "brothers" are distinguished from the disciples (2:12; see 7:3, 5, 10; cf. Mark 3:31–35 [= Matt 12:46–50]; Luke 8:19–21); at the cross, however, she is a model disciple (with the BELOVED DISCIPLE) who belongs to Jesus' true family. The portrait parallels the Lukan image.

Revelation 12 depicts two scenes which some associate with Mary. In "heaven" a "woman" who gives birth to a "male child" encounters opposition from a "dragon" (vv 1–6). On "earth" a "woman" with her "male child" escapes a "dragon/serpent" (vv 13–17). The author uses OT imagery as well as mythological sources to create the characters. The scenes depict God's protection of the "woman" and her "offspring." The "woman" symbolizes the OT people of God as well as the NT people of God, i.e., the Church. Some argue that Mary is the "woman" giving birth to the Messiah. Others point out that early Church writers like the author of Revelation did not identify the "woman" as Mary (cf. 12:9). The birth of the "male child" is different than Jesus' birth in Matthew 2 and Luke 2 (Brown et al. 1978: 223–39).

A few Apocryphal gospels expand the infancy narratives (Matthew 1–2; Luke 1–2). The *Protevangelium of James* presents Mary's parentage (Joachim and Anna), birth, childhood, virginity, marriage to Joseph, and the birth of Jesus. Mary's Davidic lineage supersedes the legal paternity of Joseph (Matthew 1–2). Allegations about Jesus' illegitimacy are refuted by Mary's miraculous birth and virgin birth. Joseph is a widower with children (who are the "brothers of Jesus" mentioned in the canonical gospels); by this means her perpetual virginity is protected (*NTApocr* 1: 366–67). Joseph's identification also occurs in the *Gospel of Peter* (*NTApocr* 1: 179). The *Infancy Gospel of Thomas* describes Jesus' boyhood activities of performing miracles and learning with Joseph as mentor. His mother plays a major role only in an expanded version of Luke 2:41–52, where the parents search for their child (*NTApocr*

1.391–92, 398–99). In contrast, the *Gospel of the Nazaraeans* situates her during Jesus' ministry; she requests to be cleansed from sin by John's baptism (*NTApocr* 1: 146–47).

Mariological studies developed historically within the context of Christian theology, doctrine (Borresen 1983; Maron 1983; Nissiotis 1983; Pelikan 1986; Tambasco 1984: 3–12, 38–53), and devotion (Tambasco 1984: 65–72). With biblical colleagues (Flanagan 1987; Reese 1977; Schineller 1987; van den Hengel 1985), contemporary scholars consider new paradigms for Mary (Bearsley 1980); interpretations of Mary vis-à-vis God (Boff 1987; Healy 1985; Johnson 1989), Christ (Johnson 1984), Church (Carr 1985), Christian feminism (Gordon 1982; Halkes 1983; Johnson 1985; Moltmann-Wendel 1983), and ecumenical dialogue (Ben-Chorin 1983; Brown 1975; Flusser 1988; Moltmann 1983).

MARY MARGARET PAZDAN

MASADA (M.R. 183080). A stronghold (which is a translation of the Hebrew) situated at the E Judean desert close to the Dead Sea, some 16.5 km S of En-gedi. It is along the famous Afro-Syrian geological break, and stands as a rocky mountain, separated from the cliff to form a natural fortress. The plateau on top of this unique mountain measures ca. 800 m (N–S) by ca. 300 m (E–W). The two main, and practically the sole, sources to study Masada are Josephus and the archaeological record.

The first to recognize the special virtues of Masada were the Hasmoneans. Masada was one of the first of their series of desert fortresses. They were the first to build roads to the mountain's top and to build houses and two or three water cisterns. Contrary to the belief after Yadin's excavations that all the buildings exposed on the mountain were built by Herod, it is now clear that some were earlier.

A. The Hasmonean Site

Josephus attributes the construction of Masada to Jonathan the High Priest, but practically all scholars agree that it was Alexander Jannaeus (103–76 B.C.) who first built on the site. To Hasmonean activity belongs a group of four small palaces at the mountain's center. The largest and most distinctive is the nucleus of the Western Palace. It was built around an inner courtyard with two reception rooms, one to the S of the court with access through a portico, and the other (the "throne room") adjacent to it. This palace also included a small bathhouse with a ritual immersion pool integrated into it. The three other palaces were much smaller, but no doubt were built according to the same architectural prototype, each with two similar triclinia (buildings Nos. 11, 12, and 13).

To the same period belongs also buildings Nos. 7 and 9 (?), a small bathhouse which was abandoned during the construction of Herod's storehouses, three columbaria towers (two square ones at the W and a round one at the center), two or three large cisterns, and a swimming pool (18 × 13 m) at the S edge of the mountain. Building No. 7 probably combined administrative, living, and storage facilities. It was built around a large courtyard with one or two rows of rooms around. Building No. 9, the so-called Caserna probably built by Herod, included 9 identical dwelling units, each comprised of a large room and two small ones. It had also a few more rooms, two of which may have served as stables.

At least twice Herod visited the site prior to his reign (37–4 B.C.)). On the first occasion (42 B.C.), he was sent to recapture the site from a rebel and two years later returned to rescue his family and bodyguards following a long siege by Antigonus (during which they were nearly left without water, and only a sudden rain, which filled the few cisterns, saved their lives). Following his experiences, together with his general architectural interests, Herod decided to improve all of Masada's facilities. (See plan in *EAEHL* 3: 795.)

B. Herod's Masada

Herod gave special attention to the water supply. Twelve huge cisterns were carved into the NW side of the cliff. Four cisterns (each about 4000 m^3 in capacity), were placed in a row and were fed by the occasional floods which flowed in the wadi N of the mountain. The remaining eight cisterns (3000 m^3 each), were in a higher row and received floodwaters from a second wadi to the S.

These enormous cisterns were connected with the mountain's top by a system of paths. One pathway led from the lower cisterns first to the E main gangway (the "snake pass") and through it to the top. The other path, from the upper row, connected with the cisterns at the NW corner of the plateau (into the "water gate").

The largest concentration of buildings on top of Masada was along the plateau's N edge. It consisted of the Northern Palace, the large bathhouse, the storehouses, the earlier building No. 7, and the small palace building No. 9.

The Northern Palace was one of Herod's main architectural achievements. It was built on three natural terraces; about 30 m separate the elevations between the uppermost and the lowest levels of the palace. The entrance into the palace (from a large square situated to its S) passed through the upper terrace which served as the dormitory wing. In front of this wing was a large half-rounded courtyard surrounded by open colonnades.

Access to the lower terraces was by stairways and stairwells. The central terrace was a rounded structure with a few rooms attached to the cliff. Only the foundations of the rounded structure remain, but there are good reasons to believe that there was a *tholos*-shaped hall surrounded by a colonnade on these foundations.

The lowest and best preserved terrace was the square reception hall (9 × 10 m), surrounded by colonnades and a few adjacent rooms. A small bathhouse in the Roman style was in the basement floor. Colorful, well-preserved frescoes decorated this and probably the other terraces.

A large bathhouse was exposed S of the above-mentioned square. One entered it through a peristyled courtyard—a palaestra—and it included a large entrance room (*apoditerium*), a tepid room, a cold room (*frigidarium*) built as a ritual immersion pool, and a large hot room (*caldarium*), originally covered by a barrel-vaulted ceiling. Most of the heating installation (the *hypocaust*) was still preserved in the latter

room. In the other rooms many of the wall and ceiling decorations have survived, such as wall frescoes and *opus sectile* floors.

A storehouse complex surrounded the large bathhouse on three of its sides. There were 11 long (27 m) storerooms and another group of 6 shorter (20 m) storerooms (all were 4 m wide). Additional storage and administrative rooms were exposed S of the main storage block and a watchtower stood at the S edge (on Masada's highest point to guard this important area). To the W of the main storage block was building No. 7. To its N was a large courtyard, which served as the W entrance to the N area. At a later stage, Herod placed the water gate at this point. At the same time, a few more storerooms were added at the S side of the N area, along with building No. 8, a small palace located outside the S entrance to the N area. Building No. 8 was similar (although with a slightly different plan) to the four Hasmonean palaces described above.

Major additions were added during Herod's life to the Western Palace and included large service wings, a few long storerooms, and a special wing built for the palace's guards. Eventually, it became the second largest complex on top of Masada.

With the later additions, Masada was fortified with a 1400-m long casemate wall, about 6.5 m wide. The wall included about 70 rooms, some short, but some more than 30 m long. The wall included more than 30 towers. Two gates provided access through the wall: the E gate, on top of the snake path and the W one, above the path from the W (now covered by the Roman siege ramp).

The defensive infrastructure, so well implemented by the Hasmoneans, but strengthened mainly by Herod, proved its viability about 100 years later, during the first Jewish revolt against the Romans.

EHUD NETZER

MASH (PERSON) [Heb *maš* (מַשׁ)]. The Table of Nations presents Mash as a great-grandson of Noah through Shem and Aram, the ancestor of the Aramaeans or Syrians (Gen 10:23). There is no consensus of opinion as to the identity of Mash.

The LXX reads "Mosoch" ("Meshekh"). This corresponds with that name found in much the same position in the parallel genealogy in 1 Chr 1:17 (the preceding phrase "the sons of"Aram found in Genesis, has dropped out in Chronicles). LXX could reflect an older Hebrew tradition, before the loss of the final /k/ in Gen 10:23. It could also be a harmonization with the Chronicles genealogy. Against this proposal is the existence of the name Meshekh elsewhere in the Table of Nations (Gen 10:2), where duplicate names occur only rarely, if at all.

The Samaritan Pentateuch reads the name as Massa, which is the same as one of the sons of Ishmael in Gen 25:14. In the consonantal Hebrew script this would be the same as the geographical location Mesha in Gen 10:30. This site is apparently located in South Arabia. It would therefore fit with an Ishmaelite association, but not with the geographical location of the other identifiable descendants of Aram.

Three more northerly locales are possible in light of extrabiblical sources. Hittite texts refer to a Masa in west-central Anatolia (*CAH*^{3} 2: 253; *CAH*^{3} 2: 360). Gilgamesh visited the "mountain(s) of Mashu" which were in the direction of the setting sun in relation to his home in Uruk (tablet 9.2.2, 4.40). These are possibly in Lebanon (Wenham *Genesis* WBC, 230; cf. Masy, Smith 1915:17). There is also a Mount Masius (Tur Abdin) in northern Mesopotamia (Simons *GTTOT,* 8; Wenham *Genesis* WBC, 230), an area inhabited by Arameans (Roux 1964: 232). This would fit well with the biblical context. The relationship between these three northern locales is unclear. They could be completely different places, or they could be the identical location referred to in different sources.

CRAIG D. BOWMAN

MASKHUTA, TELL EL- (30°33′ N; 32°06′ E). A multicomponent stratified townsite in the Wadi Tumilat region of the E Nile delta, some 16 km W of modern Ismailia. It was first excavated in 1883 by E. Naville (1903). Subsequent investigations were conducted by J. Clédat (1910; 1914), and more recently by various members of the Egyptian Antiquities Organization. Beginning in 1977, multidisciplinary stratigraphic excavations of the "Wadi Tumilat Project" (1978, 1979, 1981, 1983, 1985) were undertaken by a team directed by J. S. Holladay (1982; 1987; 1988; MacDonald 1980; Paice 1987). The excavations were complemented by surveys of the site and its immediate region in 1977–78. A systematic stratified randomized transect survey of the entire length of the Wadi Tumilat, investigating all known antiquities sites, was conducted in 1983 under the codirectorship of C. A. Redmount and J. S. Holladay (Redmount 1989; 1990), in its turn complementing a systematic aligned 25-m gridded survey of the site itself by E. B. Banning in 1981.

A. Identification

We do not know the site's name during the Egyptian Second Intermediate period (below). Based upon inscriptions found at the site by Naville (1903: 5–10; 14–24) and Holladay (fc.) and upon Egyptian literary references interpreted in the light of the site's chronology (Redford *LÄ* 4: 1056, especially n. 4), it is now certain that the Egyptian name of the site established by Necho II, ca. 610 B.C., was *Per-Atum Ṯukw* (*Pr-Itm Ṯkw*: the "Estate of Atum in *Ṯkw*"), which came into biblical Hebrew as *pitōm* (English "Pithom"; Exod 1:11), in the *region* of *Ṯkw*, biblical *sukkôt* (English "Succoth"; Exod 12:37; 13:20; Num 33:5–6). In literary contexts this may variously be shortened to *Pr, Ḥwt* ("Temple"), or *Ṯkw*. It is important not to confuse this *Pr-Itm* with other instances of the title, especially those relating to the much earlier "Estate of Atum" at Heliopolis and ʿAn (the region of Turah and the Red Mountain), of which the later cult installations are derivative (Redford 1963: 403–7; *LÄ* 4: 1056, n. 4; 1057, n. 20). Thus, the *Pr-Itm* mentioned on the 22nd-Dynasty statue of Ankh-renep-nefer (time of Osorkon II, ca. 875–850 B.C.), found by Naville at Tell el-Maskhuta (1903: 14–16, frontispiece and pl. 4), relates to the cult of Atum at Heliopolis and ʿAn, and not to the then unoccupied site of Tell el-Maskhuta, the statue only being relocated to the new *Pr-Itm* at some unknown time after 610 B.C. Studies of the literary occurrences of this name indicate that as the name of an E delta townsite, *Pr-Itm* does not antedate the Saite period (Redford 1963: 404, 416; *LÄ* 4: 1055–57, especially nn. 10–15). Combined with the archaeologically

documented history of occupation at the site, these conclusions have obvious implications for the interpretation of the biblical text (below).

During classical times, the site was still known by its ancient name, as seen in the Pithom Stele (Naville 1903: 18–21) and by Herodotus' *Patoumos tēn Arabiēn polis*: "the Arabian town of Patumus" (2.158). Generally, however, it was known by its Hellenized translation-name of *Hērōōn polis* (Heroonpolis, Eroopolis, Heroon, Hero, etc.), as in the LXX of Gen 46.28, *kath Hērōōn polin eis gēn Ramessē,* "near Heroopolis in the land of Ramses." Under the Romans, this was shortened to *Ēro* (Ero, Hero, etc.) (Naville 1903: 8–9; 21–24; Redford, *LÄ* 4: 1054–56, cf. n. 2).

The site is mentioned (as "Heroonpolis" and "Hero") as late as A.D. 381 in the memoirs of the pilgrim Egeria (Wilkinson 1981: 101–2). By that time the location may have shifted somewhat from the present Tell el-Maskhuta.

B. Archaeological Findings

1. 2d Millennium B.C. Excavation and survey data agree in placing the first occupation of the site in the Egyptian Second Intermediate period. More exactly, in terms of agreement between the pottery analysis and a study of the scarab evidence (personal communication, J. Weinstein), the occupation could be specified as existing from the Syro-Palestinian MB II into the MB III period, perhaps ca. 1750 to ca. 1625 B.C., though neither the dates nor the time span should be treated as absolutes.

This occupation appears to represent an architecturally and culturally sophisticated seasonal (winter through wheat harvest) outpost of the pre-Hyksos and early Hyksos Asiatic occupation of the E delta, previously known from Tell el-Yehudiyeh (Petrie 1906: 3–15) and Tell el-Dab‹a (Bietak 1981). Although Egyptian elements are present, the architecture and material culture assemblage correspond most closely with those of the major center of Tell el-Dab‹a, of which the village at Tell el-Maskhuta may be a local outpost. Thus, the ethnic background of the inhabitants seems to derive from the Syro-Palestinian sphere, with some indications (e.g., the very distinctive forms of the thick-ware carinated bowls) suggesting at least partial derivation from N Syria rather than S Palestine.

The complex web of relationships obtaining between these E delta sites and the greater Syro-Palestinian culture sphere may be illustrated by two thumbnail sketches of the cooking pot series, an aspect of the material culture complex closely sensitive to intergroup (ethnic?) variation. First, the earliest occupational phases are characterized by the presence of large numbers of handmade flat-bottomed cooking pots, similar to the handmade vessels forming a minor constituent of the Palestinian MB I–II pottery repertoire (e.g., Cole 1984: 64–65), but generally lacking the latter's "rope molding" decoration. Identical cooking pots characterize MB (?) "Bedouin" encampments in the Sinai (E. Oren, personal communication), and yet others, not quite so closely similar, appear to be characteristic of some modern Bedouin encampments (Redmount 1990). The "Midianite," or "Negebite," pottery of the early S Palestinian Iron Age affords yet another set of similarities. This suggests that a minority of the early population—including elements closely related to food preparation—may have derived from local Bedouin elements. A possible corollary of this inference with respect to the Palestinian MB Age has to do with the identity of the (minority) bearers of similarly handmade cooking pot traditions in the predominantly urbanized MB culture which, as at Tell el-Maskhuta, is otherwise dominated by mass-produced pottery incorporating sophisticated fast wheel-forming techniques.

Later stages of the Tell el-Maskhuta Second Intermediate period occupation were dominated by "wheel made" hole-mouth cooking pots—already present at the stage of site formation, but in very low numbers. These vessels are most closely paralleled, as a group, by the wheel-made cooking pots of Middle Bronze II Shechem (Seger 1965: 236; fig. 111:s, t; Cole 1984: 63–65; fig. 18, subforms Ch. 11, Ch. 12). This is significant in that Shechem is one of the few truly "MB II" Palestinian stratigraphic sequences yet published. Similar vessels appear in limited numbers at Megiddo and Tell Beit Mirsim, and, to complicate the picture, they also characterize the Middle Bronze I stratification at Aphek, where they are termed "kraters" in Beck's analysis (1975: 48–50; figs. 2:7–8, 4:18–19, 6:15), the term "cooking pot" being reserved for a closely similar vessel form with an upright, rather than folded-back and pasted-down, rim (e.g., Beck 1975: figs. 2:11–14, 4:20–21, etc.). The vessel, with its distinctive "hole mouth" rim form,

also seems to appear in limited numbers in stratification presently dated to the late 3d millennium in N Syria (Dornemann 1979: figs. 17:27; 18:51; and 19:1), but is already out of date there by the time of the later Middle Bronze Age (Dornemann 1979: figs. 20b–23).

After a short initial phase characterized by houses with thin walls only one brick wide, the inhabitants lived in well-built mudbrick houses, stored their grain harvests in above-ground circular (probably beehive-shaped) silos, and had well-defined property lines marked by curvilinear mudbrick walls. They buried their dead within the village itself, for the most part in underground mudbrick tombs (constructed in pits and subsequently backfilled), closely paralleling the simpler sorts of tombs from Tell el-Dabʿa (van den Brink 1982). Warriors' tombs—those characterized by the inclusion of weapons—were marked by external ass-burials (Holladay 1982: 44; pls. 40–41), a practice also known from Tell el-Dabʿa (van den Brink 1982: 46–47, 74–83) and Tell el-ʿAjjul in S Palestine (Petrie 1931: 3–5; pls. 8–9; 1932: 5; pl. 46; 1934: 16; pls. 50, 58; Petrie, MacKay, and Murray 1952: pp. 22–34; pl. 39). Infants were variously buried in miniature mudbrick tombs, in subcourtyard jar burials, or, in one case, in a mudbrick cist secondarily inserted into an outdoor mudbrick paving. The proportional rarity of such burials (as in Palestine), however, suggests that other practices—whether at the summer home site or at Tell el-Maskhuta—may have been the norm. Except for the jar burials (one of which had a red burnished juglet as an offering, the other had nothing), all these burials were marked by the presence of personal jewelry, including gold and silver earrings and headbands, silver torques and bracelets, scarabs (some gold- or silver-mounted), bronze and silver toggle pins, and, for the "warriors' " tombs, bronze weapons, in addition to food offerings and pottery. One of the latest burials yielded a scarab of Pharaoh Sebek-Hotep IV (13th Dynasty, ca. 1740–1730 B.C.). Other burials, whether simple inhumations or in disused silos, had either no grave goods or only very modest food and drink offerings, and may have been those of (Egyptian? Bedouin?) slaves or servants. Two burials in simple rectilinear mudbrick tombs appear slightly to postdate the period of occupation. Both individuals seem to have met a violent end, one by blows to the head from a typical chisel-shaped "Asiatic" battle-ax (Holladay 1982: 44–45; pls. 43–44—on the basis of further analysis now interpreted as a gracile male), the other possibly having suffered a broken neck.

These early inhabitants used standardized brick sizes, engaged in copper or bronze smelting, manufactured pottery on site, and used the vertical loom. They hunted gazelle, bubalis (a large antelope now extinct in Egypt), various smaller animals, and a variety of wading birds and waterfowl, and kept horses, donkeys, cattle, sheep, goats, pigs, dogs, and cats. Provisionally, camels seem to be present, possibly as a hunted wild species, though this finding must be subjected to further detailed stratigraphic analysis before it can be regarded as certain. The principal cultivated plants were barley and emmer wheat, harvested with composite sickles made from flint probably imported from the Sinai. Quartzite grinders, also imported either from the E desert or the Sinai, were used and reused even after initial breakage. The settlement went through some six architectural phases prior to its apparently peaceful abandonment at some time prior to the final phase of the developed Palestinian MB II tradition. The reason for the site's existence is still unclear, but may have had to do with border control and/or regulating or assisting overland trade during the winter months.

2. 1st Millennium B.C. Following a long abandonment, settlement was renewed early in the last decade of the 7th century B.C., in conjunction with Necho II's construction of a canal from the Pelusiac branch of the Nile River to the Red Sea by way of the Wadi Tumilat (Hdt. 2.158). Inaugurated by the sacrifice of a large number of young bulls buried in rectilinear graves (four were found in one limited excavation area), the new settlement witnessed, from its inception, a major linkage to the Mediterranean trade, attested by the presence of quantities of imported trade amphorae of Phoenician and Helladic origin. It was initially unfortified, but a heavy mudbrick fortification wall, enclosing an area of roughly 4 hectares, soon was erected, probably as an aftereffect of Necho's expulsion from Asia in 605 B.C. A massive destruction soon followed. This presumably, following the correlation of the pottery indicators with the historical data, marked Nebuchadnezzar's ill-fated campaign of 601 B.C., not hitherto known to have penetrated into Egypt. Successive destructions probably mark a second poorly documented campaign of Nebuchadnezzar in 568 B.C. and the Persian conquest of 525 B.C. Four great stelae erected by Darius the Great, one very

close to the site, the rest arcing down toward the Red Sea, attest to Darius' "completion" (in his terms) of the canal. A burn layer and a blocked-up stone-lined well mark the 487 B.C. revolt against the Persians. There were traces of a minor Judean presence at the site (below), similar to those already witnessed from Daphnae and Eliezer Oren's N Sinai Survey Site T.21 (Migdol? Oren 1984: 24), after the 601 B.C. destruction, but prior to the 568 B.C. destruction. The site was continuously occupied until sometime during the 4th century B.C. (Monuments of the 30th Egyptian Dynasty, ca. 380–343 B.C., may, or may not, have been original to the site, below.) It was strongly reoccupied in conjunction with Ptolemy II's renewal of the Red Sea canal. There was a cultural hiatus during the 1st century B.C., with large-scale resettlement toward the end of the 1st century A.D. This phase appears to have been abandoned after a relatively short period, although the length of occupation has not yet been fully established, and is presently controverted.

C. General Features

1. Ramesside Monuments. Contrary to Naville's conclusions, which to a large extent are based upon inscribed Ramesside monuments found at the site, there is absolutely no evidence for a New Kingdom or 19th Dynasty occupation at the site, despite widespread excavation and intensive survey. The pottery evidence, which would be decisive, is entirely lacking. Thus, the site's numerous massive monuments obviously were imported following the building of the sea-level canal, which made relative child's play of the work of moving monuments weighing tons. Among these imports, items having to do with Atum are prominent, indicating a careful selection and purposive cult-related activity on the part of the royal patron—whether native Egyptian, Persian, or Greek. If the Ramesside monuments were already in place by the first part of the 6th century B.C., this would go a long way toward explaining certain aspects of the biblical account of the Exodus events (below). By whatever reckoning, their presence in later periods naturally contributed to the climate of understanding which led Naville to the interpretations voiced in his trailblazing work (1885; 4th rev. ed. in 1903).

2. Canal and Commerce. The site's later fortunes (ca. 610 B.C.–2d/3d [?] century A.D.) seem closely to parallel the fortunes of the sea-level Red Sea canal, and it would appear that the site was a major defense and control point, emporium, and entrepôt for this canal. It probably also served, during the Persian period (and later?), as a transfer point to and from Qedarite-controlled (and later Nabatean-controlled?) caravan routes in the Sinai, S Palestine, and the Transjordan (below). Massive storehouses, first found by Naville, and attributed to the building activities of the Israelites (Exod 1:11), may now be dated—in at least three major phases—to the later 3d and 2d centuries B.C., rather than to the Egyptian 19th Dynasty (Holladay 1982: 30–32). Smaller storehouses, differently sited than the very large Ptolemaic storehouses, are witnessed from the later Persian period and the reign of Ptolemy II. This suggests, but does not demonstrate, that the site's function as an entrepôt—which was demonstrably true for the later period—may have been part of a continuing site function from the early days of the settlement in the late 7th century B.C.; however, only moderately sized domestic (?) granaries widely distributed over the area of the fortified enclosure have so far been excavated from the Saite and early Persian periods.

Other socioeconomic activities witnessed for the site include a large temple of Atum, probably part of the site's foundation (Redford, *LÄ* 4: 1055), still functioning under the Persians (below), and apparently massively renewed under Ptolemy II. The economy was based upon architecture, herding, and a variety of craft-related industrial pursuits—probably only of local importance—such as bronze working, pottery making, large-scale commercial/temple-related (?) bread making, etc. Within this context, the Tell el-Maskhuta bowls (Rabinowitz 1956; Dumbrell 1971) become more comprehensible, appearing to be Qedarite state gifts to the temple in connection with caravan-related aspects of the S Arabian/Horn of Africa trade. This inference was given further substance, considering the archaeological "invisibility" of commodities like frankincense and myrrh, by the discovery of miniature incense altars (ultimately of S Arabian inspiration), and by the presence of Himyaritic (S Arabian) silver coinage, which are associated with overland aspects of the incense trade.

Heavy Phoenician involvement, possibly amounting to a monopoly of the canal-related Mediterranean trade entering the Pelusiac branch of the Nile, is attested not only by the presence of vast numbers of Phoenician amphorae, beginning with the earliest 7th-century levels, but also by a characteristically

Phoenician terra-cotta figurine ("Seated Goddess," cf. Culican 1969) found in the remains of a small limestone shrine. This suggests the resident status of ethnic Phoenicians (cf. Hdt. 2.112 with respect to Memphis). Aside from the amphorae, however, Phoenician pottery (such as that typically marking Phoenician settlements along the Levantine coast) either does not appear or is extremely rare. In contrast to Naukratis or Daphnae, no great quantity of Greek ostraca or graffiti has yet been found at Tell el-Maskhuta. A few Phoenician ostraca, perhaps better termed "jar labels," do occur, however. The majority of the labels—on both Phoenician and Greek amphorae—are in demotic. Sizable quantities of Greek amphorae, second only to the Phoenician in their numbers, indicate that whoever the primary traders, the Greek islands—variously Thasos, Chios, Samos, and (rarely) Lesbos—were not excluded from the trading circle. (Under the Ptolemies, the custom shifted, as elsewhere in the Levant, to Rhodes, Cos, and Knidos.) Cyprus seems to be represented in the loop- or basket-handled jar series, and a few store-jars seem to come from the S coast of Palestine. Greek fine wares of the 7th–5th centuries were rare, particularly in comparison to Naukratis, or even to Daphnae. During the Hellenistic through Roman periods the local pottery was surprisingly similar to that common throughout greater Syria-Palestine, presumably witnessing to the Hellenistic through Roman *koine,* although many strongly Egyptian forms, now including domestic Egyptian amphorae, some copying earlier Phoenician types, continued at least as far as the later Ptolemaic period. Egyptian and Gallo-Roman amphorae, together with a few amphorae of Italian (Brindisi) origin and Palestinian vessels from the vicinity of Gaza, characterize the Roman period. Tombs of the Persian, Hellenistic (?), and Roman periods have been excavated at the site, mostly by the Egyptian Antiquities Organization (for the Roman period, see Holladay 1982: 38–43).

D. Significance for Biblical Studies

1. Exodus Traditions. The citation of Pithom and Raamses as store cities built by the children of Israel has long been held to be an important piece of evidence both for dating the Exodus and for validating the antiquity of Israel's traditions about the Exodus (Exod 1:11). These conclusions now seem viable only if the presently secure site identification is taken to be erroneous. With the determination of the actual settlement patterns at Tell el-Maskhuta, the burden of the evidence now shifts drastically to favor the late dating of this passage, as long argued by D. B. Redford (Redford 1963: 415–18). This raises questions about the actual origin and purpose of the citation. Citing the evidence for a minor post-601/pre-568 B.C. Judean presence, inferred from the presence of a characteristically Judean lamp (in this instance, handmade) and wine decanter, Holladay (1988) has suggested that the passage is an anachronistic gloss to the developing literature of the Passover Haggadah by Judean refugees. These refugees sought sanctuary in the E delta following the murder of the Babylonian governor Gedaliah ben Ahikam in 582 B.C. (Jer 41:1–45:1). In this analysis, the factual basis for the attribution is posited to be an incorrect "archaeological inference" arising from the Judean refugees' recent acquaintance with the evidence of earlier "Asiatic" remains at the site, particularly the rich and very un-Egyptian tombs, which would have been despoiled at every opportunity. If the Ramesside monuments were already in place (above), it is easy to see how the refugees' confusion could have been complete. In this connection, we should note the considerably later interest in Passover observance on the part of other Judeans resident in Egypt shown in the "Passover Papyrus" (*ANET,* 491). From this base, it would not be a far remove to the literary resources available to the later editors of the developing pentateuchal literature.

2. 7th-Century Socioeconomic Factors. With respect to the larger forces affecting the life of Judah, it can be argued that the advent of the sea-level canal in the reign of Necho signaled the end of the domination of the overland caravan routes of the immensely lucrative spice and incense trade. Not only do ship-borne goods travel at half the expense of camel caravans, despite the unfavorable sailing regime of the N Red Sea (Necho's fleet was based upon triremes; Hdt. 2.159) they also move more expeditiously and safely, with fewer revenues being extracted for safe passage. Monopoly of this trade (or tribute extracted from its profits) seems to have been the driving force behind much of the Neo-Assyrian and Neo-Babylonian effort in the W (Holladay fc.; Eph'al 1982). A good case can be made that much of Judah and the S Palestinian coast's material prosperity during the late 8th–7th centuries B.C. derived from revenues coming from the carefully controlled (e.g., the chariot city of Beer-sheba Strata III–II) overland

transport route which followed the Beersheba-Zered Depression en route to Gaza and, probably, to Ashdod (Holladay fc.). From this perspective, there can be no question about the purpose of Necho's Red Sea canal: it was intended to capture, once and for all, the bulk of the spice and incense trade with the Mediterranean world. From this perspective, Nebuchadnezzar's two campaigns against Egypt become completely explicable. For Judah's part, it now seems extremely probable that the socioeconomic and political events, hitherto quite inexplicable, precipitating Josiah's death at Necho's hand are directly related to this ongoing struggle for control of this traffic.

3. Tell el-Maskhuta Bowls. Finally, the excavations at Tell el-Maskhuta offer a much fuller view of the site—and indirectly of the SE portion of the Levant—during the Persian period than has previously been available. From this perspective there can be no question of "Arabian" hegemony, e.g., that of Geshem, King of Qedar, over the Wadi Tumilat—however construed (above; Rabinowitz 1956; Dumbrell 1971). The site is culturally and economically "Egyptian," and canal-related, throughout. That leaves Eph'al's carefully researched historical conclusion—"[Geshem may be regarded as] a leader of the Qedar tribal league, whose [W] influence extended from the approaches to Egypt at least as far as southern Palestine, and who may have been 'king of the Arabs,' controller of Arabian trade in southern Palestine" (1982: 212–13)—as not only the simplest and most economical, but also the most fitting, interpretation. In this connection, state gifts to the sanctuary of a major trading partner, particularly at a primary point of contact, would not only have been wholly appropriate, but expected. The hoard of thousands of Athenian tetradrachms of approximately the same date (late 5th to early 4th centuries B.C., cf. Rabinowitz 1956: 4, n. 24), probably derives from similar gifts from the Mediterranean (i.e., Phoenician, or Phoenician and Helladic) end of the traffic. Once again, this highlights the great bearing of international commerce, in particular, the spice and incense trade, upon what otherwise might have been considered purely local concerns (Neh 2:19; 6:1–2, 6).

MASORAH. The term "Masorah" (tradition) refers, in its widest sense, to the traditional rules governing the production of a handwritten copy of the biblical text. This applies to a codex (book-form text) with vowel and accent signs, intended for the use of scholars, or a scroll without them, intended for use in the liturgy. These rules, which in their origin were concerned only with the latter type of text, cover all aspects of the production of such a manuscript, from the preparation of the materials to its completion. In the narrower sense, in which it is usually used, the term refers to the corpus of notes in copies of the Masoretic Text which were prepared for scholarly use.

A small circle (*circellus*) above a word in such a text (or between two or more words) indicates that a marginal note provides information on that word (or group of words). The basic information is given in the vertical margin beside the line of text. The most common information is represented by the letter *lamed* representing the Aramaic word for "none," indicating that the word (usually specifically that combination of letters) does not occur elsewhere. Where a word occurs more than once, other letters, representing numbers, are used to record the number of occurrences. One example is the first word in Genesis, *brʾšyt,* which, as the letter *he* signifies, occurs five times in the Leningrad Codex. In some cases, further highly abbreviated information is added. In Gen 1:1 the note adds "Three (of the five cases occur) at the beginning of a verse." A small proportion of these notes gives other sorts of information, such as the required pronunciation (Heb *qerê*) in cases where the form written in the text (Heb *kĕtîb*) suggests a different word. See KETHIB AND QERE. Collectively, these notes placed in the vertical margins of the text are known as the *masorah parva* or "lesser Masorah" (Mp), or Heb *masorâ qĕṭannâ.*

The details of the information summarized in the Mp are given in the lists of the *masorah magna* or "greater Masorah" (Mm), or Heb *masorâ gĕdōlâ.* The word in question, followed by the information given in the Mp, is typically used as a heading, and is followed by a list of the occurrences. Thus, "*brʾšyt* (occurs) five (times), three at the beginning of a verse: Gen 1:1; Jer 26:1; 27:1; and two within a verse: Jer 28:1; 49:34." The references are given in the form of key words quoted from the verse in question. One or two words usually sufficed for the scholars who used the earliest texts; later lists tend to use more. If blank leaves are left at the end of a codex, they may be filled with Masoretic lists known as the *masorah finalis.* Such material often gives other types of information, such as lists of words which occur once with and once without the conjunction, or lists of words written defectively (Heb *ḥāsēr,* lacking an expected vowel letter).

Manuscript codices differ in the Masoretic notes they provide. Moreover, in any particular codex, neither the lists of the Mm nor the notes of the Mp are necessarily given at every occurrence of the word(s) in question. Thus, the list of occurrences of the words *brʾšyt* is only given at Gen 1:1 in the Leningrad Codex. The note of the Mp is given in three different forms, and is altogether absent at Jer 26:1. The Hebrew University Bible Project edition reproduces the Masoretic notes and lists (as far as is possible) exactly as they occur in the Aleppo Codex. In the *BHS*, the Mp of the Leningrad Codex is harmonized, so that the fullest form of the note is given at each occurrence of the word in question. The lists of the Mm are published separately by G. E. Weil (1971).

The vast majority of the lists refer to the letters of the text. Some refer to pronunciation. The earliest of these are probably the *qĕrê* notes, since these, which give consonants representing the word to be read, would be largely superfluous after the introduction of vowel signs. A few notes, presumably from the latest period of the formation of the corpus, deal specifically with vowel or accent signs. Two categories of notes relate to the understanding of the text. The *tiqqûnê hasōpērîm,* eighteen cases in which the scribes are said to have "corrected" expressions which might seem disrespectful to God, are treated

elsewhere. See EMENDATIONS, SCRIBAL. The *sĕbîrîn* notes are similar to the *qĕrê* notes in that they present a word other than that in the written text. For example, the text of Jer 48:45 presents a difficulty, because the feminine noun *ʾš* appears as subject of the masculine verb form *yṣʾ*. The *sĕbîrîn* note presents the expected feminine verb form. This is not done, as often used to be suggested, to correct the form written in the text, but to confirm it. The term *sĕbîrîn* means something like "they suppose," that is, " (people) suppose (that the verb should appear in the feminine form) *yṣʾh* (but in fact the text is correct as written)." The language of this note, and of the Masorah generally, is Aramaic, the language of scholarship for most oriental Jews throughout the first millennium C.E.

The available evidence suggests that the notes of the Masorah were built up over a long period, but largely before the general use of vowel and accent signs. The lists probably originally circulated independently, and were only later included in codices as a convenience to scholars. The total corpus of the notes and lists is very extensive; only a selection appears in most codices. Some collections of lists, such as those known as *Okhlah we-Okhlah* and *Diqdûqê ha-Teʿāmim,* were given titles as independent treatises, but this seems to have been a relatively late phenomenon.

The main purpose of the notes of the Masorah was undoubtedly the preservation of the traditional wording and spelling of the text. Their value for this purpose is proved by the fact that the variants found in medieval manuscripts, though numerous, are few and minor compared to those found in comparable bodies of traditional literature, as the Mishnah or the. Many lists would have been of use for interpretation, however, and this was probably an important secondary purpose for their compilation. Other lists contain information of value for grammatical study, and are included in early grammatical works. The viewpoint of these lists is not that of the modern scholar, however, so they are now mainly of historical interest.

MASORETES. The English equivalent of *baʿalê hammasorâ,* the name for the scholars whose work it was to maintain the tradition which governed the production of copies of the biblical text (the Masoretic Text) for liturgical or scholarly use. Earlier scholars engaged in this activity were known as "scribes" (*sōpĕrîm*). The work of the scribes was the establishment and preservation of the correct form of the consonantal text. A tradition recounts that they were called *sōpĕrîm* because they "counted" the letters, words, and verses of the text. (The verb [Heb *spr*] which gives rise to the word *sōpĕrîm* means both to write and to count.) This was one of the methods of ensuring that the spelling and wording of the text did not change.

The Masoretes continued this work, and extended it to individual words, recording, in numerous lists, the number of cases in which one spelling or another was used. Such lists provided a means of reference against which innumerable details of the spelling of the text could be checked. As the general populace, speaking first Aramaic, and later Arabic, found the ancient Hebrew of the text more and more difficult to read in the traditional way, systems of vowel and accent signs were developed to assist in the preservation and teaching of the traditional pronunciation and chant. In the last stage of Masoretic activity, these signs too were reduced to a fixed tradition, in which small details of sound change were precisely noted. This feature of the writing system, which gives such trouble to beginners in biblical Hebrew, derives from the desire to represent all significant features of the reading tradition. There would be no need to represent many of these details in a system intended for ordinary purposes. The vowel and accent signs have never been included in texts used in the liturgy, but, because they are so valuable for the understanding of the text, they are generally given in texts intended for scholarly and general use.

The "scribes" and the "Masoretes" thus differed in the type of work which they did, but not in their purpose. Both worked to ensure that the biblical tradition was passed on unchanged to succeeding generations. The beginning of activity of the "Masoretic" type may perhaps be dated as early as 500 C.E. The foundations of this work can be seen in the Talmudic literature. Many interpretations of biblical

verses recorded in this material are based on the same details of spelling which were the concern of the Masoretes, such as the use or nonuse of vowel letters or of the conjunctive *waw.* Passages presenting these interpretations may even include a statement of the number of times the feature occurs, as do the Masoretic notes. However, most such passages are not formulated in the style typical of the Masoretes, and occasionally the information given conflicts with the later Masoretic tradition.

The treatise known as *Masseket Soferîm,* "The Tractate of the Scribes" (now associated with the Talmud as a "minor tractate") was probably composed in the 8th century C.E. In this tractate, the material found in the earlier Talmudic literature, with some additions, is presented in typical Masoretic style. The phenomena which are of interest are enumerated and are presented in lists similar to those of later Masoretic compilations.

The list which gives the differences between the *madinḥā›ê,* or "Easterners," and the *ma‹ărbā›ê,* or "Westerners," may contain some of the earlier material in these later Masoretic compilations. The differences listed are minor variations in the letters of the text. The identity of the two groups of scholars referred to is uncertain, and no text which can be classified as "Eastern" or "Western" in terms of these lists is now known.

A few Masoretic notes cite an authority for a particular reading. This may be a text, cited by a name, such as "Hilleli," or merely as "corrected" (*muggâ*); none of these texts have been preserved for us. The authority cited may be a scholar, a number of whom are referred to by name. Such scholars are cited as authorities for details of the vocalization or accentuation of individual words, and so must have been active during the final stages of the work leading to the completion of the Masoretic Text.

The only one of these names about which we have any significant information is that of ben Asher. Seven generations of Masoretic scholars are recorded, from the ancestor, R. Asher *ha-Zāqen,* down to Aharon ben Asher, the most famous of the Masoretic scholars. Aharon was evidently the ben Asher of the lists of variants (*ḥillûpîm*) between ben Asher and ben Naphtali. A few of these variants are minor matters of spelling; the majority are details of vowel painting and accentuation. No known text shows one of the sets of variants in these lists with complete consistency, but the Aleppo Codex, which was supplied with vowel and accent signs by Aharon ben Asher, corresponds with the ben Asher of the lists in 94 percent of the cases. (The Leningrad Codex, the next closest, corresponds in 92 percent.) Here, then, there is a real link between the texts which we have and one of the names in the Masoretic literature.

Even here, however, there is mystery. A number of the features in which ben Naphtali systematically differs from ben Asher (as the use of long *ḥireq,* as *lîśrā›ēl,* where ben Asher uses *šewa-yod-ḥireq,* as *lĕyiśrā›ēl*) are found in manuscripts, but neither the manuscripts which show them, nor any other known texts, show a high level of correspondence with the ben Naphtali of the lists overall. The highest level found (64 percent) is found in the Cairo Codex, which, according to its colophon, was written in 896 by Mosheh, the father of Aharon ben Asher. This is interesting evidence of the way the Masoretes worked. Despite his scholarly ancestry, Aharon evidently did not maintain a family tradition, but (presumably) promulgated the form of tradition formulated by the Masoretes of Tiberias as a group. This may add some plausibility to the suggestion that the name of ben Naphtali (of whom nothing is known beyond the divergence from ben Asher recorded in these lists) came to be used for any reading in known sources which was not accepted by Aharon ben Asher.

The work of the Masoretes can be said to have been crowned by the production of the Aleppo Codex, to which the vowel and accent signs and Masoretic notes were added by Aharon ben Asher. Of all currently known texts, this was evidently the first copy of the whole Bible which had been produced complete with these details. The tradition which it represented became the standard form of the text. This was due not only to the respect in which the name of ben Asher was held. His tradition represented the work of the Masoretes of Tiberias, who were renowned for their linguistic accuracy. More than this, their tradition was believed to be the authentic tradition of the Holy Land, passed on in unbroken line from the generation of Ezra.

Individual Masoretes such as Aharon ben Asher preserved and maintained individual traditions. In the finest codices, such as the Aleppo Codex, the Masoretic notes are consistent with the text of the codex in

which they are written. Since each codex differs slightly from others, the Masorah of one codex is not fully consistent with the text of another. After the time of Aharon ben Asher, it became common to supplement the Masorah of one codex with further notes drawn from others, so that the individual traditions began to be mixed. The inconsistency between Masorah and text which resulted can already be seen to a slight extent in the Leningrad Codex, as in Isa 51:16, where the text reads *wʾśym,* but the Masorah requires *wʾśm,* the reading of the Aleppo Codex. Because of this, the chief concern of the Masoretic scholar came to be the selection of the best tradition in any given case from the manuscript variants available to him, as was the case with the work of Jacob ben Ḥayyim on his edition (Vienna 1524–25). This in turn has given way, in our own day, to the attempt to trace the different strands of the earlier traditions.

E. J. REVELL

MASORETIC ACCENTS. The term "accent" (Heb *ṭaʿam*) refers to the signs marked on the words of the biblical text. These accents relate the words of the text to the music to which it is chanted in the liturgy. Accent signs do not represent individual notes, but groups of notes ("motifs" or "tropes") used in a particular form of chant. For this reason, the same accentuation has the capability to relate the words to the music of several different forms of chant.

The chant presents the text meaningfully to the congregation. The musical motifs mark off words, phrases, or larger units of meaning, and in combination show the relation of these units to each other. Consequently the accent signs in the text have something of the function of punctuation. Most accent signs are marked on the stress syllable of the word. In a few cases this indication of stress position is helpful in classifying the word.

In the standard Tiberian tradition, the accents used in the books of Psalms, Job, and Proverbs (known as the "Three Books") differ from those used in the rest of the Bible (known as the "Twenty-one Books"). The general principles governing the use of both sets of accents are the same. Thus both use accents of two types: (1) disjunctive accents (DA), which mark the last word in a semantic unit of one or more words; and (2) conjunctive accents (CA), which mark the words forming a semantic unit ending at the next disjunctive. Three other signs are also used, which are not considered as accents because they do not represent musical motifs. These are (1) *maqqēp,* which joins two or more words, all of which are chanted to the motif marked by the accent on the last word; (2) *gaʿyâ* (also known as *meteg*), marked on a syllable which is not accented to show that it receives slower pronunciation than it otherwise would (or, as some see it, that it has secondary stress. Conjunctives are sometimes marked as secondary accents with a word in a similar way); (3) *pāsēq,* which marks a slight pause after a word with a conjunctive accent.

The primary accent signs are listed in Fig. MAS.01. Names in parentheses identify an alternative form of the accent in question. The accent *pašṭāʾ* (DA.3.b) is always marked on the last letter of the word. Where the last vowel is not stressed, it is marked on the letter before the stressed vowel as well. Other accents which are restricted to the first or last letter of the word (as *sĕgōltāʾ* [DA.2.a]) are also regularly repeated to mark stress position in some manuscripts, but in the Aleppo and Leningrad codices, this is done only where the stress position is of particular significance.

The accentuation is based on the division of the text into verses (Heb *pāsûq*). This division appears to have been established in Talmudic times. (But the division into chapters, and so the numbering of verses, is medieval.) The verse division does not always coincide with the earlier division into *pisqōt* so that, occasionally, a paragraph division occurs within a verse (*pisqâ bĕʾemṣāʿ pāsûq,* as 1 Sam 14:12, 19, 37).

Each verse is an independent unit of accentuation, marked at the end with the accent *sîllûq* (DA.1.a). (In most texts, two dots in vertical line, or some other sign, are also used to mark the divisions between the verses.) The other accents used in any verse depend on the number of words in the verse, and on their syntactic and semantic relationship. On a simple level, the accentuation can be described as marking

"terminal" accent clauses (DA.1), ending with *sîllûq* or *›atnāḥ*, and "medial" accent clauses (DA.2), ending with *zāqēp* or *sĕgōltā›*. The shortest verses contain only a terminal clause, such as Gen 2:1, "The heavens, and the earth and all their hosts were finished." A few verses such as Gen 23:12, consist of one medial and one terminal clause. However, where a verse contains more than one accent clause, it usually contains two terminal clauses, the first ending with *›atnāḥ* (DA.1.b), the second with *sîllûq*. A verse may be composed only of two terminal clauses, i.e., Gen 2:4, "These are the generations of the heaven and the earth in their creation [*›atnāḥ*] on the day when God made earth and heaven [*sîllûq*]." More often, one of the terminal clauses, or both, are preceded by medial clauses, i.e., Gen 2:3, "God blessed the seventh day [*zāqēp*] and sanctified in [*›atnāḥ*] because on it he had ceased from all his work [*zāqēp*] which God had created by making." No verse contains more than two terminal clauses, but either may be preceded by several medial clauses. Where more than one medial clause is used before *›atnāḥ*, the first may be marked by *sĕgōltā›*, i.e., Gen 3:3, " 'From the fruit of the tree which is in the middle of the garden' [*sĕgōltā›*] said God, 'You shall not eat of it [*zāqēp*] and you shall not touch it [*›atnāḥ*] lest you die.' "

As these examples show, the accent clauses do not correspond to any particular syntactic structures, nor are they used to divide the verse into units more or less equal in length. They divide the verse into sense units related to the chant. The different possibilities of accentuation are used to indicate the relationship between these units, and (as a result) to highlight the significance of some. Thus, in Gen 3:3, the main division of the verse (marked by *›atnāḥ*) comes almost at its end, showing the close relationship of the two prohibitions and emphasizing the warning of the penalty for transgression given in the last clause. The semantic analysis marked by the accentuation reflects, of course, the way the text was interpreted (on the basis of the tradition they had received) by the Masoretes who established the received accentuation.

The accent clauses are subdivided by the lesser disjunctive accents in much the same way as the verse is divided into clauses. The basic principle is generally described as "dichotomy." Each unit is divided in two (as is the verse by *›atnāḥ*); each of those units may be divided in two again, and so on. The resultant analysis is similar to the analysis of speech into "immediate constituents." The accents can be classified in grades of disjunctive force (marked 1–4 in Fig. MAS.01) on the basis of their use in marking the dichotomy. Typically, a unit ending with an accent of one grade is divided by one of the grade below (as an *›atnāḥ* unit by *zāqēp*).

A closer analysis of the use of accents must concern itself with the rules governing the sequence in which the accents can occur, and those governing the conjunctives which can be used before each disjunctive. The basis for these rules is the phonological structure of the words, and the music of the chant, rather than the syntactic or semantic relationship of the words. Musical requirements sometimes result in accentuation which seems illogical from the standpoint of syntax (i.e., a disjunctive accent used on a word which is closely related to the following). This is most striking with the (relatively high-grade) disjunctive *tipḥā›* (DA.2.C.). This accent must be used in any terminal clause which contains more than one accented word. As a result, *tipḥā›* may be used even on a preposition (*›t* in Gen 2:14), or a construct noun (*yd‹y* in Gen 3:5). In such cases, of course, the accent reflects a musical requirement, and does not imply any syntactic or semantic division.

The use of accents in the Three Books is more complex than in the Twenty-one, so only a superficial sketch can be given here. See Fig. MAS.02. Verses are commonly divided into two halves. In shorter verses, the first typically ends with *›atnāḥ* (DA.2) and is subdivided by *dĕḥî* (DA.8); the second ends with *sîllûq* (DA.1), and is subdivided by *rĕbîa‹ mûgrāš* (DA.5). Where the verse is longer, its main division is usually marked by *‹ôlēh wĕ-yôrēd* (DA.3), with *›atnāḥ* used to mark the main division of the second half. *Rĕbîa‹* (DA.4) is also used as the main verse divider where neither *›atnāḥ* or *‹ôlēh wĕ-yôrēd* occurs (called "*rĕbîa‹ mûgrāš* without *gereš*"), and may act as a minor disjunctive (called *rĕbîa‹ qāṭan*) immediately before *‹ôlēh wĕ-yôrēd.*

As with the vowel signs, different systems of accent signs were developed. The "Palestinian" system appears to mark an accentuation the same as, or similar to, the standard Tiberian, but to mark it in less detail. In this system, as in the Tiberian, the accentuation of the Three Books differs from that of the Twenty-one. In manuscripts using the Babylonian system, the same signs are used in all books of the

Bible. This system differs from the Tiberian in a number of details, the most striking of which is the fact that only one medial clause can be used before a terminal clause. The internal division of verses in Babylonian manuscripts quite often differs from the standard. In fact, differences may be found in all manuscripts, but in Palestinian and Tiberian manuscripts these typically affect only the subdivisions of the medial or terminal clauses.

Like the vowel signs, the accent signs were probably developed between 500 and 700 C.E. to mark an existing tradition of chant. The music of the chant is certainly very old. The close relationship between early Church music and traditional Jewish music suggests that both derive from music in use before Christians separated from Jews. Consequently the basis of the biblical chant was probably established before the turn of the era. Punctuation is marked (by dots or by spaces) in some manuscripts of the LXX which date from this period, and so must be Jewish. Greek literary texts typically do not use punctuation, so such marks may well reflect a Jewish tradition of division of the text, but their relationship to the later accentuation remains uncertain.

E. J. REVELL

MASORETIC STUDIES. The work of the Masoretes in its most common form confines itself to listing the occurrences of some feature of the biblical text. Where opportunity arises, however, general descriptions are used to avoid the need for long lists, as in the note on *bzrwʿ* in Exod 6:6: " (This word is written) *plene* (with *waw*) three times in the Torah, and in all of the Prophets and Writings it is spelled this way (with *waw*) with three exceptions." In some cases the information recorded as a feature of spelling obviously has a purely linguistic basis, i.e., the note on *wmn kl* in Judg 7:23, " (This spelling—instead of the expected *wmkl*—occurs) twice (in the parts of the text written in Hebrew) but is regular in (the parts written in) Aramaic." That is, the *n* of the preposition *mn* typically assimilates to a following consonant in Hebrew, but not in Aramaic. General descriptions of this kind, with a list of exceptions, were an important part of the work of the latter Masoretes. The most famous medieval Masorete, Aharon ben Asher, himself made a short collection of such material, mostly concerned with the accents, which circulated under the title *Diqdûqê ha-Ṭeʿāmîm,* "Details of the Accentuation." Work of this sort continued after the Masoretic period, and resulted in a number of treatises which are still preserved. These typically include both material which we would consider purely linguistic, and so classify under "Grammar," and material which we would consider to be without linguistic relevance, and classify under "Masorah." Subsequently, it became usual to restrict works to one kind of material or the other, although the boundary between the two groups remains vague. In which category, for instance, should the unusual uses of *dagesû* be placed?

At the same time, scholars still needed to work at the establishment of the correct text. As manuscripts were recopied in the 10th century and later, the traditions of individual Masoretes, each of which differed slightly from the others, became confused. The differences between the separate strands of tradition became variants in a single stream of tradition. Consequently there was a need to evaluate the variants, and to select from among them the correct reading of any given word. The problem was further complicated by differing pronouncements on particular questions by leading scholars of later eras. The considerable problems faced by an editor are described by Jacob ben Ḥayyim in the preface to his edition of the Bible (Venice 1524–25). The same problems would, of course, face any scholar who needed a correct text on which to base his studies.

As the Masoretic period grew more distant in time, there was a growing need to explain the aims and methods of the Masoretes to the many who were no longer familiar with them. Jacob ben Ḥayyim provides some information on this subject in his preface. A more famous attempt at explanation is found in the *Massoret ha-Massoret,* a book written in 1538 by Rabbi Eliyahu ha-Levi (whose name was latinized as Elias Levita.) This author was also interested in the place of the Masoretes in history,

foreshadowing the interest in the history of the biblical text which became so great a concern for later scholars.

Many scholars worked in these three areas: (1) description of the features of the text; (2) determination of the best readings; and (3) the study of the methods of the Masoretes and their history, particularly between the time of Aharon ben Asher and the present century. The last major scholar in this phase of Masoretic study was C. D. Ginsburg. His introduction to his 1897 edition of the Bible is largely concerned with explaining Masoretic matters to the English-speaking world. He published a translation of Jacob ben Ḥayyim's preface, and of Eliyahu ha-Levi's *Massoret ha-Massoret* with the same purpose (1867). He also published a massive collection of Masoretic notes and lists (1880–1905). This material is taken from a wide range of sources, and contains much of great interest. However, treating the material from diverse sources as equally representative of "The Masorah," as if it were a single entity, reflected the approach of an earlier time. A more fruitful method was beginning to develop.

The present phase of Masoretic study was introduced by the German scholar P. E. Kahle. In his time, the discovery of manuscripts in the Cairo Geniza made Masoretic materials of all sorts, some from the 8th and 9th centuries, available to scholars. This included biblical texts with Palestinian and Babylonian vowel and accent signs, which clearly represented a tradition quite different from the standard, as well as other evidence of the work of the later generations of Masoretes. Some material of this sort had been known to and studied by scholars of the 19th century, but Kahle persuaded scholars generally of the importance of the nonstandard traditions. He also persuaded them of the importance of using the earliest form of the standard tradition available, an individual tradition produced by one of the leading Masoretes. As a result, the third edition of the text, edited by Rudolph Kittel (*BHK*), which was intended for critical study of the biblical text, was based on the best complete codex of the Bible available, the Leningrad Codex. Kahle was able to publish the *masorah parva* with this text; his plan to publish the *masorah magna* could only be realized by G. E. Weil in connection with the later (fourth) edition known as the *Biblia hebraica Stuttgartensia* (*BHS*). See MASORAH.

The availability of the early materials which Kahle did so much to publicize led scholars to concentrate on the study of the individual Masoretic traditions. Most recently, Israel Yeivin and many other scholars have made important contributions to Masoretic studies. Their work supplies scholars with a clear understanding of the aims and methods of the Masoretes, not previously available. It has also led to a better grasp of much of the variation in later Masoretic materials. For instance, 19th-century scholars typically approached the confusing use of *gaʿyâ* (*meteg*) in medieval manuscripts with the assumption that it represented corruption, through ignorance, of a single "correct" usage. It is now clear that this sign was used in different ways in different strands of tradition at the end of the Masoretic period. Confusion in later texts results from the fact that the use in these different strands have become confused. The effort to disentangle these strands, so that the usage characteristic of each can be described, has led to a much better understanding of the linguistic significance of *gaʿyâ,* and of its importance in accentuation. Close attention to the details of good representatives of individual traditions is similarly producing a much clearer picture of many other features of the text.

A final area of study is the different reading traditions still in use in the various Jewish communities. The possibility of making accurate recordings of living bearers of the different traditions, especially in Israel, has greatly stimulated the study of this material in recent years. Through the work of scholars such as S. Morag, it has already provided valuable data for understanding various features of the earlier manuscripts, in both standard and nonstandard forms of the tradition.

Masoretic studies today is thus not just concerned with the text of the Hebrew Bible in its many written forms, but extends to the oral presentation of the text. The main emphasis is not on the reconstruction of one "correct" form of the text and its supporting notes, but on the attempt to understand the variations in the sources in their original context. This will help scholars gain a greater knowledge of the history of the text, and of the written and oral presentation of it. In 1972, the International Organization for Masoretic Studies was founded by the American scholar H. M. Orlinsky to promote this work.

MASORETIC TEXT. In its widest sense, the term "Masoretic Text" (MT) can be applied to any text of the Hebrew Bible produced under the care of scholars known as Masoretes, or any copy of such a text. In the narrower sense in which it is commonly used, it refers to the standard text of the Hebrew Bible, which is derived from the tradition of the Masoretes of Tiberias, the "Tiberian Tradition." This standard text has three main components: the letters, the vowel signs, and the accents. In most manuscripts, a fourth component, the marginal notes of the Masorah, is represented at least to some extent.

The letters of the text form the oldest component, often called the "consonantal text." Where the biblical text is used in the Jewish liturgy, it is this "consonantal text" which is used, written by hand in a scroll. The text in such scrolls is written in rather narrow columns (each line typically contains 20–30 letters). The "songs" in the text, i.e., Exodus 15 and Deuteronomy 32, are spaced as poetry according to fixed conventions (which differ for these two chapters). The text is divided into sections (Heb *pisqōt*) by means of spaces (similar to those which divide the paragraphs of an English text) known as "open" (*pĕtûḥâ*) or "closed" (*sĕtûmâ*) according to the positioning of the space. These are often distinguished in later codices by the writing of *p* or *s* within the space.

The consonantal text as written in liturgical scrolls also includes the *puncta extraordinaria,* the dots (distinct from vowel and accent signs) found on some or all of the letters of one or more words in ten places in the Torah, four in the Prophets, and one in the Writings. The significance of these dots has been discussed by scholars from Talmudic times on, but no generally accepted conclusion has been reached.

Other features (with unknown origin and purpose) traditionally included as part of the consonantal text are the "inverted *nun*" signs found at Num 10:35–36, the four letters written above the line ("suspended," as *n* in *mnśh* in Judg 18:30), and letters written larger than usual (as at the end of the first and last word in Deut 6:4), or smaller (as *n* in *ʿrn* in Isa 44:14). Certain of these large and small letters appear in all mss, but texts vary widely in the number they use. The other features mentioned are the subject of a firm tradition, and appear in all carefully written scrolls. They also appear in the codices (manuscripts in book form) which typically include vowel and accent signs, and Masoretic notes. They are also usually included in printed texts. It must be noted that in the marking of *pisqōt* and the spacing of the "songs" of the text, the *Biblia Hebraica Stuttgartensia (BHS)* does not follow the traditional rules. In most passages where the *BHS* text is spaced as poetry, the editors are following modern scholarly opinion, not the Masoretic tradition.

The date of the "Synod of Jabneh" (90 C.E.) is conventionally given as that from which the form of the consonantal text can be regarded as fixed. Some parts of the text, such as the Pentateuch, were most probably fixed considerably earlier. However, the text as represented in the Dead Sea Scrolls from Qumran (ca. 300 B.C.E.–68 C.E.) is "fluid," that is, different copies of the same passage differ from each other in spelling and wording. The scrolls are written in broad columns, as are Samaritan texts, not in narrow ones, as is the later Jewish practice, and differ from the later tradition in other respects. On the other hand, the scrolls from Wadi Murabbaʿat (ca. 135 C.E.) show little variation from the later standard text. This is probably not simply because they were produced after 90 C.E., but because their owners were participants in Bar Kokhba's revolt against the Romans. Because this movement was supported by several prominent rabbis, it is likely that participants would use the text form which they favored.

There are indications that the text form which became standard in rabbinical Judaism had been preserved unchanged—at least to a large extent—from a considerably earlier period. Some archaic spellings are preserved (i.e., the 3d masc. sing. pronominal suffix written with *he,* not *waw*), and spellings characteristic of a late period, such as first-person *waw* consecutive imperfect forms with the

"cohortative" affix, are common only in late books (i.e., Nehemiah); these are very rare in the Pentateuch as compared to the Samaritan Pentateuch, or to the Hebrew of the Qumran mss. Some Jewish mss of the LXX show features of format which are closely similar to those of the standard tradition (i.e., paragraph divisions corresponding to *pisqōt,* and the poetry format of Deuteronomy 32). The former, at least, is likely to reflect a tradition established in the Hebrew text.

Apart from the scrolls from Qumran and Wadi Murabba‘at, the earliest known examples of the text of the Hebrew Bible come from the "Genizah" into which worn-out or unacceptable manuscripts of sacred (and other) texts were put in the synagogue of Old Cairo (Fustat). The building was brought into use as a synagogue in 882 C.E., so it is probable that the earliest material it contained dated from the 9th century. These texts provide evidence of great interest on the final stages of the development of the systems of vowel and accent signs. The consonantal text reflected therein differs little from the numerous manuscripts produced in medieval Europe. Each ms differs from the others in minor details, such as the use of vowel letters, conjunctive *waw*, and other prefixes, but substantial differences are very rare in the high-quality manuscripts known as "Masorah codices." Such manuscripts, carefully written, and provided with vowel and accent signs and Masoretic notes, were intended for the use of scholars. The great cost of producing a correct manuscript meant that many texts, intended for private use, were prepared without the expertise and safeguards used in the production of Masorah codices, and, as a result, contained many variants. Such "internal" variants, produced during the process of copying what was essentially a fixed text, are clearly of no interest for the earlier history of that text.

It has been argued that the texts from Wadi Murabba‘at show that in 135 C.E., the Jewish text was essentially identical to the received standard text; therefore all variants in later texts are internal corruptions due to copyists' errors. However, the assumption that the texts owned by the revolutionaries of Wadi Murabba‘at were typical of those in use throughout the Jewish world is difficult to accept. Most scholars maintain the older view that despite the scholarly promulgation of a particular text form, many manuscripts continued in use which contained variants such as those found at Qumran. These often correspond to the LXX where it differs from the standard Hebrew. During the process of transmission, these different text forms became confused (as later happened with Masoretic traditions from different sources). Consequently, some of these early variants deriving from nonstandard text forms, including the *Vorlage* of the Greek translation, eventually appeared in medieval mss. For this reason, the great collections of variant consonantal readings in medieval mss made in the late 18th century by Kennicott and by de Rossi are still valued.

The vowel signs and accent signs are generally regarded as representing a single integrated "reading tradition." However, the phrase and clause divisions marked in the text by the accent signs are not always consistent with those marked by features of the vowel pointing, such as "pausal forms." This may indicate that accentuation and vowel pointing derive from slightly different forms of the tradition. The stress position marked by the accents does appear to be that which gave rise to the vowel pointing. The vowel pointing is sometimes treated as the creation of the Masoretes. This is no doubt true for the signs, but the sounds which they represent certainly derive from an old tradition. The transliterations of the second column of Origen's "Hexapla" (ca. 200 C.E.) represent a tradition which differs from that of the standard voweling mainly in that some vowel changes completed in the later tradition are not completed in the earlier, and Origen's tradition is somewhat "vulgarized," namely, it replaces some archaic features with their equivalents in the language of the day. The reading tradition was probably essentially fixed before 500 C.E. possibly before 300.

The signs used to mark the vowels and accents were probably developed between 500 and 700 C.E., although an earlier date is possible. Other systems of signs were developed in addition to the "Tiberian" system used in the standard text. The most important of these other systems was the "Babylonian," which was widely used in the Eastern Jewish world. Manuscripts in which this system is used do not show consistent differences from the standard consonantal text. Their vowel signs reflect a different pronunciation (e.g., no equivalent to *segōl* is used), but many features shown in the standard text, such as pausal forms, are represented with little difference. The accent system also differs from the standard, but

the verse divisions do not. Much the same could be said of the "Palestinian" vowel pointing, the other ancient system which has been studied in some depth; but this is much closer to the Tiberian system, and can be considered as representing a vulgarized form of the standard tradition.

The Standard Tiberian system of vowels and accents is represented in numerous manuscripts of the standard text (MT) dating from the 9th century on. Each differs from the other in many minor details, some of which reflect scribal carelessness. The majority (in Masorah codices) reflect the fact that the minor details of vowel pointing (such as the use of composite *šewa* signs) and of accentuation (such as the marking of *gaʿyâ* [*meteg*]) were never fully conventionalized. Variants in the use of accent and vowel signs in a large and diverse group of manuscripts in the British Museum were recorded in the 1897 edition of C. D. Ginsburg; those in a few of the most important codices are recorded in that of the Hebrew University Bible Project.

The "Aleppo Codex," which was supplied with vowels and accent signs and Masoretic notes by the famous medieval scholar Aharon ben Asher (ca. 915), is used as the base text for the Hebrew University edition. This codex, which is generally recognized as representing the Standard Tiberian tradition in its best available form, is unfortunately incomplete. The best complete manuscript is that known as the Leningrad Codex, dated 1009. This was copied and supplied with vowel and accent signs and Masorah according to a manuscript slightly different from the Aleppo codex, but as the colophon states, it was corrected "according to the most exact texts of ben Asher." Its text is printed in the *BHS.* In 1524–25, a complete edition of the MT (known as the "Bomberg," or "Second Rabbinic" Bible) was printed at Venice under the editorship of Jacob ben Hayyim, on the basis of the best manuscripts available in his day. This was the first edition resulting from a major effort of scholarship, and has been the basis of the traditional Jewish text ever since.

Scholars attempting to assess the relationship of the MT to its antecedents in the biblical period generally conclude, from the history outlined above, that the consonantal text has an ancient origin, while the vowel and accent signs do not. This is quite true when applied to the written signs, but to carry it much further is an oversimplification. The MT is a unity. Its letters were preserved and passed down through the same stream of Masoretic tradition which produced the vowel and accent signs. The Jewish rules governing the form of text suitable for liturgical use are not limited to the letters of the texts, but include their layout and other features mentioned above. The letters of the text cannot reasonably be regarded as an originally independent component onto which the Masoretic tradition has been grafted.

The biblical text inevitably functioned in the community in oral form: in the liturgy, in scholarly discussion, and in the teaching of the text to children. It is unlikely that the written text was much studied independent of such realization. Oral realizations probably varied between communities more than did written texts, but there is no reason to believe that the vowel pointing was considered to be outside the tradition, or to be an inferior part of it. The *ketib*/*qere* phenomenon shows the oral tradition dominating the written. See KETHIB AND QERE. The occasional references to pronunciation in rabbinic literature clearly assume a generally accepted vowel pointing, even though alternatives might be suggested for homiletic purposes. Vowel and accent signs are not a common subject for Masoretic notes, because the notes deal with the text in its written form, which did not include vowel and accent signs until near the end of the Masoretic period. The reading tradition did change in the process of transmission, but this is not an adequate reason to reject the form reflected in MT as "late."

MASREKAH (PLACE) [Heb *maśrēqâ* (מַשְׂרֵקָה)]. The hometown of the Edomite king Samlah (Gen 36:36; 1 Chr 1:47). See also SAMLAH. The place is unidentified; in addition, the toponym cannot be explained with certainty. If Lemaire's proposal (1988) that the "Edomite king list" (Gen 36:31–39) actually is a list of Aramaean kings from the 11th century B.C. proves correct, several Mishriqîyahs in Syria could be identified with Masrekah; otherwise, the place may be sought in S Transjordan and/or NW Arabia.

If the place-name is Canaanite, it could be explained by either Heb *śārōq,* "red" (cf. the name of Edom, "the red country"), or Heb *śōreq,* "grapes," *śĕrēqâ,* "grapevine" (cf. Isa 63:1–3, presupposing viticulture in N Edom which is also attested by medieval geographers). If the name is Arabic, it could be explained by *Mashriq,* "place of sunrise, east," a noun frequently attested in Arabic toponymy. If the name is Aramaic, it could be explained by *šĕraq,* "to split;" Aram *šĕraq* is the etymon of the modern place-name *Meshrâqâ,* 12 km S of Kerak.

MASSA (PERSON) [Heb *maśśâ*ʾ (מַשָּׂא)]. A son of Ishmael (Gen 25:14; 1 Chr 1:30). The "sons of Ishmael" were prominent Arab tribes of the 8th and 7th centuries B.C. See ISHMAELITES. As a tribe, Massa is attested both in the OT and in ANE texts.

According to Assyrian *Mašʾayya, "the Massaean" and Sabaic *ms*[1]ʾ (personal name or tribal name), the name of the tribe was *Mašʾ; its etymology is unknown. The Masoretic vocalization *maśśāʾ* recalls "burden" (Albright 1956: 6) and may preserve contemporary evaluations of this tribe's behavior. Linguistically, there are no objections against the identification of Mesha, which deliminates the N border of the "sons of Jokshan" in Gen 10:30, with Massa (Meyer 1906: 244).

The admonitions Prov 31:1–9 are attributed to the mother of Lemuel, king of Massa. Both the prominent position of the queen mother and her advice against the consumption of wine recall an ancient Arabian cultural context (Knauf 1989: 72). These "Massaean proverbs" contain a number of Aramaisms which, orthographically, cannot have been composed before the Persian period (*pace* Albright 1956: 8–9). Whereas Prov 31:1–9 may serve, or may have been composed to serve, as an example for the "wisdom of the east," 1 Kgs 5:10 (see EAST, PEOPLE OF THE), the proverbs of Agur, son of Jakeh, of Massa (Prov 30:1–4) seem to ridicule the easterner's "wisdom."

It has been suggested that Meshech, mentioned together with Kedar in Ps 120:5, is a corruption of "Massa"; this assumption is, however, not necessary (Knauf 1989: 72, n. 363).

In Akkadian sources, the tribe is attested as early as 734 B.C., when the Massaeans paid tribute to Tiglath-pileser III after he had conquered Gaza. A cuneiform letter sent to Sargon II from Damascus may contain a note on a certain Asapi who went to the country of Massa (ABL 414 Rs. 13–14; Ephʿal 1982: 96–97); the reading *ma-sa-*ʾ is, however, not accepted by Parpola (1987: 139). According to CT 53, 289 Rs 8–9, Massa joined the "rebellion" of Yauṯaʿ against Ashurbanipal before 649 B.C. At approximately the same time, Massaeans raided a caravan of the Nebaioth on their way to the Assyrian king (ABL 260). At the end of the 5th century B.C., Massa and the Nebaioth are mentioned in Thamudic inscriptions as enemies of Tayma (Knauf 1989: 71–72 and n. 362). See also NEBAIOTH; TEMA. It is only by these inscriptions that the abode of Massa can be pinpointed to the vicinity of Tayma.

MASSA (PLACE) [Heb *maśśaʾ* (מַשָּׂא)]. Apparently the name of the kingdom of Lemuel, whose mother taught him the proverbial wisdom preserved in Proverbs 31. If "Massa" is indeed a proper name, it probably refers to a prominent Arab tribe of the 8th–7th centuries B.C. See MASSA (PERSON). Others suggest that *maśśaʾ* here is a common noun, referring to the "oracle" taught to Lemuel the king.

MASSAH AND MERIBAH (PLACES) [Heb *massâ ûmĕrîbâ* (וּמְרִיבָה)]. Literally, "Testing and Strife," the site of an Israelite rebellion during the desert wandering (Exod 17:7). The precise location is unknown, since the Elohist places it at Horeb and near Rephidim (Exod 17:6, 8), both of equally unknown location, while P and Ezekiel place it at Kadesh, probably modern Ein el Qudeirat (M.R. 096006) in the Sinai. Possibly the place is imaginary. The names themselves are suitable for real springs, which were often the sites of contention or lawsuits (Gen 14:7; 21:25–32; 26:14–33; Exod 2:17). Some consider the two terms to derive from separate traditions (e.g., Cornill 1891: 20–34), but more likely they arose in poetic parallelism as in Deut 33:8. It is true, however, that some sources prefer one name over the other—Deuteronomy uses "Massah" (Deut 6:16; 9:22), and P uses "Meribah" or "Meribath-kadesh" (Num 20:13, 24; 27:14; Deut 32:51). Ezekiel, whose work is akin to the priestly source, refers to Meribath-kadesh in 47:19 (MT *mĕrîbôt*) and 48:28. Ps 81:8—Eng v 7 speaks of the waters of Meribah. Ps 95:8 also calls the place Meribah, but speaks of "the day of testing" (*massâ*), showing its acquaintance with the Massah–Meribah pairing.

Examination of the texts referring to Massah and Meribah shows that there was no unified tradition of what constituted the rebellion. Deut 33:8–11, though somewhat garbled in the MT, says that the Levites were tested and striven against at Massah and Meribah, where they were endowed with the priestly functions of divination, education, and sacrifice. Their test involved renunciation of kin. On the other hand, Ps 81:8—Eng v 7 implies that all Israel was tested by the waters of Meribah. The trial in question seems to have been of their fidelity to Yahweh, the reward for which would have been sustenance (vv 11, 17). Vv 10–12 suggest, however, that the Israelites failed this test and were cast out. In other words, apostasy was committed at Meribah which bore the consequence of alienation or exile. Ps 95:8–11 specifies that Israel was punished with forty years of wandering in the desert for the sin of testing Yahweh at Meribah, but no details are supplied.

The pentateuchal prose traditions, Exod 17:1–7 and Num 20:1–13, vary markedly from these poetic texts. The former is basically Elohistic, though there have been many recent attempts to assign it to the J source (e.g., Noth *Exodus* ATD, 109–12). It is introduced by an itinerary note from the exilic stratum called P^2 by Friedman (1981: 77–81, 119–32), which tells how the Israelites arrived at Rephidim, but found no water (cf. Num 33:14); it is possible, however, that the end of v 1 goes with vv 2–7. Contrary to conventional analysis, however, there is no source break after v 1, for vv 2 and 3 are not doublets. The story runs as follows: The people quarrel with Moses and command him and Yahweh to give them water. Moses sees their grumbling as unjustified and refuses to help. The people grow thirsty and intensify their complaints. Finally Moses turns to Yahweh, who tells him to pass before the people on to Mount Horeb, where the deity will be standing. Moses is to strike the mountain (*ṣûr*, often translated "rock"), from which waters will flow. Moses does as he is commanded. The spring is named "Testing and Strife" because the Israelites strove with Moses and tested Yahweh, doubting his presence. According to E, Massah and Meribah are the springs of Horeb, while P^2 locates them at Rephidim, near Mount Sinai (Num 33:14–15).

The mention of Horeb is crucial to the proper interpretation of Exod 17:1–7. Older source critics believed (correctly) that while J and P call the mountain of Yahweh Sinai, E and D use the name "Horeb." See SINAI, MOUNT. More recent researchers have disparaged this criterion because, following Noth (*NDH,* 109 n. 10), they excise the name wherever it is found in Exodus. According to this view, the Israelites only reach the mountain of God in Exodus 19. The addition of "at Horeb" to the text is inexplicable, however, while retaining it makes several points more comprehensible. First, it explains how the Israelites can be at the mountain of God already in Exod 18:5 (E). Second, as Carmichael (1974: 244–

45) has shown, it explains the connection of Exod 17:1–7 and 8–16—the Amalekites attack while Moses has left the people behind on his journey to Horeb. Third, the image of the mountain of God as a source of water or other beverages is found frequently in the Bible, though generally the mountain is Zion (Isa 33:21; Ezek 47:1–12; Amos 9:13; Joel 4:18; Zech 14:8; Ps 36:9–10—Eng vv 8–9; 46:5—Eng v 4; 65:10—Eng v 9). Finally, the waters of Horeb reappear in Exod 32:20 (also E, in my opinion), where they dissolve the ashes of the golden calf. Notice that in the latter story we have apostasy and levitical ordination through renunciation of kinship (Exod 32:26–29), themes that we saw above were associated with the Massah and Meribah tradition. These shared motifs derive from the prebiblical stage of Israelite tradition, whether written or oral, but they appear disjointed in the Elohistic source, as if the author had pulled apart the Massah-Meribah tradition to create Exod 17:1–7 and Exodus 32. Even if both Exod 17:1–7 and Exodus 32 are primarily J, as most commentators claim, the point is still valid, as long as they are of the same source.

The priestly writer tells the story of Meribah (also called Meribath-Kadesh) in a very different fashion, reworking the plot of the older Elohistic account to explain the deaths of Moses and Aaron in the desert (Num 20:1–3). His motivation for doing so is to exculpate Aaron, his primary hero, and denigrate Moses, about whom he is ambivalent. In this story Moses is commanded to take the rod and *speak* to the rock, but instead he hits the rock. For this act of disobedience, he and the apparently innocent Aaron are condemned to death. Note that in P Meribah is at Kadesh. To account for the two locations of Meribah, the Midrash postulates that the smitten rock followed the Israelites from Rephidim to Kadesh.

The gesture of striking the ground or a rock to produce a spring has many extrabiblical parallels. Bedouin have been observed to detect subterranean springs and break through to them with their staffs. Related stories within the Bible are the tale of Marah (Exod 15:23–26), where a stick is used to produce drinking water, and the incident at Beer (Num 21:16–18), where Yahweh provides the people with water through the leaders' use of their rods as digging implements (see Koenig 1963). Another good parallel to Massah and Meribah is the etiology of En-hakkore, where Samson thirsts and cries out to Yahweh, who causes a well to burst forth (Judg 15:18–19).

The story of Massah and Meribah is part of the murmuring tradition (see Coats 1968), which tells of Israel's repeated rebellions in the desert. Most of the murmuring accounts have an admonitory function, for they tell of Yahweh's punishment of Israel. Num 20:1–13 and Psalms 81 and 95 do speak of punishment at Massah/Meribah, but for the Elohist the story of the miraculous provision of water in the desert, like the traditions of the manna and the quail (Exodus 16; Numbers 11), is an example of divine beneficence in the most inhospitable of climes and expresses the Israelites' hope that such aid would ever be forthcoming. Many other biblical passages that refer to this miraculous water implicitly or explicitly connect the water with irrigation and natural fertility (Deut 8:15; 32:13–14; Isa 35:6–7; 41:17–20; 43:19–20; 48:21; 49:10; Jer 31:9; Pss 78:15–16, 20; 105:41; 107:35; 114:8; Neh 9:15, 20). Later exegetes, however, deconcretized the gift of water, seeing it as symbolic of the Torah or of the Holy Spirit (Bienamé 1984).

WILLIAM H. PROPP

MASSEBAH [Heb *maṣṣēbâ* (מַצֵּבָה)]. The noun *maṣṣēbâ* derives from the Hebrew root *nṣb* which means "to take a stand" or "to stand" (BDB, 662–63). The RSV does not use the word "massebah," but

substitutes "pillar," "stump," or "obelisk," depending on the context. The word "massebah" (pl. "masseboth"), however, is found frequently in archaeological reports and theological discussions.

The Hebrew word, *maṣṣēbâ,* is used in the Bible to refer to several different things, some of which are condoned, others of which are condemned. When YHWH appeared to Jacob in a theophany at Luz, Jacob commemorated the occasion by erecting a "pillar" and anointing it with oil and calling the place Bethel (Gen 28:18–22; which occurs again in Gen 35:9–15). Later in the narrative, when Jacob left Laban, YHWH reminded Jacob of the episode at Luz (Gen 31:13), apparently with no intended censure.

Pillars occasionally served as burial markers. Jacob erected a *maṣṣēbâ* to mark the grave of Rachel when she died on their way toward Ephrath (i.e., Bethlehem; Gen 35:19–21). Absalom later built a "pillar" in the King's Valley near Jerusalem as a memorial since he had no offspring to carry on his name (2 Sam 18:18).

The term *maṣṣēbâ* can also refer simply to the stump of a tree after it has been cut down (Isa 6:13), or to architectural features of buildings—i.e., structural weight-bearing pillars (Ezek 26:11; the context of this passage—the destruction of Tyre at the hands of Nebuchadnezzar—refers to the devastation of Tyre's fortifications and architecture, not to its religious practices).

A *maṣṣēbâ* might also be erected upon the completion of a ceremonial covenant agreement between either two individuals (e.g., when Jacob and Laban erect one to witness their pact; Gen 31:49–32) or between two larger parties (e.g., as part of the covenant ratification between YHWH and Israel, when Moses erected 12 *maṣṣēbôt* to represent each of the tribes; Exod 24:3–8). This probably was the purpose of the erection of the stone of witness at Shechem (Josh 24:25–27) at the covenant renewal between YHWH and Israel, although the stone is not called a *maṣṣēbâ* in the text.

Of course the most frequent use of the term places the standing stone in a religious context. Jeremiah refers to the destruction of the *maṣṣēbâ* in Hieropolis (Jer 43:13, i.e., Beth-shemesh; instead of "pillar" the RSV renders the word as "obelisk"). The religious pillars were often mentioned in conjunction with Asherim and/or altars and/or graven images (cf. Exod 34:13; Lev 26:1; Deut 7:5; 12:3; 1 Kgs 14:23; 2 Kgs 17:10). Several kings of the monarchies were condemned for introducing pillars into worship contexts (e.g., Rehoboam; 1 Kgs 14:23), and their use in the kingdom of Israel is described as a factor contributing to Israel's exile (2 Kgs 17:10). Two kings of Judah are described as having purged the country of pillars—Hezekiah (2 Kgs 18:4) and Josiah (2 Kgs 23:14).

In view of the range of application of *maṣṣēbâ* in the above survey, it would appear that the use of a pillar in itself was not condemned, but that the function of the artifact was what determined its legitimacy or illegitimacy. Of course, there is also a change in mood toward pillars since acceptable *maṣṣēbôt* were generally early and their condemnation occurs predominantly following the Deuteronomic legislation.

The identification of *maṣṣēbôt* in the archaeological record can be problematic. The above survey indicates that a number of items (including architectural structural features) could be identified as *maṣṣēbôt,* however, the term in modern literature has almost universally been restricted to religious contexts. While we may dismiss pillars that clearly are structural elements (i.e., the lines of pillars in the buildings at Megiddo, Hazor, and Beer-sheba), the identification of other pillars is more difficult because few stone pillars in ancient Palestine have writing on them to identify them as religious artifacts. The archaeologist must rely upon the context of the pillar to assist in interpreting its function (and then it must be approached cautiously).

R. A. S. Macalister's excavations at Gezer uncovered a series of 10 stone pillars which he interpreted as a high place. This interpretation was strengthened by the discovery of numerous infant burials in the area around the pillars. He assumed that the combination of these phenomena reflected the statements in the biblical texts which mentioned pillars and infant sacrifice in association with Canaanite worship practices. When W. G. Dever reexcavated Gezer in the 1960s, and after much more was known about the nature of MB Age burial practices, it became clear that the site was not the kind of worship area that Macalister had imagined. The burials were remains of typical infant burials of the MB I, and only later, in MB III, were the pillars erected. The pillars probably were cultic, but not in the sense of Macalister's interpretation—

they probably were part of a covenant renewal ceremony between members of a city-state confederation similar to that described for Israel (Exod 24:3–8; *EAEHL* 2: 437–38).

Excavations at Hazor have revealed a series of small *maṣṣēbôt* in an LB IIB temple in Area C. One of these was engraved with the representation of the arms of a worshiper raised toward a disk (sun disk) and crescent carved on the top of the stela (Yadin 1956: 10).

Another clear example of a *maṣṣēbâ* was discovered by Aharoni in the Iron Age II shrine at Arad (1968). The carefully shaped stela stood in the back of a cubicle niche, which corresponded to the "Holy of Holies" of a tripartite temple. Preserved on the stela were traces of red paint; the *maṣṣēbâ* was found in association with two small incense altars. In the court of the building stood the remains of an altar of burnt offerings.

MATHEMATICS, ALGEBRA, AND GEOMETRY. It is not possible to speak of any specific *biblical* mathematics. Neither the OT nor the NT was the product of cultures carrying a mathematical tradition of their own above a normal level of "folk mathematics." But both Testaments were products of cultures in contact with well-established and sophisticated mathematical traditions.

One of these is the Sumero-Babylonian tradition, known from a wealth of cuneiform tablets. Though probably less vigorous than in the early 2d millennium B.C., this tradition was still alive during the Babylonian Exile. Furthermore, it was apparently reflected in scribal education and in practitioners' ways throughout the Syrian area during the 2d and much of the 1st millennium B.C.

Another mathematical tradition of some importance for the OT is that of ancient Egypt. Already around the mid-2d millennium B.C. Syria was politically and commercially connected to Egypt; the Joseph story in Genesis displays an Israelite view on precisely the features of Egyptian economy which molded Egyptian mathematics; and in the centuries of the divided monarchy, the Egyptian hieratic numeral script was actually adopted by the Israelites.

The NT was written in the Hellenistic world and in Greek. In spite of this, the high "theoretical" level of Greek mathematics has left no traces in the NT text. Various quasi-philosophical currents dependent on Greek theoretical mathematics, however, are reflected both in the NT text and in ancient and medieval exegetical commentaries.

———

A. The "Folk" Substratum

Long before mathematical knowledge was borrowed from the neighboring high-level mathematical traditions, the early Hebrews were basically competent in numeration and metrology. This follows mainly from indirect arguments: evidence suggests that their cultural level and context were such that they needed mathematical concepts (especially in commercial intercourse with others), as did all Near Eastern populations in the 2d and 1st millennia B.C. Linguistic arguments support the conclusion and inform us at the same time of the probable limits of "folk" counting abilities: Heb *mē›ot,* "one hundred," is a common Semitic word. Heb *lĕ›ōm,* "the people," on the other hand, corresponds to Akk *lim,* "one thousand," while Heb *›elep,* "one thousand," corresponds to Ethiopian "ten thousand." The common ancestors of the different Semitic groups will thus have counted into the hundreds before they split, no later than the 4th

millennium B.C.; but they cannot have counted routinely into the thousands. When that became necessary, the different branches borrowed terms independently of each other.

A trace of "primitive" attitudes to numbers and counting can be found in 2 Samuel 24 (and 1 Chronicles 21), where David counts his people and is punished for his temerity. This fear (or taboo) of counting one's belongings is in fact widespread among populations who are either not familiar with or estranged from centralized states and administration.

Both because of the high numbers involved and because no traces of such estrangement from the ways of civilization are apparent, the many other censuses found in the OT cannot be connected to this ethnomathematical substratum. The occurrence of borrowed Babylonian metrology (the *šeqel*), used in the vicinity of the important censuses in the book of Numbers also speaks in favor of a possible borrowing of the habits and techniques of neighboring older civilizations.

B. Babylonian Mathematics

Babylonian mathematics was, in its origin, an offspring of early civilization, understood etymologically as incipient state formation. Basically, it was a scribal activity, performed by scribes and similar practitioners and used for practical purposes—and since almost all practical applications of mathematics before the classical era consisted in computation of something, the unorthodox label "Babylonian computation" would fit the endeavour better than the name "mathematics" (which shall nonetheless be used in the following).

This does not mean that Babylonian mathematics consisted in nothing but a set of practitioners' formulas. Firstly, as it shall be argued below, Babylonian calculators knew what they were doing and why they did so. Secondly, like many professional environments making heavy use of mathematics, the Babylonian scribal culture produced a level of particularly complex, theoretical (i.e., not practically relevant) problems with appurtenant techniques, especially in the field of algebra.

Traditionally, only the mathematics of the Old Babylonian and the Seleucid periods has been investigated and discussed in the literature. From the mid-1970s onward, however, a number of texts have been discovered which adumbrate the development of Babylonian mathematics from the Proto-Sumerian beginnings around 3000 B.C. to the Late Babylonian and Seleucid periods. Some of these texts and the conclusions drawn have been published; but others (as of February 1989) have only been presented at the Workshops on Concept Development in Mathematics (West Berlin, 1983, 1984, 1985, 1988), especially by Jöran Friberg, Peter Damerow, Robert Englund, and Marvin Powell, Jr.

Already long before the late 4th millennium, a system of arithmetical recording or accounting based on small clay tokens had been in use in the Near and Middle Eastern region (Schmandt-Besserat 1977). In the Uruk IV period (late 4th millennium, the period of state formation which also witnessed the development of writing), this system appears to have inspired both the development of writing and that of numerical and metrological notations. Insofar as mathematics is concerned, a trend toward harmonization of the various systems began. So the area unit SAR (apparently meaning a garden plot, the area to be irrigated from a single well, and in any case a "natural unit") came to be understood as the square of the basic length unit (the NINDAN, ≈ 6 m), and in general the whole system of area measures was keyed to the linear system (see Powell 1972). Moreover, subunit metrologies were developed, as far as one can judge, beyond the range of the traditional system. The whole system was interconnected in a way which soon permitted coherent calculations linking arithmetically linear extensions, areas, time, and other quantities which belonged together in technical or social practice (part of the background for these statements has only been presented in workshops and is as yet unpublished; but see, e.g., some examples presented by Friberg [1984] and the implicit overview in Damerow and Englund 1987).

No doubt Proto-Sumerian mathematics was created for the purposes of practical administration in what economic anthropology calls a "redistributive economy"; the replacement of natural but unconnected units by a complex of mathematically connected metrologies which correspond to the needs of the planning and accounting official rather than to those of the immediate producer. But the complexity of the system appears to go beyond even bureaucratic needs. Even though it is difficult to distinguish possible school tablets from indubitably administrative texts (only the latter contain officials' names), it is thus a

fair assumption that the immediate root of the reorganization of a bundle of arithmetical techniques as coherent mathematics was the teaching in the temple school (this is argued more closely in Høyrup 1980: 14–17).

The early administration seems not to have distinguished bureaucratic from other priestly functions, and nothing in the mathematical substance distinguishes possible school exercises from other calculating texts. Only around the mid-3d millennium is the term for scribe (DUB-SAR) found in the sources; at this time we also encounter the nonbureaucratic use of the professional tools of the scribes: literary texts and mathematical exercises beyond the context of daily administration, the latter dealing, e.g., with the division of extremely large numbers by irregular divisors like 7 and 33 (a theme which dominates the small group of mid-3d-millennium mathematical exercises from Šuruppak and Ebla—see Friberg [1986: 16–22]; Høyrup [1982]). Even though such problems will have played no significant role in practical administration, they were evidently a central concern for a scribal profession testing its own intellectual abilities.

The trend toward increasing regularization continued throughout the 3d millennium and was brought to fruition in Ur III (21st century B.C.) (see Powell 1976). Early in the Ur III period an administrative reform was implemented which made extensive use of systematic and extremely meticulous bookkeeping. It seems probable that it was for use in this context that the sexagesimal-place-value system was created. See NUMBERS AND COUNTING. Mathematical school exercises pointing beyond the administrative domain have not been found, and from parallels in other cultural domains it seems to be a reasonable assumption that the centralized state had drained the sources for scribal autonomy and thus for further development of nonutilitarian mathematics.

Nonutilitarian mathematics was, on the other hand, central to OB mathematics, which is well documented in the sources (1900 to 1600 B.C., mainly the second part of this time span). In this period, which was characterized by a highly individualized economy (compared to other Bronze Age cultures) and by an ideology emphasizing the individual as a private person, the scribal school developed a curriculum which stressed virtuosity beyond what was practically necessary; the triumphs of Babylonian "pure" mathematics, not least the "algebra," appear to be a product of precisely this OB scribal school and scribal culture (see Høyrup 1985: 10–16).

Until Ur III all mathematical texts had been in Sumerian; even in Semitic-speaking Ebla, Sumerian mathematics was taken over in the original language. Old Babylonian mathematics, on the contrary, was written in Akkadian—supplementary evidence that it represents a new genre and a break with the (plausibly more purely utilitarian) Ur III tradition. Admittedly, quite a few texts are written predominantly by means of Sumerian logograms; but grammatical analysis shows that all but a handful of these word-signs are simply elliptic representations of Akkadian words and sentences.

Many mathematical tablets from the OB period onward are compilations, containing a variety of different problems. Often, utilitarian and theoretical problems are found together; but mathematical and nonmathematical matters are usually not treated in the same texts. Obviously, OB mathematics was not divided into fully distinct disciplines; on the other hand, mathematics as a whole was an autonomous concern—perhaps even (in the form of engineering, surveying, and accounting, or as a teacher's specialty) a distinct vocation.

In 1600 B.C. the Kassite conquest put an end to the OB social order, to the age-old scribal school, to the characteristic OB scribal ideology—and at the same time to the characteristic form of OB mathematics. Scribal training was from now on provided by scribal "families" as apprenticeship; and thus, to a certain degree, mathematics came to be mixed up with other subjects on the same tablets, having lost its disciplinary autonomy. The "mathematician" would from now on identify himself in the colophons of tablets, e.g., as "exorcist" (Akk *āšipu*) or "priest" (Akk *šangû*).

In the first centuries after the Kassite conquest, mathematical texts are virtually nonexistent, although a few Late Babylonian mathematical tablets have been discovered recently (one of them will appear in Friberg and Hunger, fc.). In the Seleucid era the development of computational astronomy (starting

already under the Achaemenids) gave rise to a renaissance of numerical computation and, as a sequel, of some of the old theoretical problems.

As already stated, Babylonian mathematics really means "computation." In intermediate calculations it made use of the sexagesimal-place-value system. See NUMBERS AND COUNTING. The use of this system and the conversion of metrological values into "pure numbers" (and reversely, after a result was found) presupposed extensive use of mathematical, metrological, and technical tables. The first group encompasses tables of multiplication and of reciprocals (the division m/n was carried out as a multiplication $m \cdot 1/n$), tables of squares and square roots and of cubes and cube roots, tables of the root n of $n^3 + n^2$, and even quite a few tables of successive powers of a number. The second group contains tabulated conversions of metrological values into sexagesimal multiples of the basic unit and technical tables which contain "fixed factors" to be used in technical computation (the ratio between the squared diameter and the area of a circle; the quantity of bricks to be carried by one worker over a given distance in one day).

The basic contents of Babylonian utilitarian mathematics correspond to the following tables: multiplication tables, tables of reciprocals, metrological tables (which were aids for calculation), and the technical tables which constituted the nexus between mathematical computation and administrative and engineering reality. Mathematics was taught in school because the scribes should be able to calculate the areas of fields, the volume of canals to be dug out and of siege ramps to be built, and, not least, the manpower needed for these tasks. All these calculations were made pretty much as they would be made today, with one important exception: the Babylonians had no concept of quantifiable angle and hence nothing similar to trigonometry. In practical mensuration they would divide complicated fields into "practically right" triangles, "practically right" trapeziums, and "practically rectangular" quadrangles (distinguishing, we might say, a "right" from a "wrong" angle). They would then calculate as we do, knowing that their results were not absolute truth but apparently without having any definite idea about the nature and size of the errors. Presumably, they would see no decisive difference between the imprecision of manpower calculations and those of area determinations.

With these qualifications the Babylonians knew the area of a right triangle (in practical mensuration they would divide an obviously nonright triangle into two; in school exercises they might use the semiproduct of the two "best" sides). In a Late Babylonian text we also find the calculation of a height (by means of the Pythagorean theorem, known already in the OB period). Similarly, they would correctly find the area of a rectangle and of a "right" trapezium. The area of an irregular quadrangle might be found by means of the "surveyors' formula," as average length times average width. In practical mensuration this technique has probably only been used for fairly regular quadrangles, where it gives acceptable results. In school texts the technique is also used as a pretext for formulating algebraic problems in cases where it is extremely unrealistic. The area of the circle was normally found as $1/12$ times the square of the circumference (corresponding to $\pi = 3$), and the circumference as thrice the diameter. (One table of constants, however, has been assumed to contain a correction factor corresponding to $\pi = 3\,1/8$).

Prismatic and cylindrical volumes were calculated as base times "height" (viz., a side approximately perpendicular to the base). The volume of a truncated cone was found as that of a cylinder with the average diameter (which is correct for a cylinder, and only three-fourths of the true value in the extreme case where the cone is not truncated), and that of a truncated pyramid in one text as height times average base (in another text perhaps correctly). When in doubt, once again, the Babylonians would opt for a (rather arbitrary) compromise instead of giving up in the face of theoretical difficulties.

Prismatic and cylindrical volumes were probably derived from a "naive" consideration of proportionality. The basic unit of area was the SAR, and the basic unit of volume 1 SAR times 1 cubit, also called a SAR (to distinguish, modern historians speak of a "volume sar"). A prism with base A [SAR] and height 1 [cubit] would then have a volume of A [volume SAR]; if it were h cubits, thus h times as high, the volume would have to be $A \cdot h$. A corresponding argument of proportionality was apparently used when the

height of a slope was found in similar cases. Certain terminological considerations suggest that even the area of rectangular figures was originally thought of in this way.

A specifically Babylonian geometric problem type is the partition of areas. Initially, this may have been a practical problem. No later than the 23d century B.C., however, it turns up as a theoretical problem: what is the length of the transversal if a trapezium is bisected by a parallel transversal? In the OB period even more complex problems of a similar kind are common, as are a number of other more or less complex and more or less artificial division problems.

Many practical computations, of course, were not concerned with geometric entities but with quantities of grain to be levied as dues, with commercial exchange, and with similar pragmatic concerns. The techniques used can be illustrated by paraphrasing an illustrative problem: two fields, 1 and 2, are given, from one of which 4 GUR (1 GUR = 300 QA, 1 QA ≈ 1 liter) of grain are to be levied per BUR (= 1800 SAR), while the other yields a rent of 3 GUR per BUR. The total yield and the difference between the two areas is given. First everything is converted into sexagesimal multiples of the fundamental units SAR and QA, in part through calculation, in part by means of a metrological table. The yield of that part of field 1 which exceeds field 2 is found. The remainder of the yield must then come from the remaining area, *A*, which is composed of equal portions from field 1 and field 2. The yield of one average SAR is found; this is divided into the remaining yield, giving the remaining area.

The idea behind the last step seems to be the "single false position" also known from other Babylonian texts: If the remaining area were 1 QA, it would consist of 1/2 SAR from each field, which would permit that the yield be found as (say) p QA. In reality it is (say) $N \cdot p$ QA, and therefore the remaining area must be N SAR.

The procedure gives an impression (confirmed by many other texts) of ad hoc improvization, built on concrete thought, rather than standardized techniques when we get beyond the most basic methods (conversions, etc.). The same feature is also found in OB second-degree and higher "algebra," perhaps the most astonishing accomplishment of the Babylonian mathematical tradition. The term is put in quotes because it is not founded on symbols as is post-Renaissance algebra or on words for unknown numbers as are medieval Islamic and Italian algebra. Instead, it builds on "naive" geometry: where modern algebra presents us with a problem $x^2 + x = A$ (which may be transformed into $x \cdot (x+1) = A$), the Babylonians would consider a geometric rectangle the length of which is known to exceed the width by *1*, and the area of which is known to be *A;* where we transform the equation in order to isolate *x*, the Babylonians would make corresponding cut-and-paste transformations of the rectangle. The way they did it would be intuitively obvious, and they would provide no Euclidean proof that the procedure was correct (hence the term "naive").

The basic transformations, e.g., the cutting up of rectangles, were made according to fixed schemes. But the OB scribes would also solve quite complex problems; and when transforming them into simple problems, they would make use of a stock of customary tricks but no standard formulas—precisely as they did in arithmetical problems. When used with intelligence (as it is in many texts), OB algebra is therefore highly flexible: as long as we stick to one or two variables and to the second degree, a set of operations almost as flexible as (and in its sequence of operations very similar to) modern symbolic algebra. Only in more complex cases do the disadvantages of the Babylonians' techniques become manifest.

Three qualifications should be given to the statement that OB algebra was geometric. First, the geometric entities involved were not abstract but concrete, measurable line segments and areas. Second, the geometric foundation did not prevent the technique from being applied to nongeometric quantities. We represent, e.g., an unknown weight, an unknown price by a pure number *x;* the Babylonian, however, would represent them by a line segment of unknown (but numerically knowable) length. Naive-geometric algebra was an all-around way to find unknown quantities involved in complex relations, truly, only artificial relations. (Babylonian scribal practice presented no problems of the second or higher degree; these had to be and were constructed in order to allow the display of scribal virtuosity).

Third, the statement is at cross-purposes with established beliefs. The interpretation which Neugebauer presented in the 1930s as a "first approximation" was at that time accepted at face value, and it has since then been conventional wisdom among historians of mathematics that Babylonian algebra was an algebra of numbers dealt with rhetorically as in the Arabic and Latin Middle Ages. Only recently has a detailed philological and comparative analysis of the text corpus and its terminology demonstrated that the numerical interpretation is in fact only a first approximation. (The reasons for this and the details of the reinterpretation are presented in Høyrup 1987.)

A final important problem type is made up by numerical investigations. Some of these are connected to the computation of reciprocals and hence to the needs of common computation. Others are inspired by the partition of the trapezium mentioned above and lead to indeterminate problems for pairs or sets of numbers. The most famous of all such texts is the tablet called Plimpton 322, a table making use of sets of Pythagorean numbers (i.e., numbers *a, b,* and *c* fulfilling the condition $a^2 + b^2 = c^2$).

Any mathematical corpus of knowledge is organized in a way which reflects its purposes, the ways of thought involved, and the underlying cognitive style. So was Babylonian mathematics as we know it. A general characteristic is its domination by methods, not problems. At the first, utilitarian level this reflects that we know Babylonian mathematics from school texts which served to train future scribes in the methods of their profession. For that purpose problems had to be constructed allowing the display of the methods to be learned. In practical life, on the other hand, the problems to be mastered were of course primary and the methods applied for that purpose secondary.

If we go to the "pure" level, however, we find the same primacy of methods, while Greek (and modern) pure mathematics take problems as their starting point and develop the concepts and methods needed to surmount them. In this case the training of practitioners explains nothing, since the particular methods belonging at this level had no practical application. Babylonian "pure" mathematics, however, had a purpose different from the scientific aim of Greek mathematics. As explained above, its rationale was the display of professional virtuosity, which also explains why it flourished in the OB era and disappeared from the archaeological horizon with the death of the scribal school.

Mathematical methods can be taught in two ways. One may present the methods in abstract terms, as theory, eventually to be illustrated by examples—or one may train exclusively through paradigmatic examples. Nowadays, the former way is supposed to be used at higher educational levels; and the latter is reserved for the early stages of school. The approach was different in Babylonian mathematics, where we know of no case of formulated theory and of only two or three where a paradigmatic example is used as the basis for a more general discussion of the method involved (though precisely these texts suggest that oral teaching would do so more often). The only cases where rules are formulated in the abstract, are found in a couple of texts from Greek-ruled Uruk (Friberg fc. in *RLA*).

This feature of Babylonian mathematics can be compared to the makeup of Babylonian legal texts like the Code of Hammurabi. "Hammurabi's Law" is no law book in the likeness of Roman Law. It is a collection of legal decisions made by the king, but of course only put together because the royal decisions were supposed to serve as paradigms for the judges of the realm. We may also draw a comparison with the listing of hundreds of separate cases in Babylonian omen texts.

One could say that Babylonian thought was more concrete and less inclined to abstraction than that of the modern mind. These terms, however, are used differently by a cognitive anthropologist like Levi-Strauss (1972) in his distinction between the "savage" and the modern mind. In other domains Babylonian thought may be concrete in a Levi-Straussian sense, with concrete entities acting as classifiers and imparting thereby some of their properties to the class which they embody (as a primitive society may suppose the members of an "arrow clan" to be swifter than others). But already in the systematization of the omen literature is an underlying implicit abstraction visible in spite of its origin in magic thought (Larsen 1987), and OB mathematics is still farther removed from Levi-Straussian concreteness. It was not their general mental makeup which prevented OB scribes from transforming their (already autonomous) mathematics into abstract science, but rather a lack of motivation for doing so: the "pure mathematics"

which they created corresponded precisely to their socio-cultural needs, as the later development of Greek philosophy corresponded to that of the intellectually sophisticated stratum of the leisure class.

This is perhaps less true for the post-Kassite scribal priests, whose tablets might list togetherd metrological conversions and the sacred numbers of gods (Friberg, personal communication concerning an unpublished tablet). Since early times, indeed, the technical cunning of scribes had been surrounded by a sacred aura. In the 22d century B.C. King Gudea of Lagash claimed that he had designed the plan of the temple in the likeness of the scribal goddess Nisaba, "who knows the essence of counting." From the mid-3d millennium "sacred numbers" were also associated with the gods, and numbers were used in writing according to the rebus principle. In the early 1st millennium (before the development of mathematical astronomy), numbers were used cryptographically in a few astrological omen texts. In certain other texts numbers were used for "coding" in a way which may explain how the Assyrian king Sargon claimed the "number of his name" to be 16,283. All these phenomena are hardly to be considered ingredients of Babylonian mathematics, but they reflect the existence and importance of mathematical activities and do so most strongly in periods when mathematics was not an autonomous endeavor (they are significantly absent from the sources for OB scribal-school mathematics). Like marginal phenomena in general, they owe their existence to the core.

The main source collections for OB and Seleucid mathematics have been published by Neugebauer (1935). Thureau-Dangin (1938), Neugebauer and Sachs (1945), and Bruins and Rutten (1961). The best overviews of the contents of Babylonian mathematics are the ones by Vogel (1959, in German) and, especially, Vajman (1961, in Russian, but a German translation is underway). A more popular introduction is van der Waerden (1962: 37–45, 62–81). An overview of the various interpretations of the Pythagorean triples of Plimpton 322 has been given by Friberg (1981). The first survey of 3d-millennium mathematics was published by Powell in 1976; recent discoveries of importance are presented by Damerow and Englund (1987); Englund (1988); Friberg and Hunger fc.). A global overview including all recent discoveries is going to be published by Friberg (fc. in *RLA*), who has also written an excellent selective bibliography (in Dauben 1985: 37–51).

C. Syrian Descendants

The Israelites would have encountered Babylonian mathematics during the Exile but only in the late phase when it was mixed up with Babylonian religion and divination. Long before that they must have been confronted with its descendants "at home," in late 2d- and early 1st-millennium Syria.

After the mid-2d millennium the Canaanite city-states of Syria were politically dominated by Egypt. Characteristically, however, the Canaanite kinglets and pharaoh corresponded in Akkadian; Ugarit, the most prominent Canaanite state, developed its alphabetic script on the basis of cuneiform; and Ugaritic scribes were—just like their Hittite and Assyrian colleagues—taught according to the Sumero-Babylonian tradition (see Krecher 1969). The only traces of mathematics in their curriculum, however, consist in metrological lists. We may reasonably deduce that only the utilitarian stratum of Babylonian mathematics was adopted, while the theoretical superstructure was too much dependent on the particular OB socio-cultural situation to be interesting in the Canaanite cultural outposts. The same will in all probability have been the case in early Israel, whose vista of Babylonian culture was much more indirect, somewhat later, and (since it was largely mediated by the Canaanites) marked by distrust.

The closest point of contact will not have been the scribal, but rather the ill-documented master builders' or architects' tradition. We are told in 1 Kings 5–7 and 2 Chronicles 2–3 that Solomon called in Phoenician masters for the building of the temple, and it seems indeed that they also followed Canaanite models (*CAH* 2/2: 149). We have no direct testimony of the geometric lore of these masters, but an Islamic 9th-century mensuration text by one Abū Bakr shows an astonishing degree of continuity with the OB algebra, not only in mathematical substance and methods, but down to the rhetorical and grammatical structure. A story told by the late 10th-century mathematician Abū'l-Wafāʾ suggests that the carriers of the continuous tradition were "artisans" (*ṣunaʿ*), i.e., master builders and the like (see Høyrup 1986). There are even reasons to believe that the starting point for the OB algebraic tradition was a preexistent

artisans' tradition, although the evidence is not compelling and the artisans may instead have been inspired by an originally scribal scheme.

Irrespective of its original relation to the OB scribal tradition, the same artisans' tradition seems to have permeated the whole Middle East; one biblical reflection is well-known: the "molten sea" set up by Solomon in the temple is claimed (1 Kgs 7:23–24; 2 Chr 4:2) to possess a diameter of 10 cubits and a circumference of 30 cubits, corresponding to the above-mentioned "Babylonian π"of 3.

D. Egyptian Mathematics

The other great Bronze Age mathematical tradition whose echoes can be traced in the Bible and, more distinctly, in the archaeological remains of the divided kingdom, is that of Egypt. Though the Egyptian tradition is in many ways parallel to the Babylonian tradition, the two were obviously independent.

Like its counterpart, Egyptian mathematics is a scribal endeavor which should also be labeled "computation." It arose in connection with administrative needs in the early state; Genesis 41 provides an Israelite perspective on that particularity of Egyptian social life (compared to that of pre-Solomonic Israel) which called for extensive computation. The Egyptian economy was, like that of the early Sumerian states, a redistributive system (the biblical descriptions of Solomon's temple building contain redistributive features, as well). Correspondingly, the calculation of rations and of provision for workers is a central topic in Egyptian mathematical texts, as is the calculation of areas and of the volumes of granaries.

It is not possible to distinguish a particular theoretical level in Egyptian mathematics. In that respect the two traditions differ. This is not to say, however, that Egyptian mathematics was a collection of formulas, nor (as we shall see below) that everything was always made in the way which suited practical applications best. There is, moreover, textual evidence that the scribes themselves saw their mathematical cunning as a high point of knowledge, as "rules for enquiring into nature, and for knowing all that exists, [every] mystery, … every secret"—as Peet (1923: 33) translates the introductory passage of the Rhind Mathematical Papyrus (RMP in the following).

There are fewer sources for the history of Egyptian mathematics than in the Babylonian case, and their chronological distribution is no less uneven. It is therefore only possible to give a very general overview of the historical development. The application of measures and the development of the metrological system began no later than the outgoing 4th millennium. Measures of capacity and of areas occur in texts from the 3d to 4th Dyn. (ca. 27th century B.C.). Already at the beginning of the 1st Dyn. (late 4th millennium B.C.) the system of linear measures was used in the canon governing the pictorial representation of human beings (Iversen 1975: 60–66), and from an early date it must also have been used in architectural design.

No direct evidence for 3d-millennium calculational techniques is available. From the way measurements and results are expressed, however, one can deduce that the later unit-fraction system (see below) was not yet existent as a coherent system but only as a way to express ad hoc expansions of the systems of metrological subdivisions. We also know that the scribal calculators were taught as apprentices, in immediate practice, and not in a school (see Brunner 1957: 11–15).

All this was to change in the Middle Kingdom, at the beginning of the 2d millennium. Scribal education from now on took place in a school, and many texts are known which reflect the way professional self-esteem was inculcated in the future scribes. The introduction to the RMP quoted above shows that even mathematics served this purpose, just as in the OB school.

A reorganization of the repertoire of fractions into a coherent system appears to have taken place at this time. The old metrological subdivisions were conserved, but they were now supplemented by a systematic notation for abstract numerical fractions. The basic elements of the system were the unit fractions $^1/_2$, $^1/_3$, $^1/_4$, …, $^1/_n$, together with the complement $^2/_3$. Any fraction had to be expressed as a sum of such unit fractions (none of them identical) in decreasing order. The Egyptian scribe would thus regard $^2/_5$ not as a number but as a problem, the solution of which was $^1/_3 + ^1/_{15}$. For practical uses these expressions were less handy than metrological subdivisions. For teaching purposes, however, they were better suited than subdivisions because everything could be expressed precisely; we may also assume that they played a role

similar to that of OB higher algebra, because the manipulation of unit fractions required the same kind of mathematical virtuosity.

Once the unit-fraction system had been introduced into the school curriculum, the scribes began using it in practical life. At times the resulting contrast between gross, unnoticed errors and the meticulous precision of the notation may strike us as odd; it is understandable, however, if we see the use of the system as a sort of *art pour l'art,* as an expression of professional identity and not as a merely utilitarian device.

Our main sources for the overall contents and the techniques of Egyptian mathematics are two large papyri copied from Middle Kingdom originals, the Rhind Mathematical Papyrus (RMP) and the Moscow Mathematical Papyrus (MMP). The former is a fairly systematic handbook containing a wealth of intermediate calculations, while the latter is rather disorderly and apparently a students' workbook. The RMP is especially excellent as a survey of Middle Kingdom Egyptian mathematics. Very little is supplied by the MMP and other sources beyond confirmation and clarification of dubious issues found in the RMP.

Almost a third of the RMP is devoted to the computation of $^2/n$ (n = 3, 5, …, 101) as a sum of unit fractions. This table is a prerequisite for all later calculations because of the distinctive way in which the Egyptians performed multiplication and division: *Multiplying* a number *A* by 29, the scribe would find by successive doublings 2*A*, 4*A*, 8*A*, and then 10*A*, and, by another doubling, 20*A*, and finally add *A*, 8*A*, and 20*A* to find the result. That is, the whole procedure was founded on successive doublings and decuplings. If *A* contained fractions with an odd denominator, the doublings would involve use of the $^2/n$ table; so, if $A = {}^1/5$, $2A = {}^1/3 + {}^1/15$, $4A = {}^2/3 + {}^1/10 + {}^1/30$, … *Dividing* (as in RMP, problem 33) the number 37 by $B = 1 + {}^2/3 + {}^1/2 + {}^1/7$, the scribe would calculate successively 2*B*, 4*B*, 8*B*, and 16*B*, seeing that 16*B* fills out 37 apart from a remainder which is two times an implicit subunit $^1/42$; since *B* is 97 times this same subunit, the remainder is twice $^1/97B$, and the full result of the division is $16 + {}^2/97$, i.e., in the required system, $16 + {}^1/56 + {}^1/679 + {}^1/776$.

Simple multiplications and divisions might give the impression that Egyptian mathematics was purely additive. As shown, however, by the latter part of the division, as well as by many solutions making use of "false positions" (cf. above) and of free manipulation of appropriate subunits, the Egyptian scribes had a perfect, though implicit, grasp of multiplicative relations and proportionality. Otherwise, indeed, they would have been unable to take care of their practical tasks.

A substantial part of the RMP focuses on problems arising through the use of the unit-fraction system, especially in connection with problems of division and proportionality. Some such problems deal with abstract numbers, others make the connection to daily practice clear, e.g., when loaves are distributed to workers and foremen (with double rations for the latter), when the connection between unit fractions and various metrological systems is dealt with, or when the quality of beer and the size of loaves are involved.

Another dominant interest is in geometric computation. As in Mesopotamia, area measures are mathematically connected to linear measures but are even more clearly conceptualized as the product of a fixed-standard width and a variable length. As in Babylonia, the concept of a quantifiable angle is absent; and triangular areas were found as the product of two sides containing a "practically right" angle. Trapeziums and trapezoids are absent from the sources; but the area of a circle is found as the square of $D - {}^1/9D$ (*D* being the diameter), corresponding to $\pi = {}^{256}/81 = 3.16$ … —much better than the normal Babylonian rule.

Prismatic and cylindrical volumes were, of course, found without difficulty; it is more astonishing that the volume of a truncated pyramid was found correctly (MMP, problem 14). It is disputed whether a "basket" in MMP (problem 10) is meant to be a hemisphere. If it is, its surface is found accurately (given the above-mentioned "π"; but if a hemisphere is not meant, the computation suggests that the Egyptians would find the circular circumference (correctly) as the quadruple area of the circle divided by the diameter and the area of a semicylinder as the product of the curved and the straight side.

Geometry and geometric computations were also used in Egyptian architecture. Architectural and building problems, however, are not very conspicuous in the mathematical texts, which in fact contain

only two types: first, the calculation of the slope of pyramids, according to the RMP, where it is dealt with five times; and second, the volume of a truncated pyramid, which is only known from MMP.

It is a recurrent claim that the Egyptians knew the Pythagorean theorem and used it in architectural construction. It should be observed, however, that the claim is not supported by any positive evidence. Many buildings, it is true, contain rectangles whose sides are to each other as 3 to 4, but nothing suggests that the Egyptians knew or were interested in the length of the diagonal.

Related to the use of geometry in architecture is the use in the pictorial arts of square grids and fixed proportions linked to the system of linear measures. This "canonical system" is one of the main factors creating the unique tenor of Egyptian art and which stabilized it for several millennia, until a metrological reform in the 7th century B.C. made it rather a factor of change.

Anything similar to Babylonian second-degree algebra was absent from Egyptian mathematics. The closest we come are two types of geometric problems. One is found repeatedly in the MMP: in a (practically) right triangle the area and the ratio between the sides containing the right angle are given; this is solved by means of a consideration of proportionality. The other comes from the Berlin Papyrus 6619 and can be translated into modern symbols as $x^2 + y^2 = 100$, $y = {}^3/_4 \cdot x$; the solution is obtained by means of a false position ("always take a square of side 1; then the other is ${}^1/_2 + {}^1/_4$").

These problems are atypical by being of the second degree. In fact, everything else related to algebra is of the first degree. But the techniques used are typical also of those first-degree problems which we would be tempted to solve algebraically. The "false position," in particular, may be regarded as a "poor man's *x*." The point in using an *x* is, in fact, that you can manipulate the unknown quantity as if it were a known number; taking preliminarily the unknown to be 1 (or any other convenient number) gives you the same possibility, as long as you stick to "homogeneous problems" (i.e., problems which can be reduced to the type $x^{11} = A$).

The above description does not exhaust the contents of Egyptian mathematics, but it covers the principal features as far as we know them and does so until the Assyrian domination. Then (modest) changes set in: a number of demotic mathematical papyri from the Hellenistic and Roman periods show, indeed, that material from the Babylonian or Middle Eastern practitioners' tradition had diffused into Egypt during the 1st millennium B.C. (perhaps carried by Persian military or fiscal surveyors?). Most conspicuous is an adoption of the Babylonian π.

Egyptian mathematical texts are problem collections, just like the Babylonian ones. The closest we come to a general description of methods is a phrase like the "always take a square of side 1" quoted above. But even in Egypt the problems were meant to be paradigmatic—as stated in the introduction to the RMP, they were regarded as "rules." In the texts, methods are thus primary and the problems secondary. In scribal professional practice, of course, the practical problems were primary; and since no clearly distinguishable level of nonutilitarian calculation developed in Egypt, the problems found in the texts are either real-life problems or structurally similar to problems encountered in "real life"—including problems arising from the idiosyncratic multiplication and division algorithms and the unit-fraction system. Globally regarded, the structure of Egyptian mathematics was thus determined by its practical duties and its characteristic methods and techniques, in mutual interaction and on an equal footing.

As in Babylonia, the mode of thought expressed in the mathematical texts is concrete. There is, however, one important difference. Babylonian mathematics, as we have seen, tended to represent other unknown entities by measurable geometric entities; the Egyptians, on the other hand, tended to represent everything by *pure numbers* (at least from the Middle Kingdom onward). Even though Babylonian mathematics is much more sophisticated in content than its Egyptian counterpart, the latter can thus be claimed to have gone farther in mathematical abstraction.

Old Babylonian mathematics, as we saw, appears to be purely secular. In later times the borderline between mathematics, divination, and religion seemed to have become somewhat blurred. In Egypt, as well, numeration and numbers played a religio-mystical role, as in the *Book of Dead*, where the deceased king is required to count his fingers (Neugebauer 1969: 9). But in spite of the "mysteries" and "secrets"

spoken of in the introduction to the RMP, the mathematical texts themselves appear to be devoid of religious and occult connotations.

This is, of course, in disagreement with the widespread speculations on "pyramid mysticism." The pyramidological arguments build (at best) on a variety of numerical ratios purportedly found in the Cheops pyramid and claimed to reflect a precise knowledge of π and the "golden section." Two flaws, however, characterize these assertions (see Robins and Shute 1985). First, precise measurement of the (original!) dimensions of the worn-down pyramid is difficult; and in order to obtain their favorite ratios, the pyramidologists avoid using the best measurements. Second, nothing in the mathematical texts suggests the slightest interest in the numbers claimed to be embodied in the pyramids; so, e.g., the Egyptians did not use a number corresponding to π but instead an approximation (viz., $^{8}/_{9}$) to å(π/4), which is quite another entity though of course just as mathematically serviceable. On the other hand, the best measurements of pyramidal slopes correspond precisely to the way pyramidal slopes are indicated in the RMP and come out mostly as 5 palms, 1 finger; or 5 palms, 2 fingers horizontally per vertical cubit (the former value being the favorite value in the RMP).

Both RMP and MMP exist in excellent editions. RMP was edited by Peet in 1923 with a hieroglyphic transcription (the original is hieratic) and English translation and commentary and again in 1927–29 by Chace et al. with free translation and commentary (vol. 1), and reproduction, hieroglyphic transcription, transliteration, and literal translation (vol 2). MMP was edited by Struve in 1930 with reproduction, hieroglyphic transcription, German translation, and commentary. A new edition of RMP intended for interested nonspecialists was published in 1987 by Robins and Shute. A collection of demotic mathematical papyri was published (with transliteration, and English translation, and discussion of terminological and technical continuity and change since the Middle Kingdom mathematics) by Parker in 1972.

Excellent surveys of Egyptian mathematics have been written by Vogel (1958, in German) and Gillings (1972). The latter work is inspiring but should be used with some caution, since the author often shows what imagined sources might have looked like and does so in the most exquisite and convincing hieratic hand. Both surveys include references to other works and to publications of minor sources. A comprehensive bibliography of works on Egyptian mathematics up to 1929 compiled by Archibald is included in Chace et al. 1927–29. A recent selective bibliography will be found in Dauben (1985: 29–37).

A fictional satirical letter much used in the school and reflecting the importance of mathematical computation in scribal occupations was published by Gardiner (1911).

The "canonical system" of the pictorial arts was described by Iversen (1975). Badawy's exposition of Egyptian architectural design (1965) should be used with circumspection.

The full range of Egyptian mathematics was probably never diffused to the Palestinian area. However, epigraphic evidence shows that from the time when the Israelite kingdoms began approaching a redistributive economy and the royal scribes came in need of computational tools, the scribes took over the Egyptian hieratic numbers (survey of the main evidence in Ifrah 1986: 271). These, however, are more complex than the hieroglyphic numbers which they represent in shorthand; and one can hardly imagine that they were adopted in isolation: they must have been imported together with at least part of that wider mathematical culture which they served. In all probability the administration in the divided kingdom will thus have been effected by means of Egyptian routines and techniques.

E. Greek and Hellenistic Mathematics and Its Aftermath

The third mathematical tradition of some importance in the biblical context was that of ancient Greece and of the Hellenistic world.

Early classical Greece was the cradle of "philosophy," i.e., of intellectual and scientific interest radically separated from direct social utility. While the nonutilitarian stratum of Babylonian (and, as far as it existed, Egyptian) mathematics had to look like a tool for scribal practice in order to serve the socio-psychological maintenance of scribal identity, Greek mathematics had to look "pure," i.e., unbound by

social utility. Scribal work, indeed, had become a lowly occupation in classical antiquity, and had stopped being intellectually productive.

The starting point was apparently intellectual curiosity vis à vis the techniques of surveyors and accountants: why did these techniques work? At the end of the road we find Euclid's *Elements;* Archimedes' computations of circle, sphere, and paraboloid; and Apollonius' *Conics;* together with a number of minor astronomical works disguised as pure spherical geometry; and Ptolemy's monumental *Almagest.* All of this was fairly irrelevant to both Jewish and Christian culture until the High Middle Ages, and there is no reason to discuss it further here.

More important than the mathematical history as a whole in this period are several underlying traditions.

First there is the alphabetic number system. See NUMBERS AND COUNTING. It has been much disputed who first used the letters of the alphabet for numbers, and the question is not definitively settled. The Greeks did so at least from the late 3d century B.C. onward, but so did the Jews and other Semitic peoples. However, no evidence for Semitic usage can be dated before the 1st century A.D.; and until then another system seemed to be in use. For this reason (and various other reasons) it is the most reasonable assumption that the alphabetic number system was invented by the Greeks and then taken over by others in the Hellenistic world (see the discussion in Ifrah 1986: 286–302).

Originally, this was just a clever notation for numbers, soon, however, the possibility to read any alphabetic letter as a number was exploited in gematria, the substitution of the sum of constituent numbers for a word. An early and most famous example is found in Rev 13:18, the number of the beast being "the number of a man; and the number is 666." (This reminds one of the Assyrian king Sargon's claim concerning the "number of his name," but the resemblance is probably accidental.)

Of greater importance was the technique in medieval and Renaissance exegesis, viz., in the *Kabbalah,* where it was used extensively for symbolic identification of words with the same gematric number (see the description of both Jewish and Christian Kabbalah in Blau 1944).

Next there is the Pythagorean tradition. The Pythagorean brotherhood had formed in the late 6th century B.C. around Pythagoras, who was (*pace* an abundance of Neo-Pythagorean and modern authors) in all probability no "scientist" or "mathematician" but rather a shamanistic figure, as has been argued by Burkert (1972). Plausibly, however, numerology (on a traditional "folk" level) was a major ingredient in his doctrine. Over the 5th century, then, and concurrently with the development of scientific mathematics, the Pythagorean brotherhood (or one branch of it) appears to have extended the numerological interest, first by adopting an existing number-theoretical interest (the "doctrine of odd and even") and extending it and then by taking up theoretical geometry. (A satisfactory discussion of the relative chronology of "philosophical" and "Pythagorean" mathematical achievements would lead too far; but see Knorr [1975: passim]; Høyrup [1985: 19–21].)

In the 4th century B.C., the Pythagorean movement disappears as a scientific school, although throughout antiquity the basic Pythagorean arithmetical doctrine remained important. It is, in fact, a doctrine rather than a theory. The fundamental constituents are the canon of figurate numbers and the classification of numerical proportions. The doctrine was put forth through examples and without proofs. The discoveries made by late-ancient Neo-Pythagorean authors (if indeed they made them) were made empirically.

Figurate numbers are the numbers which arise when points are arranged in certain regular patterns. We still know the *square numbers,* $1 \cdot 1$, $2 \cdot 2$, $3 \cdot 3$, etc., and the *prime numbers,* which can only be arranged in a single row and in no other rectangular pattern. A third species are the *triangular numbers,* 1, 1 + 2, 1 + 2 + 3, 1 + 2 + 3 + 4, etc., and still others exist (*rectangular numbers* of the form $n \cdot (n + 1)$; *pentagonal numbers,* $1 + 2 + \ldots + (n–1) + n^2$, etc.). See Fig. MAT.01.

The doctrine of proportions was coupled to the theory of musical harmony. An octave corresponds to a ratio 2:1 (in frequency, which the ancients did not know, and in string lengths on a monochord, which they did know); a fifth corresponds to the ratio 3:2, a fourth to 4:3, etc. All these are superparticular ratios, i.e., they have the form $(n + 1): n$. Other classes are defined in similar ways.

Neo-Pythagorean arithmetic was considered indispensable for the understanding of (especially Platonic) philosophy and was hence a prolegomenon in the basic late ancient philosophical curriculum. In this way it spread to much wider circles than high-level mathematics. One place in general culture which was influenced by the Pythagorean doctrine was poetry. A number of texts (so Virgil's *Bucolica* and *Georgica*) are constructed around simple proportions (identity and superparticulars) and prime numbers. These mathematical relations turn up in the counting of lines, words, and letters—especially vowels.

Interestingly, this same technique appears to have been used in the gospel of Luke. As it is well-known, the Sermon on the Mount and the Lord's Prayer are rendered differently by Matthew and Luke. According to the linguist Jens Juhl Jensen (1986), who has compared the gospel text with the principles used in "Pythagorean" poetry from the same epoch, Luke's version (but not Matthew's) follows Pythagorean principles. It is of some exegetical interest that part of the difference between the two evangelists may be the necessary difference between translation into prose and into poetry governed by strict rules.

Neo-Pythagorean doctrines were also important in ancient and medieval exegesis, in particular the figurate numbers. An important character in this connection is Philo of Alexandria, and a good example is his discussion of the measures of Noah's Ark (edited by Paramelle [1984: 148–63] with a numerological commentary by Sesiano [205–9]). The length of 300 [cubits] represents the universe, because it is the 24th triangular number, 24 being the number of hours in a day and the number of letters in the Greek alphabet, $24 = 2^3 + 2^3 + 2^3$, and the triad 1 + 1 + 1 thus occurring doubly in 24 representing equality (identity of beginning, middle, and end). Furthermore, $300 = (1 + 3 + \ldots + 23) + (2 + 4 + \ldots + 24) = 144 + 156$, 144 being 12^2 and thus including (as dot patterns) the first 12 squares, while $156 = 12 \cdot 13$ "includes" (in the same sense) the first 12 rectangular numbers. So, 300 unites in itself equality and inequality, whereby it is similar to and represents the universe. Similar astute observations are made on the width and the height of the Ark.

Philo's numerology was taken over by both Ambrose and Augustine (who as a teacher had taught Neo-Pythagorean arithmetic in his own youth). But Christian authors until the early Renaissance would also make their own numerological exegesis. A late and beautiful example is Nicholas of Cusa's mathematical "proof" that trinity could not possibly have been quaternity (*De docta ignorantia* 1.20, ed. Wilpert 1967, 1: 59–60): maximal and minimal entities coincide (a fundamental principle in Cusanus' philosophy); in surveying, the necessary reduction to minimal entities leads to triangulation; ergo …

Scientific Greek mathematics only affected medieval exegesis on one point. As mentioned above, the "Babylonian π" is accepted in the Bible. This became a problem to medieval Jewish authors, who devised the explanation that the thread measuring the circumference of the molten sea ran around the inner surface (so explained in *Mišnat ha-Middot* 5. 3). This same idea was proposed not so long ago by the pyramidologist Berriman (1953: 97).

Summing up the influence of Greek and Hellenistic mathematics, we may conclude that it affected the biblical text itself in only a few unimportant aspects. As Judaism and (later) Christianity became integrated into general Hellenistic culture, however, Neo-Pythagoreanism and elementary Archimedean surveying had become an indisputable (and noncontroversial) part of the intellectual baggage of the Church Fathers and other commentators, and they would see no problem in using it as a tool for their exegetical efforts. This mathematical view was also inherited and promulgated by their disciples in the Middle Ages and the early Renaissance.

JENS HØYRUP

MATRED (PERSON) [Heb *maṭrēd* (מַטְרֵד)]. The mother—or father—of Mehetabel, wife of the "Edomite king" Hadad (II) (Gen 36:39; 1 Chr 1:50). See also HADAD (PERSON); MEHETABEL. Whereas the Hebrew Bible has "Matred, daughter of Mezahab" (see MEZAHAB), the LXX translates "Mathraeith, son of M." It is preferable to read *bn* instead of *bt* with the LXXbecause Matred is a male rather than a female name.

The "Edomite King List" (Gen 36:31–39) is either a list of local rulers (some of which may have come from Arabia) in the country of Edom from the 5th century B.C. (Knauf 1985) or a list of Aramean kings from the 11th century B.C. (Lemaire 1988). The name "Matred" has parallels in (Classical and recent) Arabic (*Maṭrûd,* Caskel 1966: 404; *Maṭrûd* and *Mṭârid,* Hess 1912: 36). The root *ṭrd,* "to drive, drive off," is attested for both Aramaic and Arabic, whereas Heb *ṭārad,* "to flow continuously (water, speech)," provides an unlikely etymon for the personal name, as does Sabaic *mṭrd* "ritual hunt (?)" (Beeston et al. 1982: 154).

MATRED, RAMAT. See RAMAT MATRED (M.R. 118020).

MATRITES (PEOPLE) [Heb *maṭrî* (מַטְרִי)]. A clan of the tribe of Benjamin. In a lot-casting procedure used to choose Israel's first king, the Matrites were chosen from the tribe of Benjamin, and Saul was chosen from the Matrites (1 Sam 10:21). Presumably the name is derived from the Hebrew word for rain and may mean "born during the rainy season" (Reymond 1958: 19–20). The name occurs once in Hebrew and twice in Greek in 1 Sam 10:21. The sentence "finally he brought the family of the Matrites near man by man" (RSV) is not found in the Masoretic Text but is based on the Greek translation of this verse. Some scholars think that these words were mistakenly omitted from the Hebrew text (McCarter *1 Samuel* AB, 190), while others argue that the shorter Hebrew text was later amplified by means of a similar text in Josh 7:17–18 (Barthélemy 1982: 165).

STEPHEN A. REED

MATTAN (PERSON) [Heb *mattān* (מַתָּן)]. 1. A priest of Baal who was killed before the altars of Baal, when Jehoiada the priest ordered the altars and images destroyed (2 Kgs 11:18; 2 Chr 23:17). Mattan is probably a truncated form of the common Semitic name *mttnyh* through loss of the divine-name suffix (see 2 Kgs 24:17; 1 Chr 25:4, 16; Neh 11:17, 22) and attested by a Lachish seal and several Phoenician and Punic inscriptions, although he himself was probably not a Phoenician (Rehm *2 Könige* EB, 119). Mattan was possibly Baal's chief priest (Keil n.d. 364), although he is one of only two recorded victims of Jehoiada's covenant with the people and king that they should be Yahweh's people (the other victim was Athaliah, who usurped the throne of her dead son, Ahaziah). The location of this temple of Baal is unknown; but it has been speculated that, on the basis of the limited success of Athaliah and her priest Mattan and of the fact that their deaths are the only ones mentioned, the worship was of a seasonal fertility cult, with altars or even a single altar, possibly in the temple of the royal palace (Gray *1 and 2 Kings* OTL, 580–81).

2. The father of Shephatiah, an official or prince in King Zedekiah's government, partially responsible for Jeremiah's being thrown into the cistern of Malchijah (Jer 38:1).

MATTANAH (PLACE) [Heb *mattānâ* (מַתָּנָה)]. A camping place of the Israelites during the Exodus, located in Moab N of the river Arnon (Num 21:18–19).

In antiquity Eusebius and Jerome identified Mattanah with Maschana, said to have been situated on the Arnon river 12 miles E of Medeba (Lagarde 1887: 277, lines 82–83; 137, lines 30–31). Though the precise location of Mattanah is unknown, most scholars identify it with the site of modern Khirbet el-Medeiyineh (e.g., Glueck 1933–34: 13). Khirbet el-Medeiyineh (M.R. 236110) is a large tell situated on the left bank of the Wâdī eth-Themed in the upper regions of the Wâdī el-Wāle about 12 miles SE of Medeba. Glueck noted pottery sherds dated mostly to Early Iron I and traces of a wall surrounding the top of the tell. Halfway down the slope a wide ditch or dry moat encircles the mound.

Given (1) the apparent discontinuity in the sequence of place names between Num 21:16 and 19; (2) differences in readings between the LXX and the MT; and (3) the meaning of Mattanah ("gift," "donation,"), some commentators render the conclusion of Num 21:18 "a gift from the wilderness" (cf. Gray *Numbers* ICC, 290). This possible translation, however, creates difficulty with the following verse, where Mattanah clearly designates a location. Hence the majority of scholars retain the MT reading and treat Mattanah as a place name.

ARTHUR J. FERCH

MATTANIAH (PERSON) [Heb *mattanyāhû* (מַתַּנְיָהוּ)]. Var. BESCASPASMYS. As many as 10 people in the OT bear this name. It is composed of the Hebrew word for "gift" (*mattan*) and the divine name, Yahweh. Such combinations of the divine name and some form of the verb *ntn* "to give" are called names of thanksgiving by Noth (*IPN,* 170). Other examples are Nathaniel, Elnathan, and Jonathan. This combination is also found in the W Semitic world outside the literature and culture of Israel (*IPN,* 170–71). Mattaniah, in its full form or in its abbreviated form, Mattan, is almost as common in nonbiblical Hebrew sources as in the Bible. The shorter form is seen in 2 Kgs 11:18 and Jer 38:1.

In the Lachish Letters 1:5 the full name "Mattaniah" appears with the patronymic Neriah (Heb *nryhw*), but no clue is offered as to his position or title (*TSSI* 1: 34). The almost-contemporary Arad correspondence contains no reference to the name, but the recently published collection of seal impressions (bullae) from Jerusalem (Avigad 1986) contains several. There are seven identifiable persons bearing the name Mattan (see bullae Nos. 113, 114, 115, 116a, 116b, 117, and 118) including three uses of the shortened name as a patronymic (bullae Nos. 21, 52, 74). Bulla No. 119 contains the name "Mattaniah son of Semachiah" (Heb *mttnyhw bn smkyhw*). The name is among the most popular in this collection of prominent civil servants in the late Monarchy of the 6th century B.C.E.

In the Bible all of the names apply to temple officials, priests, or prominent civil figures, reinforcing the general impression given by the nonbiblical material that the name was a favorite of such persons. While the name is found in stories dealing with the time of David (1 Chr 25:4, 16), Jehoshaphat (2 Chr 20:14), and Hezekiah (2 Chr 29:13), the references are found in the Deuteronomistic History, the book of Jeremiah, and the work of the Chronicler, including Ezra and Nehemiah, that is, in literature which reached its final form either during the Exile or in the postexilic period.

Of the ten men bearing the name Mattaniah, five were priests, one was a member of the royal family, and the other four were members of the postexilic Jerusalem elite. The shortened form of the name applies to members of similar classes of people, a priest (2 Kgs 11:18) and one of a group of "princes" (Heb *sārîm;* Jer 38:1, 4). The characters are listed below in their chronological order.

1. One of the fourteen "sons of Heman," a group of Levites which was appointed by David for temple service (1 Chr 25:4, 16). The duties of Mattaniah and his thirteen brothers were to "prophesy with lyres, with harps, and with cymbals" (1 Chr 25:4). They were accompanied by members of the sons of Asaph and Jeduthun. The reference is important because of its view of prophecy. A similar understanding is seen in the activity of the prophets whom Saul met (1 Sam 10:5–13) and the activity of Elisha (2 Kgs 3:15), in which prophecy is accompanied by instrumental music (Johnson 1962: 69–74). Ps 88:1 contains a dedication to "Heman the Ezrahite," thus continuing the tradition of the musical associations of this group. The reference in 1 Chronicles 25 is clearly anachronistic and reflects a later arrangement in the temple services.

2. The ancestor of Jahaziel, a member of the court of Jehoshaphat (ca. 877–853 B.C.E.) of Judah (2 Chr 20:14). The activity of Mattaniah's descendant is clearly a prophetic one and consisted of the giving of oracles of reassurance in time of national threat (Conrad 1985: 38–62). It appears that this became a regular function of "court prophets," but it had a long history (Blenkinsopp 1983: 61–68). In this case Judah was threatened with invasion by an alliance of Moabites, Ammonites, and Meunites, a S Transjordanian tribe from the region of modern Petra. As the oracle stated, the invasion was repulsed.

3. A Levite of the sons of Asaph who, together with his colleague Zechariah and representatives of the sons of Kohath, Merari, Gershon, Elizaphan, and Heman, was commissioned by Hezekiah (ca. 727–699 B.C.E.) to consecrate the temple during the king's reform of worship (2 Chr 29:13). As with the reform of Josiah, the Chronicler pays much more attention to the role of the temple Levites in the event.

4. The uncle (Heb *dôd*) of king Jehoiachin (ca. 597 B.C.E.) who was placed on the throne of Judah by Nebuchadnezzar of Babylon, after Jehoiachin had been taken into Exile (2 Kgs 24:17). It is assumed that the term *dôd* is to be translated as "uncle" in this context, but the term does have strong overtones of intimacy and closeness which go beyond matters of kinship (*TDOT* 3: 143–56). Mattaniah/Zedekiah reigned for a further eleven years (ca. 597–586 B.C.E.), rebelled against Nebuchadnezzar, and witnessed the invasion of Judah and the final destruction of Jerusalem. The name change was obviously a source of a prophetic pun by Jeremiah (Jer 23:6). The practice of renaming kings at the time of enthronement is not unknown in the ANE and is mentioned four times in the Bible. Solomon's pre-coronation name appears to have been Jedidiah (2 Sam 12:24–25); Jehoahaz, son of Josiah, was originally named Shallum (Jer 22:11); and Jehoiakim was originally called Eliakim (2 Kgs 23:13). The Babylonian account says nothing of a name change but does state that Nebuchadnezzar appointed "a king of his own choice" on the throne in Jerusalem (*TCS* 5: 102).

5. A non-Levite, one of the sons of Elam who had married foreign women after their return from Exile and for whom Ezra had insisted upon divorce (Ezra 10:26).

6. One of the sons of Zattu, a returnee, who divorced his wife, a foreigner, on the orders of Ezra (Ezra 10:27).

7. One of the eight sons of Pahath-moab who had married foreign women on their return from Exile and who were forced to divorce them on orders of Ezra (Ezra 10:30). It is possible that he is the same as Bescaspasmys (Gk *Beskaspasmus*) in 1 Esdr 9:31.

8. One of the twelve sons of Bani who was forced to divorce his foreign wife after the return from Exile (Ezra 10:37). Each of these family groups is mentioned among the returning exiles in Ezra 2:6–10 and Neh 7:11–13, and they are distinguished from the priests and Levites. The heads are called "chiefs of the people" (Neh 10:14), and those that married foreign women are listed as "from Israel" (Ezra 10:26) in contrast to the religious functionaries. All four of the family heads entered into the covenant with Nehemiah (Neh 10:14) to separate themselves from the "people of the land" in matters of worship, marriage, and other religious practices (Neh 10:28–31).

9. Mattaniah ben Micah, a member of the "sons of Asaph," was appointed by Nehemiah as "the leader to begin the thanksgiving in prayer" in the restored temple during the high priesthood of Eliashib (Neh 11:17). A descendant, Uzzi ben Bani, was "overseer of the Levites in Jerusalem" (Neh 11:22); and another descendant, Zechariah ben Jonathan, was a trumpeter in the restored cultus (Neh 12:35). The Mattaniah mentioned in Neh 12:8 as "in charge of the songs of thanksgiving," and the one mentioned in

Neh 12:25 who was given guard duties at the storehouse of the gate are probably the same person. The absence of a patronymic would indicate that he would have been known and identified from the context. The general problems of this genealogy are discussed by Aufrecht (1988). Mattaniah, together with several other returnees, resettled in the region of Netophah in the hill country of Judah. This area is associated with modern Khirbet Bedd Faluh, a few miles SE of Bethlehem, near a spring bearing the name ʿAin en Natuf (1 Chr 9:15).

10. The grandfather of Hanan ben Zakkur, whom Nehemiah appointed as a faithful assistant to the new guardians of the storehouses (Neh 13:13). These men, Shelemiah the priest, Zadok the scribe, and the Levite Pedaiah, were appointed in the aftermath of the failure of the Levites to perform their duties. It is possible, though not certain, that Hanan was also a Levite.

MATTATHA (PERSON) [Gk *Mattatha* (Ματταθα)]. The father of Menna and son of Nathan (and grandson of King David) according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:31). D omits Mattatha, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. The name Mattatha occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of eighteen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* AB, 501), although the name is similar to several others in the genealogies. Matthat (Luke 3:24, 29) and Mattathias (Luke 3:25, 26) in Luke's genealogy, and Matthan (Matt 1:15) in Matthew's. Kuhn (1923: 208–9) believes that Mattatha and Mattathias were originally identical, both derived from a common list that subsequently formed the basis for two parallel lists in Luke's genealogy: 3:26–29, Jesus to Mattathias; and 3:29–31, Joshua/Jesus to Mattatha. It is difficult to establish which was original, according to Kuhn, but Mattatha appears in the genealogy which does not mention Joseph as Jesus' father and thus may have traced Mary's line. Hervey (1853: 36–37, 88) explains the similar-sounding names as all derived from Heb *nātan* (Nathan), especially since Mattatha is listed in Luke as Nathan's son. Thus it confirms that Luke's genealogy traces David's line through Nathan. Johnson (1969: 240–52) goes further and sees an equation being made between Nathan in the genealogy and the OT prophet, thereby endorsing Jesus as prophet, although Abel (1974: 209) disputes this because of a lack of distinctly Lukan development of the prophetic motif. Establishing with certainty the basis for use of Mattatha is virtually impossible on the limited evidence.

STANLEY E. PORTER

MATTATHIAH (PERSON) [Gk *Mattathias* (Ματταθιας)]. During the public reading of the Law, Mattathiah was among the men who stood at Ezra's right side (1 Esdr 9:43). In the RSV, the same individual is called Mattithiah in the parallel account (Neh 8:4; see MATTITHIAH), though the Greek is identical for both (i.e., *Mattathias*). Furthermore, this Greek form of the name is the most common representation of the Heb *mattityâ/mattityāhû,* which is always rendered into English by the RSV as Mattithiah (see LXX in 1 Chr 9:31; 15:21; 16:5; 25:3, 21; cf. 1 Chr 15:18; Ezra 10:43). Therefore, it is unclear why *Mattathias* in 1 Esdr 9:43 is inconsistently translated by the RSV as Mattathias rather than

Mattithias. For a similar example, compare Phineas in 1 Esdr 8:29 (Gk *Phinees*) with Phinehas in Ezra 8:2 (LXX *Phinees*).
JOHN KUTSKO

MATTATHIAS (PERSON) [Gk *Mattathias* (Ματταθιας)]. **1.** Father of Judas Maccabeus and his four brothers (1 Macc 2:1–5), and son of John, and grandson of Simeon. Mattathias belonged to the priestly order Jehoiarib and is described as a Jerusalemite who settled in the village of Modein. It seems, despite the impression the author tries to create, that Modein was the ancestral residence of the family (cf. 1 Macc 2:17, 70; 9:19; 13:25–29), though it is quite possible that the family also had a domicile in Jerusalem (2 Macc 4:27 also gives the same impression). Mattathias' family might have been a prominent one, since it is so described in 1 Macc 2:17 and because it belonged to the order of Jehoiarib, which is the first in the priestly orders' list in 1 Chr 24:7. Yet we may suspect some effort on the part of our sources to promote the status of Mattathias' family according to the dynastic interests of the Hasmoneans. Some even suppose that Jehoiarib's prominent place as the first in the list of priestly orders in 1 Chronicles may be an interpolation of the Hasmonean period. Josephus and rabbinic sources call Mattathias Ḥashmonay, or add this nickname to him. The meaning of this word is unknown, though it may be compared to Mattathias' sons' nicknames. Some postulate a connection between Ḥashmonay and a village by the name Ḥeshmon (Josh 15:27), but this lacks any positive evidence.

Mattathias in his old age took the initiative to oppose by force of arms the imposition of the religious persecution of Antiochus IV (1 Macc 2:15ff.). In the year 166 B.C.E., when a Syrian military force arrived at Modein and convened the population for an ungodly sacrifice, Mattathias killed a Jew who was ready to perform the sacrilege; and then he killed the Syrian officer. After this act he fled to the mountains, where he was joined by supporters, among them a group of Hasidim. There Mattathias and his supporters decreed that it is permitted to fight in self-defense on the Sabbath (1 Macc 2:41).

The revolt under Mattathias, at this stage, was typical guerrilla warfare. It was aimed at the renegades (the Hellenizers), at destroying the pagan altars, and at enforcing the Jewish law whenever possible, especially the circumcision of children, which was prohibited by the Syrian king. In the year 146 of the Seleucid era (i.e., 166/165 B.C.E.), a short time after the beginning of the revolt, Mattathias died (2 Macc 2:69). A "Testament" (farewell address) is ascribed to him by the author of 1 Maccabees (2:49–68). His name is mentioned, among other rabbinic sources, in the prayer *ʿAl HaNissim.* Some have suggested identifying Mattathias with the figure of Taxo in the *Assumption of Moses.*

2. Third son of Simon, the founder of the Hasmonean dynasty, and grandson of Mattathias #1 (above). He was murdered with his father and brother by Ptolemy, son of Ḥabubos (1 Macc 16:14–16).

3. Son of Absalom and a commander under Jonathan the Hasmonean (1 Macc 11:70).
URIEL RAPPAPORT

4. The father of Maath and son of Semein according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:26). D omits Mattathias, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. The name Mattathias is unknown as an ancestor of Jesus in any other biblical documents, including Matthew's genealogy, although the name, with variants in spelling, is common in canonical and extracanonical texts (see elsewhere in this entry; Fitzmyer *Luke 1–9* AB, 500). Hervey (1853: 36–37, 135) claims that the similar sounding names in Luke's and Matthew's genealogies—Mattathias (Luke 3:25, 26), Mattatha (Luke 3:31), and Matthat (Luke 3:24, 29) in Luke and Matthan (Matt 1:15) in Matthew—are derived from Heb *nātan* (Nathan), especially since Mattatha is listed as Nathan's son in Luke 3:31, confirming that Luke's genealogy traces Joseph's line of David through David's son Nathan. See MATTATHA. Johnson (1969: 240–52) goes further and sees an equation being made between Nathan in the genealogy and the OT prophet, thereby endorsing Jesus as prophet, although Abel (1974: 209) disputes this because of a lack of distinctively Lukan development of the prophetic motif. If Kuhn (1923: 208–9) is correct that the two seemingly parallel lists of names in Luke 3:23–26 (Jesus to Mattathias) and Luke 3:29–31 (Joshua/Jesus to Mattatha) were originally one (see MAATH), then Mattathias may be a variant of Mattatha if the second list is early,

possibly tracing Mary's line (since it does not mention Joseph as Jesus' father). Theological explanations for inclusion of Mattathias are improbable. For example, it has been suggested (e.g., Schürmann *Luke* HTKNT, 202–3) that Luke's genealogy consists of 11 × 7 names from Adam to Jesus, with the 12th period being the messianic age. Thus Zerubbabel to Mattathias would mark the 9th group, with Mattathias the terminal name for the period. But this scheme is not clear from Luke's text (see Johnson 1969: 231–33).

5. The father of Joseph (an earlier ancestor of Jesus) and son of Amos according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:25). D omits Mattathias, substituting a genealogy adapted from Matt 1:6–15 in Luke 3:23–31. See Hervey (1853: 36–37, 135); Johnson (1969: 240–52). There is even less apparent theological motivation for inclusion of this name here than in Luke 3:26. Establishing with certainty the basis for use of Mattathias in Luke 3:25 or 26 is virtually impossible on the limited evidence.

STANLEY E. PORTER

MATTATTAH (PERSON) [Heb *mattattâ* (מַתַּתָּה)]. A son of Hashum and one of the sons of Israel who pledged to put away his foreign wife (Ezra 10:33). He is listed under the sons of Israel to distinguish his group of laymen from the sons of priests. It has been noted that the number of marital offenders is particularly small (cf. similar genealogical lists in Ezra 8:2–14 and one in inverted order in 2:2–61, where the family names can be found for many in the list in chap. 10), although it is far more likely that the list in Ezra 10:18–44 is only a partial list, since the problem of intermarriage with foreigners appears to have been a serious one (cf. Neh 13:23–29; Meyers *Ezra-Nehemiah* AB, 87).

STANLEY E. PORTER

MATTENAI (PERSON) [Heb *mattĕnay* (מַתְּנַי)]. **1.** A son of Hashum and one of the sons of Israel who pledged to put away his foreign wife (Ezra 10:33). He is listed under the sons of Israel to distinguish his group of laymen from the sons of priests. It has been noted that the number of marital offenders is particularly small (cf. similar genealogical lists in Ezra 8:2–14 and one in inverted order in 2:2–61, where the family names can be found for many in the list in chap. 10), although it is more likely that the list in Ezra 10:18–44 is only a partial list, since the problem of intermarriage with foreign women appears to have been a serious one (cf. Neh 13:23–29; Meyers *Ezra-Nehemiah* AB, 87).

2. A son of Bani and one of the sons of Israel who pledged to put away his foreign wife (Ezra 10:37). See #1 above.

3. A priest and head of the household of Joiarib, during the days of Joiakim the priest (Neh 12:19), a family name mentioned in Neh 12:6 for a priest or Levite who came up with Zerubbabel out of exile in Babylon. The use of "and" before Joiarib (1:6) indicates to some scholars that the list from this point on is an addition to an earlier list, perhaps reflecting the author's penchant for genealogies (Meyers, 196).

STANLEY E. PORTER

MATTHAN (PERSON) [Gk *Matthan* (Ματθαν)]. The son of Eleazar and father of Jacob according to Matthew's genealogy tying Joseph, the husband of Mary, to the house of David and Solomon (Matt 1:15). Codices B* and D read *Maththan.* The name Matthan appears as Mattan (Heb *matān*) in 2 Chr 23:17 (LXX *Matthan* in Rahlf's edition) and in Jer 38:1—LXX 45:1 (*Mathan* in Rahlf's edition), and it is found instead of *Maththanian* in 4 Kgdms 24:17 in Codices B and C (*Matthan* is read in B^{C}). It does not appear in the genealogy of 1 Chr 1:19–24 or in any other list of Jesus' ancestors, although Albright and Mann (*Matthew* AB, 4–5) believe the name is characteristic of names used in the last two centuries B.C. If there

is no basis in history or tradition for the genealogies there is no need to harmonize this name with Luke's genealogy (*IDBSup* 354); but most scholars are not content with this solution, since there is an abundance of similar-sounding names in the two genealogies: Matthan (Matt 1:15), Mattathias (Luke 3:25, 26), Mattatha (Luke 3:31), and especially Matthat (Luke 3:24, 29—Codex D reads *Maththan* at Luke 3:24.). Hervey (1853: 36–37, 129–30, 134) claims that all of the above names are derived from Heb *nātan* (Nathan) and uses this to confirm that both Luke's and Matthew's genealogies are connected to the lineage of David's son Nathan. He concludes that Matthan (son of Eleazar) and Matthat (son of Levi) in Luke 3:24 refer to the same person on the basis of similar sound, common origin, and most important, similar placement in each genealogy. Gundry (1982: 18) accounts for their difference in this way: Matthew has changed the name of Joseph's grandfather, Matthat, to Matthan in order to conform exactly to the Hebrew, corroborated by Matt 9:9, where the author supposedly changed Levi (Mark 2:14; Luke 5:27) to Matthew, also supposedly based upon Heb *matān.* If the two names refer to the same person, however, a further problem is introduced: why is Matthan/Matthat given a different heir and a different father in the two gospel accounts? See MATTHAT #2 for a discussion of this problem.

MATTHAT (PERSON) [Gk *Matthat* (Ματθατ)]. **1.** The father of Jorim and son of Levi according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:29). (Codex B* reads *Maththat,* with several other variants in other texts, including D, which omits Matthat, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31). Apart from Luke 3:24 (see below), this name appears in a list of 18 ancestors otherwise unknown to the biblical documents, including Matthew's genealogy (Fitzmyer *Luke 1–9* AB, 501). Kuhn (1923: 208–9) argues that two seemingly parallel lists of names—Luke 3:23–26 (Jesus to Mattathias) and 3:29–31 (Joshua/Jesus to Mattatha)—were originally identical, the first perhaps reflecting a Hebrew context and the second, in an Aramaic context, tracing Mary's line of descent (since it does not mention Joseph as Jesus' father). Matthat is significant for Kuhn's analysis, since both lists have Levi as his father. Hervey (1853: 36–37, 129–30) believes that Matthat, like Mattathias (Luke 3:25, 26), Mattatha (Luke 3:31), and Matthan (Matt 1:15), is derived from Hebrew *nātan* (Nathan), providing evidence for Luke's genealogy tracing David's line of descent through his son Nathan (but see Marshall [*Luke* NIGTC, 162], who believes Matthat represents Heb *matat*). Johnson (1969: 240–52) goes further and sees an equation being made between the Nathan in the genealogy and the OT prophet, thereby endorsing Jesus as prophet, although Abel (1974: 209) disputes this because of a lack of distinctly Lukan development of the prophetic motif.

2. The father of Heli and son of Levi according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:24). (Codex B* reads *Maththat,* and D reads *Maththan* in the substituted genealogy adapted from Matt 1:6–15). The name Matthat is in a list of 17 ancestors otherwise unknown to the biblical documents, including Matthew's genealogy (Fitzmyer *Luke 1–9* AB, 500). If there is no basis in history or tradition for the genealogies, there is no need to harmonize this name with Matthew's genealogy (*IDBSup,* 354); but most scholars are not content with this solution, since there is an abundance of similar sounding names in the two genealogies: Matthat (Luke 3:24, 29), Mattathias (Luke 3:25, 26), Mattatha (Luke 3:31), and especially Matthan (Matt 1:15). See Kuhn (1923: 208–9), Hervey (1853: 36–37, 129–30), Marshall (*Luke* NIGTC, 162), and Johnson (1969: 240–52). It is thought by many that Matthat the son of Levi (Luke 3:24) is identical with Matthan the son of Eleazar (Matt 1:15) on the basis of similar sound, common origin, and (most importantly) similar placement in each genealogy. See MATTHAN. If the two names refer to the same person, however, a further problem is introduced: why is Matthat/Matthan given a different heir and a different father in the two gospel accounts?

Ever since Julius Africanus' (3d-century-A.D.) letter to Aristides (Eus. *Hist. Eccl.* 1.7), levirate marriage has often been proposed as the solution to the problem of why Matthat's son in Luke is "Heli" and Matthan's son in Matthew is "Jacob," although Machen (1930: 208) supposes that Jacob, Matthan's son, died childless and that his nephew Joseph (son of his brother Heli) became his heir (a similar solution could be used if Matthat and Matthan are different people). If levirate marriage was still practiced (see Mark 12:18–27), then according to this analysis Heli and Jacob may have been full brothers, one of whom was without child and whose brother married the other's widow to produce an heir. Most scholars today propose Jacob in Matthew's account as the childless brother and Heli as the natural father of Joseph, although Julius Africanus suggested the reverse.

A similar solution would need to account for the fact that Matthat and Matthan are given different fathers, but appeal to levirate marriage again is highly improbable. Machen (1930: 208) suggests that "the kingly line became extinct with Eleazar (Matt 1:15), thus avoiding levirate marriage as the solution here. If Heli and Jacob were only half-brothers, i.e., with the same mother and different fathers, then it means that their mother married two different men with remarkably similar names—Matthat and Matthan—again highly improbable (see Brown 1977: 503–4). (Julius Africanus' Lukan genealogy omits Matthat and Levi, listing Melchi as the father of Eli by a woman, Estha, the widow of Matthan, rightly noted by Johnson as an artificial reconstruction [1969: 141–42].) It is more likely that the names Matthat and Matthan refer to two different men, since harmonization on the basis of the limited extratextual evidence is virtually impossible.

———

A. Etymology

Greek *Maththaios* (mss Sinaiticus, B, D) or *Matthaios* is derived from Hebrew or Aramaic *Matta›i, Mattiya›,* or *Mattiyah,* shortened forms of *Mattith-yah (u),* which is built on the Hebrew words *nātan,* "he

gave," and *Yah (u),* a shortened form of "Yahweh"; an etymological meaning is "gift of Yahweh" or simply "gift of God."

B. Location of the Name "Matthew"

The name "Matthew" is found in two locations. The first location is in each of the four NT lists of the Twelve (eleven in Acts), close followers of Jesus (Matt 10:2–4; Mark 3:16–19; Luke 6:14–16; Acts 1:13). This group is usually called *mathētai,* "disciples" or "pupils," in the gospels of Matthew, Mark, and Luke; they are designated *apostoloi,* "apostles" or "missionaries," at the beginning of at least two, and probably three, of the four lists (Matt 10:2 [here only in Matthew]; Mark 3:14, mss Sinaiticus, B, etc. [cf. also 6:30]; Luke 6:13), in the gospel of Luke somewhat more frequently, and in Acts, where the term "disciples" designates a larger group of followers (contrast Paul, 1 Cor 15:5–7). In the lists, the name "Matthew" is seventh in Mark 3:18 and Luke 6:15 and eighth in Matt 10:3 and Acts 1:13. Thus the name is placed in a position of lesser status than the brothers Peter and Andrew or James and John, who always make up the first set of four names.

The second location of the name "Matthew" is in the Matthean version of the call of the man sitting at the "toll booth" (Matt 9:9; contrast Mark 2:14; Luke 5:27).

C. Gospel Parallels and Textual Variants

The problem concerning Matthew can be clarified by closely observing the most important gospel parallel variations and their ms variants.

According to the most reliable mss of the gospel parallels, the pertinent variations can be summarized like this.

1. The lists consistently refer to "James the son of Alphaeus," who is thereby distinguished in the same lists from "James the son of Zebedee" (Matt 10:3; Mark 3:18; Luke 6:15).

2. The lists do not refer to Levi, or to "Levi the son of Alphaeus" (see, however, the discussion of "Lebbaeus" below).

3. The lists refer to a certain Matthew (Matt 10:3; Mark 3:18; Luke 6:15; Acts 1:13).

4. Only in the list of the gospel of Matthew is this "Matthew" called "the tax collector" (Matt 10:3: *mathētēs*).

5. Only in the Matthean version of Jesus' call of the "man sitting at the toll booth" is the man named "Matthew" (Matt 9:9), thus equating the Matthew in the call of chap. 9 with the Matthew in the list of chap. 10.

6. The one sitting at the toll booth in the gospels of Mark, Luke, and Peter (see PETER, GOSPEL OF) is not called "Matthew," but "Levi."

7. In Mark 2:14 and the *Gospel of Peter* 60, he is called "Levi the son of Alphaeus"; in Luke 5:27 he is called "a tax collector named Levi."

D. Solutions to the Variations

Some scholars conclude that the problem posed by the parallels and variants is insoluble. Three major solutions to the variations can be suggested.

1. Levi = Matthew. The first solution is that Levi and Matthew are the same person. One suggestion is that Levi was renamed "Matthew" by Jesus after he was called to be a disciple, a theory that sometimes attempts to build on the supposed changing of names by Jesus (e.g., Heb/Aram *Šimʿōn* = Gk *Simōn;* Heb/Aram *Cephas* = Gk *Petros* [Eng "Peter"]). A second suggestion is that "Matthew" was the name given at baptism, "Levi" having arisen because Matthew was from the tribe of Levi. Both suggestions have been related to the traditional theory of authorship of the gospel of Matthew, that is, that the author Levi/Matthew is covertly referring to himself in the account of the call of Matt 9:9.

Both suggestions have difficulties. The first has to contend with that fact that no story about Levi renamed "Matthew" has survived and is therefore an argument from silence; that the names "Levi" and "Matthew" fall in different gospels; that the analogy with Cephas/Petros is not exact, that is, the latter is a special nickname built on a pun of great symbolic significance, namely, "rock" (Heb/Aram *kēphaʾ* = Gk *petra*); and that that renaming story itself may have arisen in the early Church. The second suggestion is also an argument from silence about names in different gospels. Both are conjectures which attempt to

harmonize the Matthean with the Markan and Lukan accounts of the call scene. As far as the author's covert allusion to himself is concerned, the call story does not mention authorship and viewpoint; moreover, one would have to accept Matthean authorship of the first gospel, which is contested (see below). However, denial of apostolic authorship does not at the same time answer the question about the identity of Matthew.

2. "Matthew" was Changed to "Levi." A second solution is that in the call scene "Matthew" (Matt 9:9) was changed to "Levi the son of Alphaeus" (Mark 2:14) or "a tax collector named Levi" (Luke 5:27). This solution can be related to any hypothesis which defends the gospel of Matthew as earlier than the gospel of Mark (the Traditional Hypothesis; the "Two-Gospel" or "Griesbach Hypothesis"). See SYNOPTIC PROBLEM. This solution runs up against a major problem: the name of a disciple, Matthew, which also occurs in Matthew's disciple list, where Matthew is called "the tax collector," has been replaced with an otherwise unknown disciple. A further problem for the view that Mark chose and then modified Luke ("Two-Gospel Hypothesis") is that one would need to explain why the Markan writer designates Levi, like James in the lists, "the son of Alphaeus." (Was there a tradition of two tax collectors, one named Matthew, the other Levi? Was Levi believed to be the brother of James, the son of Alphaeus?

3. "Levi" was Changed to "Matthew." A third solution is that the Lukan writer has accepted "Levi" from the gospel of Mark but removed the description "the son of Alphaeus" (Luke 5:27; cf. "James the son of Alphaeus" in his disciple list, Mark 3:18 = Luke 6:15), while the Matthean writer has changed "Levi" to "Matthew" (Matt 9:9) and subsequently correlated the name with one of the Twelve in his disciple list by describing this Matthew as "the tax collector" (Matt 10:3). In this solution only the Matthean writer would have removed the thirteenth disciple, Levi. Such a solution would correspond with 3d-century Origen's view that Levi was not one of the twelve disciples (Origen, *c. Cels.* 1.62). It also corresponds with the dominant modern view that the earliest gospel was Mark (the "Two-Source Theory"). This solution also has difficulties; before considering it further, however, it will be helpful to note some variants in the mss and some redaction-critical possibilities.

Table 1
Gospel Parallels (with Textual Variants)

Disciple lists:

Matt 10:3:	and	Thomas	and	Matthew the tax collector		James the son of Alphaeus,	and Thaddeus[2]	
Mark 3:18:	and			Matthew[1]	and Thomas and	James the son of Alphaeus,	and Thaddaeus[3]	
Luke 6:15:	and			Matthew	and Thomas and	James the son of Alphaeus,	and Simon who was called	the Zealot
Acts 1:13:		Bartholomew	and	Matthew,		James the son of Alphaeus	and Simon	the Zealot

Man sitting at the toll booth:

Matt 9:9:	a man …	called	Matthew	
Mark 2:14:			Levi[4]	the son of Alphaeus
Luke 5:27:	a tax collector	named	Levi	
Gos. Pet. 60:			Levi	the son of Alphaeus

[1]The tax collector: added in *thēta*, Ferrar Group, etc.
[2]Lebbaeus (Greek) or Labbaeus (Latin): D, the Old Latin "K," Latin verions; Lebbaeus who is called Thaddaeus: some later Greek texts.
[3]Lebbaeus (Greek) of Labbaeus (Latin): D and most old Latin versions.
[4]James: D, *thēta*, Ferrar Group, 565, Old Latin, Diatessaron, Origen, Ephraem, Photius.

E. Textual Variants

1. "James" in Place of "Levi." In a few mss of the Markan call scene, "the son of Alphaeus" is James, as in the lists, rather than Levi (Mark 2:14 D, *thēta,* Ferrar Group, 565, Old Latin, Diatessaron, Origen, Ephraem, Photius). Should this be what the original Markan author wrote, there would be no thirteenth disciple; and the call scene would correlate with the list by means of the "James," not "Matthew," as in the gospel of Matthew. However, the ms evidence for this variant is considered to be relatively weak. Furthermore, the Lukan parallel to the Markan call scene still has "Levi the tax collector" and the Lukan reading has no ms variants (Luke 5:27). Therefore—the problem is related to synoptic relationships—the usual conclusion is that later scribes have changed "Levi the son of Alphaeus" in the call scene to "James the son of Alphaeus" (Mark 2:14) to make it conform to "James the son of Alphaeus" in the disciple list (Mark 3:16). This argument is all the more forceful if the Lukan writer, who has "Levi," found it in his Markan gospel (the "Two-Source Theory").

Oddly, a few of the same Markan mss that have James at the tax booth in Mark 2:14 persist in calling Matthew "the tax collector" in the disciple list in Mark 3:16 (*thēta,* Ferrar Group, etc.). However, these variants are considered so weak that many modern Greek editions of the NT do not even note them as alternatives; they undoubtedly show an influence from the Matthean gospel's designation of Matthew as "the tax collector" (Matt 10:3; cf. 9:9).

2. "Lebbaeus/Labbaeus" (= "Levi") in Place of "Thaddaeus." Still other ancient mss seem to make the correlation by the reverse maneuver, that is, by bringing an equivalent of "Levi" into the list, thus requiring removal of one of the Twelve. Thus, a few Western texts have Greek "Lebbaeus" or Latin "Labbaeus" for "Thaddaeus" in the disciple lists of the gospels of Mark (cf. Mark 3:18 D) and Matthew (cf. Matt 10:3 D, African Old Latin, "K," Latin versions; Latin of Origen); some later Caesarean and *koinē* Greek mss explain with the words "Lebbaeus who is called Thaddaeus." This is a correlation only if "Lebbaeus/Labbaeus" can be with certainty identified with "Levi." Not all modern scholars have accepted this identification. Nonetheless, 3d-century Origen, who knew the variant, explained it thus (Origen *c. Cels.* 1.62), and so do certain modern scholars. One suggestion is that the change from "Thaddaeus" to "Labbaeus" was first made in early Latin mss and subsequently to "Lebbaeus" in Greek mss (Ms D is bilingual Greek and Latin); if so, this change would have predated a variant in Greek texts which would have changed "Levi" to "James," since the latter would cancel the necessity for the former (Lindars 1958).

There are several implications of these ms variations: (a) Later copyists sought to align the person called at the tax booth with one of the twelve disciples in the lists. (b) The ms variants are best explained on the basis that Mark 2:14 of these mss (the call) contained "Levi" and that Mark 3:16 of these mss (the list) contained "Matthew." (c) The later copyists of the gospel of Mark may offer a clue about the original author of the gospel of Matthew, namely, the latter made a similar change from "Levi" to "Matthew" (Matt 9:9), and for the same reasons.

F. Redaction Criticism

Redaction criticism, which has usually been built on the view that canonical Matthew knows a gospel very close to canonical Mark, offers another perspective on the problem (Pesch 1968). Mark 2:14 contains typical Markan language and construction ("as he passed on," cf. 1:16; "and he says to him," cf. 1:44; 5:19; 7:18; cf. 1:41; 5:9; 7:34; 12:16; 14:30; "following" Jesus, esp. 1:18; 10:21; cf. 3:7; 6:1; 10:32; 10:52). Combined with Mark 2:13, a generally accepted Markan transition, it appears to have been constructed as an introduction to the following scene where Jesus is at table with tax collectors and sinners, perhaps in the house of Levi the son of Alphaeus (Mark 2:15: "In his house" is not clear; cf. Luke 5:29). The general point would be that Jesus "came not to call the righteous, but sinners" (2:17b), an important theme in Mark's first major section (1:2–34 + 2:1–3:6).

If Mark composed Mark 2:13–14 as an introduction to Jesus' meal at Levi's house and if the author of Matthew used the Markan gospel, then it would appear that the parallel to 2:14 in Matt 9:9 was not from Matthew's special tradition but an adaptation of the Markan text. First, the meal with the tax collectors and sinners seems to take place in Jesus' house in Capernaum (Matt 9:7, 10). Then, apart from the name

change, there are some minor, but nonetheless, characteristic Matthean expressions vis à vis the gospels of Mark and Luke: the addition of the name "Jesus" (*ho Iēsous*: Matt 4:1, 17; 7:28; 8:14, 18; 9:9, 27; 11:1; 12:9, 15; 14:13; 15:29; 19:15) and "from there" (*ekeithen:* Matt 4:21; 9:9, 27; 11:1; 12:9, 15; 14:13; 15:29; 19:15), sometimes in combination (Matt 9:9, 27; 11:1); "a man" (Matt 13:31; 17:14; 19:3, 10; 26:72; esp. 27:32, 57); the Greek form of "called" (*anarthrous legomenos:* 2:23; 9:9; 26:36; 27:16, 33), which form the writer consistently uses simply to designate a name of a person or place. When persons have a second name or title, he employs "who is [also] called" (articular *ho legomenos:* 1:16; 4:18; 10:2; 26:3, 16; 27:17, 22). This fact excludes the first solution (4a above), that Levi and Matthew are different names for the same person.

Such tendencies can be reinforced by observing that the Matthean author is very particular about his use of the names, especially those of the twelve disciples (Pesch 1968). In contrast to Mark, he typically stresses the preeminence of Peter and seems to do so in the list (Matt 10:2: "first Simon …"; contrast Mark 3:16; Luke 6:13–14). Moreover, he aligns the list with the same sequence and language found in the original call scenes (cf. 4:18 with 10:2: "Simon who is called Peter and Andrew his brother"; 4:21 with 10:2: "James the son of Zebedee and John his brother"; cf. 17:1; contrast Mark 3:16–18: Simon … James … John … Andrew …). In general, he avoids superfluous and/or false names (e.g., persons: Mark 2:26; 3:16; 3:17 par.; Matt 10:2; Mark 5:22; 6:17; 10:46; 15:21; places: Mark 3:7; 5:20; 6:45; 7:31; 8:22); and, even more to the point, he omits the unknown Salome (Mark 15:40; 16:1; Matt 27:61; 28:1) and introduces a known woman, the mother of the sons of Zebedee (Matt 27:56; cf. 20:20; 26:37). All of these tendencies make plausible the Matthean change from "Levi" to "Matthew" in the call scene, thus bringing it into conformity with the list.

In short, redaction-critical arguments support the solution that the author of Matthew's gospel knew and changed the Markan "Levi" to "Matthew" in Matt 9:9 and then added "the tax collector" to that name in the list in 10:3, thus correlating the two passages. The basis for these changes would appear to be that the author of Matthew limits the disciples to the list of the Twelve, a limitation which can be further supported by a careful study of his use of the terms "disciples" (*mathētai*) and "twelve" (*dōdeka*) and their combination (Matt 10:1, 5; 11:1; 20:17; 26:14, 17, 18, 19, 26, 47) vis à vis Mark (Strecker 1966; Pesch 1968; Luz 1983). As noted above, the same motive can be traced in the copyists.

G. The Name "Matthew"

If the author of the first gospel, who was not the disciple Matthew, made the change from "Levi" to "Matthew" in the call scene and correspondingly added "the tax collector" to Matthew in his list, why did he choose the name "Matthew" and not another name from among the list of twelve disciples? Several answers have been given to this most difficult question, among which are the following (see Pesch 1968; Kiley 1984):

1. The author knew that *Matthias* was the only Levite in the list (1 Chr 25:3; 15:18, 21; 16:5; 25:21; 1 Esdr 9:43) and he associated this with "Levi" (Goulder 1974).

2. The author believed that Matthew had originally "compiled the sayings of the Lord in the Hebrew language" (Papias in Eus. *Hist. Eccl.* 3.39.16), sayings which he used in the composition of the gospel (a partial solution, says Kiley; cf. I below).

3. The author and/or his circles especially honored Matthew (Fenton *Matthew* PNTC).

4. The author saw "Matthew" = "gift of God" as representative of "tax collectors and sinners" of whom Jesus was a "friend" (Pesch 1968).

5. The author intended to underscore the idea that "disciples" (*mathētai*: Mark 2:15, 16 = Matt 9:9, 10) are those who should "learn" (*mathete:* Matt 9:13) the meaning of "I desire mercy, and not sacrifice" (Hos 6:6 in Matt 9:13; cf. 12:7); thus *mathētai* and *mathete* suggested *Matthias* as the true representative of "learning-discipleship" so prevalent in the gospel (Kiley 1984). The last two suggestions are easiest to document on the basis of the text itself.

H. "The Tax (Toll) Collector"

The collectors of taxes and/or tolls in the NT are usually called *telōnai* ("tax collectors," Heb *qabbāʿîm*, or "toll collectors," Heb *môkĕsîn*, cf. Aram *mākĕsayyāʿ*). Zacchaeus is designated "chief tax collector" (Luke 19:2: *architelōnēs*).

By the 1st century in Roman Palestine, the traditional system of tax collection by a group of wealthy Roman officials, the so-called *societates publicanorum*, had been abolished (Donahue 1971; see TAX COLLECTOR). They were replaced by the *telōnai* mentioned in the NT. Direct taxes, that is, taxes on individuals and land, were handled directly by the local government, either the Romans or the tetrarchs, and their clients. Indirect taxes, primarily tolls related to transport of goods, appear to have been farmed out to the highest bidders who contracted to pay a certain sum to the government prior to collection; they and their subordinates then collected as much as they could, since any surplus beyond the contracted amount was profit. Such a system lent itself to corruption, dishonesty, and especially to repression of the poor peasantry who attempted to move their produce to market. Classical writers from antiquity, ostraca (cf. BAGD 812), nonliterary papyri (Lewis 1983), Josephus (*Ant* 17.204, *JW* 2.287), Philo (*Spec Leg* 3.30), the Talmud (e.g., *m. Ned.* 3.4), and the gospels (Matt 9:10–11; 11:19; Mark 2:13–17; Luke 3:12; 5:29–30; 7:34; 15:1; 18:13; 19:2) were united in their judgment that local officials responsible for the collection of taxes and tolls were especially despised in the Greco-Roman world. In the Talmud they are designated as "robbers"; in the gospel of Luke they are considered greedy (Luke 3:12–13); and elsewhere in the gospels they are usually linked with sinners (*hamartōloi*: Mark 2:15 = Matt 9:10–11 = Luke 5:29–30; Matt 11:19 = Luke 7:34; Luke 15:2; cf. Luke 18:10–14), prostitutes (Matt 21:31–32; cf. Luke 7:29; 18:11), and gentiles (Matt 5:46, 47; 18:17); perhaps, then, they were considered by pious Jews as ritually unclean.

In Matt 9:9, Matthew is described as "a man sitting at the tax office (*telōnion*)" and in 10:3 Matthew is designated a *telōnēs*. The location was probably a toll or customs office or booth normally found at ports of entry (Jos. *JW* 2.287), or on the boundaries between various districts, for example, Jericho (cf. Luke 19:2), or, in this case, Capernaum (Mark 2:1; Matt 8:5, 9:1). Presumably the first evangelist thinks of Matthew as one of the subordinate tax collecting officials who, working at his toll booth at Capernaum (Matt 8:5; 9:1, 10; cf. Mark 2:1), was the object of scorn (Matt 5:46), one to be associated with sinners, prostitutes, and gentiles (Matt 5:46, 47; 9:10–13; 11:19; 18:17; 21:31–32). Nonetheless, the Jesus who broke with social norms and purity regulations by eating with such persons (Matt 9:10; 11:19; cf. Mark 2:15–16; Luke 5:30; 7:34; 15:1) is represented as calling just such a person to be his disciple (*mathētēs*), a call to which this Matthew is reported to have responded.

I. Church Tradition and the First Evangelist

Titles to identify authors and distinguish them, that is, "According to X," were placed at the top of the first leaf of the mss of each of the canonical gospels sometime in the first half of the 2d century C.E. (cf. esp. the anti-Marcionite prologues to the gospels). "According to Matthew" became the title of the first gospel, an ascription that may in some way be related to the tax collector/disciple highlighted in Matthew's story (Pesch 1968). In any case the earliest Christian writer on the subject, Papias, wrote that Matthew "compiled [*synetaxato*] the sayings [*ta logia*] of the Lord in the Hebrew "dialect" [*dialectō*]; and each interpreted [*hermeneusen*] as he was able" (Papias in Eus. *Hist. Eccl.* 3.39.16).

There is much controversy about the Papias statement. First, there are the terms transliterated in Greek, most importantly, *ta logia*, which, if taken in its primary sense as "the sayings," does not easily describe the gospel of Matthew, though the description is not impossible. Second, even if Papias did mean the gospel of Matthew, the canonical Matthew that has survived was written in Greek, not in a Hebrew dialect (Aramaic?). Could Papias have meant one of Matthew's sources (see G.2 above)? Was there another, Semitic-language version of the gospel of Matthew? "Compiled" and "interpreted," or perhaps "translated," are also debated. Moreover, though the vast majority of modern critics date the Papias tradition about 135 C.E., it has been dated earlier than 110 C.E. (Gundry 1982, who dates the gospel itself before 63 C.E.). If the latter date is accepted, whoever wrote in the title possibly knew the Papias tradition, which would then have greater value for ascribing the gospel to Matthew (see D.1 above); if the former

date is accepted, which has been an almost unanimous scholarly opinion, the situation is reversed, that is, Papias probably knew the title.

Most modern interpreters (contrast Gundry) have considered the Papias tradition, and therefore church tradition in the 2d century C.E. built upon Papias (Iren. *haer.* 3.1 in Eus. *Hist. Eccl.* 5.8.2; perhaps earlier is The Gospel of the Ebionites quoted in Epiphanius, *haer.* 30.13.2), to be inaccurate. The general view is that the gospel of Matthew was composed by an unknown Greek-speaking, Jewish-Christian author, probably about 85–90 C.E., probably in Syria (Antioch?), though somewhere in Palestine or the Transjordan has also been suggested. See MATTHEW, GOSPEL OF.

J. Conclusions

The above sketch tends to support the third solution noted at the outset, namely, that the writer of the gospel of Matthew has changed "Levi" (Mark 2:14) to "Matthew" (Matt 9:9) and then designated Matthew (Mark 3:18) as "the tax (i.e., toll) collector" in his list (Matt 10:3), thus removing the thirteenth disciple. This third solution is consistent with the position held by most, but certainly not all, scholars about the literary relationships between the first three gospels (the Two-Source Hypothesis). It can also be supported by redaction-critical arguments that Matthew reworked the Markan author's introduction into an account about Jesus' table fellowship with tax collectors and sinners (Pesch 1968). The author's attempt was to replace an unknown person in the call scene with a disciple known from the list, perhaps because the author and/or his circles especially honored Matthew, but as the text might more plausibly suggest, because the author saw Matthew ("gift of God") as representative of "toll collectors and sinners," of whom Jesus was a "friend" (Pesch 1968) and/or because *mathētēs* ("disciple") and *mathete* ("learn") suggested *Matthias* as the true representative of "learning-discipleship" so prevalent in the gospel (Kiley 1984). In any case, a similar motive for aligning the call of Matthew with the name "Matthew" in the disciple lists can be observed in the manuscript changes by later copyists.

DENNIS C. DULING

MATTHEW, GOSPEL OF. The second longest of the four canonical gospels, traditionally placed first in the NT canon and hence referred to as "the first gospel" (without prejudice to the actual historical order in which the four Gospels were written). The ascription of this gospel to the apostle Matthew dates to at least from Irenaeus (ca. A.D. 185; cf. his *Adversus Haereses* 3.1.2; 3.11.8) and possibly from Papias (ca. 140), though it is not clear whether the collection of Jesus' *logia* by Matthew that Papias refers to is to be identified with our gospel of Matthew (cf. Eus. *Hist. Eccl.* 3.39.16).

A. Sources

This article employs the two-source (or two-document) hypothesis as the most likely and most widely accepted Synoptic theory held today. It is presupposed therefore that Matthew used Mark's gospel and some form of the sayings source conventionally called Q. See Q (GOSPEL SOURCE); SYNOPTIC PROBLEM. Since, as the Qumran material makes clear, Judaism was acquainted with successive recensions of the same work, it is possible that Matthew employed slightly different forms of Mark and Q from those known to Luke or (in the case of Mark) to us. It is also possible that Q was already combined with Matthew's special traditions (M) before these two traditions were meshed with Mark in the gospel of Matthew; hence J. Brown speaks of Q^{mt} (Brown 1961).

It is questionable, however, whether we should think of M in terms of one fixed document in addition to Mark and Q, since M is simply an umbrella term used to designate any tradition in the gospel that cannot be traced to Mark, Q, or Matthean redaction. Thus M is isolated by a process of subtraction; it encompasses many different strata of tradition reflecting different theological positions. If M represents the traditions of the local church to which the author of the gospel belonged, then that church had a complicated history and was made up of a variety of contending groups.

A characteristic block of material within M is the group of fulfillment quotations or *Reflexionszitate;* these show how a particular OT prophecy is fulfilled in the life of Jesus. Soares Prabhu identifies fulfillment quotations by three characteristics: (1) an introductory fulfillment formula the key word of which is the passive form of the verb *plēroō* ("fulfill"); (2) a commentary function by which the quotation serves as an aside of the evangelist and does not form part of the narrative; (3) a mixed text form, at times closer to the MT, at times closer to the LXX (Soares Prabhu 1976: 19). Nevertheless, exegetes still debate exactly how many fulfillment quotations are to be counted in Matthew. Soares Prabhu accepts eleven: 1:22–23; 2:5–6; 2:15; 2:17–18; 2:23; 4:14–16; 8:17; 12:17–21; 13:35; 21:4–5; and 27:9–10. Other scholars would include 13:14–15 and 26:54, 56, while omitting 2:5–6. Also debated is the origin of the fulfillment quotations. Some see them as traditional (from testimony books or oral scribal traditions), while others view them as redactional creations of Matthew. In view of Matthew's tendency to seize upon and expand useful motifs in his tradition, both solutions may contain some truth. The use of the same Zech 9:9 quotation in both Matthew's and John's account of the triumphal entry into Jerusalem does seem to argue that fulfillment quotations (apart from the formulaic *plēroō*) were not simply creations of Matthew alone (cf. Matt 21:5; John 12:14–15).

The problem of the quotations' origin points up a basic difficulty in dealing with the M tradition: What is truly traditional and what stems from Matthew's redaction? The usual approach is to look for a heavy concentration of words, phrases, grammatical constructions, and theological concerns seen to be Matthean from the way Matthew handles texts that have a Markan or Q source. In the absence of such indicators, the passage can be declared traditional. This criterion must be used with caution, however.

If Matthew was a son of his local church and acted as a teacher in it for some time, it is only natural that the style of his tradition should be reflected in his own redactional activity. Hence the distinction between

tradition and redaction in nonparalleled material is often difficult to make. The M material no doubt grew in liturgical and catechetical activity of the Church over decades and was the living Sitz im Leben in which Mark and Q were understood long before the sources were brought together by Matthew. M, therefore, should be viewed as a dynamic oral tradition rather than some sort of primitive document (contra, Kilpatrick 1946: 36).

To be sure, other theories on the origin of Matthew's gospel are defended today. In different ways Vaganay (1954) and Butler (1951) held to the priority of an Aramaic Matthew. Jeremias (1966) denied a written Q, and Wrege (1968) applied the theory to the Sermon on the Mount. Léon-Dufour (1962) preferred to speak of various blocks of tradition. The strongest opponent of the two-source theory today is Farmer (1964), who sustains a form of the Griesbach hypothesis: Matthew-Luke-Mark, Mark being the conflation of the first two. Nevertheless, the two-source theory still enjoys the widest acceptance and use on the international scene, has been tested exhaustively in lengthy monographs and commentaries on Matthew, and creates fewer difficulties over the long range than any of its competitors. For example, it explains the gospel relations in such Matthean texts as the temptation narrative, the prohibition of divorce, and the Passion Narrative better than does the Griesbach hypothesis.

B. Literary Genre

In 1915, Votaw (1970) stressed the similarities between the Gospels and popular Greco-Roman biographies of, e.g., Socrates. Largely forgotten in the heyday of dialectical theology, this proposal has been revived by Talbert (1977), who sees Matthew as a biography that presents the career of Jesus both as a legitimation of his teaching-legislation and as a hermeneutical clue to its meaning. Shuler (1982) has refined this suggestion for Matthew, seeing it as an "encomium" or laudatory biography. The most carefully worked out position is that of Aune, who sees the Gospels as a subtype of Greco-Roman biography, influenced as well by Jewish literary traditions and Christian content (Aune 1987: 46). While one cannot deny Matthew's similarities to these and other types of Greco-Roman literature (*praxeis, memorabilia* [Robbins 1984: 60–68], aretalogies, sayings of the wise), all these genres suit hypothetical sources better than the finished Gospels. A canonical gospel is best defined as a narrative of the words and deeds of Jesus of Nazareth, culminating inexorably in his death and resurrection, which narrative is meant to communicate to the believing audience the saving effects of what is narrated. The meshing of words and deeds, the inevitable thrust toward both death and resurrection, the quasi-sacramental intent of the narrative as saving proclamation, and a lack of any character sketch of the chief figure set our Gospels apart from the classical genres suggested. Indeed, attempts to find Greco-Roman genres and thought forms can produce strainted results that obscure rather than clarify (so in the case of Betz 1985). While drawing on extent forms, the evangelists, under the impact of the "good news" they had to convey, created a new literary genre that is best labeled simply "gospel." This comprehensive term seems preferable in the case of Matthew to one-sided designations like catechism (von Dobschütz 1928), manual of church order, the new Torah of Jesus (Bacon 1930), liturgical lectionary (Kilpatrick 1946), or book of kerygmatic history (Walker 1967). Each of these suggestions rests upon one Sitz im Leben reflected in the gospel. But the true Sitz im Leben of this huge gospel was the entire life of Matthew's church over decades (Trilling 1964: 220–21); initial instruction of both Jewish and gentile converts, the more advanced education of church leaders in faith and church order, liturgical reading, missionary appeal, and debates with Pharisaic Judaism.

This stress on the special Christian genre and Sitz im Leben of Matthew is not intended to deny the usefulness of the study of ancient Greco-Roman rhetoric for the NT (Beardslee 1970; Kennedy 1984). More problematic, however, is the application of modern literary or narrative criticism (Petersen 1978; Kingsbury 1986). Such narrative criticism was developed with a view to the 19th-century English novel; whether it totally fits a 1st-century-A.D. document of religious propaganda is questionable. Distinctions among real author, implied author, and narrator are made, only to find no useful application in the gospel text. Particularly problematic is the "implied reader": How much knowledge of 1st-century places, persons, and events is presumed by the critic in this hypothetical, ahistorical reader? Still, the inventory of events, characters, settings, points of view, and rhetorical techniques does help focus the reader's eye on

particular phenomena in the text. Yet, while of some use, contemporary narrative criticism does not totally jibe with the genre of gospel and so cannot be the primary model for a critical approach to the text. Especially in Matthew's gospel, where the author consciously inserts large discourses into the Markan narrative structure and thus purposely halts the movement of the plot in favor of didactic blocks of sayings, the perspective of narrative criticism cannot encompass and explain the entire literary work.

C. Time and Place of Composition

For those who hold the two-source theory, dependence on Mark and Q makes a date after A.D. 70 almost inevitable. The variegated M material also seems to reflect a lengthy and convoluted history and necessitate a post-A.D. 70 date (contra, Robinson 1976: 86–117). The gospel in its final form bespeaks a mature theological development on such issues as salvation history, eschatology, and world mission. The gospel ends with a resounding affirmation of a mission to all nations; with baptism (with a triadic formula!) instead of circumcision as the initiation rite into the people of God; and the commandments of Jesus, not the Mosaic Torah, as the object of teaching (28:16–20). In some instances, the commands of Jesus involve not only a break with Pharisaic observances, but also the abrogation of laws in the Pentateuch (see, e.g., the rejection of both Pharisaic hand washing and OT food laws in 15:1–20, esp. v 11). The very issues that were the battleground of Paul's day have become nonissues in Matthew's gospel. Matthew's additions to Mark's eschatological discourse emphasize three times the message of the delay of the Parousia (24:48; 25:5, 19). The center of gravity in Matthew's eschatology shifts toward the abiding presence of the risen Lord in his church (1:23; 18:20; 28:20). The Parousia remains important for paraenesis not because of its imminence but because of its severity, bringing about a final sharp separation in the mixed body of the Church (22:10–14). The obtrusive reference to the burning of a city in the parable of the great supper (not original, as the Lukan parallel, Luke 14:15–24, makes clear) does seem to be an allusion to the destruction of Jerusalem in A.D. 70 (Matt 22:1–14, esp. v 7). To speak of an OT theme here (Rengstorf 1960) does not explain why Matthew disrupts the flow of the parable to insert the theme where it does not seem to belong. The separation of Matthew's church from the synagogue (see E below) also argues for a post-A.D. 70 date. At the same time, the use of Matthew by Ignatius of Antioch (see below) necessitates a date of composition of the gospel before the early years of the 2d century (Brown and Meier 1983: 15–18).

Many places suggested fail to pass close scrutiny. A date after A.D. 70 makes composition in Judea, and especially a destroyed Jerusalem, hardly likely. The disruption of Jewish and Jewish-Christian life in Palestine because of the First Jewish War was immense; yet Matthew's gospel seems to reflect an organic development out of its Jewish matrix. The use of Greek in a gospel addressed to a whole church seems unlikely in Palestine, where the ordinary language of the common people was Aramaic and the sacred language was Hebrew. The disruption of a Jewish presence in Caesarea Maritima in A.D. 66 makes that city also a dubious candidate. What we do know of the origins of Christianity in Caesarea Maritima points to a liberal, Hellenist matrix with gentile sympathies rather than a conservative Jewish basis (Acts 8:40; 10:1–48). The N Syrian hinterland or the city of Edessa likewise runs into the problem of the common language of the ordinary people in those areas, namely, Aramaic. The cities along the Phoenician coast are possibilities, but we know next to nothing about them in the NT period. Moreover, the church of Matthew had to be prestigious and lively enough not only to support the production of this large gospel, but also to have it accepted in the churches at large in the 2d century. Such objections also hold true of Alexandria. The origin and state of Christianity in Alexandria in the 1st century are unknown to us.

Well-known, by contrast, is the most likely candidate, Antioch, the capital of Syria (Brown and Meier 1983: 18–26). A predominantly Greek-speaking metropolis with the largest Jewish population in Syria, it was the home of a Christian community founded in the late 30s by a Hellenist group of Jewish Christians who began a circumcision-free mission at Antioch (Acts 11:19–26). This mission was impeded for a while by the strict view of the James party from Jerusalem (Gal 2:11–14), but the gentile orientation of Ignatius of Antioch—something that is taken for granted—shows that the more liberal approach had won out before the beginning of the 2d century. This tangled history would help explain the different strata of tradition in Matthew. The struggles between Hellenists and the James party have left traces of both liberal

and conservative views. The Jewish tone of the gospel would have been reinforced by the sizable Jewish population in Antioch. Dialogue and debate with the synagogue are reflected in the focus on Jewish customs and rites, on the Mosaic law, and on the fulfillment of prophecy. Yet the gospel stands on the borderline between the Jewish and gentile world. On the whole, Matthew's gospel employs better Greek than Mark's and uses Greek plays on words. Despite the strong Jewish tone, there are pointers throughout the gospel (2:1–12; 8:5–13; 15:21–28; 27:54) toward the climactic missionary charge in 28:16–20. Antioch supplies the perfect meeting place for the melting pot that is Matthew's gospel. Founded in the 30s, the Antiochene church enjoyed a lengthy, mostly undisturbed existence in a Jewish-gentile milieu, with time to develop a scribal tradition and perhaps a scribal school for the cultivation of OT texts and Christian traditions (Stendahl 1968). The composition of such a large gospel was no mean financial undertaking, and Kingsbury (*Matthew* Procl) claims to find hints in the gospel of a relatively affluent urban church. The special traditions about Peter in the gospel (e.g., 16:18) may reflect his influential role in Antioch in the first generation (see D below). Composition of the gospel at Antioch is also supported by the fact that Ignatius of Antioch is the first Church Father to use Matthew (Matt 3:15 in *Smyrneans* 1:1; Matt 10:16b in *Polycarp* 2:2; Matt 2:1–12 in *Ephesians* 19:2–3).

D. Occasion of the Gospel: a Church in Transition

The conclusion that Matthew's gospel was written at Antioch ca. A.D. 80–90 has important consequences for understanding the origin of the gospel as well as the history of the early Church. It enables us to plot the development of Christianity in one significant urban center in the first three Christian generations and thus to comprehend the problems and forces that led to Matthew's particular approach to the gospel traditions. From Acts and Galatians we know that the church at Antioch was founded by "leftist" Jewish-Christian Hellenists who were the first to begin a wide-ranging circumcision-free mission to the gentiles. Although this was opposed by the extreme right wing of Jewish Christians, the so-called Council of Jerusalem (A.D. 49) accepted the innovation. Soon afterward, however, because of pressure from the right-wing group around James, the brother of the Lord, Paul and Peter clashed at Antioch over table fellowship between Jewish and gentile Christians. Paul soon found it expedient to leave Antioch; he never mentioned it again in his letters and did not return for long sojourns. More to the point, Paul does not say in Gal 2:11–14 who won the argument at Antioch, although his victory in that debate would have been extremely helpful for his argumentation in Galatians 2. It thus seems likely that Peter won the debate and represented in Antioch an approach more conservative than Paul's, yet more open to the gentiles than the James group's. After the destruction of Jerusalem in A.D. 70, the second generation of Christians in Antioch was severed from the conservative umbilical cord of the mother church in Jerusalem. By this time the rejection of the Christian gospel by most Jews and its acceptance by many gentiles raised anew the question of how a church rooted in Judaism should relate to the larger gentile world. Matthew's gospel represents a conscious attempt at synthesis and compromise among the competing traditions inherited from the first generation. True to the Pauline thrust, it concludes with a clear legitimation of a universal mission, with no mention of circumcision; food laws are abrogated. Yet in the face of a flood of gentile converts with no heritage of Jewish morality, the gospel stresses the moral teaching of Jesus, affirming OT ethics even as it radicalizes or even transcends them at certain points. Matthew is pointedly trying to preserve both the new and the old wine (9:17c, a Matthean addition to the Markan statement of radical discontinuity). He is the scribe trained in the kingdom of heaven who brings forth from the storehouse of tradition things "new and old" (13:52; note the order of the adjectives: the newness of Jesus is the norm by which one properly interprets the OT tradition). It is no accident that the "liberal conservative" Matthew, seeking a moderate middle path from a Jewish past into a gentile future, exalts the figure of Peter as the "chief rabbi" of the Church (Matt 16:18–19). Historically, in a time of crisis, Peter did represent a centrist position between Paul on the left and James on the right. Faced with the remnant of a strong Jewish party and the problem of an influx of pagans, Matthew seeks the same sort of "balancing act" by meshing the various and not always harmonious traditions of Mark, Q, and M. Matthew's gospel thus has as its larger Sitz im Leben the crisis of a church in transition, seeking to preserve what is viable in its Jewish past as it moves into the uncharted waters of a predominantly gentile

future in the Greco-Roman world. That this problem did not entirely disappear in the third Christian generation at Antioch is indicated by the seven authentic letters of Ignatius of Antioch. He, too, must fight a Judaizing group on the right (although by this time the Jewish influence is largely spent) and the new danger of a gnosticizing/docetic group on the left. His solution is typically Antiochene: a synthesis of major NT traditions, now involving Pauline, Matthean, and Johannine streams of thought (Brown and Meier 1983: 28–86).

E. Matthew's Church and the Synagogue

Many scholars, e.g., Barth (1963), Davies (1964), and Hummel (1966), maintain that Matthew's church is still tied to the synagogue, despite growing tensions. Highly "Jewish" material like the exhortation to accept the teaching authority of the scribes and Pharisees (23:2–3) is used as the basis for this position. However, an increasing number of exegetes, e.g., Strecker (1971), Trilling (1964), Frankemölle (1974), and especially Hare (1967), hold that Matthew's church had already broken with the synagogue by the time the gospel was written. Matthew's gospel has nine references to Jewish synagogues. Wherever the context fails to designate the synagogue as belonging to "the hypocrites," Matthew adds the qualifier "their" to indicate an institution that is now foreign to the Christians. Mark and Luke have no such consistent usage. Matthew thus creates a pointed linguistic opposition between "their synagogue" and "my [Jesus'] church" (Matt 16:18). This sense of break and distance is also seen in Matthew's addition to the end of the Markan parable of the evil tenants of the vineyard (Mark 12:1–12; Matt 21:33–43) in Matt 21:43: "Therefore I tell you that the kingdom of God will be taken from you and given to a people [*ethnos*] bearing its fruits." The kingdom is transferred from Israel to another people, non-Israel, the Church (Matthew never calls the Church the "new" or "true" Israel; for him there is too much of a break). Indeed, it is difficult to see how a group that pursued a universal mission without circumcision, rejected the food laws of the Pentateuch, abandoned the "teaching of the Pharisees and Sadducees" (Matt 16:11–12) in favor of the power to "bind and loose" invested in Peter (16:18–19) and the local church gathered around Jesus (18:18–20) could remain in union with the synagogue. It is sometimes suggested that the break was hastened by the insertion of the *birkat ha-mînîm*, the cursing of heretics and/or Christians, into the Eighteen Benedictions, a key prayer in the synagogue liturgy. But the date of the *birkat ha-mînîm* is disputed: some place it around A.D. 85; others, early in the 2d century. Moreover—as is often the case in juridical actions—such formal measures probably just finalized a process that had been going on for some time. The break with the synagogue need not be taken to mean that Matthew's church had given up all attempts to win over Jews; Jews are probably included, in undifferentiated fashion, in the mission to "*all* the nations" (*panta ta ethnē,* 28:19).

F. Author: Jew or Gentile?

Until the last few decades, the number of scholars who favored the view that Matthew, the redactor of the gospel, was a Jewish Christian was overwhelming. Yet, as R. E. Brown has pointed out (Brown and Meier 1983: 1–8), "Jewish Christian" is a category that admits of many nuances. Bacon thought of Matthew as a conservative Jewish Christian proposing a neolegalism (1928: 229). Von Dobschütz thought of a rabbi of the school of Johanan ben Zakkai who had ben converted to Christianity and had written a type of Jewish-Christian catechism (1928). Goulder has instead called Matthew a small-town scribe who applies midrashic techniques to Mark's gospel, which is Matthew's only extended written source (1974). Abel seeks to resolve the tensions in the gospel by positing two redactors: the first was an anti-gentile Jewish Christian, while the second was anti-Jewish and pro-gentile. More recently, scholars who see Matthew as Jewish view him as a moderate Hellenistic-Jewish Christian (Bornkamm: 1968) who was liberated from an earlier stringent Jewish Christianity which opposed the gentile mission and upheld the Pharisaic view of the Law. This position is maintained by scholars who hold that Matthew's church was still tied to the synagogue as well as by some who claim that the break had already taken place. The arguments for this position usually rest on the strikingly "Jewish" tone, language, and subject matter of the gospel. Rabbinic parallels are especially stressed.

In the last few decades, however, a vocal minority of exegetes has sustained the hypothesis that the final redactor of the gospel was a gentile (Clark 1947; Nepper-Christensen 1958; Strecker 1971; Trilling 1964;

Walker 1967; van Tillborg 1972; Frankemölle 1974; Meier 1976). The fierce polemic against Pharisaism and Israel, the rejection of ritual observances and food laws, and openness to a gentile mission would of course be possible in a zealous Jew who had become a zealous Christian convert. We see something similar in Paul. Yet it is precisely the comparison with Paul that points up a striking difference. For all his polemics Paul affirms his great love for his own people (Romans 9), strives to gain their conversion, and affirms that on the last day "all Israel will be saved" (Rom 11:26). Matthew instead redacts the Markan Passion Narrative so that "all the people" (no longer just "the crowds") cry out to Pilate, as they request the crucifixion of Jesus, "His blood be upon us and upon our children!" Thus is a prophecy of Jesus (another Matthean redactional insertion into Mark) fulfilled: the kingdom of God is taken from Israel and given to another people. While Jews are probably included in the universal mission commanded at the end of the gospel, Matthew no longer speaks of Israel after the Passion Narrative; he speaks simply of "Jews" in 28:15. The extreme nature of the gospel's polemic, as compared with Paul's, does raise the question whether its author was Jewish.

More specifically, though, there seem to be places in the gospel where the author makes mistakes about the Hebrew Scriptures and about Jewish parties and beliefs—matters that an intelligent, well-educated, and highly articulate Jew would have known. One example is the mention of two animals in the entrance of Jesus into Jerusalem (21:2, 7). In this Markan narrative Matthew's major change is the insertion of a formula quotation (v 4) and the careful underlining of the literal fulfillment of the prophecy in Jesus' action (vv 2, 7). So literal must be the fulfillment that Matthew presents a scarcely imaginable description of Jesus riding on both animals. Matthew apparently understood the text of Zech 9:9 to be speaking of two separate animals, not the one animal that is in fact mentioned twice in Zech 9:9 because of the Hebraic parallelism. Such a misreading of the intent of the OT text is hardly understandable if the writer is an intelligent, well-educated Jew. There is no explanation for Matthew's doubling of the animals except a misunderstanding of the text. The rabbis would indeed at times ignore Hebraic parallelism when ignoring it served their theological purposes. But here in Matthew no special theological purpose is served except the theological purpose of literal fulfillment, a purpose that indicates that Matthew understood the text as literally meaning two animals.

Matthew seems involved in another slip concerning matters Jewish in his reference to the Sadducees in 22:23. Matthew, like Luke, is again dependent on Mark. In his description of the Sadducees, Mark in 12:18 says: "And there come to him Sadducees, who say there is no resurrection, and they asked him, saying …" Mark uses a relative clause to define the Sadducees as a group. Denial of the resurrection is a hallmark of the Sadducees as a party and not just a statement about what some particular Sadducees were saying to Jesus at one particular moment (a separate participle, "saying," indicates the words they address to Jesus). Luke makes the same point as Mark, employing an attributive participle with definite article to define the Sadducees' basic theology as a group (something Luke knows well; cf. Acts 4:1–2; 23:8). Josephus and the Talmud give similar descriptions. The fact that denial of the resurrection was basic to the Sadducean position can thus be presumed as common knowledge among Jews and even among some Christians of the 1st century A.D. and even later. Hence Matthew's change of Mark's description is especially strange (Matt 22:23): "There came to him Sadducees, saying there is no resurrection …" Matthew has made the attributive clause or participle predicative. It no longer describes the basic position of the Sadducees, but simply reports what these particular Sadducees were saying or thinking as they came to Jesus. Once again, the only likely explanation of this garbling of the Markan tradition is ignorance of the Jewish situation before and after A.D. 70. Neither before nor after that date could any well-educated Jew make such a mistake in describing the Sadducees.

Moreover, this is not the only instance of Matthew's ignorance of the stance of the Sadducees. Matt 16:11–12 (clearly redactional) manifests the same lack of knowledge of the Jewish situation. While Mark 8:14–21 simply states that the disciples did not grasp what Jesus meant by avoiding the leaven of the Pharisees and the leaven of Herod, Matthew changes the reference to the leaven of the Pharisees and Sadducees (Matt 16:11). Then Matthew states that the disciples understood that Jesus was not talking about avoiding leaven in bread, but rather "the teaching of the Pharisees and Sadducees." Matthew uses

the definite article with "teaching" and only one definite article for "the Pharisees and Sadducees." Thus, he thinks of the doctrine common to the Pharisees and Sadducees as one entity, set over against the teaching of Jesus. No Jew aware of the conflicts in Judaism before A.D. 70 and no Jew aware of the Pharisees' triumphant branding of the Sadducees' doctrine as heretical after A.D. 70 could have written such a sentence. Matthew must be considered to have been ignorant of the exact doctrine of the Sadducees. This is extremely difficult to reconcile with the theory of a Jewish-Christian redactor, while it jibes well with the theory of a gentile-Christian redactor. To all this, one might add the consideration that it is Mark, not Matthew, who displays the greatest number of Semitisms and outright Semitic words in his gospel. In fact, Aramaic words in Mark's text tend to be dropped by Matthew, with only the Greek equivalent retained. Matthew improves the highly Semitic Greek of Mark in the direction of more acceptable Greek usage, employing some Greek plays on words known from the classical period. Granted, no amount of argumentation in this question will generate absolute certitude. One could reconcile all these data with a picture of an enlightened, educated Hellenistic-Jewish Christian with universalistic views. Indeed, such a Jewish Christian could be thought of as having once shared the narrow views of his older tradition and as having developed slowly toward his present position. But as S. Schulz observes, such a "liberated" Hellenistic-Jewish Christian is hardly discernible from a gentile Christian (1967: 162). In the end, the theory of Matthew as a gentile Christian who had belonged to the Antiochene church (and perhaps its scribal school) for many years, who revered the Jewish-Christian traditions of his church, and who intended to preserve while interpreting them in his gospel seems to be able to explain all the data more easily.

In the light of all the data we have seen, it is extremely difficult to hold that the gospel of Matthew was actually written by the apostle Matthew. But even the gospel narratives themselves create major difficulties for the attribution of Matthew's gospel to "Matthew-Levi" the tax collector. If we hold in the two-source theory, then this Matthew-Levi would have to be dependent on the evangelist Mark for much of his narrative material. Even the Church Fathers admitted that Mark was not an eyewitness of the earthly ministry of Jesus. Thus we would be left in the awkward position of claiming that the apostle Matthew, an eyewitness of the public ministry, copied a good amount of his account of the ministry from Mark, a noneyewitness. This relationship becomes incredible when we notice that the author of Matthew's gospel is dependent on Mark for the story of the call of Levi (or Matthew) the tax collector (Mark 2:13–17 = Matt 9:9–13). It is inconceivable that, in recounting the autobiographical story of his call by Jesus, Matthew the apostle would have to rely on the narrative of Mark, a non-eyewitness. Moreover, the very existence of one person called both Matthew and Levi is questionable. Mark 2:14 and Luke 5:27 know of a "Levi the tax collector," whom they do not identify with the Matthew (not called a tax collector) mentioned in the list of the Twelve. Only in Matthew's gospel is this tax collector, in the story of his call, named Matthew, not Levi (Matt 9:9). That one and the same Jew in the 1st century A.D. would bear two different Semitic first names is highly unlikely. Jews could certainly also bear a Greek first name in addition to their Semitic first name, or an indication of who their father was or where they came from, or some (serious or humorous) nickname. But to have two Semitic first names would naturally cause endless confusion. Hence it seems that it is the author of the First Gospel who has consciously changed Levi's name to Matthew and who has "cross-referenced" the change in the list of the Twelve by designating Matthew the apostle a tax collector, thus identifying two people who are distinguished in Mark and Luke. Why the first evangelist did this is not clear. It is possible that the first gospel does contain some special tradition originating from the apostle Matthew (Pesch 1968). Also possible, however, is a play on words in Greek (Kiley 1984). The evangelist may have noted the concentration of words for disciple and learning (*mathētēs* and *mathēteuō*) in the story and indicated that a prime example of the sinner called to be a *mathētēs* was Matthew.

G. Structure and Content of the Gospel

Under the rubric of structure we are considering the structure consciously intended by the author, and not the "deep structures" examined by contemporary structuralists (for the latter, see Patte 1986).

Scholarly opinions on the structure of Matthew's gospel vary widely. One reason for this is that Matthew is a superb "verbal architect," building his literary basilica with many finely fitted, interlocking stones. These interlocking literary structures include summaries of Jesus' activity (e.g., 15:29–31), summaries that form inclusions of whole sections (Jesus as teacher, proclaimer, and healer in 4:23 = 9:35), inclusions in individual pericopes (the first and eighth beatitudes in 5:3, 10), clear cross-references (two multiplications of loaves in 14:20 plus 15:37 = 16:9–10), subtle cross-references (monitory dreams given to gentiles to save Jesus: the Magi and Pilate's wife, 2:12; 27:19), numerical patterns, often in threes (9 beatitudes [5:3–12], 6 antitheses [5:21–48], 3 pious practices [6:1–18], 3 triplets of miracles stories [chaps. 9–10], 3 passion predictions on the way to Jerusalem [16:21; 17:22–23; 20:18–19]), repeated formulas (the concluding and transitional formula at the end of each of the five great discourses [see below]), blocks of similar material in similar forms (e.g., controversy stories in chaps. 12, 21–22), geographic patterns (Bethlehem in Judea (ρ) Egypt (ρ) Judea (ρ) Galilee (ρ) Nazareth (ρ) Capernaum (ρ) in and around Galilee (ρ) Judea (ρ) Jerusalem (ρ) Galilee). Faced with this wealth of structural elements, one must avoid subjective flights of fancy by concentrating on structural devices in the text that are clearly visible, occur repeatedly, and are spread throughout the body of the gospel. Of the many suggestions made in recent years, three are worthy of note.

A few critics in this century have held the view that the whole gospel is governed by one great chiasm or inverted (concentric) parallelism. That is, the gospel is divided into two halves, like the two halves of a parabola: pericopes at the outer limits of the halves correspond to each other (e.g., chaps. 1–2 and 26–28), pericopes a little further in correspond to each other (e.g., chaps. 3–4 and 24–25), and so on until one reaches the center of the chiasm at the center of the gospel. Green (1968) sees the center in chap. 11, while Fenton (1959) and Ellis (1974) see the center in chap. 13. The objective basis for this approach is the undisputed presence of inclusions at the beginning and end of the gospel. "Emmanuel, God with us" (1:23) and "Behold, I am with you all days" (28:10) provide the clearest example. Indeed, the whole of chaps. 1–2 and 26–28 forms a rough inclusion, with many of the themes and even rare phrases first seen in the Infancy Narrative (a "proleptic passion") returning in the Passion Narrative. Moreover, chaps. 11–13 do seem to witness a turning point in Jesus' relation with Israel. However, the attempt to extend these valid insights to the whole of the gospel, arranged as one grand chiasm, collapses of its own weight, improbability, and lack of objective criteria. The grand chiasm is basically the creation of the ingenious critic. Blocks of chapters at one end of the gospel are forced to correspond to relatively small sections at the other, corresponding themes are in the eye of the exegete rather than in the wording of the Greek text, and chiasm critics cannot agree on where the all-important center of the chiasm lies.

A second, more popular approach today is the one suggested by Krentz (1964) and championed by Kingsbury (1975: 1–39). Kingsbury postulates three main sections of the gospel, demarcated by "superscriptions" (1:1; 4:17; 16:21). Section One (1:1–4:16) sets forth the genesis and significance of the *person* of Jesus, emphasizing from the beginning the key title Son of God. Section Two (4:17–16:20) shows Jesus the Messiah offering salvation to Israel by his teaching, proclaiming, and healing, only to meet with rejection. Section Three (16:21–28:20) depicts the suffering, death, and resurrection of Jesus the Messiah, with its effect on Israel and all humanity. To support this division, Kingsbury places great weight on the phrase that occurs at 4:17 and 16:21: "From that time Jesus began …" He also claims that 3:1 ("Now in those days …" introducing the Baptist) belongs with chaps. 1–2 and that the prologue of the gospel extends to 4:16. More recently, Kingsbury has supported these insights of redaction criticism with arguments from modern narrative criticism (1986).

There are a number of problems with this approach. It is questionable whether five Greek words, occurring only twice in the gospel (4:17; 16:21), can be called a "fixed formula"; the concluding and transitional phrase at the end of each of the five great discourses deserves that label much more. It is also unlikely that *apo tote* ("from that time") indicates a major break from the preceding verses and a new beginning. In 26:16 *apo tote* begins the last sentence of the pericope of Judas' agreement to betray Jesus (26:14–16). In chap. 4, v 17 seems more natural as the last verse of 4:12–17; and in chap. 16, v 21 stands in the middle of the great Caesarea Philippi scene with its multiple interactions between Jesus and Peter

(16:13–28), a scene which has its own christological inclusion (Son of Man in vv 13, 28). Moreover, precisely from a literary point of view, it is awkward to make 3:1–12 go with chaps. 1–2 when some thirty years have passed, the Baptist (a totally new figure, unlike his treatment in Luke's gospel) is introduced, and the phrase of 3:1 ("Now in those days …") sounds more like a clearing of the throat for the new beginning, the new eschatological event of the coming of the adult Jesus, rather than a mere link with the Infancy Narrative. The Baptist's proclamation is word for word the proclamation of Jesus in 4:17, supposedly in a different section of the gospel. In chap. 16 the expansion of the Markan Caesarea Philippi scene by Matthew explains the need for a caesura in 16:21. The more important literary datum is the Son of Man inclusion (16:13, 28) and the fact that a change in geography is signaled in 16:18 ("into the region of Caesarea Philippi"); no other change of place is indicated after that until 17:1 (going up the high mountain for the transfiguration). Literary signals thus indicate that the Caesarea Philippi scene in 16:13–28 is to be taken as a unit; to place a major division of the gospel at 16:21 tears apart the christological and ecclesiological synthesis that Matthew has carefully constructed.

The third division proposed is the most traditional and remains the most likely: The public ministry is made up of five major sections or "books," each with the pattern of narrative plus discourse, with the Infancy Narrative as prologue and the Passion Narrative as climax. This position enjoys the advantage of starting from clear, undisputed literary facts and slowly building up an argument with further literary data found in the text. The starting point of this position is that Matthew purposely builds large discourses out of disparate sayings of Jesus. As so often, Matthew has taken his cue from and expanded upon his sources: Mark had two discourses (parables [chap. 4] and eschatology [chap. 13]), while Q provided various blocks of sayings (e.g., the more primitive form of the Sermon on the Mount/Plain in Luke 6:20–49). Matthew enlarges these collections to monumental proportions, especially in the Sermon on the Mount and the eschatological discourse. Moreover, Matthew did not lump his discourses together in one section of the gospel; they are carefully spaced out over the length of the public ministry: Sermon on the Mount, chaps. 5–7; missionary discourse, chap. 10; parables, chap. 13; discourse on church life and order, chap. 18; eschatological discourse, chaps. 24–25. The result of this spacing out is that the body of the gospel naturally falls into large blocks of narrative then discourse, narrative then discourse. Matthew has thus significantly altered the configuration of Mark, where narrative loomed much larger over a few small discourses. Any literary analysis of Matthew must come to terms with this monumental remodeling of the gospel form in the direction of lengthy discourses.

Matthew's editorial hand is clear not only in this overall pattern of narrative plus discourse but also in the redactional formula he uses both to close the five major discourses and to provide a transition back to the narrative. The clause, "And it came to pass, when Jesus had finished these words [instructions, parables]," occurs at 7:28; 11:1; 13:53; 19:1; and 26:1. The precise wording and function of this clause are found nowhere else in Matthew or in the rest of the NT. That Matthew is carefully keeping count of his discourses and their structuring function is clear from his modification in the final occurrence of the formula, at the end of the eschatological discourse and of the whole public ministry, as the Passion Narrative begins: "Now it came to pass, when Jesus had finished all these words …" The collocation of the five sermons is thus anything but haphazard. This conclusion may also be supported by a consideration of the way Matthew introduces each of the discourses (Keegan 1982).

Thus, Matthew seems to demarcate precisely five major discourses as large structuring elements in his gospel. This is not to deny that the narrative sections have sayings material as well (e.g., the Beelzebul controversy in 12:22–45; the dispute over clean and unclean in 15:1–20). But these sections do not contain as lengthy a body of sayings of Jesus, uninterrupted by dialogue and directed solely or mainly to his disciples, as do the five discourses. Chapter 23 constitutes a special case. What is notable is the lack of unity in the audience addressed. Jesus begins (v 1) by addressing "the crowds and his disciples" (a unique phrase in the gospel; the five discourses are addressed primarily or solely to the disciples). In verse 13 Jesus begins the seven woes against the scribes and Pharisees, which employ the 2d person plural (vv 13–36); he concludes with an apostrophe to Jerusalem (vv 37–39). Although some would count chap. 23 as a separate discourse and others would see it as the first part of the eschatological discourse (chaps. 24–25),

it seems best to consider it a bridge Matthew constructs between the controversy stories and parables of judgment on Israel, on the one hand, (chaps. 21–22) and the eschatological discourse, on the other. Before the sermon on the future judgment, Jesus pronounces judgment now on the leaders of Israel.

Another characteristic that marks off the five discourses is their careful positioning in the flow of the gospel, so that they take up a number of themes raised in the previous narrative, while also preparing for the narrative to come. The discourses thus act as pivots in the literary structure because of their Janus-like quality. The flow of each narrative section into its corresponding discourse can be sketched briefly as follows. Jesus, whose authority as Son of God has been validated by his baptism and temptation (which in turn pick up themes from the Infancy Narrative), leaves Nazareth for his "base of operations" in Capernaum; he calls his first disciples and attracts large crowds, who "follow" him (chaps. 3–4). The context is thus created for Jesus to teach authoritatively the basic requirements of true discipleship and following, viz., the Sermon on the Mount (chaps. 5–7; so ends Book One). Authority in teaching is matched by authority in deed in the three triplets of miracle stories (chaps. 8–9). What Jesus has been doing during his initial ministry in Galilee by way of proclamation and healing (summary in 9:35, looking back to 4:23) the Twelve are likewise commissioned to do (but without a mandate to teach) in the missionary discourse (chap. 10; so ends Book Two). The rumblings of opposition in Israel, heard faintly in Book Two, burst into the open in Book Three, abounding in controversy stories as well as in woes and rebukes by Jesus (chaps. 11–12). Jesus reacts to Israel's rejection by withdrawing verbally into the veiled speech of parables, just as he withdraws physically into a house with his disciples, who do understand him (13:1–52; so ends Book Three). As the breach with Israel widens, Jesus turns to concentrate on the formation of his disciples into the embryonic church; hence the prominence of Peter and the use of the word "church" (*ekklēsia*) in the narrative of Book Four (13:53–17:27). Naturally, the matching discourse focuses on church life and order, with "church" occurring twice (chap. 18; so ends Book Four). Amid increasing hostility, Jesus leads his embryonic church up the road to Jerusalem and to the cross, teaching the duties of the various states of life under the shadow of the cross (chaps. 19–20). Arriving in Jerusalem, he displays his authority by refuting the Jerusalem leaders in debate, by speaking parables of judgment on Israel, and by pronouncing woes against the scribes and the Pharisees (chaps. 21–23). Corresponding to this context of judgment is the sermon on the final judgment, the eschatological discourse (chaps. 24–25; so ends Book Five and the public ministry). All that remains is the great eschatological event of death-resurrection.

A number of misconceptions about this five-book division must be avoided. First, this division is not necessarily connected with the theory of Bacon (1930) and others who tried to see in the five books a reference to the Pentateuch, with Jesus as the new Moses teaching the new Torah. While the appearance of *biblos geneseōs* ("the book of origin," or possibly "the Book of Genesis") in Matt 1:1 make the allusion to the Pentateuch tempting, attempts to work out the correspondence in detail are forced, especially with regard to Leviticus and Numbers. Such strained explanations have brought the five-part division of the Matthean public ministry into disrepute, but unnecessarily. The five-book division rests on data internal to the gospel and has nothing to do with any Pentateuch hypothesis. Actually, five-part divisions of literary works were well-known in the Jewish and Greco-Roman world at the time. In Judaism, the Psalms, the Megilloth, and probably the original form of the *Pirqe ʾAbot* all had fivefold divisions. Certainly no one has proposed that Irenaeus intended to write a new Pentateuch because his *Adversus Haereses* was divided into five books! Hence Matthew is simply taking up an honored literary convention, with no necessary connection with the Mosaic Torah.

A second misconception is that the five-book structure of the public ministry reduces the Infancy Narrative and the Passion Narrative to an unimportant prologue and epilogue respectively. It does not. One must be careful about terminology here. A prologue, especially in a biblical work, is not necessarily unimportant. John 1:1–18 is designated a prologue, without in any way reducing its significance for the meaning and structure of the Fourth Gospel. Actually, Matthew 1–2 is not unlike John 1:1–18 in that it answers questions about the nature, origin, and destiny of Jesus. It is a prologue that functions like the overture to an opera, sounding some key themes that will develop as the work progresses. In particular,

Matthew's prologue introduces leitmotivs that return in the narratives of the passion and resurrection. Hence, instead of simply and solely providing an introduction to the public ministry, the Infancy Narrative acts also as a proleptic Passion Narrative. Indeed, the five books of the public ministry are basically intelligible apart from chaps. 1–2; in the ministry there is little by way of direct reference backward to the Infancy Narrative. Thus chaps. 1–2 are rightly set apart from chaps. 3–25. Similarly, the narratives of passion and resurrection are not relegated to the position of epilogue or appendix by the five-book division. They are rather the climax of the whole narrative. While up until chap. 26 individual events in Jesus' life fulfilled individual prophecies (the message of the formula quotations), starting in chap. 26 "all the writings of the prophets" are fulfilled (26:54, 56). This is why, with the exception of the apologetic use of the OT to explain the scandalous fate of Judas (27:3–10) no formula quotation is used in the Passion Narrative. The death-resurrection of Jesus constitutes the one world-turning, age-changing apocalyptic event that fulfills all prophecy and ushers in the age of the Church (28:16–20). Hence, like the Infancy Narrative, the Passion Narrative stands apart from the public ministry, not as epilogue but as all-encompassing climax. On this basis, the following structure may be proposed.

1. Prologue (Chaps. 1–2). Matthew is the only one of the four canonical Gospels that begins with the OT literary genre of genealogy (1:1–17). This underlines a major message of the whole work, echoed often in the fulfillment formulas: the prophecies of the OT are fulfilled in the life of Jesus. The 3 groups of 14 generations reflect an apocalyptic mind-set: all salvation history is divided into epochs that are guided by God to the consummation of his plan. Yet the appearance of the four strange women hints that the movement of the plan is not always in a straight line; the discontinuity of these four "holy irregularities" is woven around the main thread of continuity. The 3 groups of 14 may indicate that the time of Jesus is the period of perfection and fulfillment ($3 \times 14 = 6 \times 7$). The number 14 is also symbolic in Hebrew of the name David, and Jesus' status as Son of David is at the heart of chap. 1. The annunciation to Joseph (1:18–25) has as its main point the theme of continuity: by naming Mary's child and accepting him as his own, Joseph son of David inserts Jesus into the Davidic line. Yet the element of discontinuity is also present; the virginal conception is the supreme "holy irregularity," making this Son of David also Emmanuel, God with us. Chapter 1 thus explicates the first titles of 1:1, "Jesus Christ, son of David."

But Jesus is also "son of Abraham," the Abraham in whom all the nations were to be blessed (Gen 22:18). This promise is to be fulfilled at the end of the gospel, with the mission to all nations (28:16–20), but a foreshadowing of all the nations' coming to Christ is seen in the coming of the Magi. While the united front of Judaism (Herod, chief priests, scribes, all Jerusalem—Matthew is not concerned with historical probabilities) rejects Jesus, the gentiles follow the hints of natural religion and OT prophecy to reach and adore the King of the Jews. The Jerusalem rulers seek to kill Jesus, but amid the carnage God rescues his Son out of death (proleptic Passion Narrative). By his going down to Egypt and subsequent exodus, Jesus recapitulates the history of Israel, the son of God in the OT. The high point of the Infancy Narrative is reached in God's declaration through Hosea that Jesus is not only son of David, son of Abraham, son of Joseph, son of Mary, but preeminently "my Son" (Matt 2:15). The "salvation geography" of chap. 2 comes to rest at Nazareth in Galilee, which links up with the traditions of the public ministry (3:13; 4:13). Jesus shall be called a "Nazarean" (2:23) in the sense of the truly consecrated holy one who will save his people (cf. *nazîr* in the birth story of Samson, Judg 13:5, 7).

2. Book One (3:1–7:29). a. Narrative (3:1–4:25). The Baptist is introduced as the great preacher of repentance. Matthew tends to create parallels between John and Jesus; hence, Jesus' initial proclamation of the kingdom in Mark 1:15 is put into the mouth of the Baptist by Matthew (Matt 3:2). Thus John anticipates word for word the initial proclamation of Jesus in 4:17. The united front of Judaism, represented by the historically unlikely union of Pharisees and Sadducees, is opposed to John as it will be opposed to Jesus. John warns his adversaries of the fearful separation of good and evil and the fiery punishment to come; the theme of separation on the last day is dear to Matthew. The ability to remit sins is carefully withheld from John's baptism; it is accomplished only by the death of Jesus (26:28). John's subordination is also seen in the dialogue before Jesus' baptism. John should be baptized by Jesus, but

Jesus explains the present order by a reference to fulfillment of God's saving plan, foretold in prophecy (3:15). The Father's voice in the theophany following the baptism is addressed not to Jesus (as in Mark, with his messianic secret), but to the bystanders. The Jesus-Spirit-Father concatenation at the Baptism of Jesus points forward to the triadic baptismal formula in the great commissioning (28:19). The sonship of Jesus, the true Israel, is then tested by the devil. Three times, like Israel in the desert, Jesus is tempted. But unlike Israel Jesus shows he is the true son by his obedience in the midst of affliction. He will not take the easy way to the kingdom that bypasses the cross. Returning to Galilee, Jesus takes up the fallen standard of the Baptist. He transfers his residence to Capernaum and begins a ministry that will ultimately bring light to the gentiles (Isa 8:23–9:1—Eng9:1–2). With sovereign authority he calls his first four disciples and attracts large crowds from all four points of the compass. He has begun his triple ministry of teaching (note that the pedagogue Matthew puts that first; moral catechesis is a special concern for him), proclaiming, and healing (4:23). The highlighting of teaching is meant to introduce the first example of extensive teaching, the Sermon on the Mount. The core proclamation ("The kingdom of heaven is at hand") was already given in 4:17; the healings will be reported in chaps. 9–10.

b. Discourse (5:1–7:29). Structurally, the sermon can be divided into two parts. Up until 6:18 the sermon is dominated by groups of threes; after 6:18 it is a group of loosely associated commentaries on the petitions of the Our Father, which fittingly stands at the center of the sermon (Bornkamm 1978; Guelich 1982). The 9 (3 × 3) Beatitudes open the sermon with a two-edged message. The poor in spirit must wait confidently for God to bring salvation (apocalyptic type of beatitude), but in the meantime the disciples must imitate the saving action of God (mercy, peacemaking) in their own lives (wisdom beatitudes). They must hunger and thirst for justice (= God's salvation on the last day), but in the present they must suffer persecution because they do justice (= do God's will; Przybylski 1980; Broer 1986). Though persecuted by the world, they are to be the light of the world (triple parable of salt, light, and city).

As Jesus begins to interpret the Mosaic law for his disciples, he makes a basic statement of principle (5:17–20; Barth 1963; Meier 1976). He brings not dissolution of the Law but its fulfillment. Yet this fulfillment is prophetic, eschatological fulfillment, in which the fullness of the eschaton sometimes spills over and transcends the old vessel of the Law—as is seen in the antitheses. But that is not to lead any Christian teacher to laxity. Christian "justice" (= doing the will of the Father according to the teaching of Jesus) must outstrip the justice of the Jewish teachers in both quality and quantity. This principle is then illustrated in the 6 (3 × 2) antitheses (5:21–48). In the antitheses on murder, adultery, and love, Jesus radicalizes the Law by extending and interiorizing the obligation; in the antitheses on divorce, oaths, and retaliation Jesus radicalizes to the point of abrogating the letter of the Law. In each case it is the authoritative word of Jesus ("but I say to you") that decides the issue (cf. 7:28–29; 28:20). The overriding concern in all these commands is that the disciple be undivided in his love of God and neighbor (= being perfect, 5:48). The three pious practices of almsgiving, prayer, and fasting (6:1–18) show a similar contrast between Jewish and Christian approaches; stress is laid on avoiding ostentation, with a view to the eschatological reward. Eschatology is shown to be at the center of Jesus' moral exhortation by the placing of the eschatological prayer (the Our Father) at the center of the sermon. The disciple prays for the glorious manifestation of God (the hallowing of the name) on the last day in the coming of his kingdom, his definitive rule over humanity, when his will shall triumph (first half of prayer, the "thou" petitions). The second half of the prayer (the "we" petitions) probably refers to the banquet in the kingdom, final forgiveness at the judgment seat of God, and final deliverance from Satan; possibly, though, Matthew understood it in reference to daily needs in this world (though that fits Luke's wording better; cf. Luke 11:3). Beginning with 6:19, Matthew arranges various sayings of Jesus to comment on the petitions of the Our Father. In view of the coming kingdom, the disciples are not to worry about material needs, but are to put their future entirely in the hands of their provident Father (6:19–34). They should imitate the kindness of the Father in their own lives (7:1–12). They must choose for or against acting on the words of Jesus right now; as they choose, so shall they be judged on the last day (7:13–29). The authoritative word of Jesus is the touchstone of salvation.

3. Book Two (8:1–11:1). a. Narrative (8:1–9:34). Matthew has already given examples of Jesus' proclaiming and teaching; he now presents 9 (3 × 3) stories of Jesus' miracles (Held 1963). Each triplet of miracles is demarcated by a buffer pericope dealing with discipleship. The streamlined miracle stories focus upon the encounter between the petitioner's word of faith and Jesus' all-powerful word of healing. Fulfilling OT prophecies, Jesus the servant shares his power with his community of disciples and points forward to the inclusion of gentiles in that community. The first triplet (8:1–17) shows Jesus' healing power directed to the marginalized: a leper, a gentile soldier and his servant, and a woman. In healing the leper, Jesus typically both breaks the letter of the Mosaic law and yet commands compliance with its ritual prescriptions. The healing of the centurion's servant foretells the entrance of the gentiles into the kingdom and the exclusion of Israel. The healing of Peter's mother-in-law and of many others shows Jesus to be the Isaian servant. The first buffer (8:18–22), stressing the cost of discipleship, looks forward to the second triplet (8:23–9:8). The stilling of the storm portrays the Church beset by the messianic woes and turning to its Lord in prayer. The theme of the disciples' "littleness of faith" overshadows the actual miracle (Bornkamm 1963b). In Gadara Jesus' power over chaos in nature is seen to extend to chaos in people, as he exorcises two demoniacs. The Church is to trust its Lord, because his triumph over evil is complete. This triumph is demonstrated also in the forgiveness of sins, empircally verified by making a paralytic walk. It is a power Jesus shares with human beings in his church (the *tois anthrōpois* of 9:8). The joyful triumph over sin is depicted in the second buffer (9:9–17) by Jesus' table fellowship with tax collectors and sinners. Against the Pharisees Jesus quotes Hosea 6:6 on the superiority of mercy to sacrifice (repeated in 12:7). The break with Pharisaic Judaism is sounded in Jesus' rejection of voluntary fasting, yet Matthew adds the moderating note that both new and old should be preserved (cf. 13:52). The third triplet (9:18–34) emphasizes the importance of faith, even in the face of death or blindness. The final healing, of a mute demoniac, points forward to the clash with Israel in Book Three, since it calls forth the charge that Jesus casts out demons by the prince of demons (9:34 = 12:24).

b. Discourse (9:35–11:1). The third buffer (9:35–38) is a bridge section. On the one hand, it forms an inclusion with 4:23 and rounds out the nine miracle stories. On the other hand, it introduces the missionary discourse: Jesus the good shepherd sends out his disciples to share in his mission. The "twelve disciples" (10:1) are introduced for the first time as Jesus confers his healing and exorcising powers on them (Matthew has no story of the choice of the Twelve). By calling them "the twelve apostles" (10:2)—the only time he does so in his gospel—Matthew already signals that the limited mission during the life of Jesus foreshadows the wider mission to come after the death-resurrection. Only vv 5–16 deal with missionary activity in the strict sense and remain within the initial limitation of the mission to "the lost sheep of [= who constitute] the house of Israel" (vv 5–6). Just as this restriction will be lifted after the death-resurrection, so too will the restriction on the disciples' power (the power to teach, not conferred here, is granted in 28:20). Verses 17–25 speak of all disciples faced with persecution, not just missionaries, and the horizon seems expanded to the gentiles (v 18). By inserting here material from Mark's eschatological discourse, Matthew stresses that the mission is not simply a matter of telling people about the eschatological event; it is part of the eschatological event. Three times the disciples are told not to fear earthly persecutors but only the final judge (vv 26–33). They must be ready to bear even the heavy cross of breaking family bonds. Jesus did the same; and, as goes the Master, so goes the disciple. The initial theme of mission returns in vv 40–42, along with Matthew's favorite theme of reward. The theme of opposition, persecution, and breach within the family of Israel prepares well for the narrative of Book Three.

4. Book Three (11:2–13:52). a. Narrative (11:2–12:50). The tension between Israel and Jesus heightens notably in Book Three. There is tension even with the Baptist, who is puzzled that the fiery judge he expected should turn out to be the healing servant of Isaiah's prophecies. Yet John, for all his limitations, does stand parallel to Jesus; for both, despite all the differences in their styles of preaching, have met with the same rejection of Israel (11:2–19). Jesus expresses the growing breach with his woes on the cities of Galilee that have rejected his call to repentance. In contrast he gives thanks to the Father for having revealed the secrets of the end times to the spiritual babes who have accepted Jesus. The Father

and Jesus enjoy a mutual knowledge to which no one else has access, unless Jesus wills to mediate it through his revelation. For Jesus is the true wisdom teacher of the end time; indeed, he speaks like Wisdom itself in the OT as he invites the weary to learn from him (vv 20–30). The hostility of the leaders toward Jesus heightens in the two sabbath disputes, over plucking grain and healing. Jesus again demands mercy, not sacrifice; and for the first time we hear that the Pharisees seek to destroy him. Jesus, the gentle servant of Isaiah, responds not with vengeance but with peacable withdrawal; it is just such mercy that will give the gentiles hope (12:1–21). Jesus' merciful healing of a blind and mute demoniac leads only to renewed charges by the Pharisees of diabolic power. Jesus refutes the charge and goes on the offensive, warning that the condition of Israel after it rejects him will be worse than before he came. The break with the synagogue is graphically portrayed when the family of Jesus has to cool their heels outside, while inside Jesus teaches his true family, namely, those who do the will of his Father (12:22–50).

b. Discourse (13:1–52). The parable discourse is Jesus' verbal response to his rejection by Israel. Having given Israel an opportunity to accept his clear message (there is no thoroughgoing messianic secret in Matthew, as we find it in Mark), Jesus now responds to their refusal by withdrawing into the veiled speech of parables. The parables are a punishment because (v 13; contrast "in order that" in Mark 4:12) Israel has not seen the truth, while the disciples do (again, contrast the blind disciples of Mark). The split between synagogue and church shines through the presentation. The disciples will face the same sort of opposition, and a disappointingly large number will fall away (cf. 24:10–12). But as the allegorical explanation of the sower parable promises, the final triumph of the eschatological harvest is assured (13:1–23). The parables of the mustard seed and the leaven make the same point about the contrast between the unpromising beginnings of the kingdom and its future, universal victory (vv 31–35). Distinctly Matthean is the parable of the wheat and the weeds, with its allegorical explanation. While the parable (vv 24–30) stresses the need for the Church to exercise patience and restraint in this present world composed of good and bad, since no one is authorized to anticipate the final separation of good and bad at the last judgment, the explanation (vv 36–43) depicts in detail that fearful separation which will most certainly come. The certainty of strict judgment takes the place of the temporal imminence of judgment as the motivating force in Matthew's exhortations. (Indeed, the threat of eternal punishment stands near or at the end of each of the five discourses.) The theme of separation is dramatically acted out as Jesus leaves the crowds halfway through the discourse to speak to his disciples alone in the house (v 36). The break between Jesus and Israel, and between the Church and the synagogue, is thus visibly symbolized. Such stressful times of separation demand that one be willing to sacrifice everything joyfully for the one true value of the kingdom, as the parables of the treasure and the pearl point out (vv 44–46). The theme song of the separation of good and bad on the last day returns in the final parable of the fishnet (vv 47–50), which ends on the grim note of fiery punishment. Yet all is not lost; the Matthean disciples do understand how to combine properly the new teaching of Jesus with the ancient wisdom of Israel (v 52; note the order: "new and old"!). From now on, the chasm between these believing disciples and an unbelieving Israel will widen right up to the end of the gospel (28:15 versus 28:17a).

5. Book Four (13:53–18:35). a. Narrative (13:53–17:27). While Matthew formed Book Three largely from Q and M, the narrative of Book Four is mainly Markan. It is taken mostly from the great "bread section," Mark 6–8, where *artos, artoi* ("bread," "loaves") form a literary and theological leitmotiv, still visible in Matthew. In Book Four the great "ecclesiological book" of the gospel, Matthew highlights the role of Peter and references to the Church (*ekklēsia*; the word occurs in Matthew only in Book Four and nowhere else in the four gospels). Christology and ecclesiology are welded together as Jesus prepares for the founding of his church through the apocalyptic events of the death-resurrection. Hence this book is dominated by christological titles and passion predictions on the one hand and by teaching to and about the Church on the other.

The breach with Israel widens still further with Jesus' rejection at Nazareth and the martyrdom of the Baptist, who even in death is paralleled with Jesus. The Baptist's death is thus a prophecy that Jesus will meet a similar fate at the hands of Israel (13:53–14:12). Just as the arrest of the Baptist occasioned Jesus' coming into Galilee to begin the struggle (4:12), so now the Baptist's martyrdom occasions Jesus'

temporary withdrawal (cf. 12:15), as he turns his attention more to the formation of his embryonic community. This community is nourished by the feeding of the 5,000, in which the eucharistic allusions are clear, and in which Matthew heightens the role of the disciples as go-betweens (14:13–21). The walking on the water reveals Jesus as the divine Savior of his imperiled church, that fittingly acknowledges him as Son of God (14:22–36; contrast Mark's blind disciples in 6:51–52; Heil 1981). The christological confession voiced here will be expanded by Peter in 16:16 and extended to the gentile centurion in 27:54. In 14:28–31, Peter is a prime example of a disciple who is "of little faith" (*oligopistos*), which for Matthew means having faith but panicking in a crisis and acting as though one did not have faith. Peter boldly begins walking on the water, trusting in the word of Jesus. But the forces of chaos cause him to sink into death, from which the saving hand of Jesus rescues him (an acting out of many of the Psalms of Lament in the OT). Jesus teaches his disciples to reject Pharisaic ritual concerns and even OT food laws (15:11, 17–18). The break with the Pharisees and the synagogue is expressed in the terse command: "Leave them; they are blind guides" (15:14). Having torn down these legal walls of separation, Jesus heals the daughter of the Canaanite woman, solely on the basis of the woman's faith. The stress that this case is exceptional and does not fit into the regular mission of Jesus (15:24) makes it all the more a pointer forward to the time of the Church (28:16–20). The time of the Church is again foreshadowed in the feeding of the 4,000 (15:29–39).

In chap. 16, Jesus transfers teaching authority from the Pharisees and Sadducees (again, the united front of Judaism; their teaching is corrupting leaven, vv 11–12) to Peter as "chief rabbi" in the church of Jesus. Typically, the disciples are not totally blind, as in Mark. But being of little faith, they fail initially to understand but do so after Jesus' instruction (vv 7, 12). Matthew expands Mark's Caesarea Philippi scene, which in Mark is a christological turning point in the messianic secret, into a grand christological synthesis of major titles. The union of Christ, church, and morality is clear. Jesus indicates he is Son of Man in the triple sense of earthly ministry (v 13), Suffering Servant (Son of Man is implied in v 21; cf. 17:22–23; 20:18–19; 26:2), and final judge (vv 27–28). By divine revelation, Peter recognizes Jesus as Messiah and Son of God (v 16). Jesus reciprocates in vv 17–19 by pronouncing a beatitude and conferring a title on Simon. Simon is the recipient of an apocalyptic revealation from the Father. Henceforth he will be called *petros*, the Rock (Peter was not a usual first name in Aramaic or Greek in the 1st century A.D.), for on this stable rock (cf. 7:24–25) Jesus will build his church (notice the future; the full founding of the Church takes place after the death-resurrection, in 28:16–20). Peter is made vicegerent over the new palace of Jesus, the royal Messiah (cf. Isa 22:15–25), with the power to decide what is permissible or not according to the teaching of Jesus ("bind and loose"). All this high christology and ecclesiology are then balanced by the first prediction of the passion. The ambiguous Peter revolts against the word of the cross; and Jesus tells him that he is playing the part of Satan, who sought to deflect Jesus from the cross with promises of easy triumph (4:1–11). Jesus tells all his disciples that they must follow the Son of Man on the way of his cross if they are to share in his kingdom (vv 24–28). As a continuation of the apocalyptic revelation to Peter, the transfiguration confirms that Jesus is the glorious Son of God (17:5); but the disciples must also listen when Jesus speaks of his death as Son of Man, following his forerunner, the Baptist (17:9–13). The disciples, though, still suffer from little faith, as is shown by their failure to cure the epileptic boy (17:14–20) and their sorrow at the second passion prediction (17:22–23). The question of whether Jesus should pay the temple tax (17:24–27) provides Matthew with an opportunity for the Lord to give practical instruction to his church through Peter and also to highlight Peter's unique relationship to Jesus (note that Jesus provides just enough money for himself and Peter; this apparent favoritism probably occasions the jealous question of the other disciples in 18:1).

b. Discourse (18:1–35). The narratives that focused on Peter, church, and the disciples naturally flow into the discourse on church life and order. The discourse has two major parts: (1) the need to care for children (vv 1–5) and for "the little ones," the lowly church members who are easily neglected (vv 6–14); (2) the need to apply church discipline to the recalcitrant sinful member of the church (vv 15–20) but always with a readiness to forgive (vv 21–35). Jesus tells the would-be leaders in the Church that they must be willing to assume the powerlessness and vulnerability of a little child; indeed, they must give

special attention to such unprotected people. This includes not only literal children but all the spiritual little ones who are easily led astray by the bad example of others. All disciples (note the lack of any restriction to church leaders) must be good shepherds, leading the straying sheep back to the Father. But what of the arrogant sinner who remains in the Church and refuses private correction? Matthew provides a three-step procedure (based on Lev 19:17–18 and Deut 19:15 and seen also at Qumran), culminating in excommunication. Once again, we meet the phrases "church" and "bind and loose" (cf. 16:18–19), but here the church is the local community, and its action refers to expelling or admitting members. Such a serious decision is made in the presence and by the authority of Jesus (v 20). But the parable of the unforgiving servant (vv 21–35) reminds us that the final word on church discipline must be forgiveness within the family of God.

6. Book Five (19:1–25:46). a. Narrative (19:1–23:39). The narrative of the book divides into two parts: the journey to Jerusalem (chaps. 19–20) and the clash with the authorities in Jerusalem (chaps. 21–23). As Jesus leads his embryonic church up to Jerusalem and therefore to the cross, he instructs it on the obligations of various states of life; for Matthew, discipleship involves concrete moral imperatives. Appealing to the Creator's will in the beginning, Jesus, who restores in the end time the Creator's original order, forbids the intermediary expedient of divorce (19:1–9). The prohibition is formulated in a Jewish manner, from the male point of view (contrast Mark 10:11–12); as in Matt 5:31–32, "unchastity" (*porneia,* 19:9) probably refers to unions that the book of Leviticus considered incestuous. Voluntary celibates have a place in the kingdom, as do children (vv 10–15). On the other hand, the difficulty of the rich in entering the kingdom is demonstrated (vv 16–26); yet all things are possible with God. To the disciples, who have left all to follow him, Jesus promises a share in his final kingdom; but they are warned not to think they have a legal claim on God's gift and not to measure jealously their expected reward against that of others (the parable of the workers in the vineyard, 20:1–16). To blunt excessive concerns about reward, Jesus utters the third and longest prediction of the passion, the first one to specify his crucifixion and the role of the gentiles. The mother of James and John (introduced into the Markan story perhaps to spare the honor of two prominent members of the Twelve) ignores the message of the cross as she asks for the chief places at the heavenly banquet for her sons. Jesus promises a share in his cup of suffering, but leaves rewards in the kingdom to the Father. The other disciples prove just as ambitious, as their indignation shows. Jesus uses his own humble service unto death as Son of Man to show them what their ministry in the Church must be. Jesus describes his death as a ransom which buys back the whole group (the "many") from their bondage to sin (20:28). This text, along with 1:21 and 26:28, shows that Matthew does think of Jesus' death as a vicarious sacrifice (contra, Strecker 1971). The blind disciples need healing of their inner sight if they are to follow Jesus on the way to the cross; this is what is symbolized by the healing of the two blind men in 20:29–34. Again, the power of faith to heal is stressed—a faith expressed in the cry to the "Son of David," the messianic title that the leaders of Israel will not give Jesus but that the no-accounts and outsiders will.

The triumphal entry of the Son of David into his capital (21:1–11) brings together the themes of the literal fulfillment of prophecy (Zech 9:9), Jesus' foreknowledge (of the ass at Bethphage), and the disciples' prompt obedience to Jesus' command. Hailing Jesus with Ps 118:25–26, the crowds recognize the Son of David as a prophet; they fail to see him as Son of God and Son of Man. The "cleansing" of the temple (21:12–17) is actually a prophetic act symbolizing the rejection and destruction of the temple, to be replaced by the church. That full membership in the people of God is about to be widened is indicated by the healing of the blind and lame, i.e., marginalized members of the temple community, and the cries of the children, the little ones without rights or power. Protest comes from "the chief priests and the scribes." The mention of them is ominous. They first appeared in the gospel as advisors to King Herod in his plot to kill the infant Jesus (2:4–6); since then they have been mentioned together only in Jesus' prediction of his death. The cursing of the fig tree (21:18–22) is a prophetic parable in action. In the Matthean polemic it signifies that Pharisaic Judaism, covered though it be with the foliage of external piety, lacks that inner obedience to God which is the true fruit of religion. (One must remember that throughout Matthew's gospel references to Judaism reflect a fierce religious polemic, and not a sober,

scientific analysis of religions.) This parable in action prepares for the verbal parables of judgment in chaps. 21–22. The initial dispute over Jesus' authority (21:23–27) sets the stage for the three parables of judgment and four dispute stories that follow. In the initial dispute, the Jewish leaders refuse to answer Jesus' counterquestion about the origin of John's baptism. The inability to teach on a matter of such importance reveals their lack of authority, and so Jesus feels no need to answer their question about his authority. The three parables of judgment that follow (21:28–22:14) have one central message: by rejecting the Father's will as revealed in the Son, Israel itself is rejected and another group (the gentiles) will receive the kingdom. (a) In the parable of the two sons (21:28–32), the leaders have said yes to God's will in the Law but have failed to act on their response; tax collectors and sinners (and, in Matthew's view, the gentiles) accepted the Baptist's (and later Jesus') call to repentance and so entered into the kingdom in the place of the leaders. (b) In the parable of the evil tenants of the vineyard (21:33–46), the Markan parable becomes for Matthew an allegory of salvation history. Before and after the Exile, God, the owner of the vineyard Israel, sent his people his servants the prophets; but they met ill treatment and martyrdom. Finally, he sends his Son, who is killed outside the vineyard (Jerusalem). God's response toward Israel will be the destruction of Jerusalem. Toward Jesus his response is the resurrection, which vindicates the rejected Son and makes him the cornerstone of a new people, who receive the kingdom that was taken away from Israel (v 43, a Matthean addition). Matthew thus pointedly adds an ecclesiological point to a christological parable. (c) Matthew again expands a parable of a dinner (cf. Luke 14:15–24) into an allegory of salvation history in the story of the royal wedding feast (22:1–14), with many motifs taken from the parable of the evil tenants. But now the two sets of servants are the OT prophets and the NT apostles; in both periods of history they meet with rejection, even murder. The king (God) destroys the city of the murderers (Jerusalem) and orders a universal mission. The result is the "mixed bag" of the Church, with "both bad and good" (v 10); hence, the extra parable in vv 11–14, in which the king enters (at the final judgment) to separate bad from good (cf. 13:24–30, 36–43, 47–50).

In 22:15–46 Matthew picks up the theme of the initial dispute story and gives four concrete examples of Jesus' superior teaching authority besting the Jewish leaders. Once again, the Pharisees and Sadducees together represent the united front of Judaism, hostile to Jesus. (a) Faced with the hypocritical question about the coin of tribute (22:15–22), Jesus first shows that his questioners, not he, carry and use the coin; then he enunciates a general rule—not a detailed solution to the problem—about rendering to Caesar and to God what is due to each. (b) Faced with the Sadducees' mocking question about the one woman married to seven brothers ("At the resurrection, whose wife will she be?"), Jesus replies that the Sadducees fail to understand both the Scriptures—in refusing to see intimations of resurrection in the Pentateuch, the only Scriptures they recognize as binding—and the power of God—in imagining that the resurrection would be a return to the conditions of earthly life (22:23–33). (c) The dispute over the greatest commandment (22:34–40) is not a dispute at all in Mark (12:28–34), where the scribe and Jesus agree. Reflecting the break with the synagogue, Matthew cannot conceive of a *Jewish* scribe sympathetic to Jesus. Jesus' reply is carefully balanced: love of God comes first, but it cannot subsist without a similar love, that of neighbor. Matthew adds that all the Law and the Prophets, the whole of sacred Scripture, stems from and are summed up in these two commands. Jesus both binds one to the Law as the expression of God's loving will and frees one from the Law when it is distorted by casuistry (cf. 5:17–48). (d) Having defeated his adversaries, Jesus now goes on the offensive by asking them whose son the Messiah will be (22:41–46). Their silence indicates that he alone, the true Son of David and Son of God (chaps. 1–2), is the legitimate interpreter—as well as fulfiller—of messianic prophecy. David's Son (by adoption) is David's Lord because he is also God's Son (by virginal conception).

Having demonstrated the bankruptcy of the "united front," Jesus pronounces judgment on them in chap. 23, which acts as a bridge to the discourse on universal judgment (chaps. 24–25). (a) The disciples are warned to avoid the titles and other trappings of power that have developed among Jewish teachers (vv 1–12). Actually, here and throughout chap. 23 Matthew may be excoriating tendencies he sees already present in the Christian community (Garland 1979). The fiery denunications are not to be taken as an objective description of 1st-century Judaism. Matthew aims at the teachers his two favorite charges: they

say but do not do, or what they do is only for show; this is what Matthew means by "hypocrisy." (b) "Hypocrite" is the key word in the seven woes against the scribes and Pharisees, another Matthean tag for the united front of Judaism (vv 13–36). With increasing virulence, Jesus condemns the scribes and Pharisees for their split between saying and doing, between inward and outward reality. They mesh with their evil forebears as murderers of past and present prophets. (c) Jerusalem has been the center of such murders, and Jesus ends chap. 23 with a lament over the unholy city, soon to be left desolate. Jesus acts out that divine abandonment by leaving the temple for the last time in 24:1.

b. Discourse (24:1–25:46). The verbal battles with and condemnation of Judaism in the narrative of Book Five now flow into a discourse depicting worldwide upheavals and the universal judgment on the last day. The first half of the discourse (24:1–36) is basically from Mark and is more doctrinal, in that it teaches the order of events up to the coming of the Son of Man. After an initial prediction of the temple's destruction (vv 1–2), Jesus proceeds to the Mount of Olives, where the disciples' opening question carefully distinguishes between the destruction of the temple on the one hand and the coming of Jesus and the end of the age on the other (v 3). Writing after A.D. 70, Matthew is intent on not confusing the destruction of Jerusalem (which receives little attention in this discourse) with the still outstanding Parousia (the return of Jesus; only Matthew, among the evangelists, uses this word well-known in the epistles). A whole series of terrifying events must occur before the end; they are not the end, but only the "birth pangs." The Church will suffer persecution from without and, worse still, apostasy, hate, false prophets, wickedness, and lovelessness from within (vv 10–12). Matthew obviously writes from and for a church that has known deep divisions. Yet even this is not the end; the gospel must first be proclaimed throughout the whole world (v 14). Instead of speaking directly of the temple's destruction, as in v 1, Jesus now speaks of a desolating sacrilege in the holy place; the vague reference allows an application to future horrors that Christian apocalypticism expected before the Parousia. Included in such blasphemies are the false messiahs and prophets who will claim to fulfill the hope of the Parousia. But the real Parousia will be a public and cosmic event (vv 23–28). It will reveal the crucified Son of Man ("the pierced one" of Zech 12:10–14) to be the Son of Man of Daniel 7:13–14, coming to judge and save the world. The Markan half of the discourse ends with the parable of the fig tree, emphasizing that the end is certain and near, yet sudden and incalculable. The tone of imminence comes from the Markan material; Matthew now balances that with his emphasis on delay.

The second, a paraenetic half of the discourse (24:37–25:46) is more "Matthean" in that it comes to grips with the delay of the Parousia and the problem of flagging vigilance. The second half begins with three short parables from Q: the generation of Noah, the two pairs of workers, and the thief in the night (24:37–44). The parables stress the need to be vigilant in the face of the uncertain date of the Parousia. Then come the three great parables of vigilance during delay: the prudent or profligate servant (24:45–51), the prudent and thoughtless virgins (25:1–13), and the talents (25:14–30). Each parable sounds the theme of delay (24:48; 25:5, 19), thus balancing the note of imminence in the Markan part of the discourse (e.g., 24:34). The servant parable warns Christian leaders in particular not to become lax in the face of the Parousia's delay. The parable of the virgins warns that those who have not reckoned with the delay face the final separation from the elect that constitutes judgment for Matthew. The parable of the talents defines being vigilant during delay not as being inactive but as being faithful in doing God's will with all one's being. The conclusion (25:31–46) is not another parable, but the truth behind all the parables. The criterion for the final judgment and separation will be the deeds of mercy done to the poor and outcast and therefore to the Son of Man, who declares his solidarity with suffering humankind. The Son of Man then acts out this teaching in the climax of the gospel, the death-resurrection.

7. Climax: Death-Resurrection (Chaps. 26–28). Matthew binds together death and resurrection as one pivotal, earthshaking, apocalyptic event that puts an end to the old era of sin and death and brings in the new period of the Church. Even here the story reflects Matthew's weaving together of the themes of Christ, church, and morality. The dignity and foreknowledge of Jesus is heightened, especially with the use of the titles Son of Man (chap. 26) and Son of God (chap. 27). As the kingdom is transferred to the new people of God, the Church, the responsibility of Israel for the Messiah's death is stressed. The failure

or courage of individual actors (e.g., Peter, Judas, the faithful women at the cross, Joseph of Arimathea) serves Matthew's moral exhortation. The narratives of death-resurrection are especially rich in cross-references, which make a neat structural outline difficult. The standard chapter divisions, which coincide with major time divisions, are used simply as a matter of convenience.

a. From Wednesday to Thursday Night (26:1–75). Matthew alone adds a fourth prediction of the passion of the Son of Man, thus emphasizing Jesus' knowledge and control of events. Jesus' mention of his death in the context of Passover intimates that his death will be the true Passover sacrifice (vv 1–2). His prophetic words actually set the events in motion; only after he speaks do his enemies gather to plot his death. The woman who anoints Jesus at Bethany provides both an inclusion with the women at the cross and tomb and a contrast with the Jewish leaders and with Judas. Her anointing is indeed the only one Jesus would receive, since in Matthew the women do not come to the tomb on Sunday morning with the intention of anointing the body. Just after Jesus shows contempt for money, Judas plans to betray him for money (the greed motif is not made explicit in Mark). The 30 pieces of silver (the payment of the rejected shepherd in Zech 11:12) echo the price of a slave's life in Exod 21:32—a paltry sum. The story of the preparation of the Last Supper (vv 17–19) demonstrates Jesus' sovereign command and the strict obedience of the true disciples (Mark emphasizes Jesus' miraculous knowledge). When Jesus predicts his betrayal at the supper, the innocent disciples address him as "Lord," the usual title used by believers, while Judas betrays himself by using "Rabbi," which, along with "Teacher," is the title used by unbelievers when they speak to Jesus. Fittingly, then, Jesus replies to Judas: "You have said it"—an ambiguous reposte that he will also use with Caiaphas and Pilate. In narrating the institution of the Eucharist, Matthew follows Mark but makes the two groups of words and actions more nearly parallel each other. He adds that the blood of Jesus—not John's baptism (cf. Mark 1:4)—is the means to the forgiveness of sins (cf. Matt 1:21; 20:28). Jesus promises that, despite the apparent failure of his mission, he will celebrate the messianic banquet with the disciples in the kingdom. From this point on, Matthew keeps stressing Jesus' desire to be with his disciples and their failure to be with him, despite Peter's boast that he will die with Jesus. In Gethsemane (vv 36–56), Jesus, the model of prayer, practices what he preached in the Sermon on the Mount by echoing phrases from the Our Father ("my Father … your will be done … enter into the test"). Ever in control, Jesus orders Judas to carry out what he has come to do, even as he commands his disciples not to use violence. By ordering that the sword be put away, Jesus once again teaches morality (echoing the Sermon on the Mount on nonresistance), proclaims his filial trust in the Father, and underlines his purpose of seeing prophecy fulfilled in the apocalyptic event of death-resurrection (with the exception of the formula quotation in 27:9–10, 26:54 and 56 take the place of individual formula quotations during the Passion Narrative). During the trial before the Sanhedrin (vv 57–75), and indeed throughout the passion, Matthew stresses the innocence of Jesus; he is the suffering just man of the Psalms. The power of Jesus is intimated in that the last two witnesses are not designated as "false," for they unwittingly speak the truth in claiming that Jesus can destroy the temple. Also unwitting and ironic is the way the high priest echoes Peter's confession at Caesarea Philippi when he asks Jesus "by the living God" whether he is the Messiah, the Son of God (26:63; cf. 16:16). While in Mark Jesus simply says, "I am," in Matthew the answer is the more indirect "you have said it." Immediately Jesus adds the corrective title Son of Man: "from now on" (i.e., from the turning point of death-resurrection) they will see Jesus as Son of Man exalted at God's right hand (Ps 110:1) and coming on the clouds of heaven (Dan 7:13–14)—a prophecy fulfilled proleptically in the final scene of the gospel (28:16–20). Peter's denial contrasts negatively with the Jesus who boldly proclaims the truth and positively with the Judas who despairs after his sin and commits suicide. Peter's bitter weeping betokens both the depth of his sin and the effectiveness of his repentance (he is obviously among the eleven rehabilitated disciples in 28:16).

b. From Friday Morning to Saturday (27:1–66). At the end of the night session, which concludes in early morning, the Sanhedrin sends Jesus to Pilate. In an interlude (the first separate story inserted into Mark's framework), Matthew depicts the fate of the betrayer, a different version of which is contained in Acts 1:15–20. The story sounds three Matthean motifs: Jesus' prophetic knowledge is confirmed (cf.

26:21–25); the Jewish leaders are responsible for the innocent blood of Jesus (cf. 27:25); even the tragedy of Judas' suicide was foreseen by God and fits into his saving plan (the formula quotation in vv 9–10; cf. 2:17). In the trial before Pilate (vv 11–26), the title Messiah is translated into the politically provocative title King of the Jews. The crowd must make the basic choice between Jesus, the true Son of the Father, and the prisoner Barabbas (= "Son of the Father"; some manuscripts sharpen the comparison/contrast by inserting "Jesus" before "Barabbas"). Like the gentile Magi (cf. 2:12), Pilate's wife also receives a monitory dream, urging noninvolvement in the plot of the Jewish leaders to kill Jesus. But the leaders persuade the crowds and thus coalesce with them into "all the people," who cry out for the death of Jesus and take the responsibility for his blood on themselves and their children (27:25, a Matthean insertion meant to explain the transfer of the kingdom from Israel to the Church; cf. 21:43, 23:35). For Matthew, the choice of Barabbas may also symbolize Israel's choice of armed political resistance to Rome, which led to the Jewish War and the destruction of Jerusalem. The mocking by the gentile soldiers (vv 27–31) likewise foreshadows the future faith of the gentile world, first expressed by these very soldiers after the death of Jesus (v 54).

At the crucifixion (27:32–44) the two titles stressed are King and Son of God (cf. chap. 2). The placard reading "King of the Jews" proclaims the ironic truth that Jesus is enthroned as King by his crucifixion. Twice into the mockery narrated by Mark, Matthew inserts the title Son of God (vv 40, 43). "If you are the Son of God …" echoes the challenge of Satan at the temptation (chap. 4). Like Satan and like Peter (16:22–23), the leaders tempt Jesus to understand the status of Son of God as a dispensation from suffering, as an easy, miraculous road to triumph. In this "last temptation of Christ," Jesus defines Son of God in terms of trustful obedience to the Father's will, even to the point of shameful death. The apocalyptic signs surrounding Jesus' death begin with the darkness, a symbol of God's wrath over a sinful world. For all his high christology, Matthew keeps the element of tension between divine and human by retaining from Mark the cry of abandonment (27:46). The cry fits in with the presentation of Jesus as the suffering just man of the Psalms (here, Ps 22:2). The drink of vinegar (v 48), like the drink mixed with gall (v 34), also echoes the Psalms of Lament (Ps 69:22—Eng 21). The death of Jesus unleashes a panoply of apocalyptic events (vv 51–54). The rending of the temple veil foretells the destruction of the temple and the cessation of its sacrificial cult in light of the sacrifice of Jesus (cf. 26:28). The earthquake, the shaking of the foundations of the old world as God brings in his kingdom, causes a chain reaction: the rocks split, the tombs of the holy Israelites of old are opened, and the dead come forth. The resurrection of the dead, prophesied by Ezek 37:12, is realized proleptically at the death of Jesus. Matthew thus proclaims that the death of Jesus is life-giving; it raises the dead to life. The theme of the earthquake, associated with resurrection from tombs and other apocalyptic imagery, serves to tie the death of Jesus together with his resurrection (v 53; cf. 28:1–10), creating one great apocalyptic event that ushers in the new period of the Church. This ecclesiological dimension is supplied by Matthew's redaction of the centurion's profession of faith in Mark. While the Markan centurion alone comes to faith because he sees how Jesus dies (15:39), in Matthew the centurion and the soldiers with him who had participated in the crucifixion (symbolizing the whole mass of sinful gentiles) see the apocalyptic events ushering in the kingdom and so repeat the confession of true disciples: "Truly this [omitting Mark's 'man'] was God's Son" (cf. 14:33). Both Jews and gentiles (the holy ones raised from their graves and the soldiers) are saved by the death of Jesus and brought into his community.

All that follows looks forward to the resurrection narratives. The connections create a "leap frog" effect: the women at the cross and tomb connect with the women at the tomb, the appearance to the women, and the appearance to the eleven; in between, the setting of the guard at the tomb connects with the guard struck down at the empty tomb and the guard's report to the Jewish leaders. Reflecting the split between church and synagogue, Matthew will not allow Joseph of Arimathea to have anything to do with the Sanhedrin, as in Mark 15:43; instead, he is a disciple of Jesus (27:57). The setting of the guard and the sealing of the tomb (vv 62–66), along with the false report of the guard (28:11–15), are unique to Matthew and reflect his apologetic against Jewish explanations of the resurrection; neither camp

apparently claimed that the body was still in the tomb on the third day. The sealing of the tomb may echo Dan 6:17.

c. From Sunday to the End of the Age (28:1–20). One of the most significant aspects of the final chapter is the almost complete absence of christological titles. The one great title is "Jesus"; thus does Matthew emphasize the identity of the earthly Jesus with the Risen One (Bornkamm 1968). The two women who came to the tomb in v 1 correspond to the witnesses of the burial (27:61). They come simply "to see," since the seal on the tomb would prevent any anointing (the purpose of the visit in Mark). Since there was a tacit prohibition of depicting the resurrection itself, Matthew showers his apocalyptic themes on the empty tomb scene. Mark's young man becomes the dazzingly bright angel of the Lord (not seen since the Infancy Narrative), descending from heaven amid an earthquake (cf. 27:51) and unsealing the tomb to announce God's triumph over death in the resurrection of Jesus. Like the guards at the cross, the guards at the tomb fear; but they become like dead men as the dead Jesus rises (cf. the contrast at the death of Jesus, 27:51–56). The angel's Easter proclamation is presented as the fulfillment of Jesus' prophecy; the women, unlike their Markan counterparts, run with both fear and joy to fulfill their commission. On the way Jesus appears to these women (28:9–10, unique to Matthew among the Synoptics). While at first glance superfluous, this appearance reaffirms the reality of the risen body (it can be touched); the restoration of the eleven to fellowship with Jesus, making possible the foundation of the Church (he calls them "brothers"; cf. 12:46–50); and—implicitly—the function of a resurrection appearance not as a return to an old relationship, but as the origin of a new mission (the women are not to cling to Jesus but are to deliver his message to the disciples). The good news of the resurrection is countered by the big lie of grave robbery (vv 11–15). As in the case of Judas, money is the problem solver. The soldiers do "as they were taught," the false teaching of the leaders competing with the true teaching of the disciples down to Matthew's day. This polemical stance may move Matthew to speak of "the Jews" (v 15; previously in the gospel only gentiles used that term); for him, Israel the chosen people is no more, its place being taken by the Church.

In the great commission that concludes the gospel (28:16–20), Matthew presents the risen Jesus as coming to his church; he is the Son of Man coming to believers in a proleptic Parousia. Contrary to Luke, Jesus does not go away from his church via ascension; hence, since Jesus stays with his church always, there is no need for a special sending of the Spirit to take his place. The regrouped eleven obey Jesus' command to go to Galilee, the very mention of which conjures up thoughts of the beginning of Jesus' ministry in Galilee of the gentiles (cf. 4:15). Throughout the gospel, the mountain has been a privileged symbol of Jesus the Son's eschatological authority and activity as he gathers his community and reveals the Father's will (4:8; 5:1; 8:1; 15:29; 17:1, 9; 24:3; 28:16). That the disciples worship Jesus yet doubt is a perfect paradigm of the littleness of faith that clings to all disciples up until the end of the age. The solemn declaration of Jesus falls into three parts. (a) Jesus proclaims that through the death-resurrection he has been exalted to the status of ruler of the cosmos, having all authority over heaven and earth (something never predicated of the earthly Jesus). The whole context reflects Dan 7:14, which describes the triumphant arrival of "one like a Son of Man" after the powers of evil have been defeated: "And power was given to him, and all nations … shall serve him" (cf. Dan 4:14). Jesus' prophecy in 26:64 is thus fulfilled. (b) Therefore, i.e., on the basis of his exaltation to universal rule, Jesus can now command a universal mission. This mission involves three things. First, the eleven are to make disciples of all the nations, an undertaking which means persuading people to do the will of the Father according to the teaching of Jesus and thus become Jesus' brothers and sisters in the family of God (cf. 12:46–50); in other words, it means following Jesus. Second, all the nations enter this family of God by being baptized. But this no longer entails John's baptism, but rather baptism into the divine reality revealed in the theophany after the baptism of Jesus: Father, Son, and Spirit (Schaberg 1982). To be baptized is to be plunged into the family life of God. Third, the object of teaching (which the eleven are empowered to do only now) is all and whatsoever Jesus taught during his earthly life; hence, the importance of the five great discourses. By this commission, Matthew concludes his gospel with a great reversal. The same person (Jesus) who formerly ordered the twelve disciples to undertake a mission *only* to Israel (10:5–6; cf. 15:24) now tells

the same group to pursue a mission to all nations, with baptism instead of circumcision as the initiation rite and the commands of Jesus instead of the Mosaic law as the norm of morality. The death-resurrection has proved the watershed of salvation history. (c) The last word of the risen Jesus is a promise to remain with his church for all days, i.e., throughout the whole indefinite period of world history that extends from "proleptic" to "fully realized" Parousia, the end of the age, the hope of which is certainly not surrendered. But the emphasis on the in-between time, when Jesus Emmanuel (1:23; 18:20) abides with his church, empowering it to undertake the staggering task of a universal mission. Like Yahweh commissioning the great patriarchs and prophets of the OT, Jesus assures his wavering disciples that he will sustain them (Lange 1973). Michel was thus correct when he saw 28:16–20 as the key to the whole gospel (1950); it is a microcosm of Matthew's major theological concerns.

H. Major Theological Concerns

The structure and content of the gospel confirm the view that Matthew consciously introduces ecclesiological and moral concerns into traditional material that was mainly christological. Hence, the particular configuration "Christ-church-morality" captures what is specific to Matthew's thought. For purposes of clarity, however, these three themes can be further differentiated into six topics.

1. Christology. The discourses, especially the Sermon on the Mount, remind us that Matthew is capable of putting forth an evaluation of Jesus not dependent primarily on titles. The discourses obviously present Jesus as teaching authoritatively (7:29), and Jesus calls himself a teacher (23:8; 26:18). Yet, strange to say, to address Jesus as "Teacher" or "Rabbi" (in the vocative) is for Matthew the sign of an unbeliever, or at least of someone not yet a true disciple. Such an address indicates that the speaker sees Jesus merely as a human teacher and nothing more. True disciples, by contrast, address Jesus as "Lord" (*kyrie*), expressing thereby their faith in his divine authority and his claim on them (cf. 26:22, 25). "Lord," however, occurs in Matthew mostly in the vocative; Matthew does not use it as a key title to explicate Jesus' transcendent status. Often behind the *kyrios* title stands the figure of Jesus as Son of Man.

There are a number of titles that Matthew uses positively and yet does not employ to develop the central mystery of Jesus. Among these lesser titles, "prophet" remains inadequate, since it can apply to others (e.g., the Baptist). Jesus, by contrast, is unique in that he fulfills the Law and the prophets, which all point to him (5:17; 11:13). Still, Jesus the Son is portrayed in a prophetic light as the last in the line of prophets rejected by Israel (23:34–39; Sand 1974). Likewise, the Infancy Narrative and temptation story present Jesus with Mosaic traits; but at best one can speak of Jesus not as the new Moses but as the one greater than Moses. In the Sermon on the Mount, e.g., Jesus takes the position of God, not Moses (cf. 5:27–28). Jesus is also called or alluded to as the (Isaian) servant (e.g., 3:17; 12:18), but the image is usually connected with Jesus as Son. Likewise, Emmanuel (1:23) lies within the orbit of Jesus as Son. Messiah (*christos*) and King stress that Jesus is the fulfillment of the ancient prophecies and promises made to Israel in general and David in particular. They also emphasize the royal authority of Jesus; but to receive its full weight, Messiah must be joined to Son of God (16:16; 26:63; cf. Nolan 1979). Son of David likewise emphasizes Jesus as the royal fulfiller of Israel's messianic hopes (1:1–17); it is precisely Joseph the Son of David who, by acknowledging the virginally conceived Jesus as his son, places him in the line of David (1:18–25). During the public ministry, Son of David is the address used especially by the marginalized and helpless who appeal to Jesus for healing (the Canaanite woman in 15:22; the blind men in 20:30). The Canaanite woman combines this title with Lord, indicating her true faith, while the Jerusalem crowds hail Jesus only as Son of David (21:9), without adding to it the title that shows true discipleship, "Lord." Hence the title Son of David reflects the paradox of Jesus the Jewish Messiah, who is accepted by the marginalized and even by pagans, while most Israelites reject him (Gerhardsson 1979).

For Matthew, the two key titles are Son of God and Son of Man, which combine a sense of Jesus' transcendent status with his central role in salvation history. Kingsbury (1975, 1986) emphasizes Son of God over Son of Man; Lange (1973) does just the opposite. Actually, neither title completely subsumes the other; yet the two share a certain amount of common ground. Instead of thinking of Matthew's christology as a circle with one central title, one should imagine an ellipse, with Son of God and Son of Man as the two foci. Hence it is best to speak of the Son christology of Matthew, with both titles included.

Matthew uses Son of God in the early chapters of his gospel to stress Jesus' direct origin from God and his filial relationship to God. Throughout the gospel, Matthew develops the title in terms of the obedient servant who recapitulates the history of Israel, the son of God in the OT, and who proves he is the true Son and Israel by withstanding temptation and doing the will of the Father (e.g., 2:15; 3:17; 4:1–11). By a grand inclusion, the same definition of sonship by obedient suffering returns at the mockery of the crucified Jesus (27:40, 43). Knowledge of Jesus as Son of God must come through divine revelation, but there is no Markan-style secret about this sonship in Matthew. At the baptism, God points out Jesus as his Son to others (note the "this is" in 3:17). After Jesus is revealed in divine majesty bestriding the waters of chaos, a whole group of disciples confesses him as Son of God (14:33). By the Father's revelation, Peter is able to say that Jesus is Messiah and Son of God halfway through the gospel (16:16)—a profession of faith confirmed by God at the transfiguration (17:5). At the trial before the Sanhedrin, Caiaphas unwittingly repeats Peter's profession of faith in his unbelieving question (26:63).

Still, both at Caesarea Philippi and at the trial, the limitations of Messiah and Son of God are seen in the fact that each time Jesus must supplement or correct these titles (note the "but I say to you" in 26:64) with the one title he constantly uses of himself, always in the third person: Son of Man. This unique and mysterious usage marks off Son of Man from all the other titles, whose meanings are much clearer from their OT usage. Son of Man is a title *sui generis.* It is more like one of Jesus' parables or riddles. Jesus can use it freely in public, people can understand that it refers to Jesus, yet no one seems to grasp the deep theological import Jesus gives it. From Mark and Q Matthew inherits three major meanings of Son of Man: (a) the lowly yet powerful servant of God during the earthly ministry (e.g., 8:20; 9:6); (b) the suffering, dying, and rising servant who gives his life as a ransom for the many (e.g., 17:22–23; 20:17–28; 26:2); and (c) the judge and/or deliverer on the last day (e.g., 10:23; 16:27–28; 24:30, 36 ["the Son" in v 36 is probably the Son of Man]; 25:31; 26:64). These various meanings are not hermetically sealed off from one another (cf., e.g., 16:13–28), but rather form a spectrum of meanings encompassing the whole of Jesus' earthly career, death and resurrection, and Parousia. The one stage of Jesus' career that was not explicitly covered by the Markan Son of Man was the present rule over the world by the risen Jesus. This gap is filled in by Matthew in his allegorical explanation of the parable of the wheat and the weeds (13:37). The use of "the Son" in the triadic formula of baptism (28:19) may also reflect Son of Man christology (Schaberg 1982). That not every reference to God as Father immediately implies the Son of God title is shown by 16:27, where the Son of Man at the last judgment is said to come "in the glory of his Father." This is hardly proof that Son of God absorbs Son of Man, since in Matthew the final judgment is a function proper to Jesus precisely as the Son of Man, not the Son of God. Nor can Son of Man be reduced to a circumlocution for "this man." That may or may not have been the meaning of the Aramaic phrase *bar ʾ (ē)naša* in the mouth of the historical Jesus, but that usage must not be confused with the title in Matthew's redaction. Matthew writes in Greek, where *ho huios tou anthrōpou* (literally, "the Son of Man") has a peculiarly solemn and titular, yet puzzling ring. To translate it simply as "this man" would pass over the Matthean emphasis on the fulfillment of the prophecy of Dan 4:13–14, especially in 24:30.

2. Kingdom of Heaven. The theme of the kingdom of heaven mediates between Christ and church. In itself, the kingdom of heaven (or of God) indicates a transcendent and dynamic reality; it is an abstract way of saying that God is coming in power to exercise his rightful rule over his creation. Thus, the kingdom (or better, rule) of God is not first of all a place or space; yet, if God exercises his rule over concrete individuals and groups, spatial images naturally arise, as is the case in various sayings and parables of Jesus. Matthew alone among NT writers uses "kingdom of heaven," "heaven" being a respectful Semitic circumlocution for God. Matthew uses "kingdom of heaven" 32 times and "kingdom of God" 4 times (12:28; 19:24; 21:31, 43). The fact that the two forms can be used interchangeably even in a single pericope (19:23–24) shows there is no real difference in meaning. While its roots meaning in the preaching of the historical Jesus seems to have had a future-yet-imminent thrust, "kingdom of heaven" in Matthew has become a highly complex concept with a spectrum of meanings plotted out over the time line of salvation history. "Kingdom" becomes a process concept in Matthew. The kingdom existed

already in the OT, for in some sense Israel possessed it (21:33–46, especially v 43). But the birth of Jesus, the King of the Jews (2:2), naturally entails a new, heightened presence of the kingdom. Yet both the Baptist and Jesus begin their ministries by proclaiming that the kingdom is drawing near (3:2; 4:17). The kingdom has already come in the exorcisms of Jesus (12:28); nevertheless, Jesus teaches his disciples to pray for its final coming (6:10) and to seek it (6:33). The apocalyptic events of death-resurrection mean a new stage in the coming of the kingdom, since for the first time Jesus is exalted to total power over the cosmos (28:16–20). He rules now as Son of Man in his kingdom (13:37–38, 41; cf. Kretzer 1971); but his visible coming as judge on the last day will mean the final and definitive coming of his kingdom (16:27–28), which will be the kingdom of his Father (13:43). The kingdom of heaven thus embraces the whole sweep of salvation history, as God's rule progressively breaks into and triumphs over the sinful human world. From its all-inclusive sweep, it is clear that the kingdom of heaven is not coterminous with the Church of Jesus, which begins to develop during the public ministry and is fully founded by the death-resurrection. The Church is that locus and instrument of the kingdom where Jesus is consciously confessed, worshipped, and obeyed. Making disciples of all the nations is the path the Church takes as it journeys through history toward the consummation of the kingdom. But with Matthew's tendency toward realized eschatology and high ecclesiology, kingdom and church are more closely associated in his gospel than anywhere else in the NT (cf. 16:18–19, and the ambiguity in the use of "kingdom" in 18:1, 4).

3. Salvation History. Implied in Matthew's process view of kingdom is a concept of salvation history. Matthew orders the many stages of the coming of the kingdom into three major periods: Law and prophets, earthly Jesus, and the Church. There is first of all the period of the OT, the Law and the prophets, which pointed forward to and prophesied the time of Jesus (11:13). The fact that all the formula quotations refer to and are fulfilled in the life and death of Jesus indicates that his earthly life is the second period, the midpoint of salvation history. It thus differs from the time of the Church, to which no formula quotation is applied. The distinction between the time of Jesus and the time of the Church, the third period, is reinforced by the different rules for mission. During his public ministry, Jesus was sent only to the land and people of Israel (15:24) and enjoined his twelve disciples to observe the same restriction (10:5–6). After the death-resurrection, the "turning of the ages," the exalted Jesus commands the same group to undertake a mission to all nations (28:16–20) until the Parousia (v 20). This outline of salvation history aids Matthew in resolving the tension between his more "conservative" Jewish-Christian and his more "liberal" gentile-Christian traditions. The more conservative material can be affirmed as true of the earthly ministry of Jesus, while the more open material can be referred to the time of the Church. Kingsbury, however, claims that Matthew divides history into two epochs according to the theme of prophecy and fulfillment: the time of Israel and the time of Jesus, the latter including the post-Easter period (1975: 31–37).
